## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 14TH, 1905.

## BIRTH.

On the 6th January, at No. 206 B Bluff, the wife of Mr. L. BARMONT, of a Son.

## DEATHS.

At Yokohama, on the 6th January, suddenly, from heart failure, Sister STE. MARTHE, of the Holy Infant Jesus, in the 61st year of her age.

At No. 219-D Bluff, Yokohama, on January 11th, 1905, H. MOSS, in his 69th year.

On the 12th January at the Friends Girls' School, Miss MARY ANNE GUNDRY, of Tokyo, Japan, and Leeds, England, aged 69 years.

Funeral services at 30, Koun-machi, Mita, Shiba, Tokyo, January 14th at 10 a.m.

## SUMMARY OF NEWS.

A LIGHTER with coal capsized on the night of Jan. 6th at Shinagawa with the result that a *sendo* was drowned.

The death of Count Anenokoji was announced on Jan. 7th. His father was a *huge* (Court noble) before the Restoration.

DURING the last year, the production of habutae silk in Ishikawa prefecture was 786,755 pieces of a value of 12,994,202 yen.

The quotation of silver yen in Formosa was *sen* 98 on Jan. 5th. At the end of the previous month the quotation was *sen* 1 lower.

THE *Jiji* believes that the headquarters of the Japanese garrison in Liaoting Peninsula will be removed from Kinchow to Port Arthur.

MAJOR-GENERAL S. IGUCHI, one of the Staff officers of the Manchurian Army, who was in

Tokyo on special business, left on Jan. 8th for the front.

MARQUIS YAMAGATA, Chief of the Staff Office, has been slightly indisposed since Jan. 4th and was not present at the New Year Court Banquet on the 5th.

THE 8th of January being the birthday of Queen Helene of Italy, a congratulatory message was transmitted by the Japanese Court to the Quirinal.

AN official telegram has been received in Tokyo to the effect that Prince Fushimi arrived on Jan. 4th at Honolulu. He landed at 10 a.m. and left there at 5 p.m. for home.

VICE-ADMIRAL SHIBAYAMA, Commander-in-Chief of the Kure Naval Station, has been appointed to Port Arthur in the same capacity and Captain Tamari is appointed chief of staff.

THE *Kokumin* says that the Nippon Red Cross Society has purchased four steamers and converted them into hospital ships. They will be despatched on Jan. 10th to the front.

THE *Standard* says that Gen. Sir William Nicholson is definitely selected as Governor of Gibraltar (in succession to Sir George White, appointed Governor of Chelsea).

HIS Excellency the Governor of Hongkong has decided that the law shall take its course in the case of the three Europeans who murdered a Chinese sampan woman and her daughter.

A MAN, apparently a student, was found on the railway at a point near Ichigaya station on Jan. 10th. He is believed to have been run over by a train while trying to cross the rails.

THE Kobe Cricket Club and the Kobe Sailing Club last week presented Mr. A. H. Gillingham with a silver cigarette box, a cigarette case and a silver match-box as a souvenir on leaving Kobe.

THE Government has granted permission to the Osaka Shosen Kaisha to open a regular service between Kobe and Dalny. It is said that the first steamer will leave Kobe on January 12th.

CAPTAIN J. M. HUTCHISON, of the British Navy, who recently arrived in Tokyo, proceeded at 11 a.m. on January 11th to the Palace accompanied by the British Minister and was received by the Emperor.

PRINCESSES FUMI AND YASU (daughters of the Emperor) left Shimbashi at noon on Jan. 8th for Kamakura where they will spend the cold season. They were attired in green crape and wore white feather comforters.

THE French Minister at Tokyo, says the *Nichi Nichi*, paid a visit on Jan. 11th to the Russians at Shidzuoka; and the French Consul at Nagasaki visited the prisoners from Port Arthur at Inasa, near Nagasaki.

MR. M. N. GOBHAI, No. 41, Yokohama, and two leading Indian traders have presented to the Emperor through the Minister for the Imperial Household, an address congratulating him on the capitulation of Port Arthur.

THE net profits for the last half year (1904) of the Teikoku Commercial Bank was yen 67,399 55 and an interim dividend was paid of *sen* 88 per share for the period, which is equivalent to 5 per cent per annum.

MADAME KITAJIMA, a Court Lady, and Baron Madenokoji, under the special instructions of the Empress, will proceed on Jan. 9th to the Yokosuka Naval Station to inspect the condition of the

hospital. On the following day, with the same purpose, they will leave for Sendai and other provincial centres.

A FISH dealer and a *geisha* committed suicide in the teahouse, Nonki-tei, Akasaka, on Jan. 10th. It appears that the man killed the woman by cutting her throat with a knife and then killed himself. The couple were heavily in debt.

A TELEGRAM from Kanazawa reports that a floating mine, which was recently found on Noto peninsula, has been ascertained to be of Russian manufacture, by an officer of the Maidzuru Naval Station, who had been sent to the place to examine it.

A CHINAMAN employed by the steamer *Austriën*, which arrived on Jan. 6th at Yokohama, has been arrested by the Harbour police on a charge of having attempted to smuggle 15 tins containing opium. He had brought it from Hongkong.

LEADING Liberals have established the *Sengo Keiei Kenkyu-kai*, which aims to investigate financial matters after the war. The members decided to meet every Sunday, and the first meeting will be held on Jan. 8th at the office of the party.

AN old widow residing at Imai-cho, Azabu, was found strangled on Jan. 10th. The police believe the crime to be the work of a robber. The deceased had been a lady attendant in the Court of the Feudal Lord of Uwajima before the Restoration.

ADMIRALS TOGO AND KAMIMURA proceeded on Jan. 11th to the detached palace at Numadzu where they were received by the Crown Prince. That day the streets of the town were dressed and the distinguished officers were warmly welcomed.

SISTER ST. MARTHA, of the Convent of the Holy Infant Jesus, expired suddenly in the railway compound, Yokohama, on Friday afternoon. She had just returned from a visit to Tokyo. The deceased, who succumbed to heart disease, was 62 years old, and had spent over 30 of them in Japan.

THE carriage of Mr. Kubota, Minister for Education, overturned through the stumbling of a horse, on the morning of Jan. 10th at Andozaka, while the minister was on his way to his office. Fortunately Mr. Kubota escaped injury, but the *hetto* was slightly injured and the vehicle damaged.

TOKYO papers report that the Emperor has ordered General Baron Okazawa, Chief Aide-de-camp to His Majesty, to proceed to Korea, Port Arthur and Manchuria to make enquiry as to the health of the soldiers in the cold season. The Baron will probably start on January 20th with presents from the Emperor to be distributed among the troops.

It is announced in the London *Gazette* that the King has granted unto Mr. Walter Denning authority to accept and wear the insignia of the Fifth Class of the Imperial Japanese Order of the Rising Sun, conferred upon him by the Emperor of Japan in his capacity of Professor of English Literature in the Second High School at Sendai.

AT the 64th Annual Meeting of the Peninsular and Oriental Steam Navigation Company, held on the 13th December, the Directors, after providing for the usual dividend at the rate of 5 per cent per annum on the Preferred Stock, recommended a dividend on Deferred Stock of 6½ per cent. for the six months, and a bonus of 3 per cent, making, with the Interim Dividend of 3½ per cent. paid in June, a total distribution on the Deferred Stock of 13 per cent. for the year.

## PORT ARTHUR.

Saturday, January 7.

Russian officers, speaking from Chefoo, continue to tell vivid stories of the sufferings of the garrison prior to capitulation. The gist of it all is that men and officers were completely worn out and incapable of further effort. The condition of the sick and wounded seems to have been especially pitiful. But the salient fact which stands out above all the features of the narration is that after the capture of the northern and north-eastern sectors of the permanent defences, and after the breaching of the Chinese wall, there began to fall upon the two towns and upon their defenders such a rain of shot, shell and bullets as made it evident that the choice lay between surrender and death. That all engaged in the terrible struggle were weary, that the wounded were suffering tortures in the absence of medical necessities, and that the garrison had been decimated and was tormented by disease—these facts are beyond question. But they are facts incidental to every protracted siege. They constitute a pitiable picture, but they scarcely differentiate the case of Port Arthur from that of many another stubborn defence. The Chefoo officers say also that although every one in the garrison was convinced of the absolute necessity of surrender, the news that Stoessel had actually proposed to capitulate produced a feeling of profound sorrow and humiliation. Very likely it did in the case of some of the men, but we have also had a story that many welcomed the intelligence. The father of one of these Chefoo officers seems to have been in Sevastopol during the siege of the latter place. He is represented as saying that the state of affairs in the Crimean fortress was mere child's play compared with that in Port Arthur.

We should attach more explicit credence to these records of suffering and hardship were they not disfigured by repeated declarations that only four thousand men remained fit to take their place in the fighting line. Where then were the remainder of the 24,000 combatants who surrendered, independently of the sick and wounded? Sympathy is a fine thing and no one will be disposed to withhold either sympathy or admiration from Stoessel and his brave troops. But we can not ignore the fact that there has not been any of this outcry on the Japanese side, though the sufferings of the besiegers also can scarcely have been less than those of the besieged. The Russians would be wiser in their own interests if they left others to write the story of what Port Arthur had to endure.

We refrain from re-producing many other obvious exaggerations and falsehoods which appear in the columns of so-called Russian organs. One would suppose from reading them that it was the business of the Japanese to load their cannon with cotton wool. In all this hysteria about the heroism of the besieged, the public is apt to lose sight of the achievements of the besiegers.

One of the Chefoo fugitives, said to be an officer of considerable rank, alleges that prior to offering capitulation, Stoessel had communicated the state of affairs to the Tsar, and had received from His Majesty a reply in the sense that he did not look for any further resistance from the garrison, and that he now left the commanding officers to take whatever course deemed expedient.

It is expected that the bulk of the Port Arthur prisoners will be sent to Japan.

Monday, January 9.

The tragedy at Sungshushan is described in some detail by Tokyo journals. Its scene appears not to have been the fort but the attached work against which the futile attack was directed in the closing days of November. The Japanese are said to have made four rushes on that occasion, each costing heavily. A fifth charge would have carried them into the fort. But in making it they were caught in an entanglement of nails which pierced the men's feet. They fell in heaps and were slaughtered in their tracks. Determined not to be again the victims of such a device, the investing troops had recourse subsequently to gun-cotton. They undermined the parapet and fired a huge charge of that terrible explosive so that a great mass of the interior slope was blown in. The Russians in the auxiliary fort, observing this, attempted to escape, but the rush of the assailants immediately following the explosion was too quick for them, and they were all shot down or captured. This did not constitute the tragedy, however. What is remembered with horror is that a large number—600 it is said, but the official report suggested only some 350—were buried under the debris of the parapet and among them were several women, as was proved when the Japanese subsequently excavated the place. It will be remembered that 160 were rescued from this extraordinary grave, but we gather from the accounts in Tokyo journals that no women were among the saved. Presumably these unfortunate people were with their husbands in the covered gallery.

Tuesday, January 10.

Vice-Admiral Kataoka, commanding the Third Squadron, has issued a general order—in the absence of Admiral Togo—announcing that one stage of the war at sea has been brought to a glorious termination. In the body of the order he states that when the six destroyers, constituting the sole remnant of the Russian Squadron at Port Arthur, emerged from the harbour and steamed for Chefoo and Kiaochow, they were pursued by vessels of the blockading squadron. The *Akitushima*, under Commander Yamaya, with a destroyer squadron under Commander Fujimoto, and a torpedo-boat squadron under Commander Kasama, pursued the Chefoo section of the enemy, and Rear-Admiral Togo Masamichi, second in command of the Third Squadron at the time, took the *Chiyoda*, under Captain Murakami, the *Tatsuta*, under Commander Kamaya, and a destroyer squadron under Commander Suzuki, in the direction of Kiaochow Bay. The Russian craft, however, had slipped out under cover of darkness, and got a start which enabled them, steaming at the top of their high speed, to reach their destinations without being overhauled.

A belief seems to be entertained in Tokyo that salvage operations may be successfully undertaken in the case of several of the warships blown-up by the Russians at Port Arthur. The work of destruction was probably hurried so as to interfere with complete efficiency, and moreover as the vessels were virtually submerged before explosives were employed, the force of the latter must have been considerably diminished. The *Sevastopol* and the *Bayan* are supposed to be in a hopeless condition, but among the other battle-ships, cruisers, gun-boats, destroyers and steamers some, if not several, will probably repay the trouble and cost of salvage. The harbour has certainly proved

a veritable death-trap. It is now the grave of property aggregating in value probably a hundred and fifty millions of yen. The mines alone that have been placed at the entrance and along the adjacent coasts represent a big figure.

It is stated that Vice-Admiral Shibayama, now Port Admiral at Kure, will be soon appointed to command the fortress at Port Arthur, his place at Kure being taken by Vice-Admiral Arima, now chief of the Department of Naval Supplies. Admiral Shibayama's chief of staff will be Captain Tamari, and Rear-Admiral Saito, Vice-Minister of the Navy, will take over Vice-Admiral Arima's present duties in conjunction with his own.

Wednesday, January 11.

We read in the *Nichi Nichi Shimbun* that the taking over of Russian property at Port Arthur has been nearly concluded. The buildings number 300 and the small arms thus far total twenty thousand, but the greater part of the siege guns are said to have been more or less destroyed either by Japanese fire during the siege or by the Russians themselves at the time of capitulation. Doubtless an official list will soon be published. There were said to be over 600 guns mounted in the various forts or assigned for their defence, and it may be presumed that the whole of these, whatever their condition, have fallen into Japanese hands. The question has much importance with regard to the future armament of the fortress.

Thursday, January 12.

It is expected that some three months will be needed to clear away the mines from the waters of Port Arthur. The terms of capitulation provided that the Russians should hand over all maps and plans showing the positions of these engines, but such information would be useful mainly in the case of contact mines. No exact record can have been kept of the numerous mechanical mines strewn outside the harbour either by Russians or by Japanese, and the task of completely removing this danger will be long and arduous. Heavy winds and high seas have hitherto prevented any work, but of course it will be commenced at the earliest possible opportunity. All the officers who are to be in charge at Port Arthur, from Vice-Admiral Shibayama downwards, have been nominated and it is expected that they will start for their posts on the 16th instant, whereafter the operations for raising the sunken vessels will begin. The impression at present is that some of the battle-ships may be saved and added to the Japanese navy. No conclusive examination has yet been possible, but there are some reasons for thinking that explosives were not used in every case, the Russians confining themselves to throwing kerosene on the decks at low water and setting them on fire. Rear-Admiral Arai, who has had much experience in work of this kind, and who was recently engaged upon the *Varyag*, will be in charge of salvage operations at Port Arthur and immediately under him will be Professor Ishikuro, an eminent naval engineer. Speaking of the *Varyag* we may mention that although she has been brought into an upright position and her heavy weights have been removed, the cold weather compelled postponement of further work. There is a rumour, however, that great difficulty will attend the task of floating her, as her seams have been opened by the explosion which sealed her fate. On the whole it would seem that salvage opera-

ions will occupy much labour and much attention during this year. The only vessel hitherto re-floated among the many victims of the war is the *Miyako*, and even in her case we have only a rumour.

### MUKDEN.

Saturday, January 7.

General Kuropatkin is reported to have carried out his recently announced intention of breaching the walls of Mukden in order to facilitate his military operations. When mention was last made of this purpose the telegraph represented Kuropatkin as seeking to obtain Governor-General Tseng's consent to the act of destruction. Tseng, of course, declined to entertain any such proposal without sanction from Peking, and Peking had recourse to its stereotyped refuge, silence. We ventured to surmise that if Kuropatkin deemed the measure essential he would take it, in despite of any mood the Chinese might display, and that is what he is now reported to have done. The big wall has been breached through a length of 40 feet, so that troops can gain free access to the city. Mukden, being counted within the limits of belligerent territory, must take the fortune of war as it comes, but the question suggests itself, what does this breaching of the wall portend. Its immediate significance, we presume, is that large numbers of Russian troops—either those already in the field or those now arriving, probably the latter—are to be billeted in the city, and that, for the purpose of facilitating their rapid concentration in the fighting line on the Hun, there is need of some freer avenue than the gates afford. The ultimate significance, however, is that the city of Mukden with its large non-combatant population is thus brought within the direct district of fighting and may be treated as a section of the Russian defences. Everybody remembers the horror that happened at Liaoyang, where, owing to Russian occupation of positions in the immediate vicinity of the walls, the citizens were brought into the line of Japanese fire and many were cruelly wounded or killed, old men, women and children. Apparently that terrible experience has not deterred Kuropatkin. He intends to include the walls of Mukden in his scheme of fortifications. If the peaceful Chinese suffer, that is their own look-out. A little adroit management may even convert their sufferings into a vehicle for traducing the Japanese. We see what happened at Port Arthur. Stoessel scattered his so-called hospitals all over the two towns; eighteen hospitals, nearly all disconnected. This is not a matter of hearsay. It is clearly and indisputably proved by the map which General Balakoff himself transmitted to the Japanese Head Quarters. Either the Japanese artillery must have refrained altogether from shelling the towns or the so-called hospitals must have been exposed to fire. And then we have Stoessel himself deliberately stating in a despatch to the Tsar that the Japanese purposely bombarded his hospitals. There has been plenty of evidence that Russian soldiers in Port Arthur, acting of course with the acquiescence of their officers, fired upon and bayoneted Japanese wounded. From such troops a counter-charge of the nature of that preferred by Stoessel comes with very bad grace, to say the least of it. But since an officer of Stoessel's fully proved bravery and competence has persuaded himself to formulate such an accusation, we must be prepared for similar manoeuvres on the part

of other Russian Generals, and when, as is now the case at Mukden, we see steps taken the almost inevitable sequel of which is to involve the non-combatant population of a big town in the horrors of war, while their probable sequel is to furnish a new expedient for perverting Russian recklessness into a simulation of Japanese cruelty, it is a plain duty to point out what is happening. Stoessel's eighteen detached hospitals at Port Arthur and Kuropatkin's dispositions at Liaoyang may not be repeated at Mukden, but the public will at all events be prepared for a similar *mise en scene* at the latter place.

Monday, January 9.

The *Fiji Shimpō* has a telegram from London saying that the Council of Ministers held by the Tsar after receipt of the news of Port Arthur's fall, decided to order Kuropatkin to assume the offensive at once. Our contemporary, commenting upon this intelligence, observes that men sitting over a council-board would be very apt to come to such a decision, since it is manifest that the investing army having now been released from duty in Liaotung, will be sent to the Shaho, constituting a powerful re-inforcement, and the obvious course would be for Kuropatkin to strike before that consummation can be effected. But Kuropatkin himself can scarcely be prepared to assume the offensive, and it may be that he will again find himself between the devil and the deep blue sea. On the other hand from the point of view of the Russian Government, it is almost imperative that something of a bold nature should be attempted. For apparently the humiliation of the fall of Port Arthur is to be followed by the recall of the Baltic Fleet, since rumour alleges that the second Squadron, being in need of repairs, can not join Rojestvensky. How much hope Russia placed in the possibility of the Baltic Fleet recovering for her the command of the sea, we can only conjecture, but if she be now forced to abandon that hope in the immediate sequel of the destruction of her Pacific Squadron and the loss of her great stronghold, we can understand her almost overwhelming anxiety to effect something in the way of rehabilitating her reputation. That is the *Fiji's* view. Yet the *Fiji* does not think that Kuropatkin will assume the offensive yet.

Tuesday, January 10.

Fighting of a desultory nature appears to be still going on in the neighbourhood of Hanchang. Seoul reports that at 3.40 on the afternoon of the 6th a Japanese force attacked the Russians who had retreated to Hsiangshaho, after their recent essay. Some injury was inflicted on the enemy, but as he was re-inforced the Japanese did not continue the attack.

Wednesday, January 11.

The *Asahi Shimbun* says that, according to reports from the front, the Russians at Mukden and Fushun commenced a movement in the direction of the Shaho on the 6th instant. The indications are that Kuropatkin contemplates assuming the offensive.

In considering this news there is one thing to be remembered, namely, that if Viceroy Alexieff's public statements be trustworthy, the whole responsibility for the celebrated ante-Shaho Order rests on Kuropatkin's shoulders. There was an almost universal disposition at the time to acquit him of blame for the unsoldier-like bombast and injudicious announcements contained in the Order, but apparently he and he alone was the author. That being the case, it would follow that at

the very earliest opportunity he will resume the offensive, for in the sight of his army he cuts a somewhat ridiculous figure. At the same time the very moment when the news of Port Arthur's fall has circulated among his troops can scarcely be called auspicious for a fresh essay.

Thursday, January 12.

All accounts agree that the Russian forces on Kuropatkin's left wing have been much increased of late, and that the number now concentrated in the Hanchang region is some 17,000 or 18,000. This intelligence is not altogether novel. There has been evidence for some time that the Russians were massing a strong force in this district, either because they anticipated a turning movement on the part of the Japanese, or because they themselves contemplated such a movement. Now that they have a fine military road connecting Fushun with Tiehling, they are plainly in a position to operate more boldly on their left than they would have been had the Mukden-Tiehling highway been their principal line of communications. It is of course evident that inasmuch as Nogi's army, a veteran force of 4 Divisions, is now freed for operations northward of Liaotung, Kuropatkin, if he were in a position to strike, should hasten to anticipate the pressure that this new force will exercise in Manchuria. But Kuropatkin does not seem ready to strike quickly. Accounts vary greatly as to the number of troops he has received since the battle of the Shaho. Some say that his casualties have been made good, and that he has been further stiffened by 60,000 men. Others allege that he has received only 41 additional battalions, and say nothing about his casualties. We shall probably be estimating at the highest figure consistent with probability if we assume that he is now 30,000 stronger than he was when the celebrated Order was penned. The question he has to ask himself, therefore, is whether he will be relatively stronger at the end of February, or whether his superiority—if there be any—is greater now than it will be then. We say the end of February because, climatically speaking, that is the most suitable time for field operations, inasmuch as the cold will then have abated somewhat while the rivers and roads will be still frozen. It is in view of climatic considerations, we imagine, that the St. Petersburg Council of State spoke of the end of February as the date by which they intended to add 200,000 men to Kuropatkin's force. No one knows better than Kuropatkin whether that is possible. Judging from experience he must deem such a feat more than problematical, for if only 100,000 troops reached him between October and the end of December, in spite of his manifestly most urgent need, how can double that number reach him between the beginning of January and the end of February? It is for him, however, to make his own estimate. If he now remain quiescent, the obvious inference will be that he expects to be relatively stronger at the close of February than he now is, whatever additions the Japanese shall have made to their forces by that time. If he strike now, it will be because he doubts the feasibility of the two-hundred-thousand promise.

### THE PROPOSED COURT MARTIAL.

The cry in Russia for a court martial in connexion with the fall of Port Arthur is very natural, as the *Fiji Shimpō* remarks. Nominally the officer arraigned before the

tribunal would be Stoessel, but the question is, not the nature of Stoessel's defence, which all agree in admiring and applauding, but the nature of the preparations existing in the fortress at the time of the attack. It was currently reported and even openly stated in official quarters that Port Arthur had a supply of ammunition and provisions amply sufficient for a year and a half. Very much longer periods were occasionally mentioned, but a year and a half was the minimum. Yet, according to Stoessel's reports, the besieged found themselves short of both ammunition and provisions after a few months. They were not actually without food, but it was of such a nature that its continued use without the alleviating adjuncts which are just as essential as beef and bread, blood-poisoning became inevitable, and as for heavy-gun ammunition the Russian Commander declares that the supply had failed totally. It is very conceivable that under these circumstances there should be some excitement and suspicion in Russia, especially since the fortress, during its investment, was not completely cut off from communication with the outer world: several steamers, laden with ammunition and provisions, reached it. The *King Arthur*, for example, is said to have made many successful voyages before her capture. It might be supposed at first sight that Stoessel himself, in his capacity of commander-in-chief, was responsible for the state of the supplies. So he was assuredly in the last resort, and there can be no doubt that had he established a thoroughly efficient system of inspection, no such shortage could have existed. But the best commander must always be partially dependent on his quartermasters' department. At any rate the Russians must see the vital necessity of fixing the responsibility clearly. It had been a topic of open talk in the Far East for many years that in the supreme moment deficiencies like those now apparently proved to have crippled Port Arthur would be found not only in Russian fortresses but also on Russian ships.

#### FOREIGN OPINION ON THE FALL OF PORT ARTHUR.

##### RUSSIAN OPINION.

Reuter telegraphs that the Russian newspapers speak as follows:—

The *Novoe Vremya* asks who is responsible for not placing Port Arthur in a thoroughly defensible condition. That is a question that must be answered.

The *Russ* considers it a great sin that in aristocratic and official circles little concern is shown about the fall of Port Arthur. This, it considers, demonstrates the unfitness of such persons to be entrusted with great national tasks.

The *Bourse Gazette* urges that Rojestvensky should not wait for the third squadron, but should continue his voyage at once.

Another journal insists that Russia should now give up this ceaseless war. As the Japanese granted honorable terms of capitulation to the Port Arthur garrison, so the Russians should grant honorable terms of peace to Japan.

(RECEIVED AT THE FOREIGN OFFICE.)

The editor of the *Novoe Vremya*, M. Svorin, writing on the 6th instant, says:—"The honour of the Army is the honour of the Nation, and the Army's failures are the Nation's failures. To-day, after the great railway to the Pacific Ocean has been completed, to abandon Manchuria must be

pronounced improper. Among the people there are some who say that the present situation is the result simply of official mismanagement. But the officials are a part of the people. They do not differ from the other part. It is for the people themselves to determine whether the war shall continue or whether it shall cease. The Sovereign should take counsel of the people and obtain their views. There are various precedents for that course in times of national peril. And the people, when it comes to tendering their views, should inform themselves fully of the Government's policy. Port Arthur did not surrender until after its strength had become exhausted. Will Russia follow the same course?"

##### ITALIAN OPINION.

The news of the fall of Port Arthur evoked expressions of satisfaction in Italy, and there was much applause for the action of the Japanese Navy and Army. In non-official circles men spoke of the probability of peace being now restored, but diplomats and officials considered the time still premature.

The *Journal d'Italia* says:—"The great Russian stronghold in the Far East has fallen, and Stoessel's surrender makes further resistance on Russia's part hopeless. This development of the situation places Japan in the first rank of military powers. It is now certain that the ability and courage of this hitherto little known nation are quite exceptional. These feats of Japan will raise a new spirit throughout Asia. It will rest with Japan to dictate the nature of Far Eastern progress. She is to be regarded as a formidable rival of America and Europe. Russia's hope of acquiring a good harbour in Far-Eastern waters is no longer more than a dream. She will have to change the direction of her ambition and turn her eyes to the Persian Gulf.

The *Tribuna* thinks that the fall of Port Arthur may possibly furnish a motive for the combatants to make peace, but looking at the situation carefully it seems that Russia has not yet abandoned her hope of crushing Japan and taking vengeance for the discomfiture hitherto inflicted on her. So long as she can not divest herself of her haughty confidence in her own prowess, the war will continue. Other Powers, however, ought to exert their influence to put an end to the conflict in the cause of humanity and the general interest. Naturally the difficulties of intervention deter any attempt, but neutral Powers, having regard to the danger that threatens their own tranquillity and in view of the terrible nature of the war, can not sit with folded hands. More to be feared by Europe than the Yellow Peril is the Russian Peril, which constitutes a near menace.

(RECEIVED AT THE FOREIGN OFFICE.)

##### ENGLISH OPINION.

English leading newspapers are agreed that the terms of the Capitulation Agreement show the surrender to have been unconditional. They of course express profound admiration of the besiegers' brave defence.

The *Daily Telegraph* comments on the chivalrous conduct of Japan towards the garrison of Port Arthur and the sailors included in it, and says that greater credit is due to the Japanese in view of the fact that many Russians had violated their oaths and resumed active service.

The *Times*, referring to the rumours of mediation, says that mediation can not pos-

sibly succeed unless both the combatants desire it, and that no Government will be so foolish as to lose sight of that fact. The *Daily Telegraph* takes the same view.

The *Times* of the 3rd instant says:—"No praise too high to bestow on the obduracy of General Stoessel's defence. His professional ability has been as conspicuous as his courage and determination. He has most excellently displayed the martial valour of a Russian subject, and the lustre of his name will shine as brightly at that of the greatest commander by whom a similar task has been achieved. But we say that the defence of Port Arthur has been splendid with what words are we to praise the will of the assault? For the task of attacking this terribly strong fortress was something greater again than the task of defending it. However valiant, however determined the defenders were, they must yield the crown of laurels to the assailants. In dogged resolution, in military skill, in the highest type of valour and in all points appertaining to the function of a warrior, the crown must fall to the besiegers. That this would be the case had been anticipated, but the fall of Port Arthur involves other results the great significance of which can not be foretold. Port Arthur is not simply a fortress. It is also the symbol of Russia's political power. By capturing it the Japanese have obliterated the memory of the heavy discomfiture they suffered ten years ago at the hands of the three allied Powers. At that time Japan was despised as an Oriental country without qualifications to rank with the August Powers of the Occident, but now the Japanese have removed this slur, and what is more, have broken the great symbol of Russia's political power and of her material strength in the Far East. It is impossible for the peoples of Europe to estimate how great will be the influence exercised by this event upon one-third of the human race. By the fall of Port Arthur the Japanese forces have achieved the second great object of the war. Already they had destroyed Russia's Pacific Fleet, and now, if the Baltic Fleet ventures to emerge into Far Eastern waters they have ample leisure to meet it. Thus Japan has broken Russia's might in Manchuria and elsewhere. It is truly a great success. The Japanese have not yet entered Mukden, but it is inevitable that this incident should exercise a great effect on the position of the Russian army in general. With regard to Russia's internal conditions, it is difficult to speak with entire assurance, but when this great calamity comes to the ears of thoughtful persons among the people, of whom the bulk have been disappointed by the Tsar's decree, it will be more than ever difficult to allay the nation's discontent."

The *Standard* says:—"The long awaited fall of Port Arthur has now become an accomplished fact. It can not but have important results both from a political and from a military point of view. Politically speaking the moral effect upon the Mongolian race and especially upon the Chinese will be very great. We apprehend that the perpetual occupation of Port Arthur by Japan will follow. As to the military side of the question, the Japanese armies at the Shaho will now be strengthened by the veteran army of Nogi, and the future of the Baltic Fleet, now on its way out, has become hopeless."

The *Daily Telegraph* says:—"The vehement defence of the Russians led by such an able General as Stoessel has finally been unable to withstand the martial valour of the Japanese. Simultaneously with wiping away the humiliation that they endured ten years ago, the Japanese have strengthened the bases of their international power and opened a new chapter in their history."

All the other English papers agree in lauding the defence and the attack.

The Austrian newspapers consider that the fall of Port Arthur will contribute materially to the restoration of peace. They also say that Russia's failure to relieve this, the stronghold of her power in the Far East, must greatly impair her prestige and shake public confidence in her prowess. The Japanese army hitherto held at Port Arthur, will now be free to join Marshal Oyama's forces.

The *Nova Fret Presse*, after warmly praising the Japanese General says that Russia's failure to succour Port Arthur will inflict lasting injury on her martial renown. When the news spreads into the interior of Russia, it will have the effect of fanning into flame the smouldering embers of popular discontent. The people will cease to hope for victory and will lose all confidence in the present Government, so that the desire for peace will acquire redoubled force.

The *Fremdenblatt* thinks that this capitulation agreement will not end the war but that it will make Russia assemble still greater forces in Manchuria to recover her lost prestige. Yet Korea and the key of Port Arthur have now fallen into Japan's hands, and the object of dispute in Manchuria has been largely reduced as compared with what it was at the outbreak of the struggle. Therefore there is a hope

that the war will not enter its third phase and that peace will be restored.

The *Vienna Tageblatt* observe that Port Arthur gain becomes Japanese property, and that no country will be found to dispute Japan's right to the place. For Germany now fully appreciates Japan's strength, England understood it when she formed the alliance, and Russia has simply had vengeance taken on her.

#### GERMAN OPINION.

The fall of Port Arthur is a universal topic of conversation in Berlin. German journals express the opinion that the flag of the Rising Sun having been now once more floated over the ramparts of Port Arthur, the Japanese will never consent to see it lowered again. They all agree, too, that the fall of the fortress will greatly dispirit the Russian nation and that the bravery shown by the garrison will be the only consolation.

All the newspapers published extras announcing the capitulation, and crowds assembled in the streets of Berlin. The persistence and courage of the Japanese army were much applauded, as was also the brave defence made by the Russians. It was regarded as a matter for rejoicing that the terrible bloodshed at Port Arthur had been terminated.

The *Vossische Zeitung* says that the fall of Port Arthur will have a strong moral effect upon the progress of the war. The Japanese Army will be greatly inspirited, and the Russians will be correspondingly depressed. One phase of the war has been terminated in Japan's favour, and the nation will now look for fresh developments in another direction.

The *Nord Deutsche Allgemeine Zeitung* says that apart from the question of the issue of the war, the defence made by the Russian Army in the face of such brave and incomparable forces as those of Japan will long stand conspicuous in military history.

The *Kreuzzeitung* says that Stoessel's defence will be always remembered, and that had not the Japanese been the splendid fighters they are, Port Arthur would still be safe.

The *Tageblatt* declares that Stoessel's splendid defence ranks with that of Sevastopol and will always constitute an honour to Russia in the pages of military history. The confidence and resolution of the Japanese will be increased by the event, and they will be freshly inspired to continue the struggle with their great adversary. On the other hand, the Russian troops will be dispirited and the Russian nation will become more desirous of peace. There is also another important question connected with the event. Will the Baltic Fleet continue its voyage eastward? That will have to be carefully considered, for the Japanese fleet has gained a new base, and will be able to unite its whole strength against the newcomers.

The *National Zeitung* says that the Japanese army has achieved a gallant and incomparable feat. But the names of the defenders of Port Arthur will also stand in history. The Japanese have reduced the fortress which was the stronghold of Russia's might in the Far East, and have grasped the fruits of their victories. Such strength and such endurance as the Japanese troops have shown are rare in history, and they have become the masters of Port Arthur. Here the terrible drama hitherto enacted on the Liaotung Peninsula terminates.

The news of the fall of Port Arthur did not produce any marked effect upon the quotations of Russian securities in the Berlin market. This was due partly to the manipulation of Russian financiers and partly to the belief that the incident will help to create a longing for peace in Russia.

#### BELGIAN OPINION.

The fall of Port Arthur has created a great sensation in Belgium. Public opinion shows itself thoroughly appreciative of both the attack and the defence of the fortress. More especially the remarkable achievements of the Japanese Army are alluded to with astonishment and admiration. The various pro-Russian journals, which have hitherto interpreted everything to Russia's advantage, are all astounded, and the principal of them agree in foreseeing that the result of the capitulation will be shown in the following respects:—

1. Nogi's Army and Togo's Fleet will now at once be released from the duties hitherto devolving on them. The former will reinforce Oyama, and the latter will be able to direct its whole strength against the Baltic Fleet. Probably the Baltic Fleet will be recalled.
2. Russia will forfeit prestige and confidence in the Far East.
3. Japan will unquestionably rank as a first-class Power.
4. Some third Power will probably endeavour to bring the war to a close.
5. The great internal trouble in Russia will probably be increased.

The *Independence Belge* says:—"The fall of Port Arthur is one of the greatest events of modern times. The historic prestige of the Russian empire and the world's faith in it have received their first great blow. A new country whose admission to the comity of civilization was an affair of yesterday and which was still lightly regarded as strange and still infantine has now inflicted on one of the greatest States in the world a blow and a disgrace that can never be removed."

The same journal, having related the various stages of the investing army's work, goes on to remark:—"By this event Japan has deprived Russia of her most important naval base in the Far East; has driven the Russians into the interior, and has contrived that Russian influence can not again extend to the region which for many years has constituted the cynosure of the great European Powers' ambition. These are the cardinal results. In former years Japan obtained possession of Port Arthur by escalade, but it was at once taken from her by the Great Powers. We must, however, regard her present capture of the place as a *fait accompli*, for she has purchased it at the heavy cost of the best blood of her beloved sons. Port Arthur was held by Russia under lease. Japan, by right of conquest, will now constitute herself the lessee."

The *Independence* then discusses the impossibility of Russia recovering the ground she has lost, and urges that she should lose no time in opening negotiations for the restoration of peace. It concludes thus:—"Thus only can Stoessel's brave defence be saved from the reproach of futility."

#### PRISONERS.

Saturday, January 7.

The number of Russian prisoners in Japanese hands will soon become an interesting question. Up to the 23rd of December, the latest date to which accurate records have been published, the following were the figures.

	Officers.	Rank and File.
At Matsuyama .....	50	1,351
" Himeji .....	—	891
" Nagoya .....	—	500
" Marugame .....	—	350
" Fukuchiyama .....	—	351
" Fukuoka .....	60	120
Totals .....	110	3,563

The grand total here is 3,673. To these the Port Arthur prisoners will now have to be added. What they muster we can not yet tell exactly, but probably 40,000 will be near the mark. The officers, about 900 in number, are a doubtful quantity. Judging of the terms used by the Tsar in sanctioning the arrangement for the release of the Port Arthur officers, we are inclined to think that a good many of the latter will decide to refuse the Japanese offer. The Tsar puts the alternative in the form "share the fate of the soldiers," and if he really used these exact words, many of the officers can scarcely choose but interpret them to signify that His Majesty deems it the better part for an officer to remain with his men and reserve at least the hope of being able to fight again for his country ere the close of the war. Can there be any second opinion as to that? At any moment—so, at all events, a Russian ought to suppose—many Japanese may fall into Russian hands, and thereafter an exchange of prisoners may take place, when officers held by the Japanese would recover not only their liberty but also the privilege of bearing arms in the cause of their country. To purchase the pleasure of returning home on condition of not fighting again for the fatherland is to buy ease at the expense of duty. It will be surprising if many Russian officers fail to take that view. Under any circumstances Japan will presently be holding between forty and fifty thousand Russian prisoners.

As to the Japanese who are held prisoners by the Russians, our knowledge is limited to those whose names, having been actually reported officially by the Russian authorities to the Japanese, have appeared in the *Official Gazette* in Tokyo. The following is a list taken from the files of the *Official Gazette*:—

Military Officers .....	7
Naval Officers .....	3
Military Non-commissioned officers .....	6
Naval .....	17
Naval Paymaster .....	1
Naval Secretary .....	1
Military Surgeon .....	1
Engineers (civilian) .....	16
Employers (interpreters and couriers) .....	73
Ship's Artificers (merchant vessels) .....	55
Ship's crews (merchant vessels) .....	148
Tradesmen taken from merchant vessels .....	10
Stone-mason .....	1
Total .....	339

This list merits examination. Out of the total of 339 only 34 are combatants, including a secretary and a paymaster. All the rest are non-combatants, pure and simple. What a commentary this fact suggests when we collate it with the behaviour of the Japanese at Port Arthur. The Japanese at Port Arthur never raised any question whatever about the non-combatants. They treated it as a matter of course that these should be liberated at once. Yet the Japanese know very well that many of their own non-combatant countrymen are held prisoners by the Russians, and have been so held for several months. No one could have blamed them if, on capturing Port Arthur, they had said, "Very well; here are your non-combatants now delivered into our hands. You are unlawfully holding as prisoners many non-combatants of our nationality. Release them and we will let yours go free. Otherwise we will retain as prisoners every one of your non-combatants." Is not that what any European nation would have said under the circumstances? What we wonder is whether Japan's code of conduct is appreciated.

(Received at 12.16 a.m. on the 6th instant.)

The number of prisoners taken over on the 5th instant was:—

	Officers.	Rank & File.
Fifth Regiment of Rifles.....	36	1,547
Thirteenth " ".....	38	665
Fourteenth " ".....	32	882
Fifteenth " ".....	50	1,353
Sixteenth " ".....	30	1,004

Totals ..... 186 ..... 5,451

Among the above officers 86 took the oath not to fight again.

[It is noticeable that the term *Koi-gun*—investing army—hitherto employed in the reports, is now replaced by *Nogi-gun*.—Ed. J.M.]

Monday, January 9.

We learn from the *Kokumin Shimbun* that Stoessel and the majority of his officers have taken the oath not to engage again in the war. They will be sent with the non-combatant part of the population to Nagasaki, and there released to make their own way to Russia. Ultimately the officers who have declined the pledge, and the rank and file will be assembled in Dalny for transport to Japan. Those suffering from contagious diseases—and there are said to be many such—will be kept at Port Arthur until they recover.

If the above be trustworthy, as its source indicates, the world's verdict will probably be that Stoessel and the majority of his officers have made a mistake. It is hard to apply strict moral standards to the conduct of men in such circumstances, but the message of the Tsar can be read in one way only: a distinct intimation that, in His Majesty's opinion, the more soldier-like course for the officers would be to remain with their men. The message might easily have been worded so as to avoid any such suggestion. The Tsar, having expressed approval of the stalwart defence made by the garrison, might have simply said that, in view of their long and arduous labours, the officers would do well to avail themselves of Japanese leniency by taking the oath and returning home. But he went out of his way to designate the alternative course, and in designating it he chose words which amounted to a plain indication of his own view—"share the fate of the soldiers." His Majesty's instinct was the instinct of a true soldier.

It is stated that the first batch of Russian prisoners from Port Arthur will reach Moji to-day (9th). The distribution of these prisoners will be a matter of considerable difficulty. At present there is talk of locating 4,000 at Hiroshima, 3,000 at Osaka, 2,000 at Moji, 1,000 at Fukuoka, and an unstated number at Kurume. That does not dispose of more than one-fourth of the total.

General Stoessel is said to be among the 237 prisoners who have taken the oath not to bear arms again during the war. When we say 237 we refer to the number on the 5th and 6th only; that is to say, on the first two days of the business of handing over prisoners. It will be seen that out of 508 officers transferred on those two days, 291 refused to take the oath and 237 took it. Stoessel's conduct in setting the example of giving the pledge will be criticized and rightly criticized in many quarters. The act goes far to mar his fine record.

Chefoo reports that some five thousand non-combatants reached that place from Port Arthur on the 7th instant. The number seems to be exaggerated.

(Received at the Imperial Military Head Quarters at 1.50 a.m. 7th instant.)

The prisoners handed over on the 6th instant were as follows:—

	Rank & File.
25th Regiment of Rifles Infantry .....	42
26th " " .....	40
27th " " .....	58
28th " " .....	52
7th Battalion Relief Infantry .....	14
3rd " " .....	12
10th Regiment Staff .....	2
3rd Division 11th and 12th Mixed Regiments.....	4
4th Brigade of Artillery.....	26
Garrison Artillery.....	2
Kwantung Garrison Artillery.....	68
Gendarmes .....	2
Total .....	322

Among the above officers 151 took the oath not to fight again. The total number of prisoners taken over on the 5th and 6th was 508 officers and 16,658 rank and file, and among the officers 237 took the oath.

A Moji telegram reports that 155 Russians captured in the Urlungshan and Sunshushan fights were brought on Jan. 7th by the *Jinsen Maru* from the front to Ujina.

A telegram from Kobe says that the Sanyo Railway Co. has received instructions from the Government to carry twenty thousand Russians who are expected to arrive on and after Jan. 10th from Port Arthur at Shimonoseki and Ujina and who will be sent to several places inland.

The *Jiji* believes that General Stoessel will come to Japan on his way home.

(Received at the Imperial Military Head Quarters; 11.07 p.m., 7th instant.)

At 4.30 on the 7th instant the transfer of prisoners was completed. The numbers received to-day were:—

	Rank and File.
General Stoessel's Staff.....	9
Staff of the Commander-in-Chief in Kwantung .....	6
Engineers Company.....	11
Telegraph Corps .....	4
Railway Corps .....	1
Cavalry .....	4
Crew of <i>Revanan</i> .....	22
Crew of <i>Pobeda</i> .....	22
Crew of <i>Pallada</i> .....	11
Crew of <i>Peresviet</i> .....	15
Crew of <i>Poltava</i> .....	16
Crew of <i>Sevastopol</i> .....	31
Crew of <i>Bayan</i> .....	15
Crew of <i>Roba</i> .....	12
Crew of <i>Strodevali</i> .....	4
Crew of <i>Olizant</i> .....	6
Crew of <i>Giljak</i> .....	5
Crew of <i>Amur</i> .....	7
Naval Defence Head Quarters .....	3
Public Service Bureau .....	60
Naval Brigade .....	59
Torpedo Brigade .....	10
Military Court .....	3
Field Post Office & Telegraph Bureau.....	33
Totals .....	369
Totals previously given .....	508
Grand totals .....	877

The totals given in the official statement are 878 officers and 23,491 rank and file, but as all the previous details tally mutually and show the figures 877 and 23,472, we assume the latter to be correct.

It will be observed that the totals are less than those estimated prior to actual transfer. The aggregate now stands at 24,349 of all ranks independent of the sick and wounded, which will probably raise the figure to the neighbourhood of 40,000.

(Received by the same at 2.40 p.m. on the 8th inst.)

The numbers that had taken the oath up to the 8th were 441 officers and 229 soldiers who are to accompany them. Among the officers of high rank, General Fock, Lt.-General Smylnoff, Major-General Golbatfsky and Rear-Admiral Vilman will all be sent to Japan as prisoners. General Stoessel is to leave Dalny for Russia on the 12th instant.

Tuesday, January 10.  
General Stoessel and a number of Russian officers and soldiers with their wives were

expected at Nagasaki on Monday. There is talk of the General entering a Japanese hospital to be radically cured of his hypochondria before he leaves for Russia, but other reports say that he will proceed at once to Shanghai. The Japanese are evidently taking much care to have these prisoners treated with the utmost courtesy. Accounts differ, however, as to the places at which the prisoners will be distributed. Hiroshima is now mentioned as likely to have an assignment of four thousand. Meanwhile 156 prisoners have arrived at Ujina. These are the officers and men captured at the storming of Sunshushan.

Wednesday, January 11.

It will not surprise any one to learn that General Stoessel's act in taking the oath and returning at once to Russia meets with undisguised disapproval in Japan. Tokyo journals agree in describing it as an act quite unworthy of a soldier and as calculated to tarnish the fame won by the General for his gallant defence of Port Arthur. No Japanese officer, they say, would dream of taking such a course. He would deem it his unequivocal duty to remain with the men he commanded, above all in view of the terrible experiences he and they had shared. There is evident reluctance to speak harshly of the Russian commander or to follow him with reproaches on his return journey, but it was not to be supposed that a proceeding so inconsistent with Japanese ideas of military decorum would escape condemnation. The *Nichi Nichi* suggests that there may be some special necessity for Stoessel to hasten home for the purpose of submitting a personal report to his Sovereign, but it admits that this interpretation of his conduct is conspicuously lenient, and that the nature of any such necessity is not apparent to outsiders. On the other hand, unstinted praise is given to General Fock, Lt.-General Smylnoff, Major-General Golbatfsky and Rear-Admiral Vilman who have chosen to proceed to Japan as prisoners. There can not, we think, be any question that when the Tsar penned his reply to General Stoessel's inquiry as to the terms of capitulation, he intended to signify that, in his opinion, the officers should remain with their men. From the mere point of view of artistic entity it seems most regrettable that Stoessel did not share his Sovereign's sentiment.

These four high officers who come to Japan are to be quartered at Nagoya according to present reports. The original idea was said to have been Kamakura, but it has been changed.

The Nagasaki Municipal Council has decided to ask the Town Assembly for a sum of 6,500 yen to entertain the Russian prisoners who call there. Nagasaki seems to be making great preparations of every nature to receive these officers and men. Some of them will doubtless find themselves quite at home in Inasa.

General Stoessel, his staff and family, are to leave Dalny on the 12th instant for Nagasaki, but it is expected that they will not land there, preferring to remain on board the steamer until they can transfer themselves direct to the French mail steamer due on the 16th instant. This steamer, the *Australien*, has been made the subject of an application by the French Representative in Tokyo, and she will specially call in at Nagasaki this trip to take up the General.

Lieutenant (or Captain) Milsky, who recently escaped from confinement at Matsuyama and was subsequently re-arrested,

made another fruitless effort on the 5th instant. He was accompanied by 5 privates, and they were all apprehended three days later at Minami-Yamazaki in Iyo province. This officer has always obstinately refused to give his parole. It is difficult to see how he can hope to escape, but no one will blame him for making the attempt. The Japanese, however, will be compelled to adopt measures of restraint which are evidently foreign to their wish.

Thursday, January 12.

The first batch of Port Arthur prisoners reached Nagasaki on the morning of the 10th and after medical inspection were sent on at once by steamer to Hiroshima, with the exception of those who have taken the oath and are to return home. These latter were landed at Inasa. The Russians to be released numbered 26 officers and 26 men; those sent to Hiroshima, 2 officers and 1,574 men. They belong to the Fifth Regiment of Siberian Rifles and are known as the "model troops." Accounts differ as to their appearance, some saying that they looked in tolerably good condition; others that they plainly suggested the hardships they had suffered. Each officer of those released had one portmanteau and a blanket. The parting between the officers who return to Russia and their men who remain prisoners is said to have been very touching. A remarkable reception was given by the Japanese to the released officers. They were met by officials of the municipality and by leading men of Nagasaki, and having been conducted to the temple Goshin-ji, found a collation prepared for them in the garden. Colonel Torchakoff made a short speech. He said that he and his comrades could not sufficiently thank the Japanese for granting such a kind reception to men who had so recently been their enemies. When the war was over, it was evident that Russia and Japan would be better friends than ever. This incident showed that the Japanese stood above other nations from a moral point of view. He begged that the profound gratitude of himself and his comrades might be made known to the whole Japanese nation, and he asked the journalists present to assist in realizing that hope.

Ujina expects 5,182 prisoners to reach that place on the 12th.

It is not surprising to learn that Europe, on hearing details about the number of men still available for the fighting line in Port Arthur, has changed its opinion as to the just distribution of applause. This was pointed out in our own columns when the news reached us that the defenders had still some twenty-five thousand men on the active list, not because we desire to withhold from Stoessel and his brave men the credit they fully deserve, but because the facts of the capitulation shew plainly that the garrison was not by any means reduced to the impotent condition represented by the officers who escaped to Chefoo, and because this clamour about the extraordinary gallantry and endurance of the besieged tended to obscure the greater gallantry and perseverance of the besiegers.

Friday, January 13.

One of the prisoners who has reached Nagasaki has attracted some attention. He is a man of education, and he is said to have received a decoration for gallant conduct at the battle of Nanshan. One of the returning officers was anxious to take him home to Russia under the regulation which allows each officer to be accompanied by a soldier-

servant, but the man declined the proposal on the ground that, being a Pole, he would receive scant mercy at the hands of the Russian authorities if he took the oath not to fight again.

The first batch of prisoners, 1,050, who have reached Nagasaki, are said to belong to the Division commanded by Lieut-General Fock. They are to proceed to Hiroshima and thence to Osaka. Their commanding officer will accompany them, he being among the number that have refused to take the oath. We presume that the great majority of these officers will have the good sense to give their parole against escaping, in which case they will be able to pass a very pleasant time in Japan.

There is a timely warning in the *Jiji* against over-doing the kindly treatment of Russian prisoners. Very wisely our contemporary reminds its countrymen that immense differences exist between Russian and Russian. Many of the private soldiers now in Japanese hands are utterly ignorant bores, quite incapable of appreciating leniency. These are the men who, without any provocation, assault their guards, break out of confinement and even outrage women, all of which offences have been committed by prisoners now in this country. Others, it is true, are educated and well conducted, but unhappily control must be exercised with regard to the worst element demanding restraint not with regard to the best. The Japanese, who are full of generosity and have a most wholesome habit of forgetting injuries, now show some disposition to go to extremes in their attitude towards their prisoners, and the *Jiji* suggests moderation.

#### THE JAPANESE PRISONERS IN PORT ARTHUR.

It is strange that we have as yet no official statement as to the Japanese prisoners in Port Arthur. These were to have been delivered over at once, and there is naturally some anxiety to know who and how many they are. It will be remembered that the crew of the little steamer *Hanyei Maru* are included in the numbers. From this fact, and from the details recently published in these columns, it is quite plain that to imprison non-combatants for an unlimited period is regarded by Russia as a proper usage of warfare. If we admit the hypothesis that there can be degrees of civilization in the manner of conducting campaigns, then certainly it follows that this habit of the Russians is about as unseemly as anything can be. It is only a short degree removed from the practice of robbery and outrage against the civilian population of an invaded district. The *Hanyei Maru* incident occurred in March, and her people, 11 in number, have been kept in durance at Port Arthur ever since. A recent report put the number of Japanese prisoners in the fortress at 105, and there is now talk that in this figure are included 5 marines who manned the *Oiaru Maru* and the *Sagami Maru*, vessels of the blocking squadron. If only 5 of the brave men who were reported "missing" on that occasion are alive, the affair was even more terrible than the public supposed. And if only 105 Japanese are prisoners in the fortress, it will follow that the Russians did not succour any, or comparatively any of the Japanese wounded who fell within their lines during the siege. There must have been hundreds of such unfortunate men, for time and again the Japanese assaults were forced home to

points if not actually within the works, then at any rate so close to them that the subsequent relief of the wounded could not but devolve on the besieged. Where are all the brave men that were left lying hurt and helpless on these occasions? Were they suffered to lie through long days and nights, dying by inches without so much as a draught of water or a hand stretched out to help them? It is very fine and very satisfactory to learn now of the chivalrous treatment extended by the Japanese to the remnant of the garrison, but General Stoessel and his officers must explain these shockingly suggestive facts before they claim any sympathy for their own sick and wounded, who lacked medical comforts and even necessities, and above all before they accept the credit of having conducted an honorable warfare.

(Received by the Imperial Naval Department.)

Among the men reported missing on the occasion of the third blocking operation at Port Arthur, the following have been taken over by our army and sent to the hospital ship, namely, 5 belonging to the *Sagami Maru* and 5 belonging to the *Oiaru Maru*.

[This makes 15 thus far recovered thus far among 88 missing.—Ed. J.M.]

(Received at the Naval Department.)

With the exception of the sixteen men already found among the prisoners at Port Arthur, there is not one survivor of the men engaged in the third blocking operation.

It seems strange that no absolutely definite information should yet be forthcoming about the Japanese prisoners in Port Arthur. The Naval Authorities have distinctly ascertained that among 88 men reported missing on the occasion of the third blocking operation, only 16 reached land, or, at any rate, only 16 consented to be saved. That is a terrible percentage, and bitter disappointment must be the lot of many families who have hitherto been living in hope that the issue would be different. But even more appalling do the facts appear to be with reference to military prisoners. All accounts agree that there are only 107 prisoners in all, and whether these include or exclude the naval men we do not know. Assuming that they exclude them, however, we have still to deduct 11 men taken from the little steamer *Hanyei Maru*, 11 men whose detention in durance since the 26th of March is one of the grossest possible violations of civilized warfare. Making this subtraction there remain 96 prisoners, namely, 2 sub-lieutenants and 94 rank and file. Is it conceivable that these represent the whole number captured by the Russians throughout the long course of a siege which included numerous assaults on the forts, assaults every one of which must have resulted in the fall of many Japanese wounded within the Russian lines? General Stoessel, in his despatch about immunity for hospitals, spoke of Japanese wounded being included among the inmates of these buildings. There is still room to hope, therefore, that the record is not quite so black as it looks, but we are somewhat surprised that it has not yet been found possible to clear up this point completely and to relieve the anxiety of waiting friends and relatives. Still, the work of going through some 15,000 or 16,000 sick and wounded is not to be accomplished in a few days.

#### GENERAL STOESEL'S REPORTS.

The Foreign Office has received by telegraph from St. Petersburg the text of two reports sent by General Stoessel to the Tsar and published in the Russian capital. The

first bears the date of December 28th and was published in St. Petersburg on January 3rd. It runs as follows:—

"The situation of the fortress has become most cruel. Our principal enemies are blood-poisoning—due to insufficient diet, hard labour and want of vegetables—and the 11-inch shells of the Japanese. Only a few of the garrison are free from blood-poisoning, and the trouble spreads in spite of all the efforts made to check it. Owing to lack of ammunition we can not reply to the Japanese 11-inch guns and are obliged to endure their fire passively. These conditions daily diminish our defensive capabilities. The losses of our troops may be inferred from the heavy casualties among the officers of rank. Of ten officers of General's rank Kondrachenko has been killed and Ladnatofsky has died. Nadowensky (?) and I have been wounded. Golbatofsky also has been hurt. Out of 9 colonels commanding regiments, 2 have been killed, 2 have died of wounds 4 are wounded. In addition to these very many of the senior officers have been killed, wounded, or struck down by sickness. The same is true of the rank and file. The companies do not now average more than 60 men each, and several of them are commanded by ensigns or lieutenants. Since the 18th of this month the enemy has not made any attack, but on the 27th he exploded a mine under No. 5 battery. Twenty brave soldiers of his scaled the parapet but all were killed by our fire. In revenge for this the enemy has been heavily bombarding us with 11-inch shells, and although he knows that our wounded can not return to the fighting line, he makes a point of firing on our hospitals. The number of our men in hospital is now 13,000, and some 300 are added daily."

The second despatch is dated December 29th and was published in St. Petersburg simultaneously with the former:—

"At 10 o'clock yesterday (28th) the enemy exploded a mine under the parapet of No. 3 Fort. Thereupon the whole of his siege artillery opened a heavy fire on this fort. At 3 in the afternoon he made two attacks upon the parapet from the direction of the glacis and the ditch, but both were repulsed. But he thereupon made his way in by ascending the funnel-shaped opening in the parapet produced by the explosion, and this force of his, being assisted from all directions, poured into the fort. By 5 p.m. they had possessed themselves of the parapet, and thereafter about 2 battalions charged into the interior of the fort. Our men resisted from the fortifications, but these were greatly injured by the enemy's fire. A force of our troops were in the covered gallery, but the enemy planted a quick-firer at the entrance, and it was impossible for our men to emerge. Our reserves made three counter-attacks to relieve this imprisoned force but failed to do so. Thus the fort fell into the enemy's possession. Our casualties were very heavy, especially among the officers. The Japanese have now occupied the north-eastern sector of the fortress. We can hold out for some days longer. Our ammunition is almost exhausted. I propose to take measures so that the horrors of a final fight in the streets of the town shall be averted. The blood-poisoning plague is spreading daily. We have ten thousand men in the fighting line, but all are ill."

The *Kokumin Shimbu* makes a faint-hearted attempt to shield General Stoessel against the criticisms that his conduct has evoked in Japan. What the Russian Gene-

ral is mainly blamed for is, first, that after offering to capitulate he ordered the destruction of ships and forts and even caused vessels to be sunk so as to block the entrance to the harbour, thus taking an active measure of defence against the very troops to whom he was proposing to surrender; secondly, that instead of remaining with the men who fought so bravely under his command, he is turning his back upon them and making his way home while they remain in captivity. We observe that the *Kokumin* has not a word of excuse to formulate on the first of these two counts. Nor indeed can any excuse be found. What Stoessel did was to offer to hand over the fortress to the Japanese on condition that they allowed his officers and men to return to Russia, and in the meanwhile he took every possible step to destroy the fortress.

It was essentially a dishonorable act. Nothing can excuse or palliate it. But as to Stoessel's return to Russia, our contemporary is inclined to find reasons. It denies that the conduct of Admiral Ting at the fall of Wei-hai-wei can be justly contrasted with that of the Russian General, for Ting knew that if he went back to China he would be degraded if not put to death, and that the choice consequently lay between suicide and public disgrace. He might, indeed, have fled to Japan as he was invited to do, but that would have been a very poor ending to a glorious career. General Stoessel has no such difficulties to encounter. He will be received with open arms in Russia as the gallant defender of Port Arthur, and we notice that this gallant defence is the one point upon which the *Kokumin* finds itself able to lay unequivocal stress. The Japanese, our contemporary says, had reasons to think that they could capture the fortress in August—it is a pity that the *Kokumin* can not appease public curiosity, by detailing those reasons—, whereas under Stoessel's command it held out until the end of December. That is a fine record which nothing can mar. But does it outweigh his conduct in ordering the destruction of the ships and the forts after he had offered to capitulate? Does it outweigh his conduct in quitting the men to whose bravery and endurance he owes his title to fame? We fail to detect that the Tokyo journal attempts to answer either of these questions in the affirmative. And very significant is the concluding paragraph of its article. Should Stoessel's action, it asks, be taken as a model by Japanese military men? Not for one moment. In the face of such a conclusion, we really find that the *Kokumin's* essay, though permeated by a fine feeling of generosity towards a fallen enemy, amounts to a scathing arraignment of Stoessel.

#### KOREA.

Saturday, January 7.

As to General Hasegawa's order that Japanese gendarmes and police shall henceforth discharge the duties which the Korean police have proved themselves incapable of performing, it is said that Mr. Hayashi has intimated to the Foreign Representatives that these duties will include the preservation of order in the case of the foreign as well as the native elements of the population. Mr. Hayashi is further reported to have told the Emperor of Korea that the measure has for sole motive the maintenance of the public peace, which it has been amply shown that the Korean police entirely fail to preserve. In point of fact nothing has been more con-

spicuous in Korea during the past twenty-five years than the incompetence of the police. They either leave rioters to work their sweet will, or they interfere in the interests not of general good order but of special politics. We have always foreseen that the Japanese would be obliged to take these matters into their own hands, but doubtless the necessity will be disputed in many quarters. Those that dispute it, however, have to demonstrate that Korean police can be trusted to perform the task now transferred to the Japanese, and such a demonstration is scarcely possible.

The *Fiji Shimpō* publishes the text, or a Japanese translation, of the agreement concluded on the 27th of December between Mr. D. W. Stevens and the Korean Government. Mr. Stevens is to have wide functions. He is to examine into and prepare drafts of his views on all questions having connexion with the Empire's foreign affairs. He is to be consulted about all correspondence between the Korean authorities and foreign Governments, and no despatch is to be sent to the latter without his approval. He is to be entitled to attend all official councils on foreign matters and to announce his opinions. He is to have the right of making direct representations to the Emperor. Finally, should there be a desire on the part of either of the contracting parties to terminate the engagement, the consent of the Japanese Minister will be essential, whereas, if the Japanese Government desire to terminate it, the Korean Government will be bound to consent. Evidently without some stringent arrangements of this kind the important office to which Mr. Stevens is appointed would soon become a mere sinecure as all such offices have hitherto been in Korea. It is one thing to appoint an adviser, another thing to consult him, and yet another thing to follow his advice. The terms of this agreement seem fully calculated to secure the new councillor against being reduced to a cipher. Japan's object is to straighten out Korean affairs and to put an end to the international friction for which the intriguing of Korean politicians and the scheming of foreign adventurers have been responsible ever since the peninsular empire was opened to the world's intercourse. Such objects are not to be obtained without decisive measures. Every careful reader of modern history will agree in regarding it as quite essential to the preservation of peace in the Far East that Korean affairs should have some measure of order introduced into them, and if Japan approached the task with gloved hands, as she has always hitherto done, the outlook would be hopeless.

Monday, January 9.

The regulations, nineteen in all, issued by General Hasegawa for the military policing of Seoul and its neighbourhood show that the main object of the measure is to secure the tranquillity and good order of the region forming the hinterland of the Japanese Army's operations. These regulations interdict in detail all acts calculated to inure to the disadvantage of the Japanese, as for example, spying on behalf of the enemy or assisting his spies; rendering aid of any kind to him; contriving the escape of prisoners taken by the Japanese; forming parties to resist the Japanese; impeding the movements of Japanese troops; injuring military telegraphs, roads, machines or vessels, or doing anything to impair their utility; injuring bridges or buildings; stealing or doing anything to the impairment of arms, ammunition, provisions or articles of war in general; conveying news or spreading rumours

detrimental to the Japanese army or posting placards of that tendency; offering opposition to the employment of labourers by the Japanese or refusing to comply with requisitions; forming associations or employing newspapers or other publications to disturb public peace and good order; entering or sojourning in districts to which a veto extends; concealing or conniving at the escape of law-breakers, or making away with proofs of guilt. Penalties of more or less severity are prescribed for violations of this code.

General Hasegawa is said to have advised the Emperor of Korea that whereas in other countries the military outlays do not exceed one-fourth of the State revenue, in Korea they amount to one-third, while, on the other hand, the Korean army has never done anything justifying its existence. It is manifestly useless for the purposes of war against foreign nations, and the Government ought therefore to recognise that the sole function of the troops is to preserve order at home. The General suggests that 8 battalions would be an amply sufficient establishment, namely, one in each province. Cavalry, artillery and engineers are quite unnecessary for present purposes, but as a school for educating officers and men, one company of each of these arms might be maintained. All incompetent and superannuated men should be removed from the service. Two battalions of Guards should be formed to protect the Palace, and they should be organized with specially selected men. Further, there is no occasion for a land-transport corps: horses and vehicles alone need be kept. If it be thought essential to have some cavalry in the Palace Guards, a small force might be formed. As for gendarmes, the present establishment suffices, and the men may be distributed to whatever places they are required. The General further recommended the amalgamation of several military departments which the Korean Government has organized separately in imitation of the Japanese system.

Tuesday, January 10.

From accounts published in Tokyo journals we gather that good progress has been made in constructing the Seoul-Wiju Railway, though things have not moved quite so fast as was expected. Thus whereas the original idea was that the line might be opened from Seoul as far as Pyongyang by the close of 1904, the prospect now is that this section will not be completed until the middle of the present month. Meanwhile work has been going on southward from Wiju, and the section to Chonju, a distance of 40 miles, will be finished in February. There will then remain only some 60 miles to be constructed in order to bring Seoul and Wiju into communication.

With regard to the extension of this line into Manchuria, which was one of the proposals made to Russia by Japan and rejected by the former, a survey of the locality has been made by Mr. Nomura, an engineering expert of the Department of Communications. He returned at the close of last year from completing the task, but as his report has some relation to military affairs, it is not published. The impression seems to be, however, that the Fengwangching-Mukden route will be selected.

In this context it may be mentioned that there are 50 stations between Seoul and Fusan, on the recently opened line, and 11 on the Seoul-Chemulpo road. Rumour says that all these stations are to be known by the Japanese renderings of their Korean place-names.

Thursday, January 12.

The Reform Party (*Il-chin-hoi*) in Korea has been dissolved. A grand meeting of its urban and provincial members took place on the 9th instant in Seoul, when the President informed the assembly that no occasion existed for the continuance of the organization. Its original object had been self-protection as against the arbitrary doings of the Korean police. But now that the police power of the Japanese had been extended, this purpose was no longer imperative, and the party might break up.

Mr. Hayashi is said to have asked the Korean Government for permission for Japanese ships to visit all parts of the Korean coast, paying, of course, the usual customs duties and tonnage dues.

The Japanese gendarmes in Seoul have issued detailed regulations for the control of public meetings and associations. These regulations closely resemble those formerly operative in Japan. They require organizers of associations to proceed in accordance with official sanction, and they forbid all public assemblies of the nature of demonstrations. Evidently the Korean capital is at last about to enjoy a period of peace and good order.

The Seoul-Fusan railway is said to be now taking only 7 yen per mile daily. Until 10 yen is reached the road will not pay working expenses.

There is published in Seoul an Anglo-Korean journal the title of which is a matter of no consequence. From its recent issues we take two extracts:—

Some four or five of the agitators were slightly wounded and then the Japanese soldiers interfered on behalf of the *Il-chin-hoi*, disarmed the Korean soldiers and arrested their officers.

What excuse will be made by the Japanese for their high-handed proceedings we do not know but the fact remains that the Japanese authorities are responsible for all the trouble, from beginning to end. By the aid of subsidies they get together a society composed of all the riff-raff of Seoul which does not include a single respectable Korean. This society assembles and talks sedition, yet when the Korean Government takes steps to suppress the meetings the Japanese step in and prevent them.

What are we coming to? The real purpose which the *Il-chin-hoi* is intended to serve has not yet leaked out but we should not be surprised if the ultimate design of the Japanese is the substitution of Japanese for Korean soldiers as palace guards.

It is only reasonable to suppose that the erstwhile bellicose and aggressive Government of Japan has by now realized the futility of its undertaking, and would be willing to listen to proposals for a peaceful settlement could terms be devised which would involve no loss of face. But, in view of the fact that Japan was the original aggressor, and chose her own time and place for the making of the "coup" which was to "prick the bubble" of Russia's reputation, it can hardly be expected that Japan will obtain by diplomacy anything which she has shown her inability to take by force at a time when all the circumstances were in her favour.

It is not, we need scarcely say, with any idea of discussing the opinions expressed in these extracts that we quote them. Our object is to compliment the Japanese on the strength of their position in Korea since they can afford to suffer such journalism, and on their liberality in suffering it. In a country like Korea, where newspapers are comparatively novel affairs, the influence they exercise may be very pernicious, and in such countries it has always been deemed wise to impose some legal restraints upon freedom of speech. But the Japanese apparently think that no need for precaution exists in Korea. This is another interesting parallel between Egypt and the little peninsular empire. In Egypt, after 1881, the efforts of the British Government to re-organise the country and to bring prosperity to the people as well as to obtain for them the blessing of security of life and property, were hampered

by the French local press, which could see no good in anything English. France was then England's enemy, so far as concerned Egypt. Therefore it was not unnatural that French journals should take that line. England, on the contrary, is now Japan's friend and ally, so that it is distinctly unnatural for an English paper to take any such line in Seoul. But just as the British in Egypt went on quietly doing the right thing and ignoring newspaper clamour, so the Japanese in Korea are following the dictates of wise statesmanship in paying no attention to scurrilous journals. It is a good sign.

Friday, January 13.

A skirmish is reported at Kowon, near Yuesan in Korea. The Russians are said to have had 9 killed and to have lost 8 horses and some rifles, while the Japanese had only one man slightly wounded. The Japanese numbered 30.

#### NAVAL CASUALTIES.

So far as we can ascertain by carefully collating the various official reports, the total casualties in the Navy from the outbreak of the war to the beginning of December were as follow:—

	Killed	Wounded	Died of Wounds	Total
Officers.....	127	8	85	220
Warrant Officers.....	33	3	25	59
Blue-jackets.....	1,303*	56	854	2,213
Others .....	22	2	23	47

Total..... 1,485 69 985 2,539

(\* Including 88 of the men belonging to the blocking squadron whose fate is unknown.)

To these we must add the losses sustained by the Naval Brigade in the shore operations from the 15th of August to the 30th Nov. :—

Severely wounded .....	60
Slightly wounded .....	170
Killed.....	20
Died of wounds .....	10

Total .....

Then again we have to add the casualties connected with the torpedo attack upon the *Sevastopol*. These appear to have been heavier than was at first supposed namely:—

	Killed	Wounded
13th December .....	—	3
14th " .....	18	—
15th " .....	11	—
16th " .....	4	—
Totals .....	33	3

Yet one other addition must be made, namely figures published in the *Official Gazette* on the 24th and the 26th of December but not explained. They are:—

	Killed
24th December .....	1 officer.
26th December .....	67 blue-jackets.
	8 officers.
	66 blue-jackets.

Total .....

These figures make a grand aggregate of 2,977 casualties, namely 1,759 killed and 1,218 wounded, among the killed being 144 officers and among the wounded 85. But it must be noted that the figures as to officers are not wholly trustworthy.

Such totals illustrate the cardinal difference between naval fighting where cannon only are used, and military fighting where the rifle is the principal agent of destruction. Rifle bullets wound 4 men for every one they kill, whereas gun shot kill 5 for every four they wound.

The Emperor will present colours at 10.30 a.m. on Jan. 18th at the Palace to a new regiment. The Imperial Princes and high officers of the army and the navy will be present.

## CHINA.

Saturday, January 7.

The Russians have been getting into further trouble in Shanghai. On the evening of the 3rd two of them purchased some *samsu*, but not having any means of drinking it, they borrowed a cup from a neighbouring house. As they did not return the cup, a woman went from the house to fetch it. The Russians dragged her to a secluded place, and were proceeding to assault her when a number of Chinamen collected, rescued the woman and beat the sailors. The Taotai has made strong representations to the Russian Consul.

Monday, January 9.

News from Peking says that the Foreign Representatives there view with much approval the terms granted by Japan to the garrison of Port Arthur, and that the German Minister, who constantly maintained that the fortress was impregnable, expresses much astonishment at its fall. As to the terms, there can be no second opinion on the score of liberality. Whether they are altogether wise from a practical point of view is another question. It is beyond all doubt, and the Japanese well know it, that some of the *Varyag's* crew have been found serving in Russian warships recently disarmed. There is thus the most conclusive evidence that the Russian Government will disregard pledges given to secure the liberation of prisoners. A European Power, in Japan's place, would have proclaimed this fact; would have declined to extend to the marines in Port Arthur any measure of leniency whatever, and would have explicitly stated the reason for that course. Japan, however, reckons that the reward of magnanimity, though intangible, is in the end much more valuable than anything obtainable by retaliation. She is right.

Wednesday, January 11.

Peking sends an almost sensational report of the doings of the *Gignu* (righteous army) which was recently organized by the Manchurians for the purpose of opposing Russian outrages. This army is said to be distributed at Kingking, Hwaijien, Tunglwa, Sinpau and Langching; in other words, throughout the district between Fushun and the Yalu. Its forces are reported to have gained repeated victories over the Russian detachments sent to attack them. They are organized into battalions and brigades, after the manner of a regular army; they wear a kind of uniform and they appear to be well armed. Colonel Madoriloff, who commanded the Russian troops confronting them, is said to have returned to Mukden, and to have been replaced by Major-General Kantaro, who has marched out with reinforcements numbering 6,000. The righteous army is believed to be acting in concert with five or six thousand Hungtshu who operate in the Penhsihu region. If the accounts sent from Peking about the army's doings be at all accurate, the Russians, by their excesses, have raised against themselves an enemy not at all to be despised.

Peking telegraphs that France's attempts to bring about the pacification of the Kwangsi rebels having been hitherto thwarted by the Viceroy of the Two Kiang, she has now assembled a squadron at Hanoi, and is making demonstrations of force.

There is a report from Honan that anti-Christian disturbances are apprehended, and also that the Kolaohui are showing signs of restlessness in Chungking.

Thursday, January 12.

The Chinese authorities in Shanghai have decided, it is stated, to seek sanction for a code of seven regulations which they deem essential to the preservation of good order among the crews of the Russian vessels at Shanghai. The gist of the regulations is that the duty of protecting these Russians shall devolve solely on the Taotai; that the place where the men may walk shall be strictly limited; that the Chinese local authorities shall have competence to try and punish, without reference to the Russian authorities, any men attempting to escape; that the Taotai may proceed at any moment to the ships and muster the crews; that a similar discretionary power with regard to inspecting the condition of the ships and their stores of coal shall be vested in the Taotai, the Inspector of Customs and all Chinese army and navy officers; that the Taotai, consulting with the Senior Consul, shall be competent to take measures against the visits of the men to the foreign settlements and to arrest all persons walking there without permission; and that Peking shall send an interpreter to assist the Taotai in the performance of these duties. It is uncertain whether the Chinese Government will consider itself competent to give practical sanction to such regulations without the agreement of the Russian authorities.

## THE LATE DR. SCRIBA.

On Friday afternoon the remains of the late Professor Dr. Scriba were interred in the Aoyama cemetery in the presence of a great assemblage of all nationalities. Many of the deceased's countrymen came from Yokohama to attend, and several of the Foreign Representatives followed the cortege. The Emperor having conferred on Dr. Scriba during his last illness the First Class Order of the Sacred Treasure, a strong body of soldiers acted as a guard of honour at the house of the deceased and in the cemetery. Heavy rain began to fall after the procession had started but the rites were in no degree abbreviated for that reason. It is perhaps within the truth to say that no larger body of mourners ever followed the remains of any foreign resident of Tokyo to the grave.

The following Resolutions of the Standing Committee of the Tokyo diocese of the American Episcopal Church Mission on the death of Dr. Scriba, are sent to us for publication:—

The Standing Committee of the Missionary District of Tokyo, acting in the absence of the Bishop, as the Ecclesiastical authority of the District, at a meeting duly called, adopted the following Resolutions:

I. The Committee having learned of the death of Dr. Julius Karl Scriba would express their great regret, and their deep sympathy with his bereaved relatives.

II. Dr. Scriba, having been connected, as a consulting and operating surgeon, with St. Luke's Hospital for the past two years, the Committee desires to record its high appreciation of the advantages which accrued to the Hospital from his great skill, his persevering fidelity to his patients and his generous assistance.

III. Since all the members of the American Church Mission who are officially connected with the Hospital were absent from Japan at the time of Dr. Scriba's death, and so were unable to pay due honor to his memory, it is further resolved that this series of Resolutions be spread upon the record book of the Committee.

(Signed).

E. R. WOODMAN,  
President.Attest: GEO. WAI LACE,  
Secretary.

Tokyo, January 9th, 1905.

## THE BALTIC FLEET.

The doings of the Baltic Fleet become more and more perplexing. Reuter told us yesterday that another contingent of ships was to sail from Libau between the 28th of January and the 2nd of February to join Rojestvensky. These ships are the *Imperator Nikolai I*, a ship of 9,700 tons with a nominal speed of 15 knots, laid down in 1886 and completed in 1889; the *General Admiral Apraksin*, the *Admiral Oustakoff* and the *Admiral Seniavine*, three sister-ships of 4,126 tons, with a nominal speed of 16 knots, commissioned respectively in 1896, 1893 and 1894. These last are sea-going coast defence iron-clads. Finally, there is the cruiser *Vladimir Monomach*, which has a displacement of 5,754 tons with a speed of 15 knots, and was completed in 1881. If these ships are to join Rojestvensky it is plain that the latter must wait for them before entering Far-Eastern waters, which means that the Baltic Fleet can not arrive upon the fighting stage before May next. The strange thing is that Rojestvensky should be delayed in order to receive this re-inforcement, for the five ships will still further impair the homogeneity of his fleet and can not add materially to its strength. Then there is the question, where will the squadrons already *en route* wait for those coming after? Rojestvensky's section is now supposed to be at Ste. Marie in Madagascar. Another section is apparently on the way from Suez to Madagascar. A third left Suda Bay in Crete on the 8th inst. And now we learn that a fourth is to set out from Libau at the end of January or the beginning of February. Apparently all are to rendezvous at Madagascar, which means that the Russian vessels are to enjoy the hospitality of a French port for a period of some three months. That is quite inconceivable. If anything of the kind be permitted by France, she must inevitably be counted a belligerent. Yet it is impossible to see any other arrangement, unless Rojestvensky and the three squadrons now at sea are to make their way back to European waters and concentrate anew prior to a final start for the East. It is all a mystery, and it grows daily more like a farce. At all events a great many things will have happened before May next.

## DEATH OF MR. HARRY MOSS.

We regret to announce the death at 4 o'clock on Wednesday morning at his residence 219-D Bluff of Mr. H. Moss, one of the oldest residents of Yokohama. Mr. Moss, who was a native of Bristol, England, arrived in this country toward the end of 1859 in the schooner *Dayspring* and after a cruise to Hakodate left that vessel and settled in Yokohama. Mr. Moss engaged in a variety of occupations, being at the time of his death in active business as an estate agent and broker. The deceased gentleman, who was 69 years, suffered from asthma but had lately secured some alleviation of that ailment, and his sudden demise will come as a shock to his many friends.

Mr. Moss was a prominent Freemason, his knowledge of the jurisprudence and his enthusiasm in the working of the craft rendering his services as valuable as they were cheerfully given. He was a P.D.G.W., a P.Z. and had on many occasions occupied the principal chair in the Orient Mark and O'Tentosama Lodges. Mr. Moss leaves a wife and a large family with whom deep sympathy will be felt.

## THE RUSSIAN SHIPS.

We have been hearing hitherto that the *Sevastopol* was shattered by an explosion and sent to the bottom in that way, but Commander Suzuki of the Navy tells a different story. He was watching the entrance of the harbour from a torpedo-boat at a distance of some 6 miles, when, on the 2nd instant, the *Sevastopol* was observed to be making her way out, in tow of two steamers. Those on watch, being ignorant of the capitulation, observed the vessel very closely. She was cast off by the tow-boats at a point about 1½ miles south of Ching-taushan and she was then observed to be sinking steadily, taking constantly a heavier list. Finally the whole of her deck became visible as she heeled over, and just when her masts seemed likely to touch the water, she went down. This had occupied about an hour, and up to that moment there had not been any explosion or any smoke. But at the instant of the vessel's sinking, a column of water rose from her and the sound of an explosion was heard. She went down in some 20 fathoms, and it is conjectured that the cause of sinking was the opening of her sea-cocks, the final explosion being caused by pent-up air. The *Otravny*, on the other hand, as well as a large three-masted steamer which were sunk near the same place, obviously owed their destruction to explosions. The evidences of this were very plain.

## BANZAI! TEIKOKU BANZAI!

(By a FEMININE OBSERVER.)

Who would have thought, last Thursday, as they looked on the neat, polite, smiling thousands assembled on the Yokohama Cricket Ground that there were any such things as want, care, or sorrow in our midst; and how many realized, when they looked on the admirable result, the indomitable courage of the great heart of Japan that alone made it possible? In all that rejoicing throng there must have been few indeed, who, if they had not actually experienced the grinding pain of poverty, had felt at any rate the deeper though more ennobling pang of tragic bereavement, as well as the sorrow of separation from friends and relatives engaged still in the great struggle; and all alike must have at such a time grave anxiety for the future. Yet each unit in that mighty throng, from high official to humble coolie, was animated with a calm, almost sweet politeness, and the mass of beamingly happy faces did one's heart good to see. From three o'clock till close on six band after band of the gay processionists, men grown grey in their country's service, young striplings eager for their turn to come, little toddling babies turned for the nonce into miniature editions of their soldier or sailor fathers, students, clerks, men-of-war's men, nurses, *gogai* with their jingling bells, *ronin*, *samurai*, the man in the street, even the ever-useful *gomiya san*, all were there, and still kept arriving, to take up their places in as orderly and well conducted a manner as though on Church parade. Here and there sat gay parties picnicking on the grass, their long march in store necessitating a supply of provisions. Other groups posed with ready good nature for the ubiquitous snapshotter; some stood apart and conned the words of the war-songs to be sung in the now soon-to-be great procession. Many turned rapt faces skywards to watch the inspiring day fireworks, which broke every few moments above us, to liberate perhaps

a shower of golden rain, a dissipated tiger who invariably elected to float feet uppermost, an inflated wrestler, a Red Cross nurse, or a portly Russian officer of not too handsome aspect, and then, to catch this last on impaling bamboo, there would be a merry rush, in which boys and men took equal part. Yet even as the sunshine faded and the grey and primrose twilight fell, in and out among it all, in perfect safety and comfort, walked foreign ladies and children, in many cases quite unattended, with a ready answering *banzai* for every gay but courteous salutation. As the stars came out and the mantling darkness settled over the vast crowd, there was a merry set of English ladies and children having an impromptu meal on the steps of the Pavilion, and none shouted *banzai* more heartily than they when the time came. As the different groups of the procession in waiting around the Recreation Ground began to light their lanterns the scene was indescribably lovely, the gay globes of light looking like huge glow-worms against the dark background of foliage, for every tree was made visible and *banaai* after *bansai* rent the air! Eulogistic speeches were made from the Pavilion by venerable officials, their words punctuated by most loyal and enthusiastic *bansai*: a band played the Japanese National Anthem, and then enthusiasm and expectation having risen to fever-heat, about six o'clock the procession finally got under weigh, in perfect order and the utmost good humour. As it passed joyfully out of the principal entrance foreigners vied with the Japanese in the heartiness of their acclamations, and a group of English seemed highly pleased when a Japanese paid them the thoughtful compliment of a passing "Hip-hip-hurrah!" Like a gleaming, golden river the procession wound round the Recreation Ground, the crowds before taking up the rousing *bansai* of those behind, and it seemed as though for that night, at least, Sorrow slept, and the angel of Peace kept loving watch over fair Japan.

## THE NEXT BIG OPERATIONS.

The *Kokumin Shimbun*, generally a most trustworthy authority, speaks as though it was virtually certain that Kuropatkin will soon essay a forward movement. Our contemporary assigns to him 317 battalions of troops and over 1,100 guns. That in itself is an interesting statement. At the battle of the Shaho, the Japanese official report gave him 276 battalions of infantry, mustering 200,000 bayonets, 173 sotnias of cavalry, representing 26,000 sabres, and 122 batteries of artillery, or 950 guns. If he has now 317 battalions of infantry and 1,100 guns, he must have received 41 battalions and 150 guns since the Shaho fight, and if we assume that his losses have also been compensated so as to bring up his battalions to the strength they had before the Shaho, then he has now 230,000 infantry in round numbers, 26,000 cavalry and 1,150 guns, or a force approximating 270,000 of all arms. The *Kokumin* speaks of 300,000 but that, we suspect, is a very broad estimate. The view taken by our contemporary is that although Kuropatkin, were he free to consult his own hereditary inclinations, would now retire, especially as the attraction which held him near the Liaotung Peninsula has disappeared, retirement would be a very difficult, if not an impossible, feat in the face of an army lying camped within rifle-range. Besides, apart from mere tactical consider-

ations, there is the fact that Russia having received two heavy blows within the past month, the destruction of her Pacific Squadron and the capture of Port Arthur, is in a manner bound to make an attempt to retrieve her fortune by striking a strong blow with her army in the field. The hopes she centered upon the Baltic Fleet had two bases; first, that Port Arthur would endure until the Fleet's arrival, and secondly that a powerful remnant of the Pacific Squadron would be available to assist the new comers. Both of these contingencies have disappeared, and nothing now remains but to strike with Kuropatkin's Army. The stroke will be delivered soon and its effects will be much more momentous than was the fall of Port Arthur.

That is the *Kokumin's* opinion. We offer it without comment. But to this context belongs the latest estimate given by *The Times'* Military Expert on the subject of the Russian programme of organization in Manchuria:—

Meanwhile, Kuropatkin, with a free hand and a promise of support limited only by the restrictions of troop-transport, is in process of reorganizing his army. He has found nothing better than to conform to the procedure of his enemy and to divide his army into three, each of four army corps and two brigades of rifles. Each army, when complete, will number 150,000 men, and by the spring the Russians anticipate that they will be able to take the field with something under half a million of men and a formidable train of artillery. General Linevitch has been very properly given command of the First Army, consisting of the old Siberian and East Siberian Corps, under Stackelberg, Sassulitch, Ivanoff, and Zarubaeff respectively, while General Kharkevitch, formerly Quartermaster-General of the Army of Manchuria, becomes Chief of the Staff of this army. Linevitch is already at Mukden, and the organization of this army should be far advanced, but the troops composing it have fought more and suffered more than any other part of the army and require heavy reinforcements before they resume operations.

The second Army, under General Gripenberg, will probably be composed of the 8th, 16th, and 21st European Army Corps, and to these may be added either the 5th or 6th Siberian Corps, formed of reserve troops from the west, and already on the spot. The commander of this army is now on his way to the East, where he will find half his troops assembled—namely, the Siberian corps allotted to him and the 8th Corps, the last units of which should have arrived at the end of last week, but may have been delayed. The 16th Army Corps the division of which have recently been reviewed by the Tsar, will follow, while the six rifle brigades under orders will probably be fitted into the scheme of railway transport between the various army corps and will be distributed among the three armies on arrival. The second Army cannot be ready for many weeks, but the exact date of its concentration cannot yet be fixed owing to the uncertainty which prevails respecting the capabilities of the railway for troop-transport during the winter. Especially on the new circum-Baikal section, and also owing to the doubt whether the new army corps, or the rifles, or lastly the drafts to make good losses, will have precedence upon the line.

The Third Army, under General Baron Kaulbars, has all its cadres on the ground—namely, the 1st, 10th, and 17th European Army Corps, under Meyendorff, Tserpitzky (vice Slutchevsky), and Bilderling, besides a Siberian corps, probably the 6th, under Soboleff, which will be told off to this army. General Martson will be Chief of the Staff of the Third Army, but at present Kaulbars has not left Western Russia. The troops of this army, like those of the First, have suffered heavily and will require very large reinforcements before they are up to strength. Both the divisional commanders of the 1st Army Corps have been relieved of their commands; so has the commander of the 10th Corps, while both the 10th and 17th Army Corps lost the best part of one of their artillery brigades at the Shaho. It will, indeed, be an affair of many months before the Russian army is able to resume operations with anything approaching the strength which would normally be represented by the units intended to form part of it. If we put down the present effectives of the field armies under Kuropatkin at 250,000 men we are probably not far from the truth, and we cannot anticipate that the 450,000 or 500,000 men required will be assembled before the break-up of the winter, even if all circumstances are favourable.

There has not been any question as yet of considerable reinforcements of cavalry. The 4th

Don Cossack Division has arrived and has been engaged, but the difficulty of transporting horses in the winter and the want of forage have made it impracticable to send out large bodies of mounted men or even to keep efficient and complete those already in the field.

On the other hand, the Russian artillery has been considerably reinforced. By direction of various *priksars*, notably those of June 15 and September 7, the total number of mountain batteries has been increased from the original two to 12 in all, each of eight guns, while 12 ammunition columns have been organized to accompany them. As we have already given the Japanese organization of mountain batteries, we may notice that each Russian battery has 300 combatants and 153 non-combatants, 158 packhorses for the material, and 115 for the regimental train. The material of the battery includes the eight guns and 160 cases of ammunition, two to each pack-horse. The gun, wheels, and carriage are carried on five horses. The ammunition column has 178 combatants and 99 non-combatants, with 216 horses, 96 of which carry ammunition. In addition to these mountain batteries there were formed, under *prikase* of August 16, the 4th and 5th regiments of howitzers, each of four six-gun batteries, with corresponding ammunition columns, besides a regiment of siege artillery of ten companies. When the war began there were only two howitzer batteries with the army, but with the additions noticed, all of which have probably arrived, Kuropatkin should have 60 howitzers on the ground, apparently of the 6 in. Engelhardt type, not so good as some patterns in other armies, but still a useful weapon and promising to afford valuable support to the troops in the field.

So far as the Russian army is concerned—that is to say, in view of its heavy losses and of the reinforcements which may reach it throughout the winter—we can quite understand that there are many inducements to play the waiting game. The army has wrecked itself in the vain endeavour to relieve Port Arthur, and though the fatal magnet is still there to distract the mind and disturb the resolutions of the Russian commander, it may be that the Tsar has at last arrived at the conclusion that the price his army has had to pay for the effort has been too high. Colonel Gadke tells us that the relief of Port Arthur has been abandoned, and he may be right, even though his prophecies are usually wrong.

#### NOTES ON CURRENT EVENTS.

On Saturday Tokyo celebrated the fall of Port Arthur. As is their wont the Japanese made fête in a quiet and orderly manner. There were occasional volleys of "*bansai*," but in their intervals the day might almost have been mistaken for a religious festival so little vehemence of demonstration was there. The Hibiya Park was the principal scene of the rejoicings. Much bunting floated there, and from a platform the mayor of the city, Mr. Ozaki Yukio, in a brief speech, expressed on behalf of the capital congratulations to the nation, gratitude to the Sovereign, and thanks to the Army and Navy. General Terauchi, in the name of the Army, and Baron Yamamoto, in that of the Navy, returned thanks. Then followed a really vehement round of cheering for Admiral Togo and a lesser salvo for Vice-Admiral Kamimura. Each of these gallant officers returned thanks in brief words, and the ceremony of the occasion may then be said to have concluded. There were no lantern processions in the evening, and altogether it can not be said that Tokyo showed any exuberance of joy.

The Emperor has addressed a message of warm appreciation to General Nogi and Admiral Togo. His Majesty speaks of the long and arduous labours of the Third Army and of the United Squadrons; of their indifference to difficulties; of their enduring bravery, and of their great achievement in compelling the surrender of a fortress so strong as Port Arthur. "We applaud you, officers and soldiers, for the thorough discharge of your duties and for the great deeds you have accomplished."

This message bears date the 6th instant.

#### NAVAL ANNOUNCEMENT No. 2.

The whole of the Liaotung Peninsula being now in Japanese possession, the blockade declared on the 1st of the 1st month of the 38th year of *Meiji* is hereby removed.

(Signed) TOGO,  
Commander-in-chief of the  
United Squadrons.

(Dated) 7th January, 1905.

#### NAVAL ANNOUNCEMENT No. 3.

For the present no vessel will be permitted to enter or leave Port Arthur except Government ships.

(Signed) YAMAMOTO,  
Minister of State for the Navy.

(Dated) 7th January, 1905.

#### NAVAL ANNOUNCEMENT No. 4.

Inasmuch as no little danger is to be apprehended from floating mechanical mines in the waters from the vicinity of Shantung Promontory to the Gulf of Liaotung, and especially along the shores of the Liaotung Peninsula and in the Straits of Pechili, and inasmuch as although the Japanese Navy is now engaged searching for and removing these mines, navigation is still unsafe, the most minute precautions and circumspection should be observed by navigators.

Two new destroyers, built at Yokosuka, the *Ariake* and the *Maisuru*, are to be launched on the 30th instant. The latter term is the name of a place but its meaning is the "circling crane." *Ariake* has the significance of "moonlight morning."

A skirmish is reported to have taken place on the 6th instant at Watszing. Two companies of Russians with two guns seem to have engaged in a reconnaissance at that place and also at Tingtszing. They brought their guns into action, but they are said to have suffered heavily from the fire of the Japanese artillery.

It will be remembered that a few days ago, a rumour was spread to the effect that a British cruiser called the *Andromeda* had proceeded from Weihaiwei to Port Arthur with a quantity of medical comforts for the sick and wounded in the fortress. There being no British cruiser of that name on the Pacific station, little attention was paid to the story. It now appears, however, that the ship in question was a merchant steamer, and that her owners had the benevolent intention of alleviating with all celerity the sufferings of the inmates of Port Arthur's hospitals. The *Andromeda* was turned back, however, by the Japanese. They said that if there should be subsequent need of the articles she carried, they would be taken over, but that at present the task of entering the harbour would be dangerous even for a steam-launch. Thereafter some steps were taken to make the Government in Tokyo sensible of the true intentions of the vessel's owners, and accordingly instructions are said to have been forwarded in the sense that her assistance should be accepted. But before this order could be acted on, the *Andromeda* had returned to Wei-hai-wei.

It is officially announced that the sum due to Japan as the installment of the Chinese indemnity for the second half of 1904, was paid on the 7th instant and is now lying in the Specie Bank at Shanghai. The amount is 941,924 taels 9 momme, namely 1,248,992.02 yen.

The *Official Gazette* announces that the name of the child born to the Prince and Princess Imperial at 7.28 p.m. on the 3rd

instant is Nobuhito, and that his title is Teru-no-Miya.

England and the United States seem the only two Powers that are at present committed to the adoption of the new rifle for both Cavalry and Infantry. In each case, says the *Times of India*, the carbine is being discarded and a short rifle issued. The English pattern has just been described by Major Wallace at the Meerut Rifle Meeting, and it will become well-known in India within the next year, as British regiments are to be rearmed with it. It may be noted that there is no inclination on the part of the great military Powers to adopt an automatic rifle, though several patterns have been submitted for trial. Experiments are proceeding with these; but according to Von Lobell the question of ammunition-supply in action blocks the way. It is remarked "that officers of war experience are loth to give into the soldier's hands any weapon that will not remind him at each shot of the value of each round of ammunition." Already in the big conscript armies, with men serving or only two years, the shooting is very poor, and fire-discipline so weak that it would be impossible to control the expenditure of ammunition during a battle. With a magazine-rifle the rate of fire is considered high enough already: with an automatic weapon there would be the ever-recurring danger as to the number fired. There is said to be a reaction on the Continent in favour of fewer men and longer service, but no Power dare take the initiative in reducing its Infantry. In England, with voluntary service, the new terms of enlistment will ensure a high percentage of seasoned men in all Foreign Service battalions, and these will be far more amenable to fire-discipline than the short term conscripts. The Indian Army, with its universal long service, is certainly in the mass the best shooting force in the world, and it wants no better weapon at present than the Lee-Enfield. If, in the future, a satisfactory automatic rifle is invented it could be issued with confidence both to British and Indian soldiers, for the control of fire is one of the matters to which attention is paid in our Musketry instruction.

Japanese papers state that the amount of tax to be paid by the Street Railway Company of Tokyo during the first 5 days of the month was 8,001.29 yen, to which must be added 312.70 yen for season tickets (*kwaisu kippu*). The tax payable in the same interval on the small section of the Tokyo Electric Railway Company's line that has been thus far opened was 465.75 yen. The detailed returns are:—

	Street Railway. Yen.	Tokyo Electric Railway. Yen.
1st January .....	1,841.55	85.50
2nd January .....	1,517.95	97.59
3rd January .....	1,615.68	106.26
4th January .....	1,340.20	88.97
5th January .....	1,685.91	87.43
Total .....	8,001.29	465.75

Of course the fact of it being the new-year season and also the fall of Port Arthur may have influenced the results, but any exceptional traffic due to those causes will be more than counterbalanced by the extensions which the lines will receive during the year. At the above rate the tax collected from the Street Railway alone will be over 500,000 yen, whereas the Government's estimate for all three lines, the Shigai, the Denki and the Densha is only 600,000 yen.

The Berlin *Tageblatt*, as quoted by *Public Opinion*, says with reference to the Anglo-

Japanese alliance that "it was explained in Asia to mean that England would support the ambitions of Japan, which ambitions at the time were sufficiently evident." What is meant by "Asia" in this sentence? We judge that the term is introduced by the Berlin journal chiefly because it constitutes an element of vagueness such as political writers often find convenient. "Asia," however, in such a context, can mean only China and Japan, and so far as concerns these countries nothing could be less correct than the *Tagblatt's* version. In Japan and China the alliance was interpreted, not as intended to encourage Japanese ambitions, but as plainly designed to check Russian ambitions. A very few interested persons doubtless construed it in the former sense, but by the Chinese and the Japanese it was welcomed solely as a means of guaranteeing Manchuria and Korea against Russian aggression which had already become a menace too palpable to elude the shallowest intelligence. The general feeling produced throughout Japan by the news of the alliance and by perusal of its terms was that for five years at any rate peace had been secured, and that a further lease of life for that period had been obtained for the two sick men of the Far East, to whose throats the Russian knife was already held.

Seoul sends word that the skirmish at Watszing, reported in Tokyo on the 9th instant, cost the Russians one officer and forty rank and file. If such were its dimensions, however, we should have expected to hear something about it from official quarters.

It is stated that General Nogi has asked to be excused from returning to Tokyo and taking any appointment that would remove him from the theatre of war. He wishes to remain with his army, and his wishes will doubtless be respected.

An English marine agency has made a report which shows that fewer lives were lost at sea in 1903 than in any year during the last twenty-five. The number of lives lost was 624, of which 599 were sailors and 25 passengers. The annual average for the last twelve-five years is 1,613 lives. Other figures show that there were 5,765 accidents sufficiently serious to be recorded. Of the 350 vessels which were total losses, 70 foundered, 188 stranded, 56 were sunk in collision and 18 disappeared. Of the lost, two had been sailing safely for sixty years, five for more than forty years, and 21 for over twenty years. There were 5,660 lives saved along the British coasts. Of this number the rocket apparatus saved 235, lifeboats rescued 489, the coast guards picked up 205, passing ships saved 578, and 1,100 reached safety in the boats of their own ships.

Mr. Takahashi, Vice-Governor of the Bank of Japan, who went to England last spring, accompanied by Mr. Fukai Eigo, has just returned to Japan. He says that whereas the first Japanese loan was subscribed by only a few capitalists, the second found applicants among all classes of the people in America and England, a plain proof that general confidence had been established in Japanese finance. In the case of the English, especially, Mr. Takahashi thinks that their action was influenced to some extent by their sympathy with Japan on account of her stout fighting and on account of the alliance. The decline in the market price of Japanese securities after the battle of Liaoyang, was not owing solely

to the efforts which disappointed war-correspondents made to injure Japan's credit. It was largely due also to a perception of the fact that the war would be prolonged.

On the 10th instant rumours were circulated in Tokyo to the effect that the Tsar had approached King Edward with the view of arranging preliminaries for peace. No thoughtful persons attached importance to the story, but it had currency in the capital for a few hours, and its effect upon the share market, though comparatively slight, was doubtless sufficient to reward the inventors of the tale.

The *Fiji* relates that a body of Russian cavalry, 300 strong, recently rode down the west bank of the Liao, and by making it worth Chinese while to conceal their movements, reached as far as the old town of Newchwang, whence, having reconnoitred, they finally retired unmolested. This was an expedition worthy of the Cossack's fame as riders at large.

The engagement of Miss Alice Blight, daughter of Mr. Atherton Blight of New York and Philadelphia, and the Hon. Gerard Lowther, British Minister at Tangier, has just been announced from London. Mr. Lowther was for some time Secretary and *Chargé d'Affaires* of the British Legation in Tokyo. He was then promoted to the Embassy in Washington, and in 1901 was appointed Minister to Chile. Lately he was transferred to Tangier.

The crew of the *King Arthur* have all been sent to Nagasaki and released. They consisted of 4 Germans from Port Arthur, the master, 6 Englishmen, 1 Chinese and 48 Lascars.

The cotton possibilities of the British Empire afford an interesting study. In 1793 the West Indies supplied Great Britain with 71 per cent. of her total requirements of raw cotton. In 1801 the imports from the same possessions amounted to 25,000 bales. At one time substantial fortunes were realized from cotton-growing in Trinidad. But 20 years ago cotton was abandoned in favour of sugar, the only place where it was continued on commercial lines being the small island of Carriacou. Now that the sugar industry has declined, vigorous efforts are being made in favor of a revival of cotton-growing as an industry. The suitability of the West Indies for cotton-growing is unquestionable. Sea Island cotton cannot be grown beyond the influence of sea air, and in the United States it is produced only in South Carolina, Georgia and parts of Florida. Further inland it deteriorates. Commercially it is used for thread, lace-making and very fine yarn. The United States mail bags are made of Sea Island cotton. It is also used for sail cloth, linings for bicycle tires and other purposes where a combination of strength and lightness is required. This Sea Island cotton is said to have been originally introduced into America from the West Indies. Experiments with cotton in the West Indies have been a great success. During the season ending last March, Barbados alone shipped 61,000 pounds of cotton. The possibilities, put in a few words, as regards new sources of supply come to this: In the Soudan and in various parts of British Africa, Rhodesia, and Central Africa, cotton of the Egyptian type can be grown: on many parts of the West coast of Africa, cotton of the American type can be grown. In the West Indies, Sea Island cotton can be grown,

while there is every probability that, alike in India and in many other sections of the British Empire, the indigenous growth of cotton can be so far improved as to furnish, from this source alone, substantial supplies of cotton which, though not, perhaps, wholly serviceable for Lancashire spinners, would nevertheless, have an important and beneficial effect on the international market.

Louise Michel, the famous revolutionary leader, whose death is reported, was born at Vroncourt in 1830, and first distinguished herself by her poetical and musical talents, which were recognised and encouraged by Victor Hugo. In 1860 she opened a school in the Quartier Montmartre, Paris; and in 1870 took an active part with the revolutionary Commune, and was made prisoner; and though she eloquently defended herself before the judges, she was sentenced to transportation to New Caledonia for life. On the amnesty to political prisoners in 1880 she returned to Paris; and, continuing to take part in Communist assemblies, was re-imprisoned in 1883, and again in 1886. She resided in London for some years, speaking regularly in Hyde Park and at the Anarchist Club off Tottenham Court Road. She was regarded as the leader of the small party of English Anarchists, and invariably used opportunities of preaching her gospel on the occasion of any public demonstration in the Parks or Trafalgar Square. A forcible, eloquent, and striking speaker, she had also published her "Memoirs," and written a novel with the essentially characteristic title of "The Microbes of Society."

The citizens of Nagoya tendered a reception to the Rev. Merriman C. Harris, Bishop of the Methodist Episcopal Church for Japan and Korea, on the 10th inst. It was a representative gathering. Speeches of welcome were made by Major-General Aoyama, Mayor of the City, Mr. Saka, Chief Secretary to the Governor, Mr. Kaeriyama, representing the Nagoya Club and the Nagoya Economic Association, and representatives of the Kinjo Ladies' Society, the Women's Christian Temperance Union, the Young Men's Christian Association, the Nagoya Preachers' Meeting, and the Newspaper Association. The *Kembutsu Jo Gakko* was beautifully decorated for the occasion. Bishop Harris having been decorated by the Emperor for his services to the Japanese on the Pacific coast, the citizens vied with each other in doing him honour. After the "Welcome Meeting" 75 of Nagoya's representative people, ladies and gentlemen, sat down to an elaborate dinner in the Nagoya Hotel. Following this were suitable after dinner speeches by such men as Dr. Kumagai, Prof. Hibino, Supt. of the Middle Schools, and Mr. Teikondo, President of the Dai Ichi bank.

The Emperor of Germany has gracefully signified his appreciation of the Port Arthur siege and its result by conferring orders on General Baron Nogi and General Stoessel. The distinction is well deserved, but we can not help wondering by what rule His Majesty is guided in granting these honours. If any Japanese officer deserves to wear an order of merit, that officer is Admiral Togo. Nothing is heard, however, of a German order for Admiral Togo. Is that because no naval commander on the Russian side can be justly selected to pair off with the Japanese Admiral and thus enable His Majesty to satisfy the dictates of neutrality?

In the skirmish at Watszing on the 6th instant the Russians are said to have had a

hundred casualties. They retreated across the Shangkaiho, and although a small force showed some disposition to advance again on the 10th, there was no collision. If the affair reached such dimensions we are surprised that no official statement has appeared.

### THRIFT.

"There could be no better evidence than this of the thrift of the American people. The great majority of depositors in savings banks are men and women in moderate circumstances, and the fact that there are so many such depositors, and that the deposits are so large, proves that, while the rich have been growing richer, the poor have also been growing richer." Thus the *Richmond Times-Dispatch* comments upon the recent bulletin of the Department of Commerce and Labour giving an interesting comparative statement of savings-bank deposits in various countries. According to this bulletin, the total deposits in all savings banks in the world aggregate more than \$10,500,000,000, with 82,640,000 depositors. The United States leads all the other nations with total deposits amounting to \$3,060,000,000. Germany is second with \$2,274,000,000, and the United Kingdom comes third with total deposits of only \$966,854,000. Roumania is last with deposits of \$7,460,000. In the average deposit, the United States is far ahead. They have an average of \$4.18 per depositor, and the nearest country (Canada) has an average of \$2.89. Hungary is third with \$2.51, Germany has \$1.47, the United Kingdom \$1.87, and France \$1.75. Japan finishes up the list with an average deposit of \$1.50. Several countries have a larger amount on deposit per inhabitant than the United States. Denmark leads with the high average of \$66.41. Switzerland is second with \$62.47, and New Zealand is third with \$49.61. In Australia the average per inhabitant is \$43.47; in Germany \$39.98, and in Norway \$39.94. Then comes the United States with \$37.48. The lowest average per inhabitant in any country considered is in India, where it is but 15 cents. Germany has more depositors than any other country, its total being 15,432,211, or about 1 in 4 of the people. France is second with 11,298,474; the United Kingdom is third, with 11,093,469; and Japan comes next with 7,467,452 depositors. The United States is fifth with 7,305,443 depositors, or about 1 in 10 of the people. Russia has only 4,950,607 depositors. The figures used in arriving at the grand totals cover 770,000,000, or about half the population of the world.

### "THE RUSSO-JAPANESE WAR."

The Kinkodo Publishing Company of Tokyo have issued the sixth part of their fully illustrated record of "The Russo-Japanese War." The literary matter of the present number is quite on a level with its predecessors, though in the matter of machine work the printing is not quite so satisfactory, the ink on many pages being too thickly applied and hence has led to much smearing and blurring, while a greasy feeling is imparted to the fingers as one turns over the leaves. The coloured plates—always an outstanding feature of this publication—number eight altogether and include spirited sketches of the Emperor on the parade ground at Aoyama; Prince Kanin leading a charge at the battle of the Shaho; scenes around Port Arthur, and reproductions of old prints of the Genroku age. The Rev. A. Lloyd contributes the translation of a poem recently composed by the Emperor. It runs:—

The foe that strikes thee, for thy country's sake,  
Strike him with all thy might; but, as thou strik'st,  
Forget not still to love him.

### THE CELEBRATION AT SENDAI.

All over the country, in busy towns and quiet country hamlets, flags have been flying, trumpets blowing and children shouting for many days past over what, in many of its aspects, may be regarded as the greatest event of the war. Sendai celebrated the fall of Port Arthur by a quiet and dignified ceremony held in the open air in front of the railway station at 11 a.m. on the 5th inst. It was the third celebration of the kind that has taken place in Sendai since the war began. The proceedings consisted of music performed by a military band, of congratulatory addresses read by the Mayor, the Commander of the garrison, the Governor of Miyagi, and the head of the Miyagi-ken Education Society, of three cheers for the Emperor, of the singing of the national anthem, and of cheers for the Second Division of the Army (stationed at Sendai in time of peace). At the close of the ceremony the audience was requested to listen to a short address from Mr. Ochiai, of the American Episcopal Mission, who has been engaged in Christian work among the soldiers at the front in connection with the Young Men's Christian Association. Mr. Ochiai said that his work did not consist of simply preaching to soldiers, but of attending to their social wants, forming clubs, providing literature, including novels, for the soldiers. The chief object that he and his fellow-workers had in view was affording comfort to the troops, bodily, mental and spiritual. Mr. Ochiai, it is stated, starts for the front again about the middle of this month. This ceremony, being got up in a hurry, was not so well attended as might have been expected. It being school vacation time, the mustering of students in large numbers was out of the question. Though the foreign residents only received notice of the function late the night before or early on the 5th, nearly everyone was present. We have been informed by our Japanese friends that there is a marked difference between the commemoration festivities held in the Southern provinces of Japan and those held in Northern and North-Eastern towns; the Northerners being less demonstrative and less excitable in every way.

Temperaments may differ here as in other countries; but in our opinion the Northerner's apparent coldness of manner is not to be taken as an indication of lack of patriotism. Though perhaps less ceremonious than the Southerners, the Northerners are as deeply interested in the country's welfare and are as ready to make very big sacrifices for the success of the Japanese cause as are their Southern compatriots, and as for the cheerful endurance of hardship at the front, it is said that the troops that hail from the North have no equals. No one could show greater interest in the war than the present mayor of Sendai, Mr. Hayakawa, an old man of outspoken ways and original character, whose thorough sincerity nobody doubts. On cold frosty mornings long before daylight the old man has been repeatedly seen, *chōchin* in hand, making his way home from the railway station on foot; whether he has been to see Sendai soldiers off or to greet Northern troops as they have passed through Sendai.

### CLOSE OF THE ST. LOUIS FAIR.

"World's Fair does not owe a Dollar" was the exultant headline in the *St. Louis Globe-Democrat* that told the item of chief popular interest at the close of the big exposition. The *St. Louis Republic* added the gratifying information that the city indulged in no great building boom like the one that Chicago repented of after its great fair. Indeed, we are told—

"St. Louis is in better financial and industrial condition than it was when it set about its great international enterprise." From an educational standpoint the fair is considered even more successful. Says President Francis:

"The results of this work can not be adequately measured by the beauty of its landscapes, the grace and symmetry of its buildings, the comprehensiveness of its exhibits, the intelligence of its congresses, the elegance of its social features, nor by the ineffable pleasures conferred on its patrons, but time will be required to demonstrate that the thought and

the labor and the sacrifices that have entered into it were not ill-advisedly bestowed. The compensation will continue to flow for at least a generation to come. Its influences will be felt and appreciated in widening circles as the years go by. It marks a new epoch in the intellectual and industrial advancement of the world, and the dawn of a new era in the international relations of governments and peoples."

The *New York Times* compares the attendance and finances of the St. Louis and Chicago fairs in the following editorial:—

"It seems that, in round numbers, the Chicago Fair cost its projectors about \$28,000,000 and took in, in admissions and concessions, about half of that amount. The St. Louis Fair has cost about \$22,000,000 and taken in rather less than half of that amount. In each case the expenditures of the general, state, and local governments are excluded. The total admissions at St. Louis for seven months are announced to have been 18,317,457. The paid admissions at Chicago for six months were something over 21,000,000. At St. Louis September was the best month, with a total of 3,651,873. At Chicago the best month was the last, October, with its paid attendance of 6,391,340. This is the result we should have expected from the comparative size of the two towns. It is very creditable to the managers of the St. Louis Fair that they should have succeeded in carrying out their ambitious program without finding themselves confronted at the end with a huge deficit. And certainly no thinking American will think of denying, with respect to either fair, that it was worth to the country all it cost."

The *Globe-Democrat* "points with pride" thus:—

"The city has made good all promises and more than met expectations at home and abroad. It is a grand triumph for St. Louis. In all essentials the Louisiana Purchase International Exposition has been a success beyond any that preceded it. It was much the largest. More money was spent in creating and conducting it than on any other. But one criticism has been heard, and that related to a piling up of attractions beyond the ability of any spectator to do justice to all. That objection, if it be one legitimately, leans to virtue's side. Every resource of liberality was exhausted to give visitors the limit of amplitude for their money. The Fair throughout was run for high ideals, for merit, beauty, and completeness, as an exhibition of skill and progress for the earth. Everything planned was accomplished, if within the compass of human endeavor. Looking back over the seven months of the Fair and the years of preparation, St. Louis rejoices that the achievement hoped for was reached beyond the dreams of the sanguine, and will stand in history as a splendid realization."

"It is a minor matter that the attendance was not the largest. The Fair was the biggest and best and that is why St. Louis is delighted with the record."—*Literary Digest*.

### FATAL FIRE IN MAEBASHI.

A very serious accident is reported from Maebashi in Gumma prefecture. At 8.20 p.m. on Jan. 8th, fire broke out in the Shikishima theatre in which at the time were some five hundred persons. Owing to a strong wind, the flames immediately spread throughout the building and to six houses near by. The result was that 29 persons were killed, six being severely injured, and some being still missing. It is reported that some inflammable substances which had been intended to be used on the stage as fire works exploded while an employee was preparing them.

The *Fiji* reports that the proprietor of the theatre and two actors were among the victims, and the man who was preparing the fire-works lost the sight of both his eyes.

Three godowns at Kokura belonging to the Kyushu Railway Co. were destroyed by fire on the night of Jan. 5th. The damage is estimated at yen 750,000.

A gas explosion occurred on the morning of Jan. 6th at the Yubari coal mine, Sapporo, the result being that 11 men were killed, 44 injured and 28 are missing.

Early on the morning of Jan. 11th, fire broke out at Bakuro-cho, Aomori, destroying eleven houses.

## THE PORT ARTHUR RECORD.

WE ventured to suggest in our last issue that the tales told by Russian officers at Chefoo must be taken with a large allowance of salt. It is natural that the beaten side should seek to exalt the character of its defence and to minimize the value of the victors' achievement, and from that point of view much allowance had to be made. Moreover, Colonel OGORODINKOFF and General FLOUG have prepared us for nimble exercises of Russian imagination. But truly it may be questioned whether any one would have ventured to discount the Chefoo tales as liberally as official reports now require us to discount them. The least flighty of the Chefoo narrators declared that there remained only 8,000 men of all ranks and arms to garrison the forts, and that out of these 8,000 fully 2,000 were inefficient from fatigue. But we have now the official return of General NOGI, and it shows that, after deducting officials attached to the army, surgeons, priests and the general body of non-combatants, there remained no less than 27,834 fighting units. Nor is that all. Out of the non-combatants a considerable proportion were acting as volunteers. Let us suppose that there were 1,500 volunteers. Then the final result is 29,334 effectives. If the naval officers who carried the tales to Chefoo intended to say that not more than from 5,000 to 8,000 were available for constant duty, inasmuch as the men were allowed three nights in bed out of four, then they were doubtless near the mark, but on that hypothesis their talk about soldiers so worn out through want of sleep as to be incapable of being roused becomes incomprehensible. These officers have acted a very unkind part to the garrison. They would have been incomparably better advised had they kept silence, for then the general public might have paid no very serious attention to the number of men remaining effective in the fortress at the moment of capitulation. But now that the plaintive history of from five to eight thousand utterly exhausted invalids is suddenly changed into nearly thirty thousand effectives, the whole business becomes a subject for ridicule.

Two questions suggest themselves on reading these official figures. The first is, what was the original strength of the garrison? On examining the list we find that the military effectives at the moment of capture totalled 23,238, and the naval 4,804. In hospital there were some 15,000 or 16,000. Take the smaller number; assume that 1,000 of them were non-combatants and one thousand blue-jackets; then we get the results that there were actually in the fortress 36,238 of the army and 5,804 of the navy. But it will probably be a conservative estimate to put the deaths among combatants from disease and wounds at 8,000 since the siege began, 7,500 for the army and 500 for the navy. If so, the final figures are 43,738 of the army and 6,304 of the navy. That is even greater than the maximum

estimate made by the military expert of *The Times* some months ago.

The second question is, must we moderate our estimate about the quality of the defence in the last resort? If there were 29,000 effectives in the fortress when it capitulated, one is immediately impelled to consider the number of the investing army. It is difficult now-a-days to frame any rule for the ratio between besiegers and besieged. The old idea used to be four to one, but that was before the days of quick-firers magazine-rifles and search lights. Still if we adopt the same ratio now, it follows that the Japanese should have mustered 200,000 when they first invested the place, and should have had 112,000 for the last phase of the fight. We do not believe that they had at any time a hundred thousand, and thus their feat becomes all the more remarkable, while, just in the same proportion, the brilliancy of the Russian defence is dimmed. One of our local contemporaries has said, we perceive, that the siege lasted 7 months. That figure is reached by counting from the battle of Nanshan. But the duration of a siege counts from the day when the sod of the first parallel is turned. It is now more important than ever to take that basis, for the length of zigzags and parallels to be dug is the measure of the besiegers' work, and the length of the zigzag has increased much owing to the greatly extended range of modern fire-arms. It used to be possible to excavate the first parallel at a distance of some 600 yards. Now, three times that distance is still highly hazardous. At any rate the point is that the calculation must begin from the time of commencing the saps and parallels, and considering that capitulation came little more than four months after that time in the case of Port Arthur, it is evident that the investing army must have worked with superb energy. We shall hear a great deal about these things when experts begin to talk, having the exact figures before them. Meanwhile it is enough to say that, considering the large numbers of the garrison, the stupendous strength of the fortress and the very brief period required to reduce it, the laurels rest mainly with the assailants. It is to them that our plaudits should be addressed in the first place and to the assailed in the second.

## THE BALTIC FLEET'S BASIS.

IT is stated that M. LESSAR has lately been exercising his influence in a persistent though secret manner to secure China's consent to an arrangement which would amount virtually to allying herself with Russia. He asks that Amoy and Mamei should be placed at the disposal of the Baltic Fleet, which is soon to arrive in Far Eastern waters, and that the Fuhkien officials should be notified in that sense. The Chinese Government is said to have negatived this suggestion as a matter of course, but M. LESSAR is nothing if not persevering. He is pressing the application, and seems to regard

its rejection as a distinctly unfriendly act on China's part. Truly the story is incredible. M. LESSAR has doubtless taken the measure of China's foot, and is well aware that history contains no other example of a nation so curiously impotent to defend its own rights or so wretchedly feeble in the face of menace. But in urging such a proposal on the Waiwupu he would be altogether transgressing the utmost conceivable limits of diplomatic daring, and besides he can not forget that in this matter he has Japan and England to deal with as well as China. Did China, in obedience to his importunity, range herself thus on Russia's side, England would be compelled to take a hand in the game, and the privilege of using Amoy and Mamei would then have been very dearly purchased. Probably the whole tale is manufactured out of public bewilderment as to the action of the Baltic Fleet. None can conjecture what line ROJESTVENSKY will pursue. Yet it must have been all mapped out before he left Libau. He must have a hard-and-fast programme, defining the places at which he is to stop and the time—approximate time—he is to remain there. He appears to be now anchored at Ste Marie Island, off the north-east coast of Madagascar, and not only has he been anchored there for some days, but he is also credited with the intention of remaining there until the remainder of his Fleet joins him from the north. Such procedure would be exactly analogous to the concentration of a Russian army within French territory for the purpose of attacking Japan. Yet, in reply to Japanese protests, the French Government is said to have stated that there is no danger of the non-observance of neutrality, and that the local authorities of Madagascar have received strict instructions. That is surely a very remarkable reply. It involves the contention, in the first place, that the duties of neutrality are to be interpreted exactly as France pleases to interpret them; and it indicates, in the second, that the observance of those duties is to be trusted solely to the resolution and competence of local officials in a remote part of the French Republic, who are not armed with any tangible powers to enforce their orders. France, usually so logical and circumspect in her international relations, is difficult to recognize in all these things. She surely can not intend to assert the proposition that her international obligations are to be measured simply by her own municipal convenience, neither can she expect Japan to admit that no machinery is within the reach of the French Government except the issue of instructions to the authorities at Tamatave. A word from Paris to St. Petersburg would settle the whole question, but apparently that word remains unspoken. Perhaps we err in putting that construction on the situation. Perhaps the word was spoken before ROJESTVENSKY put to sea, and perhaps its echoes have already reached Madagascar. No one can imagine

that the Baltic Fleet was sent out into space, like NOAH'S birds of trial, without any provision of ports of call. There must have been a clear understanding between Russia and France, possibly also between Russia and Holland, in compliance with which understanding the Baltic Fleet is now regulating its movements. Most assuredly ROJESTVENSKY did not appoint Madagascar as the rendezvous of his squadrons without some definite assurance that the hospitality of French ports would be extended to him in that region. France's delicate situation is well appreciated, but it must be frankly confessed that she seems to be resolving her difficulties in a manner very difficult to reconcile with any due observance of neutral obligations.

#### A BERLIN LECTURE.

THE Berlin correspondent of *The Times* sends the following to that journal under date of November 22nd:—

The commercial rivalry of Germany and Japan in the Far East formed the subject of a lecture delivered at a meeting of the German Colonial Society, with Duke Johann Albrecht of Mecklenburg in the chair, in Berlin, last Saturday. The lecturer, Herr Woas, appears to have been travelling in China in Japan for the last 18 months, and he was chiefly concerned to show that Japanese competition was becoming a serious danger to German trade in East Asia. He drew attention to the ubiquitous activity of the Japanese trader and of his agents, who were to be met with not only on the coast of China, but in the towns of the interior and on every river. The fact that a Japanese technical high school had been established at Nanking was unmistakable evidence that the Japanese were bent upon securing a permanent footing in the Chinese markets.

This intention on the part of the Japanese seemed to constitute a sufficiently grave offence in the eyes of the lecturer, but judging by the exclamatory form of the sentence, the enormity of their venturing to compete with the Germans in Shantung, or, as the lecturer described it, in "our Shantung," appears to have been beyond the power of mere words to express. The new railway from Tsingtau to Tsinanfu, which was the work of German enterprise, had indeed increased the trade of the province, but it was the Japanese and not the Germans who had benefited. The Japanese palmed off upon the unsuspecting Chinaman cheap and shoddy wares at prices and by methods with which the German trader could not compete. Moreover, the Japanese employed no middlemen, while the Germans transacted the greater part of their business through agents, with the result that they never really knew the kind of goods which were in demand.

The lecturer not only represented the Chinaman as the gullible victim of Japanese trade methods, but he also dealt with certain aspects of the Celestial character which, in his opinion, rendered business relations with the Chinese far more satisfactory than with the Japanese. A Chinaman's word was as good as his bond, but not even the bond of a Japanese was considered binding. In Japan commercial disputes could not be settled by Consular intervention, but came before the native Courts, which were strongly prejudiced against foreigners. The superficiality of the Japanese character and civilization was exemplified by the army which was indeed a marvel of organization, but which, on the other hand, lacked the quality of "inner steadfastness," especially among the junior commissioned and the non-commissioned officers.

In the lecturer's opinion the war with Russia was not the outcome of a national movement, but was solely the work of the commercial and industrial classes in Japan, who, having subjugated Korea, desired to add Manchuria to their sphere of influence as a preliminary step to overrunning the whole of China. It was this instinctive desire for expansion on the part of Japan which constituted the peculiar and signal danger for the Germans in the Far East. Soon after the outbreak of the war with Russia it was officially declared at a meeting of Japanese merchants and bankers at Kobe that the war was essentially an economic move. The lecturer maintained that no one therefore, was indirectly more threatened by the present war than the Germans. In his opinion it would be highly regrettable if the German

sphere of interest in China, the province of Shantung with its rich natural resources, were to pass under Japanese influence.

The lecturer, however, confessed that, although the Germans were tolerated by the Chinese, the latter preferred to deal with the Japanese, and placed every possible obstacle in the path of German progress. The Chinese, for example, were now doing their best to bring about the construction of a railway from Tsi-ngan-fu to the coast which would terminate some miles to the north of the concession of Tsingtau and which would thus become a serious rival to the new German railway between Tsingtau and the interior of the province of Shantung. He feared that if the Japanese proved victorious in the struggle with Russia they and their commerce would receive increased support from the Chinese, while German trade would be left stranded high and dry. Herr Woas considered that this was a peculiar hardship, especially in view of the great debt which Japan owed to Germany. But it was a regrettable fact that the Germans, of all others, were objects of hatred and suspicion in Japan. He himself had been assaulted in broad daylight at Shimonoseki by two apparently respectable Japanese simply because he had been recognized as being a German. The lecturer concluded by observing that the Japanese not only did not love the Germans, but hated them because they saw that the Germans were surpassing them in the race for commercial supremacy in China. In view of this fact, and in view of the tenacious energy of the Japanese, the Germans must make every effort to retain the ground which they had already won.

We have no knowledge about Herr WOAS or the degree of credit he enjoys in Germany. It does not even follow that his views command attention and respect because he happens to have been invited to lecture before an important society with the Duke of MECKLENBURG in the chair. On the other hand, as the impressions formed by travellers are almost invariably inspired by the people with whom their journey brings them into association, it may fairly be inferred that what Herr WOAS had to tell to an audience in Berlin was what he had himself been told by his countrymen in China and Japan, or at least by those whom he questioned. From that point of view the tone of his lecture is very regrettable. It suggests thorough dislike of the Japanese. Indeed the lecture has not one good word to say for them, and the lecturer would evidently regard it as little short of a calamity did they emerge victorious from the present war. As to the cause of such antipathy, he states it with sufficient distinctness: "Japanese competition is becoming a serious danger to German trade in the Far East." Is it then a grave offence in the eyes of Herr WOAS, and in the eyes of his countrymen in the Far East from whom he derived his views, is it a grave offence that any country should enter into commercial rivalry with Germany? Competition is an irksome feature of business. That every one recognises. Its unwelcome character becomes accentuated too, when competitors have the assurance to intrude into spheres which we had fondly hoped to reserve entirely for exploitation by ourselves: "our Shantung" for example. To that extent all merchants will sympathise with the protests of the German lecturer, peevish though they be. As readers of history, however, and as observers of Far-Eastern affairs during some forty years, we can not but marvel at the narrowness of Herr Woas' horizon. He fails altogether to see that the procedure attributed now by him to the Japanese in Shantung is precisely a replica of what the

Germans themselves have been doing in British colonies throughout the East during the past half century. Everywhere the Germans, under the shadow and protection of the British flag and in enjoyment of British hospitality, have stepped in, laid the foundations of German trade and built upon these foundations solid and prosperous edifices. They are still as industrious as ever in prosecuting the work. Ask the average Briton, the local trader, how the thing has been done, and you will receive a reply of almost wearisome uniformity. Under-selling, he will say; importing "cheap and shoddy wares at prices and by methods with which the British trader could not compete." The operation commenced and was carried far on its way before there was any such thing as an "Our Shantung." Yet we have never heard that this competition inspired in British breasts the sentiments which the Japanese, by adopting German devices, seem to have inspired in the breast of Herr WOAS. The spirit which induces England to throw open to all the world every region where her flag flies, the spirit which prompts her to grant throughout the length and breadth of her dominions equal privileges to all comers without distinction of nationality, that spirit nerves her people to meet competition in a manly fashion, and to refrain from bitter resentment or plaintive outcry if they are beaten. We think that we can admire German thoroughness, German industry, German ingenuity and German enterprise. We think that we can even take lessons from the Teuton's display of these fine qualities. We do not think that it is necessary either to denounce or to dislike him because he has made us "sit up" or because his inroads into a field where we once enjoyed a monopoly have been distinctly expensive to us. Herr Woas, however, and the Germans he represents are neither readers of history nor unprejudiced observers of contemporary events. He and they draw the sponge through their own past, and fail altogether to observe the contrast between their ideal of "our Shantung" and the realities of British colonies where the bases of their business were laid.

It can not be said that any injustice is done to Herr WOAS in attributing to him such conceptions. There is no room for doubt, since, if he reveals to us the sentiment aroused in his own bosom by commercial competition, he is frankly ready to attribute the same sentiment to other people under similar circumstances. "The Japanese hate the Germans," he says, "because they see that the latter are surpassing them in the race for commercial supremacy in China." Herr WOAS is persuaded, then, that all rivals in business must be mutual haters. A civilized doctrine, surely! He is consistent, too. Hatred and ratiocination are qualities never coexistent, and Herr WOAS does not reason. His contradictions are very flagrant. In one breath he declares that although the new railroad in "our Shantung" has increased the trade of

the province, "it is the Japanese and not the Germans that have benefited"; that the Japanese sell their goods "at prices and by methods with which the German can not compete;" that they "employ no middlemen" whereas "the Germans, transacting the greater part of their business through agents, never really know the kinds of goods that are in demand;" that "although the Germans are tolerated by the Chinese, the latter prefer to deal with the Japanese and place every possible obstacle in the path of German progress," and finally that "if the Japanese prove victorious in the struggle with Russia, they and their commerce will receive increased support from the Chinese while German trade will be left stranded high and dry." All this is an unequivocal confession that Japanese commercial competition is winning. Yet in the very next breath Herr Woas declares that "the Japanese hate the Germans because they see that the latter are surpassing them in the race for commercial supremacy in China." Herr Woas is too good a hater to be a logical reasoner.

Our own impression as to the sentiments of German residents in Japan at all events does not bear out Herr Woas' representation, and it is possible therefore that we attach too much importance to his words. Yet we must most earnestly protest against the grossly misleading account given by this traveller as to the origin of the war. "The war," he says, "was not the outcome of a national movement, but was solely the work of the industrial and commercial classes in Japan, who, having subjugated Korea, desired to add Manchuria to their sphere of influence as a preliminary step to overrunning the whole of China. It is this instinctive desire for expansion on the part of Japan"—he proceeds to affirm—"which constitutes the peculiar and signal danger for the Germans in the Far East. Soon after the outbreak of the war with Russia it was officially declared at a meeting of Japanese merchants and bankers at Kobe that the war was essentially an economic move." We have never seen a more unscrupulous falsehood in print. Herr Woas must either be quite ignorant of his subject or deliberately bent upon deceiving his countrymen. If he is unaware of a fact familiar to all ordinarily close observers, namely, that in order to avoid war Japan offered to recognise Manchuria as Russia's sphere of sole influence, then he incurs the guilt of pretending to be acquainted with a subject which he has never studied. If, while aware of that fact, he publicly made such a statement as the above, then he is an unscrupulous slanderer. No gentler term is applicable. It is indeed a most cruel libel on Japanese merchants and manufacturers to charge them with having desired and brought about this war, when their sole ambition was to be suffered to pursue in peace the path of prosperous progress upon which their country had just entered. No one will be troubled to dispute the profoundly wise dictum of Herr Woas when he lays to the charge of

Japanese "junior commissioned and non-commissioned officers" a lack of the quality of "inner steadfastness." No one will trouble about such persiflage for it is plain that the learned gentleman does not comprehend his own meaning, and that he is at all events wholly unqualified to pass any judgment upon the junior officers and non-commissioned officers of the Japanese Army. His slanders in that field may be passed over with indifference. But we tell him plainly that his version of the war's origin is the most unfounded and malicious fable hitherto invented on this subject, not even excluding the versions concocted by the Russians themselves.

#### RUSSIA'S PROGRAMME.

IT is in the sense of an answer to the capitulation of Port Arthur that the Japanese interpret the decision said to have been taken by the Council of State in St. Petersburg to send to KUROPATKIN 200,000 reinforcements by the close of February. But the resolve and the manner of its announcement naturally provoke some criticism. Speaking broadly, the State Council seems to suggest to the world that whereas Russia has hitherto been relying on her army and her navy in combination, she now proposes to withdraw the latter factor from the theatre of war and to place her trust entirely on the former, in pursuance of which programme she will forthwith proceed to strengthen the army by nearly a hundred per cent. No one will be induced to believe, however, that she has not been working up to the high-water mark of her capacity in the matter of the army ever since the war began. Her navy certainly counted for much at the outset, when it mustered a numerous array of powerful vessels and before its personnel had displayed the marked incompetence now proved by the record. But from the 9th of February, 1904, the St. Petersburg Government, unless we suppose it to have been afflicted with extraordinary myopia, must have known well that the Pacific Squadron was thenceforth condemned to a mainly subsidiary role, and that all solid hope of redressing the situation lay in the army. From the moment when that conviction was forced home to Russian statesmen by the stern logic of events, their palpable duty was to augment their country's troops at the scene of contest by every available unit. Yet it would appear from their recent decision that they ask the world to convict them of having neglected that imperative devoir. For they declare that they will now despatch 200,000 recruits to KUROPATKIN by the end of February. They say, in effect, "we have hitherto been treating this war as a bagatelle, but now we intend to take it in earnest." What will be the conclusion drawn by intelligent Russians? Will they not conclude, can they fail to conclude, that if their Government is able to send two hundred thousand men over the Trans-Asian railway during the first two months of 1905, it has been deli-

berately guilty of suicidal *insouciance* during eleven months of 1904 when the number of troops despatched by it over the same route scarcely exceeded that total? The railway has not undergone any radical change. Its carrying capacity is not materially different now from what it was before Port Arthur fell. Some sidings have been added during the past few months, and the Circum-Baikal section has been opened, but no one can pretend to imagine that the potentialities of the route have thus been quintupled, and that it can perform in the first two months of 1905 a task which it took eleven months to perform in 1904. The High Council, vaguely or perhaps clearly conscious of the glaring inconsistency between its new promise and its old practice, tried to reconcile the two by reference to a novel kind of waggon specially adapted for purposes of military transport. The public hears for the first time about this waggon, but, though vastly interested, fails to form any conception of the striking contrivance. It can not be a waggon several storeys high, for the tunnels are not elastic in the matter of height, and seeing that lateral and longitudinal expansions are limited by the gauge of the railway, conjecture is bewildered. Besides, are hundreds of these miraculous vehicles already in existence? Has Russia been able to furnish a big supply of them at a week's notice? We fear they will not resolve the dilemma. Either the Russian Government has egregiously failed to perform its duty to the army hitherto, or its capacities have now suddenly received an almost miraculous development. During the space of three months that have elapsed since the battle of the Shaho, KUROPATKIN does not seem to have received more than seventy or at most eighty thousand reinforcements. Yet the necessity of strengthening him materially must have presented itself vividly to St. Petersburg after the disastrous failure of his forward movement in October. It would be most unwise, of course, on the part of the Japanese to under-estimate Russia's capacity. Very likely she will manage to achieve the programme mapped out in St. Petersburg after the Shaho fight, namely, the organization of three Manchurian armies each mustering 150,000 men. But the feat will not be achieved by the end of February. And if the Russians seriously contemplate any special haste now, it is a fair inference that KUROPATKIN will not strike until he is in a position to utilize the results of his Government's feverish energy. The advantage of position is all with the Japanese, for they have another army already organized, already in the field and consisting of veteran soldiers, and they have an immense reserve of troops at home waiting to go to the front. The curtain has again fallen on their strategical plans. We may not conjecture. But we deem it an immense gain that a garrison of 40,000 Russians has ceased to occupy a Japanese army of four divisions at a point far removed from the arena where the great and decisive struggle must take place.

## GRATITUDE.

BY gratitude we usually understand a feeling of kindness on account of a favour received, and by "favour" we understand an act of benevolence distinct from justice or remuneration. Thus the conclusion is reached that the sentiment of gratitude can not be properly expected to exist unless there has been some purely gratuitous service performed. This point is recalled by a remark which found a place in the recent lecture of Herr WOAS before a Berlin audience, namely, that Japan's present attitude of dislike towards German subjects is particularly hard in view of the great debt the Japanese owe to Germany. It is not necessary here to discuss minutely whether the learned professor exaggerated in his analysis of Japan's mood. We ourselves think that he did. We do not believe, in fact we have no hesitation in denying, that the individual German is an object of antipathy to the Japanese. One could easily indicate several Germans who assuredly rank among the most popular foreign residents of Japan, and several others who, though no longer resident, are remembered with the kindest feeling. Politically, however, there is some distrust, and therefore dislike, just as there was in the case of England during the heat of the treaty-revision controversy. A different sentiment will doubtless supervene by and bye, though the extremely delicate position occupied by Germany in Europe must always handicap her for winning confidence in Asia. What we desire to discuss here, however, is the wisdom and even the justice of proclaiming Japan's obligations to foreign countries, as is so frequently done. Some years ago a distinguished Japanese Admiral, speaking at a public dinner, said that he and his countrymen would always be conscious that the benefits they had derived from their foreign employees could not be repaid by the emoluments the latter had received in Japan. The sentiment did honour to the speaker. But was it an assertion consistent with strict justice? The question is easily answered by another query, namely, among the many hundreds of foreigners who have served Japan in various capacities, is there one, even one, of whom it can be alleged that he gave his services for Japan's sake rather than for his own? There is not one. Here is no evidence of an act of benevolence distinct from justice or remuneration. All the foreign employees of this country consulted primarily their own advantage and would never have sought or retained employment had they not seen their account in doing so. Of course that is not the whole story. The quality of the service rendered has also to be considered. It has been of very high quality on the whole. Whether because of fortunate selection, or because of some devotion-winning trait of her own; whether owing to this cause, or to that, or to both, Japan has certainly been well served, and so far as their manner of performing their

duty exceeded its ordinary demands, to that extent this country's foreign employers have established a title to gratitude. Yet even there, if the truth be frankly told, the incentive of personal ambition probably proved far more powerful than the prompting of altruistic benevolence. If solid benefits conferred and received are to be the bases of judgment, then it will have to be admitted that the foreign merchants at the treaty ports are Japan's greatest creditors, for by their exertions there has been built up a trade without which this empire's modern career would have been impossible. Will any one, however, put forward such a claim on behalf of the foreign merchants? They themselves would be the first to ridicule it; the first to admit that they worked for their own hand and that the promotion of Japan's interest concerned them only in so far as it contributed to their own profitable opportunities. It would be politic as well as just did all foreign publicists take the same line. This too prevalent tendency to draw up an intangible debtor-and-creditor account where there are really no material items to enter, is precisely one of the causes that have operated to educate Japan's objection to foreign assistance. Her development, remarkable though it is, has suffered somewhat from a premature desire to dispense with alien coöperation because such a large share of accomplished results was claimed by injudicious partizans of her foreign employees.

## THE IMPERIAL DIET.

## HOUSE OF REPRESENTATIVES.

Yesterday the House of Representatives held an extraordinary meeting and voted unanimously an Address to the Throne and a Resolution. The former was chiefly of a congratulatory character. It spoke of the repeated victories won by His Majesty's armies and squadrons, and having expressed the apprehension that this great struggle must be a source of much solicitude to the Imperial mind, it declared the resolution of the House to respond to all the duties involved by the situation. The Resolution was merely a warm expression of thanks to the Army and the Navy in connexion with the capture of Port Arthur.

## RUGBY FOOTBALL.

The mild weather on Saturday was doubtless responsible for the much larger gathering of spectators on the cricket ground to watch the Rugby football match. The first half of the game saw nothing scored, neither side allowing any advantage to the other. The play was fast and very interesting. On change of ends Whites were the first to score, Kingdon touching down and Tebb converting neatly. This put Colours on their metal and they made several attempts to capture the leather. At length Foster obtained a try which W. S. Moss failed to convert. Nothing farther resulted, the game ending in a win for Whites by five points to three. Teams:—Whites: W. B. White (Capt.) P. Mitchell, J. S. Cartwright, L. D. Tebb, G. N. Fairhurst, P. A. Cox, H. E. Hayward, W. J. White, A. Kingdon, A. E. Cooper, W. B. Mason, A. W. S. Austen, J. Abbey and O. Strome.

Colours: W. S. Moss (Capt.) E. W. Kilby, H. W. Kilby, T. W. Kilby, B. C. Foster, W. Goddard, H. J. Hearne, F. W. R. Ward, C. A. S. Palmer, V. R. Bowden, E. J. Moss, jun., S. R. Ford, F. G. Correa and C. T. Mayes. Mr. Farrier, referee.

## THE NECESSITY FOR A MINIMUM INCOME.

Mr. Bernard Shaw has been talking to a London audience upon the necessity for a minimum income, and characteristically enough he entitled his lecture, "Socialism for the upper classes." "First acquire an independent income, and then practise virtue." This excellent saying of the ancient Greeks was, Mr. Shaw said, the real text of his discourse.

One could not be a virtuous or honest member of society unless one belonged to the upper classes. (Laughter.) Virtue, honesty, honour, health, happiness all required the possession of money to be able to practise them. (Laughter.) He did not see why that perfectly true statement should be regarded as a subject for laughter. He should have thought that the fact that most people had not got money to enable them to practise these virtues ought to be a matter rather for wailing and gnashing of teeth. With some persons it was only necessary that he should open his mouth in order to make them laugh. But there was nothing he disliked more than to be laughed at, and, as he was serious in all that he said, he appealed to them not to laugh at him any more. Immorality and starvation were two different sorts of vice, and it was hard to say which was the more heinous. Indeed, considering all that poverty entailed, he thought it the greater crime of the two. The first essential of morality was having money enough. He did not accept the dictum that character was a thing independent of money. Of course there were people who were extremely happy and honest on small incomes; but it was none the less perfectly true that, other things being equal, a person could not be as happy and as honest without a sufficient income as he could be with it. Having thus shown the influence of the possession of money on the individual character, he desired to prove that the possession of money was of no use at all. (Laughter.) The first thing a rich man discovered on coming into the possession of his money was that one-half of the population was organized in a tremendous conspiracy to get as much as possible of it out of him. That was done chiefly by compelling him, at the dictates of fashion, to buy things which he did not want. It was useless for the individual possessor of wealth to attempt, by ignoring fashion, to lead a simple life. Nothing really complicated life so much as to do things which other people did not do. The simplest life that could be lived by any one was precisely the sort of life that was lived by the people around him. To attempt to assert his individuality by refusing to eat what they ate and wear what they wore would land him in a life far more cumbersome and expensive. The moral of what he was saying was that, if they thought each could get into his own corner and save his own soul by his own exertions, they would soon find that they were greatly mistaken. The reason why Socialists had been compelled to set themselves against Christianity, although the professed aims of both were the same, was that they had discovered that each individual could not work out his or her salvation, as Christianity declared, by personal righteousness. No one could do any good in this world unless he did it socially with his fellows and on a large scale. For instance, if they wanted to be clean in London there was no use in simply soaping themselves, for they would be dirty again in five minutes; they could only be clean by making London clean, and London could be made clean only by common social action. The only remedy for social evils was the crude and simple one of equality. Some people argued that it was impossible for men to be equal, as some had brains and others had no brains; as some were 6 ft. high and others 5 ft. Such people should not be argued with; they should be taken out into the back garden and buried. (Laughter.) That was the only way to treat people who thought that mental and physical equality was the same thing as legal, political, and economical equality. There were an immense number of people living in the West-end of London who ought to be guillotined. (Laughter.) There should be a board, like the Income-tax Commissioners, before which rich people should be compelled to appear to prove that they earned their incomes, and if it could be proved against any one that he took money which he did not earn he should be killed. The thing to do was to establish a minimum of income, and compel every one to work for it. That minimum income should be sufficient to make a man a decent member of society, and, once it was established, it would be quite right to regard it as a crime for a man not to be a decent member of society. If any one wanted an income above the fixed minimum there would be no harm in letting him have it, provided he worked hard for it. But the minimum income was the thing, and he believed it was going to play a great part in the economic movement of the future.

## AMERICAN TOPICS.

The International Banking Corporation of New York have been appointed fiscal agents of the United States in Panama. The company has established a banking house in the city of Panama.

The *Boston Herald*, speaking of the declining exports of American wheat, says:—"The thought of the United States as permanently ranged among the importing nations, as regards wheat, is one which is likely to make its way but slowly into the consciousness of this people, and yet it is one which it would be foolish to dismiss lightly."

The United States is a producer on a grand scale. The Secretary of the Department of Agriculture estimates that the cotton crop will reach a value of \$600,000,000; corn, \$1,000,000,000; wheat and hay, \$1,000,000,000, and other farm crops will bring the total up to about \$4,900,000,000, compared with \$4,480,000,000 last year.

For the first time in the history of the noted family of financiers, the Rothschilds of Vienna have sent two of their sons to the United States to study American banking methods. It is presumed that they will avoid the impressionable form of banking which has produced the Chadwick scandal and the "frenzied finance" which caused the recent slump in Wall street trust securities.

At the annual dinner of the international committee of Young Men's Christian Associations of North America, the Secretary of the Navy said: "I believe that I voice the sentiment of every railroad man in the West when I speak of the association's work among the railroads. It has been better for the railroads, better for the men, and best of all for the public. Under such management as it has now, the association is bound to progress."

It is stated by the newspapers in Madrid that the Duchess of Villahermosa, one of the most aristocratic and proudest ladies of Saragossa, has refused 1,500,000 pesetas (\$29,500) offered by a New York millionaire called Hamilton for a portrait painted by Velasquez of Diego Corral, a personage at the court of Philip IV. The Duchess replied that her love for art made her despise money. "I prefer," she said, "to present my picture to the Prado Museum. Spaniards and Yankees cannot experience similar feelings of respect with regard to artistic relics." The press and public applaud the Duchess' answer.

The decision of the New York State Court of Appeals that the State eight hour law is unconstitutional is considered an important event in the history of labour legislation. It "will have some influence unquestionably on a similar bill pending in Congress and relating to contractors on government work," thinks the *Philadelphia Press*. In the case that came before the court, Controller Groat of New York City, refused to pay a contractor for six scows because the contractor had worked his men more than eight hours a day on the job, contrary to the eight-hour law. The contractor sued for the money, on the claim that the law was unconstitutional, and the court sustains the claim.

William McGee, sole white survivor of Custer's command in the battle of the Little Big Horn, is in jail in New York for stabbing and mortally wounding, Frank Mitchell, a salesman, who died later of his injuries. McGee, who followed border life for forty years, has three holes in his body and a clip over the scalp from Indian bullets and knives. He lay wounded one whole day in the trenches with Reno, standing off the rushes of Sitting Bull's braves. And now he has ended up by getting jailed for a stabbing affray, which started from a dispute with Mitchell over his ability to make kidney stew. McGee has been employed canvassing for Harper's periodicals. He was the neighbour and friend of the man he stabbed.

"Uncle Joe" Cannon, says the *New York Commercial*, is apparently going to have a hard

time in quelling the spirit of tariff revision in the House of Representatives. Three different bills providing for revision of customs duties were introduced in that body on the opening day of the session, and all of them were introduced by Republicans—that, too, by Republicans representing states that gave heavy pluralities for President Roosevelt—Massachusetts, Michigan and North Dakota. It looks very much as if "Uncle Joe" were going to have another case of "insurgents" on his hands, and as President Roosevelt has declined to express himself on the tariff question, it may happen that the present case may prove serious.

The death of the Rev. Dr. Benjamin F. De Costa in New York recalls memories of one of the most remarkable "conversions" in American church history. Dr. De Costa was sixty-eight years old, and had been for eighteen years the rector of the Church of St. John the Evangelist, New York, at the time that he decided to join the Roman Catholic Church. He became a Roman Catholic priest during his residence in Rome last autumn. The *Catholic News* (New York) is authority for the statement that "his ordination to the Catholic priesthood was the joy of his life." The same paper adds: "It is a fine tribute to him to know that a great many of his former parishioners when he was an Episcopalian minister, came to visit him frequently during his long illness and were among the dear friends at his funeral."

A practical consular reform, remarks *Public Opinion*, is the President's order including 355 subordinate consular positions in the classified service. Years ago the corps of consular clerks was formed for the purpose of affording a training school. Few of these clerks, however, have become consuls for the reason that political backing was required to obtain the higher post and because, if obtained, dismissal was to be expected at the next change of administration. The new executive order changes this state of affairs, and opens to consular employees a career which is worth working for and which should now attract a rather higher grade of men than those who now predominate in the service.

In the U. S. War Department report, remarks a New York journal, there is little of general interest except in that part of it which refers to the Philippines. Drouth and locusts are the explanation this year of a decrease of about \$5,000,000 in the islands' trade; last year it was a cattle disease that did most of the trouble. We may have brought the Philippine good government, but no one can deny that bad luck came along with it. The most practical plan for the improvement of the islands' trade is the secretary's recommendation of a repeal of all duties on exports to America except twenty-five per cent. of the Dingley duties on sugar and tobacco. Congress has "turned down" the same recommendation from the President, from Secretary Root, and from the Philippine commission, but there is still hope that Mr. Taft will be more successful.

Speaking on the subject "Insurance on Women," a writer in the *Minneapolis Journal* says:—"It is a toss-up since the last policy was taken out, which woman carries the heavier life insurance, Mrs. Leland Stanford of California or Mrs. James Dunsmuir of Toronto. The odds are in favour of Mrs. Stanford, for she now is rated as insured for 'over' \$1,000,000, whereas Mrs. Dunsmuir is put down at an even million. There is no question they are the most heavily insured women on the American continent, and far ahead of any of their sisters in the east. The next nearest is Mrs. Basil N. Duke of Durham, N. C., who has policies amounting to \$835,000. In New York there is no policy on the life of a woman for more than one-tenth of that carried by Mrs. Dunsmuir. Mrs. Gage E. Harbell is insured for \$100,000. Mrs. Henry C. Alexander carries a policy for a similar amount, and so does Mrs. Robert K. Stafford. The total in New York, however—in policies of more than \$50,000 each—is not much greater than the insurance on the life of the widow of the California multimillionaire."

## BUSINESS AND THE WAR.

We have received from the Bureau of Commerce and Industry, of the Department of Agriculture and Commerce, a pamphlet showing the effects of the war on foreign trade and on domestic commerce and industry, as well as the market conditions in Manchuria and Korea. The book gives many statistical tables explaining the fluctuations in trade and also comparisons of returns in 1903 and 1904. In the prelude to the first chapter it is stated that in the autumn of 1903, when Russo-Japanese affairs were gradually becoming more serious, profound anxiety was generally felt regarding the position of business rather than on the fighting capacity of the nation. Since the outbreak of war, however, trade and industry have developed, except for a few branches of merchandise. Comparing the period from October, 1903—which was the date fixed for the promised withdrawal of Russian troops from Manchuria—to September of the following year, with the previous corresponding period, the increase in Japan's foreign trade was *yen* 29,102,000.

## TRADE-MARK PROTEST.

In the Patent's Bureau, a decision has been delivered on a protest lodged by Mr. J. W. Copmann, Yokohama representative of the Standard Oil Co. of New York, against Mr. I. Eto, a kerosene oil dealer, residing in Osaka. According to the *Official Gazette* of Jan. 10th, the Standard Oil Company on Nov. 4th, 1903, registered a trade-mark reading "Atlantic Refining Company," on tins containing kerosene oil, and the Japanese merchant also registered in the same month of 1903 at the Bureau a trade-mark for an oil can reading "Attemper Refining Coal-oil." The Standard Oil Company contended that the mark registered by the Japanese possessed no qualification for showing the quality of the oil, the name of the manufacturing firm or place, etc. in accordance with Art. 2nd of the Trade Mark Law, but that it simply resembled the foreign mark, and therefore that such trade mark should be abolished. The protest of Mr. Copmann was sustained on the ground that the constitution of the Japanese trade mark closely resembled that of the foreign mark and that consequently the public would be confused.

## NEWS OF THE WEEK.

Mr. S. Yada, Manager of the Yokohama branch of the Mitsui Bank, has been removed to the Nagoya branch.

A telegram from Ujina reports that 192 Russian prisoners and 345 Japanese invalids were brought there on Jan. 5th from the front.

Viscountess Hayashi, consort of the Japanese Minister to London, arrived at Nagasaki by the German mail steamer *Bayern* on the 11th.

In the end of December, workmen employed at several factories in Tokyo numbered 33,577, including 9,370 cotton spinners, 4,758 printers, 4,040 tobaccoists, 1,833 in iron works, etc. Of them 16,421 were females.

The price of Japanese bonds in London is continuously rising. The quotations received on Jan. 7th by the Specie Bank were as follows: 4 per cent, £76.15; 5 per cent, £91.73; war bonds, £90.61; 6 per cent, at a premium of 2.375 per cent.

It is reported by Tokyo journals that *yen* 54,280,000 of the loan raised in New York, and 15,000,000 in London, will be brought to Japan this month. With this money the Government intends to redeem a portion of the temporary advances from the Bank of Japan, which now amount to *yen* 95,500,000.

Hongkong papers announce the death of Mr. Dalgleish, a member of the staff of the Hongkong and Shanghai Banking Corporation. Mr. Dalgleish was the son of a well-known "China

hand" formerly resident in Shanghai, and was respected and esteemed by a wide circle of friends. He had recently been on the Bank's Manila staff and came to Hongkong a few weeks ago to enter the hospital.

About 8 p.m. on Jan. 11th, Asaka Hisa (42) wife of a restaurant keeper, living at Sugatami-cho, Yokohama, attempted to commit suicide by drowning off the bund, just in front of No 6. She was immediately rescued by a policeman and removed to the Kagacho Station. The cause is reported to be temporary insanity.

A remarkable fall took place on the rice market in Tokyo on Jan. 11th, the quotations being as follow:—

	Closing price on the 11th	Closing price on the 10th.
January delivery.....	Yen. 12.91	Yen. 13.15
February ".....	12.95	13.17
March ".....	13.03	13.24

According to investigations made by the Finance Department the average price of bonds during December was as follows:—old bonds, yen 17.50; Redemption, yen 84.99; War, yen 85.02; Tokyo City, yen 96; Osaka Harbour, yen 86; Osaka Water Work, yen 82.60, and Kobe Water Work, yen 85.

A telegram from Urawa says that H. Nakano, a farmer residing at the village of Sashioji, near Tokyo, was arrested on Jan. 8th on a charge of having tried to utter a counterfeit 10 yen note in a tobacco shop. He had forty-two similar notes in his possession. At Urawa police station he confessed that he had passed several of these notes in Tokyo and Saitama prefecture.

Says the *N.-C. Daily News*:—There was great sorrow on Sunday among her old friends in Shanghai when it became known that Fanny Hannen, as she was popularly known to so many, was dead, having been carried off prematurely by cancer. A Shanghai girl from her birth, a resident in Shanghai and Yokohama up to the time of her marriage with her cousin, she was admired and loved by all who knew her; and with such kind and hospitable parents she could not but be known to practically everybody. Very great sympathy is felt with her husband and children, and with Lady Hannen, and "Beau," to whom her untimely death must be a terrible blow.

Mr. Yi Yong Ik is said to have announced his intention of refusing any official position which may be offered him, devoting his time instead to the reform question. He has brought back from Japan a large number of books dealing with this matter and he proposes to have them translated into Korean for the benefit of the people in general.

The *Times of Ceylon* heads the following story, "Babooism":—A Calcutta lady one day bought some article of vertu from a Tamby. Fearing she had paid an excessive price, she referred the matter to a clerk in her husband's office whose reply was as follows:—"I beg to inform your highness that silly ass merchant sold the article dam cheap. If purchased in the bazaar it would have been much more costive."

A telegram from Maebashi reports that a youth named D. Doi, a student of the Maebashi Academy, on the night of Jan. 10th, attempted to murder Mr. A. Takahashi, one of the teachers of the institution, by inflicting an injury on the left arm with a knife just as the latter was about to enter his dwelling. The culprit gave himself up at the police station where he explained that the teacher had behaved in a partial manner when he examined his class last month.

#### THE LAW COURTS.

##### ALLEGED RUSSIAN SPY.

The trial of H. B. Collins, charged with having undertaken to communicate Japanese military secrets to Russia, will take place at 9 a.m. on January 17th in the Yokohama District Court.

#### MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

To the numerous letters published in the *Gokyo* (Methodist) on "The Indifference of Educated Laymen to the Church" we referred last month, when we furnished brief epitomes of the first three communications. These appeared in the *Gokyo* of Oct. 29th. Through the months of November and December week after week these letters were published. Some of the writers deny that there is any indifference to the Church, but the majority express dissatisfaction at the existing state of things and propose various changes in methods of working and teaching. Letter No. 4 is by Mr. M. Minakami. He says that the church has fallen behind the age. Twelve or thirteen years ago, he observes, the church led in everything. It figured in politics, it figured in literature, it figured in philosophy, it figured in education. It led the way in all charities. It stood forth as the champion of the reform of all useless and harmful customs. It aimed at enlightening and forming public opinion on all topics. But the Church to-day occupies no such position. Instead of leading it merely follows. The cause of this is that it has not moved with the times. It clings to out-of-date notions and methods. It has failed to show that like all other human institutions it can adapt itself to altered conditions. There is no successful organization in existence that is not repeatedly changing its methods and even its fundamental principles in order to bring itself into line with prevailing tendencies. We find even a conservative country like England going back on Free Trade rather than fall behind the age and be worsted in the financial struggle against other states. Now, when we examine the theology, the doctrines proclaimed from the pulpit, the articles of belief formulated in church creeds to-day, we perceive that they are all characterized by extreme unprogressiveness. There is no free spirit of inquiry, and hence no life. Many preachers have a feeling that this is so and are in heart more advanced in thought than would appear from their sermons. The thoughts which pass through their minds in their studies and the doctrines which they proclaim from the pulpit are as far apart as heaven from earth (*Jiyu kenkyu wa shimpo no kaitei [steps] nari. Jiyu rissu wa shimpo no chudō nari. Jiyu shinjō [信條] wa shimpo no mukuteki nari. Yo wa konnichi no kyōkai ni wa kyōgaku ni kwan shite hyōri [表裏] rjōyō no jutsu [説] aru wo miru; sunawachi kōdan ni okeru Kyōgaku to shōtai [study] ni okeru kyōgaku to no aidai ni shōjo no sa aru koto kore nari*). The Japanese church to-day is the organ of European and American missionary societies. It is not free to steer its own course and adapt itself to the existing situation. Our church is not only lacking in intelligence, but no attempt is made to devise methods for developing intelligence. (2) Our organization and our business arrangements are behind the age. (3) The road to free inquiry is blocked. These are the chief causes of the decay of the church's influence in the country. After dwelling further on the unsatisfactory state of affairs in the Church, Mr. Minakami sums up his recommendations under seven headings as follows:—(1) Every sect should possess a Business Bureau, to which all important business connected with church work and organization should be entrusted. The head of this Bureau should have supreme power to settle business affairs. He should be assisted by subordinate officers, who should collect information and carry on investigations. (2) Promising pastors should be sent abroad to complete their studies. (3) An evangelistic literary department should be created, to which should be committed the work of preparing Christian books. This work should rank as high as pulpit evangelistic work. (4) The salaries of pastors and others should be raised to twice or even thrice their present amount, and a system of special emoluments for special services should be devised. There should be old age pensions, and provision made for the widows and orphans of deceased pastors. (5) Worship and preaching should take a new form, whereby greater effects would be

secured in less time than is now spent at services. (6) The road to free inquiry in matters of doctrine should be opened up. (7) A committee should be appointed to inquire into and report on the present financial condition of the church, and the future financial policy to be adopted should then be determined.

In the next letter published Mr. N. Kinoshita says that in many cases the education received in this country predisposes young men against religion. Those who take an interest in science or philosophy are very apt to treat religion coldly as being out of harmony with the principles which they have learnt to respect and to follow. Young men who in their general study have gained a certain knowledge of religion are often not a little disappointed when they come into contact with ill-informed Christians or when they attend Church services. They are overcome with astonishment and despair when they perceive how great is the inferiority of what they see and hear to what they had by their studies been led to expect. (*Yūye ni ōku no seimen wa kyōkai gai ni yetaruru shisō to kibō to katsugō [thirst] to mo idanite kyōkai ni iru toki, so no amarino rettō ni kyōkai-rakutan suru nari*). That the Christian religion is more or less known all over the country is not so much the result of the work of the Church as of the extensive study of English books which contain constant allusions to Christian teaching. The general conclusion which Mr. Kinoshita reaches is that the church is behind the age and needs a thorough overhauling. This she herself must realize, he says, or she will go from bad to worse. The age demands certain things from her; if she makes no attempt to meet these demands she will be regarded by public opinion generally as an effete institution or as the mere abettor of superstition—a retrograde influence in the world.

Dr. Anezaki, who, it will be remembered, spent some years in Europe investigating the state of religious opinion and Church organization there, contributes a long article to the December number of the *Taiyo* on "European Churches." He regards the subservience of certain churches to the civil power as an element of weakness and as calculated to seriously interfere with the free development of religious thought. The Church, he says, has from time to time been used as a tool of certain Governments for purely political purposes just as Buddhism and Shintoism were used here in former days. This is a subject, continues Dr. Anezaki, which should specially interest the Japanese at the present time as the power wielded by the Czar is largely dependent on the skillful use that he and his ministers make of the superstition of the ignorant millions under their rule. To Dr. Anezaki it appears that in this modern world there is no grander sight than that afforded by the spectacle of Count Tolstoy writing just what he thinks unharmed in the very heart of one of the most despotic countries in the world. Strong as is the Russian Government, it is not strong enough to lay hands on Count Tolstoy and pack him off to Siberia. This power wielded by a great religious teacher in a country noted for its intolerance and violent suppression of liberal thought of all kinds is something that the Japanese would do well to analyze thoroughly, says the learned Doctor. It is a thing that we certainly do not possess and yet which in the future we may need more than battleships and big armies—a species of moral greatness which commands the respect and admiration of the whole civilised world. To appeal, and to appeal successfully, to the nobler instincts of human nature is to occupy a position high above the petty national jealousy and animosity that exist throughout the world. The moral grandeur of Count Tolstoy's position to-day should find no more ardent admirers than right thinking Japanese, according to Dr. Anezaki.

We have received from L'Abbe E. Ligneul two theological pamphlets, one entitled "The Church," issued last October, and the other entitled "The Eternal World," published in December. They belong to a series of works which is to embrace the whole range of Church teaching and church

dogma. The name given to the series is *Shin-gaku Kōyō* (新學綱要), "The chief elements of Theology." The treatise on "The Church" covers 81 pages, and is divided into 14 chapters. Chap. VIII deals with the Sects of Christendom. M. Ligneul, with his wonted lucidity, draws attention to the enormous gulf which separates Protestants from Catholics. The basis of Roman Catholicism is authority, says M. Ligneul, the basis of Protestantism is the alleged right of free interpretation of the scriptures. The principle of free interpretation, he goes on to point out, proves in a great many cases to be the high road to unbelief, and to endless discord and schism. Having denied the authority of the church to interfere with individual freedom of belief and interpretation, Protestantism cannot logically complain of the lengths of scepticism and destructiveness to which members of their various bodies go. Each individual Christian interprets the Bible as he or she pleases and is answerable to no tribunal but his or her conscience. All Christians according to this theory are on an absolute equality. Each may choose what he will believe, but nobody has a right to dictate to a fellow-Christian what he or she shall believe. And so it happens that the Protestant section of the Christian church is split up into numerous sects, which in many cases differ from each other on the very fundamentals of the faith of Christ, some of the sects drifting away to the verge of agnosticism and scepticism. On this principle there can be no stable church. When once its authority is gone, the church can no longer retain its hold on the minds of those who profess to belong to it. The permanency, the stability, the oneness and the wide influence of the Catholic Church throughout the world are owing to the fact that its sons and daughters all bow to one supreme authority, no one claiming the right of settling his or her articles of belief.

The *Yekai* (永界) discusses the subject of eschatology from a Catholic point of view. There are 4 chapters. One on the communion of saints; one on the forgiveness of sins, one on the end of the world, the resurrection of the body and the final judgment, and one on eternal life, the work being of precisely the same length as the treatise on the Church. M. Ligneul and his translator, Mr. Maeda, are most indefatigable. They have within the past few years produced no less than 57 books and pamphlets in the defence and explanation of Christianity and in the definition of its attitude to questions philosophical, moral, political and scientific. Their works are a credit to their compilers and constitute a little library on Christian apologetics that is not surpassed if indeed it is approached by the productions of any Mission in Japan. Some of M. Ligneul's books are reported to have had a very good sale, second editions being called for.

The Roman Catholic Mission issues a magazine on the 15th of each month called the *Tsūsoku Shūkyōdan*, which is edited by Mr. Maeda, and which aims at making religious doctrines intelligible to poorly educated people by explaining them in simple language. The style of this periodical is plain colloquial Japanese, the language that is heard in the streets every day. Most of M. Ligneul's books are well supplied with *kana*; and thus they may be read and understood by any one possessing a medium knowledge of the Japanese language.

A writer signing himself "Entei" in the pages of the *Koye* (Roman Catholic) discusses the subject of religious tolerance in a very temperate and broad-minded manner somewhat as follows:—With some tolerance is another word for indifference. The good and the bad, the pure and the impure, truth and error are all treated by them in the same way: neither the one nor the other of these being welcome or unwelcome. Where there is zeal, earnest belief, attachment to fixed principles, then intolerance is apt to arise and set well-meaning people at loggerheads with each other. The intolerance that exists between believers and unbelievers is very great, but this subject will not be discussed here. What is most plain is the intolerance both towards each other and towards outsiders that exists within the

pale of the church among those who are equally interested in the Church's prosperity. Five causes for this kind of intolerance may be specified: (1) Many Christians forget in judging others and condemning them in their own minds that God only knows the secrets of the heart. Their condemnation of others is founded on insufficient knowledge. (2) Some people, owing to the constitution of their minds, to their education or to certain prejudices which they have to overcome, are a long time in reaching the truth. Even a man so great as Newman took 20 years to arrive at the goal of the Catholic Church, and yet he affirmed that not once during his inquiry was he conscious of acting contrary to what he conceived to be the truth. Such men are not to be condemned or treated with impatience. (3) There are persons whose impatience and intolerance are caused by their perpetually dwelling on the human side of the church, on the faults and failings of its members, rather than on its Divine side. (4) Defenders of the church must bear in mind that not a little of the opposition which they encounter from outsiders is owing to the blundering manner in which they state the church's case to inquirers. Many of them treat inadequate evidence as if it were adequate; they state half truths as though they were whole ones; they mix up weak elements or irrelevant elements with strong and relevant arguments; they defend tenets which are not essential parts of the Christian creed at all, or they treat as facts things for which there is no foundation. Hence they create a bad impression on opponents. Instead of mourning over their own inadequate defence of Christianity, these persons blame inquirers for their prejudice against Christianity. (5) Many of our Christians seem to overlook the fact that they can do no more than point out the road that leads to truth, can only conduct men as far as the portal of the church. To make them enter lies not within their power. This must be left to God's grace. There should then be no ill-feeling because inquirers do not take the final step of entering the church. True tolerance consists in making due allowance for others, in refraining from attributing to them bad motives for not joining us, in patiently waiting for the dispersion of the mists that obscure their vision, in realizing the truth that the perplexities of other minds are only half known to us, though perfectly known to Him whom we serve and on whose behalf we are working.

\* \* \*

In a recently published pamphlet entitled *Shinri no Nihon* (Truth-loving Japan) the author affirms that the whole world is at present in search of a new religion. The old religions have gone and the new religion has not yet come (*Kyūkyō yukite, Shinkyō imada kitarasu*). All attempts at formulating a new faith have so far failed, but that does not say that success is unattainable. That men will be content to go without religion is not for a moment to be believed. Byron observed, men have never been without religion in the past and they will never be without it in the future. One thing is plain. All forms of superstition are doomed. The religion of the future will possess an immovable rational basis, will appeal to man's highest faculties, to the moral sense and reason. The writer we are quoting comes to the conclusion that pantheism is the creed that will survive all other forms of faith, as among thinking men it may be said to be one of the earliest forms of belief.

\* \* \*

The *Seikyō Shimpō* (Greek Church), in a leading article on the tendency of the system of education now followed, says that specialization is being carried too far. The watchword of modern educationists is "usefulness" and the schools are doing their best to round off all young men designed for round holes and to square those destined for square ones. This is all very good in its way. But men have duties to society to perform outside their special callings, and an educational system which fails to take note of this and train accordingly is defective. Japan will doubtless be abundantly supplied with specialists after a while, but will there be a good supply of men possessing general intelligence

and having wide interests? It is in this that we can see the superiority of Western systems of education to that now in vogue in this country, says the *Seikyō Shimpō*. Education should awaken and satisfy general interest. Society needs men whose natures are developed on more lines than one, who have been taught how to adapt themselves to various situations in life. The gist of the article is that the standard which Japan is now adopting is too exclusively utilitarian to answer the diverse needs of the nation.

Commenting on the fortunes of the Greek Church during the past year, the editor of the *Seikyō Shimpō* says that the Church and the nation have alike passed through a severe ordeal, have received that baptism of blood which other nations have been called to undergo prior to their thorough regeneration. Up to the time of the war and even after it had commenced, Greek Church Christians were under suspicion of wishing success to Russia owing to their religious connection with that country. But, says the *Seikyō Shimpō*, the part we have played as a Church since the war began and the willing manner in which not a few of our converts have laid down their lives in their country's cause at the front have had the effect of banishing from the mind of the general public the unworthy suspicions which for years they so persistently harboured. This of itself is no small benefit to have gained from the war. But the war has benefited us in another way. It has impressed upon us the necessity of our being financially independent of foreign aid. For at such a time as this there is no saying how long the help we have received from Russia will be extended to us. It is a happy omen that this feeling prevails throughout the 300 odd churches which belong to our communion. Not one of these churches has been badly affected by the war. On the contrary, the war has tended to deepen faith and strengthen resolution, and everywhere there is a desire for financial independence. In many other ways our converts have been stirred up by the calls for help, comfort and charity which have come from so many quarters. Opportunities for the display of Christian virtues have been afforded which to our knowledge have been largely utilized. The experience which we have had then, though in many respects bitter has been most instructive. For a young church like ours to have passed through such an ordeal unscathed constitutes training that we could ill afford to miss. It is then with feelings of gratitude for God's many good gifts to us as a church that we bid farewell to the dying year.

The Greek Church Theological Press has issued a Russo-Japanese colloquial handbook that is largely used by the Japanese army at the front and which has now reached its third edition. It sells at 16 sen a copy and bears the title of *Ganyō Nichi-Ro Kaitoa*.

\* \* \*

Commenting on the effects of the war on Christian propaganda, a recent number of the *Kirisutokyo Sekai* says:—When the war broke out we were not without apprehensions that it would be utilized by the enemies of Christianity to stir up prejudice against us. A few ignorant people here and there did try to make out that Buddhism and Christianity were combating each other. But the public generally refused to entertain any such notion and even secular writers pointed out that Russian Christianity was an inferior article and that it would not be fair to judge all Christians by Russian standards. Thus it has happened that the war has been no hindrance to our work. On the contrary, it has tended to stimulate our zeal in various ways. For many years past there has never been so much earnestness in our churches as there is now. The movement which began with the Kumiai Kyōkai manifesto has spread to all parts of the country. From Tōkyō, Okayama, Kōbe, Kōchi and many other places we hear of enthusiastic meetings having been held. That at a time when the whole mind of the nation seems to be absorbed in the war such a warm welcome should be extended to religious teaching is quite unexpected. What is the meaning of it all, and whence does it come? The fact is this, that the nation is beginning to feel that it has a mission in the Far East and to realize that it is not

spiritually well equipped for the fulfilment of this mission. Thanks to the material civilisation and to the extensive knowledge we imported from the West we have been successful in the war. But thoughtful people are coming to see that success in the war will mean increased responsibilities. And so not a few are beginning to overhaul their mental equipment, to examine their ethics and their religion and to ask, will these stand the new tests to which they will be subjected? Must we not go in for a new mental outfit? No patching up of the old garments with new material, such as is being attempted by the new Buddhists, will, in our opinion, answer, says the *Kirisutokyo Sekai*. Christianity alone can serve our purpose at such a time as this. The church must not let this opportunity pass unused. There may never be such another.

Mr. Takahashi Washizō, writing on the ascension of Christ in No. 1,109 of the *Kirisutokyo Sekai*, says that the whole subject must be regarded as a mystery, which the short notices penned by the compilers of the Gospel record do not help us to understand. The narrative does not seem to treat the ascension as though it were anything more than the most ordinary event. Further explanation was probably not needed in the early days of the church's history when there was little scepticism, but in modern times there is a feeling that a more detailed account of what happened is desirable. The words "and a cloud received him out of their sight" are interpreted by this writer as designed to show that the ascension is veiled in an obscurity which had better be left undisturbed, as conjectures are to no purpose in a land of mystery.

\* \* \*

In the December number of the *Chūōkōron* (Buddhist) appears an interesting article from the pen of Mr. Ueda Mannen which traces the connection of Christianity and Buddhism with philology; the chief points of which we give below. In modern times the labours of such men as Bopp, Grimm and Humboldt have rendered the study of philology a comparatively easy task. But when we come to inquire whence these scholars obtained their material and what made it possible for them to raise philology to the level of a science, the reply is that Christianity brought this about. In pre-Christian times the two leading nations of the West, the Greeks and the Romans, were noted for the contempt in which they held all foreign tongues. They were the languages of barbarians and unworthy of being studied. This superciliousness was the result of narrow-minded national pride, such as has prevailed in China for centuries. Then came Christianity, with its doctrine of the equality of all men, with its condemnation of racial animosity and jealousy. To it all languages ranked alike. They were the media by means of which the sons and daughters of one Heavenly Father expressed themselves. And so missionaries began to investigate various tongues, in order to make the Gospel intelligible to diverse races and tribes. But modern philology may be said to date from the beginning of the fourteenth century. In 1311 Clement issued a Papal Bull commanding that Hebrew, Arabic, Chaldaic and other Oriental languages be taught in the universities of Paris, Oxford, Bologna and Salamanca.\* In the sixteenth century the Popes Gregory XIII and Urban VIII established the principle that religion should be taught everywhere by means of the native tongues and that missionaries and priests should study those tongues. It was owing to the adoption of this plan that our Japanese language was studied by the early Jesuit missionaries, who compiled a grammar and dictionary and a reader in very early days in this country. To the study of philology Lorenzo Hervás (1735-1809), the distinguished Spanish Jesuit linguist, gave great impetus by collecting written specimens of over 500 different languages and by compiling grammars of over 40 tongues. Hervás made his linguistic studies the

\* The Pope also appointed teachers of foreign languages at his own court, whom he supported. The Kings of France and England were required to support the teachers at Oxford and Paris, the clergy of Italy those at Bologna, and the clergy of Spain those at Salamanca. (WRITER OF SUMMARY).

basis of race investigations of the highest value. Besides all this, to Christianity we owe the revival of Greek and Latin learning at a time when the European world was quite unconscious of the vast intellectual treasures to be found in the works of the world's greatest teachers.

Now turning to Buddhism, it is pertinent to ask why has there been no serious attempt either in ancient or modern times to pursue the Christian policy of teaching religion by means of native languages? How is it that we have no Buddhist Bible written in Japanese? There is a notion that to translate the sacred writings into colloquial language would be to rob them of half their solemnity and charm. But has this happened in the case of the translation of the Hebrew and Greek Holy Scriptures? There was a time when Buddhism relied on its unintelligibility for its success—when mystery overawed, and a certain magnificence was thought to be attached to the unknown.\* But surely to-day Buddhism can no longer afford to fall back on any such plea. It is most desirable that our Japanese Buddhists should spread their religion in Korea and China by means of the Korean and Chinese languages. Buddhism in the Far East is on her trial in a way she has never been before. She has an earnest and pushing rival in Christianity, and why she neglects to make use of one of the most effective of all methods of rendering doctrines better known and more highly appreciated we are at a loss to understand. In this Eastern world of ours where Buddhism is most at home she quietly allows Christians to lead the way in linguistic investigations. Were it not for Mr. Batchelor we should have no Ainu grammar and no Ainu Dictionary. Were it not for the learned labours of French Missionaries in Korea, we should possess no scholarly knowledge of that language. Why does Buddhism for ever lag behind in this matter? I regard the subject merely from the point of view of a philologist and a patriot. I perceive that at the present time a golden opportunity is offered to the Buddhists to go in and win. With Manchuria, Korea, Mongolia and other provinces thrown open to them, what a service they could render to the state and to the world by studying earnestly the various tongues, by compiling grammars, phrase books and dictionaries! To wait for mere philologists to do this will be to wait in vain. Even if the men qualified for the work were forthcoming, there would be no money at their disposal. In Western countries private citizens, and voluntary associations, are almost invariably ahead of states in exploration and investigations of all kinds. In Japan it is customary to wait for the Government to lead the way in everything. The Government is opening up the neighbouring continent. It is to be earnestly hoped that Japanese Buddhists will show themselves to be possessed of the energy, the enterprise, and the sense of responsibility required for the full utilization of unique opportunities.

#### THE NIPPON RACE CLUB.

##### ANNUAL REPORT FOR 1904.

The Committee have the pleasure of submitting to the Members of the Club Report and Account for 1904.

The year under review has seen a number of innovations, change in Weight for Age, Entrance Fees, Ladies' Tickets, Four Days' Meeting, etc., and the Committee ventures to think, judging from the result, that most have been in the right direction and have come to stay.

CLUB PROPERTY.—A new paddock stand has been added, also a smaller one for holders of Employees tickets, who under the present arrangement are excluded from the Grand and Paddock Stands. Stalls have been added, and the buildings, which have been kept up to the usual standard, are now insured for ¥34,000.

A plan in detail of the area bought and leased by the Club has been obtained.

VETERINARY SURGEON.—On Mr. Harrison leaving the country, the Committee made an arrangement on somewhat different lines with Mr. Leonard; he, however, left Japan in November.

\* This principle probably explains the retention of Latin liturgies by the Roman Catholic Church. (WRITER OF SUMMARY).

SUBSCRIPTION AUSTRALIANS.—As Mr. H. Abrams failed to fulfil his contract, the Committee secured the Autumn batch through a local firm. The time for selection was necessarily very limited and the Committee have been assured that more care will be taken with the Spring lot, for which an order has been placed through the same firm. The Committee have also offers in hand from others for regular supplies, should a change be deemed desirable.

RULES.—In reprinting the rules several alterations were introduced, of which Members were made cognizant.

FIXED SKELETON PROGRAMME.—A meeting of Owners invited by the Executive Committee resulted in the framing of a Fixed Skeleton Programme. It was afterwards found desirable to change the Champion Races to Handicaps for Winners, to which alteration the Permanent Committee's sanction was obtained. The Skeleton Programme has been adopted up to and including the Autumn Meeting 1906, in accordance with Rule No. 28.

THE TIFFIN ROOM.—This was made use of during the training and proved a comfort to those Ladies who graced the Club with their presence. An attempt to draw Members and their Families to the Club premises during Summer afternoons, when arrangements were made for the supply of refreshments, proved futile. The Restaurant, under the management of Mr. Wright, was hardly in full working order at the Spring Meeting, but gave general satisfaction in the Autumn.

FOUR DAYS' MEETING.—The experiment has by the public been deemed a success. It enabled the Committee to increase the Prize Money, and giving more room for Handicaps helped to distribute the wins and made better racing generally. We had 23 different winners out of 33 Races.

A GYM KHANA was held under the auspices of some of the Members of the Club, but suffered from lack of enthusiasm.

PRIZES.—The Committee is of the opinion that so long as the value and number of Horses raced remains as at present, the limit of Prize Money has been reached. yen 32,075 was raced for during the year.

His Imperial Majesty The Emperor again graciously honoured the Club by presenting Prizes both for the Spring and Autumn Meetings.

The Committee's thanks are due to Mrs. Davis and the Ladies of Yokohama and Tokyo who so kindly provided a Purse for the Spring Meeting, also to those Gentlemen who were good enough to assist them in various official capacities.

DONATION TO WAR CHARITIES.—The Executive Committee, in concordance with the Permanent Committee, subscribed on behalf of the Club through His Excellency Governor Suifu, yen 2,500 out of the takings of the last two Meetings.

MEMBERSHIP.—29 Full and 29 Suscribing Members have been added to the Club's roll during the year. The total is now 170 Full and 98 Suscribing Members. The Club regrets the loss by death of several Members, notably that of Mr. Goodison, for many years a part owner of a successful stable that represented Kobe at our gatherings.

Finally, the Committee desires to put on record their satisfaction with the excellent work of the new Secretary, Mr. Geo. Hood.

In accordance with Rule IV. the Committee now retire.

#### YOKOHAMA CHRISTIAN BLIND SCHOOL.

##### REPORT.

DEAR FRIENDS:—As I close the accounts of the Yokohama Blind School, for the year 1904, I wish I could express to you our gratitude for all the numberless deeds of kindness which appear in cold figures in the columns below. I wish I could make you see the brightness which your many offerings of sympathy, time, and money have brought into darkened lives. I wish you could know how much encouragement your notes of appreciation and thoughtful words of sympathy have always been to us. They have helped us more than you can know. The past year has been a very successful one for our Yokohama Blind School. Teachers and pupils have done faithful work and our numbers are steadily growing. Twenty pupils are now enrolled and several very needy applicants are waiting for admission.

One especially sad case just now claims our sympathy, a young girl of twenty who wishes to come to us from Tokyo. We have heard that her eyesight was destroyed in a factory where she was made to work long hours for a meagre sum, and since becoming blind she is no longer wanted at home (her mother is dead) and so is cast adrift. Some Christian people in Tokyo becoming interested are asking if they may send her to us and we are hoping that we can make up to her in some way some of the love and kindness that her life has always lacked.

One of our former graduates has spent the past year in a school for the blind in Tokyo. We hear

good reports of him. He writes that he is sometimes lonely, for not many of the students there are Christians, but those who are are trying to be faithful and to let their light shine.

Another of our young men, while home on his vacation last summer, so impressed the people of his village with their need of a Christian Blind School that recently they have decided to start one and he has been called home to make all necessary arrangements and to superintend the organization of the school. Our Christmas celebration, held in the chapel of 221 Bluff, was a happy time, long to be remembered by those who attended. Our pupils recited in English and Japanese and sang the beautiful Christmas hymns. Afterwards an hour or more was spent with tea, cake and games in the sewing room and all went home with shining faces, bearing their simple Christmas gifts. The thoughtfulness of one kind friend, who sent a contribution of fruit and foreign candy to our Christmas added much to the joy of the recipients.

Will the Yokohama Christian Blind School be continued for another year? Yes, we are glad to say that it will. For a time the future looked dark but now the sky has brightened and we look forward to the New Year feeling sure that it is going to be the best one we have ever known. Last December a letter came from Mr. Draper saying that he had succeeded in obtaining a grant of yen 300 for the school. This, together with what he himself will kindly give us, will amount to yen 600 for the year. As our expenses for 1904 were about yen 700 you can see that it will not be quite enough, but it is a generous promise for the continuance of the school. One hundred yen will be needed, above what is already pledged, to simply hold our work as it is to-day—but if we enlarge our borders at all—if we take in many new pupils—if we try to meet our growing needs we will need even more. From your kind gifts during the past year we feel sure that you will not fail to remember us in the future.

Once a blind man, walking in darkness, was touched by the hand of the Great Physician and, lo! he could see! He saw the world of beauty all about him, the birds, the flowers, the faces of the friends he had known and loved so long. But best of all he saw Jesus, and fell down and worshipped him. We can not give to these young men and women who come to us physical sight, but we can help to give them spiritual vision. We can help to open the eyes of their souls to the wonderful world in which they live. We can lead them to know and love the One who first loved them and then, some day, their long journey in the dark being ended, we know that with unclouded vision they will see Him face to face.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

AMERICA'S MERCHANT MARINE.

London, January 6.

The report of the American Merchant Marine Commission upon the Merchant Marine service of the United States, submitted to Congress, recommends subsidies for new mail routes and proposes measures to stimulate the American carrying trade with South Africa and the East.

SUEZ CANAL CHARGES.

The *Daily Telegraph's* Cairo correspondent says that in consequence of the proposed new canal, the Suez Canal Company proposes to reduce their charges by half a franc a ton.

THE TZAR.

Later.

The Tzar has returned to St. Petersburg.

FRANCE AND NEUTRALITY.

France, replying to the representations of Japan concerning the coaling and victualing of the Baltic squadrons at Madagascar, says that there is no danger of a non-observance of neutrality. The local authorities have received the strictest instructions.

THE "NIGRETIA."

The *Nigretia* has been condemned as a prize of war by the Saseho Prize Court.

REPORTED SINKING OF THE  
"KNIAZ SUVAROFF."

London, January 7.

The *New York Herald's* St. Petersburg correspondent wires that Admiral Rojestvensky's flagship, the *Knias Suvaroff* has struck a rock and gone to the bottom.

THE WAR TO CONTINUE

The *Standard's* St. Petersburg correspondent says that the Tzar and his ministers, at a council held in the Palace, decided to prosecute the war energetically and to provide General Kuropatkin with 200,000 troops before the end of February.

ROJESTVENSKY RECALLED.

Admiral Rojestvensky has been recalled.

ADMIRAL SKRYDLOFF.

An imperial decree appoints Admiral Skrydloff a member of the Council of the Admiralty.

A DENIAL.

The loss of the *Knias Suvaroff* is absolutely denied in St. Petersburg.

THE UNITED STATES AND  
VENEZUELA.

London, January 8.

The United States Government has sent

a sixty days' ultimatum to Venezuela notifying that if the United States and European claims are not satisfied, Admiral Dewey, with a strong squadron, will seize La Guayra, Puerto Cabello and Macaribo, and will send a strong force to Caracas.

PROTEST AGAINST BRUTALITY  
IN MOSCOW.

Owing to the brutality used in suppressing the recent demonstration in Moscow the municipality have suspended payment of the gendarmes until the responsible persons are punished.

DISCUSSING ROJESTVENSKY'S  
RECALL.

Reuter's correspondent at St. Petersburg says that yesterday's Council at the Palace discussed the recall of Admiral Rojestvensky, but no decision was reached.

THE BALTIC FLEET.

London, January 9.

Admiral Botrovsky's Squadron has left Suda Bay. Its destination is Port Said.

THE THIRD SQUADRON.

Coal contracts are being signed on the continent for the supply of the Third Baltic Squadron.

DEMONSTRATION AGAINST THE  
BUREAUCRACY.

A monster banquet is being arranged in St. Petersburg as a protest against the bureaucracy.

THE UNREST IN RUSSIA.

London, January 10.

The wave of popular commotion at first caused in St. Petersburg by the news of the surrender of Port Arthur has already subsided.

The Christmas celebrations have created a diversion, and the public have been joyously celebrating the season, the theatres, music halls, restaurants and taverns being crowded.

On the other hand there has been a solemn funeral service for those who fell at Port Arthur at the Kazan Cathedral, which was poorly attended.

THE THIRD SQUADRON.

Later.

Reuter's agent at St. Petersburg telegraphs that the following ships were to leave Libau about Jan. 28th or February 2nd to join Rojestvensky's fleet:—*Imperator Nicolai I.*, the coast-defence ship *General Admiral Apraxine*, the *Admiral Seniavin*, and the *Admiral Oushakoff* and the cruiser *Vladimir Monomach*.

JAPANESE CRUISERS OFF MADA-  
GASCAR.

London, January 11.

According to the newspapers of Berlin, a telegram has been received from London to the effect that Japanese cruisers are approaching the coast of Madagascar. A wireless telegraphic message in Japanese cypher has been intercepted by the English warship *Forté* which is lying at Mauritius.

RUSSIAN UNREST.

According to a telegram from St. Petersburg Prince Sviatopolk-Mirsky has resigned the portfolio of Home Affairs. It is expected that he will be succeeded by M. de Witte.

LOUISE MICHEL DEAD.

Later.

Louise Michel is dead.

CHAMBERLAIN AND THE  
COLONIES.

A letter from Mr. Chamberlain has been published in Melbourne in which he declines the invitation to visit Australia. He says

that he personally will not regret if the Opposition has an opportunity of showing the real character of its alternative policy, and he adds that a short time in Opposition will invigorate and unite our party, so that on return to power we may look forward to triumphs.

#### THE JAPANESE FLEET AND THE BALTIC SQUADRON.

London, January 12.

Reuter's correspondent at Mauritius says it is stated that the Japanese fleet are at Diego Garcia. Admiral Rojestvensky was informed on Jan. 2nd that the Japanese had proceeded to meet the Baltic fleet. The Baltic fleet has redoubled its vigilance. The aid-de-camp of Admiral Rojestvensky, interviewed at Tamatave, on January 3rd, said the squadron will require one month to cross the Indian Ocean.

#### FRENCH POLITICS.

M. Doumer, who has been elected President of the French Chamber, said, addressing a meeting of the Radical Left prior to his election, that every opportunity must be taken to subject the Ministry to reverses.

#### DECORATIONS ON STOESEL AND NOGI.

The Kaiser has conferred the Order of Merit on Generals Stoessel and Nogi in recognition of their heroic bravery at Port Arthur.

#### THE THIRD RUSSIAN SQUADRON.

Admiral Bolravosky's squadron has arrived at Port Said.

#### BRITISH NAVAL CHANGES.

The recent reorganization of the British fleets, coupled with an article in the *Army and Navy Gazette*, advocating the destruction of the German fleet by Great Britain before it becomes too powerful, has caused a regular scare in official quarters. In Berlin it is understood that reassuring explanations are now being given.

#### GOLD FOR JAPAN.

The steamer *China* ships half a million of gold from San Francisco for Japan to-day.

#### WARSHIPS SUNK AND DAMAGED AT PORT ARTHUR.

(Received at the Imperial Naval Department.)

According to report the torpedo-boats, recently sunk by our fire in Port Arthur were the *Gaidamak* and the *Kusadnik*. The destroyers injured were the *Selmi* (?) and the *Boevoi*. The *Bayan*, which was lying near the shore on the south of the East Harbour, and the *Amur*, which was in dock, were notably injured. The *Amur* turned over on her side in the dock and went to the bottom. The *Bobre*, which was lying by the west jetty of the new town, was set on fire by our shells.

(Received at the Imperial Military Head Quarters, 9.35 p.m., 5th instant.)

#### MEETING OF STOESEL AND NOGI.

General Stoessel conveyed a message that he desired to meet the Commander-in-chief of our army. General Nogi having gladly consented, the meeting took place to-day at Shwishiing at noon. The conversation was of a purely personal character and lasted for about 2 hours.

("Kobe Herald" Special to "Japan Mail.")

Shukaton (Sukiaton), 11 p.m., Jan. 5.

General Stoessel met General Baron Nogi on the morning of this day—a meeting which will be historic. The Russian Commander-in-Chief was received in the town of Shwishiing. He was accompanied by Colonel Reiss, Lieutenants Malchenko and Nebelskoy, and six Cossacks, and arrived at 10.30. General Nogi, who had with him Major-

General Ijichi, (Chief of Staff), Captains Tsunoda, Yasuhara, and Matsudaira and Mr. Kawakami, an official of the Foreign Office, reached the place of meeting at 11.05. The greetings of the two Commanders were most cordial.

In the course of the conversation General Stoessel dwelt upon the bravery of the Japanese soldiery, and upon General Nogi's intrepid, self-sacrificing nature. He expressed his gratitude for the transmission of his message to the Tsar, and specially to the Emperor Mutsuhito for His Imperial Majesty's generous directions relative to his treatment. The General's eyes filled with tears as he went on to refer pathetically to the death of Baron Nogi's two sons during the operations of the Japanese army.

The Baron replied that he was glad they both died heroically in the service of their country.

General Stoessel observed that there was indeed evidence of bravery and loyalty incomparable.

The two Generals, with their Chiefs of Staff, dined together.

General Stoessel asked the Japanese Commander-in-Chief to accept his Arab charger, and General Nogi, while declining personally to receive the horse, which, he said, was virtually a weapon, accepted it on behalf of the Army and guaranteed that it would be treated with kindness.

The Russian General returned to Port Arthur at 1.05 p.m.

Five thousand of the garrison marched out on the 5th.

#### JAPANESE CRUISERS.

(RECEIVED AT THE FOREIGN OFFICE.)

A Havas telegram from Batavia, dated the 4th instant, says:—"A Dutch steamer yesterday met 4 Japanese war-ships cruising on the east of Sumatra at such a short distance from the shore as to be visible to the naked eye."

#### MEDIATION.

The Russian *Official Gazette* of the 9th instant announces that Vice-Admiral Skrydloff is appointed a member of the Naval Council, and Rear-Admiral Dessen, Commander of the First Squadron, is appointed to the Command of the Frigate Squadron.

With reference to the subject of Mediation the Berlin *Tageblatt* says:—"Mediation is out of the question unless the initiative be taken by either Russia or Japan. Interference by a third Power, as was the case in 1895, would be injurious. At the capitulation the victor ungrudgingly granted most liberal terms to the vanquished. The clement conditions conceded by the Japanese to the Russians on that occasion are the best proof that the two Powers might now confer with each other directly, and that there is no other route to peace. There is one thing of course that Russia can never forget, namely, that Port Arthur has re-fallen into Japan's hands by force of arms."

#### THE BALTIC FLEET.

The *New York Herald* of Paris and other newspapers publish a St. Petersburg telegram which says:—"It is stated by a trustworthy authority that the Baltic Fleet is to be recalled. The general opinion is that it would be a useless task for the Fleet to continue its voyage now."

The *New York Herald* of Paris has a telegram from St. Petersburg saying that the *Kniaz Suvaroff* struck a reef and sunk.

A Wolff's telegram says that the Russian cruisers *Oreg*, *Ismurd*, *Dniepa*, and *Rion*, with the destroyers *Vronisui*, *Bromky* (? *Prochni*) and *Ryevii* left Suda Bay on the 8th instant for Port Said.

(RECEIVED IN TOKYO.)

A telegram received in a trustworthy quarter says that the *Kniaz Suvaroff*, flagship of the Baltic Fleet, seems to have struck a rock near Madagascar and sunk.

(The *Kniaz Suvaroff* is one of the four best battle-ships of the Baltic Fleet, her sister-ships being the *Bovodino*, *Alexander III* and *Orel*. Her displacement is 13,516 tons and her speed 18 knots.—Ed. J.M.)

(RECEIVED BY THE "ASAHI SHIMEUN.")

According to a telegram from St. Petersburg the *Kniaz Suvaroff*, on which was Admiral Rojestvensky, struck a rock near the coast of Madagascar and sank. But there has not yet been any certain news.

#### MORE TROOPS.

The Council of Staff Officers at St. Petersburg have decided to continue the war to the bitter end. By means of a new style of car the transport capacities of the railway will be increased and 200,000 additional troops will be sent to Kuropatkin. It was also decided that the Baltic Fleet should be recalled.

#### THE FUGITIVE DESTROYERS.

(Received at the Imperial Naval Department. Report sent by Vice-Admiral Kataoka, Commander of the Third Squadron. Received at 2.55 a.m. on the 6th instant.)

At 2 p.m. on the 5th instant the *Chiyoda* and the Destroyer Squadron returned from the direction of Kiaochow Bay. According to their report, they remained outside Kiaochow Bay until 6 p.m. on the 4th instant, watching whether the enemy's destroyers would emerge, but as there was no sign of anything of the kind, they relied on the declaration of the German local authorities and concluded that disarming had actually taken place. Therefore they steamed away.

Further, according to a report from the commander of the Destroyer Squadron sent to Chefoo, the disarming of the enemy's destroyers and torpedo-boats which put in there has been accomplished without hitch.

#### PORT ARTHUR.

(Received at the Imperial Military Head Quarters from General Nogi's Army, on the 10th instant.)

The following general officers, in addition to those in my previous report become prisoners, namely, Major-General Kiichin (?), Major-General Belui (?), and Rear-Admiral Wiren. The General officers that have taken the oath and are to be released are, General Stoessel, Major-General Reiss (or Rase), Major-General Madien (?), Major-General Costings (?), Rear-Admiral Ouktomsky, Rear-Admiral Grigovavitch, Rear-Admiral Roshitinsky and Chief-Engineer Rindebeck.

#### RUSSIAN SHIPS SUNK AT PORT ARTHUR.

(Received at the Imperial Military Head Quarters from Captain Tanaka of the Naval Staff; 10.30 p.m. 10th instant.)

The Russian gun-boat *Djidjit* lies sunk in the West Harbour of Port Arthur on the east of the Torpedo Station near the entrance of a small inlet. Her three masts are above water. She was sunk by our batteries after the capture of 203-metre Hill. The gun-boat *Rasboynik* lies sunk near the light-house at the mouth of the harbour which she blocks. Her three masts are above water. She appears to have been sunk by an explosion effected by the Russians. The gun-boat *Zabiaca* lies sunk in the West Harbour some 300 metres from the bend of Tiger's Tail Bay. Her masts and her smoke-

stack are above the water. It is said that she was sunk by the fire of our batteries after the capture of Wolf Hill. The situation at the fall of Port Arthur is thus clearly known.

Near the wharf of the Torpedo Station the three destroyers *Boevai*, *Silni* and *Pronizhni* are lying aground in a damaged condition. Also at a distance of about 1000 metres westward near another wharf the destroyers *Storazhevoi* and *Razvyschchi* are similarly beached and damaged. Adding these 5 destroyers to the 6 which escaped, only one remains to be accounted for, and we are now searching for it.

Another report from Port Arthur says that the *Posadnik* and the *Gaidamak* are sunk in the vicinity of the Torpedo Station.

[The *Dijidit* and the *Rashovnik* are cruisers of 1,329 tons and 13 knots speed. The *Zabinka* is a cruiser of 1,230 tons and 14 knots speed. The *Posadnik* and the *Gaidamak* are 400-ton vessels of 21 to 22 knots. It thus appears that there are 5 small cruisers and 5 destroyers lying at the bottom of the harbour in addition to the battleships, large cruisers and steamers.—*En. J. A.*]

(Received at the Military Head-quarters.)

#### THE SPOILS OF PORT ARTHUR.

The transfer of the property at Port Arthur was completed on the 10th. The following is the list:

Permanent Forts and Fortifications .....	59
Guns of Large Calibre .....	54
Guns of Medium Calibre .....	149
Guns of Small Calibre .....	343
Gun Ammunition, rounds .....	82,670
Torpedoes .....	60
Explosives .....	1,588
Gunpower, kilos .....	3,000
Rifles, stands .....	35,252
Fistols, stands .....	559
Swords, stands .....	1,891
Small Arm Ammunition .....	2,266,800
Ammunition wagons .....	290
Land Transport wagons .....	606
Various wagons .....	65
Riding horse harness, sets .....	87
Cart horse harness, sets .....	3,096
Electric Light, sets .....	17
Electric Machines, sets .....	15
Telephones, sets .....	134
Electric Signal Apparatus .....	3
Entrenching Tools .....	1,171
Horses .....	1,920
Battleships .....	4

(This does not include the *Sensatopol* as she is under water.)

Cruisers .....	2
Gunboats and torpedo craft .....	14
Steamers .....	10
Steam launches .....	8
Various craft .....	12

(The above are all sunk or injured; in addition there are 35 steam launches in a more or less reparable condition.)

#### THE KAISER AND GENERAL NOGI.

(FROM THE "KOBE HERALD.")

Shukaitau, January 11.

The Emperor William has conferred the Order of the Iron Cross on General Nogi, in token of his admiration, shared by the German Army, for the brilliant qualities of leadership which General Nogi displayed at the head of his valiant corps during the siege and capture of the gallantly defended fortress.

(FROM THE "JIJI SHIMPO.")

#### THE BALTIC SQUADRON.

London, January 10.

It is officially announced in St. Petersburg that rumours with regard to the resignation of Prince Svaipolk Misky, Minister of the Interior, and the recall of the Baltic fleet are baseless.

Admiral Botvinsky's squadron has arrived at Port Said from Suda Bay. It consists of four cruisers and three destroyers.

Japan has presented a protest against the supply of fresh water and provisions to the Russian squadron.

#### GENERAL KUROPATKIN.

It is rumoured that General Kuropatkin is in a serious condition.

#### NEW RUSSIAN LOAN.

The new Russian war loan is being issued principally at Moscow.

(FROM THE "ASAHI SHIMBUN.")

#### JAPANESE AT QUELPART.

London, January 10.

The Korean Government has informed the Foreign Diplomats that Japanese have landed at Quelpart and are making forts there.

[The *Asahi* says that the information is strange.]

(FROM THE "N.C. DAILY NEWS.")

#### TEA AUCTION AT LIVERPOOL.

London via Bombay, December 31.

The first tea auction for forty years was held at Liverpool yesterday, when two hundred chests of Indian tea were sold at fair prices by Messrs. Waterhouse and Sons.

#### THE OLD YEAR DIES HARD.

A violent gale swept the British Isles yesterday, causing numerous casualties on land and sea, and considerable telegraphic interruption.

There was an extraordinarily high tide in the Thames and Medway, and the Thames embankment was inundated, Cleopatra's Needle being surrounded by water.

#### PROPOSED NAVAL BASE ON THE FORTH.

London, January 3.

Lord Selborne, First Lord of the Admiralty, replying to Mr. A. W. Macdonochie, M.P. for Aberdeen-shire, says that it is untrue that the Admiralty has reversed its decision to utilise Rosyth as a naval base.

The extent and rate of its development are questions of policy which must be influenced by financial as well as naval considerations.

#### THE AMERICAN NAVY.

The annual report of the Secretary of the U.S. Navy, the Hon. Paul Morton, makes interesting reading, but we have space for only a few extracts. Mr. Morton, as Reuter informed us in the opening days of December, makes a vigorous plea for a strong navy as an agent of peace. He says that though the naval estimates for the next fiscal year have been cut down from the estimates sent in by the bureau by more than \$17,000,000, the amount asked for originally was not too much. The past year was important in the history of naval construction. "Never before were so many warships launched by this or any other nation in one year. Vessel for vessel and type for type I believe our new ships will compare favorably with those of any navy afloat." The report continues:—

Last year the navy cost a little over a dollar per capita. It cost little compared to what war would cost and it is the best insurance we have against war. We want such a navy in size, style and "sand" that no other navy will ever desire an engagement with us. It is our greatest exhibit in favour of peace. We are bound to occupy a prominent position among the great nations of the earth, and while doubtless we shall always be in the lead in every international movement to promote peace, it is much better for us to be at all times so well prepared for war that war will never come.

Provision for more officers and men is strongly urged. They are needed, the report declares, in every corps of the service. It is declared that

"The lessons of the war in the East thus far are the same as those of the Spanish war with respect to the relative value and uses of battle-ships, torpedo boats and destroyers. Weight of metal, heavy guns, and hard hitting, whether at long or short range, still do the most effective work. The day of the battleship is not over, and the sphere of the lighter vessels, while important, auxiliary only.

The report suggests that officers should reach commands earlier in life.

"Considering that future wars must be waged by young officers," says the report, "the chief of the Bureau of Navigation suggests that all captains upon reaching the age of 60 be retired; that this age limit be decreased one year for each two years from the passage of the act, until the age limit becomes 57; that this limit be reduced to 55 after the two next years; that all commanders upon reaching the age of 55 be retired; that this age limit be reduced as in the case of captains until it reaches 50; that no candidate be admitted to the Naval Academy whose age exceeds 17 on the 1st day of October of the year his class enters; also, as a contributory measure of relief, that officers whose service is restricted by law to shore

duty only be made extra numbers in the grades of commander and captain."

The Secretary further says that the ships built by the Government at Navy yards will cost more money than if built at private yards by contract. "A different question is whether they will prove better than contract ships," he adds. He believes that "the repairing and overhauling of naval vessels must at all times remain the important work of the navy yards, and that there should be no change in the policy of building public ships, as a general rule, by contract at private establishments." He believes also that the manufacture of guns and ammunition should be left to private enterprise. On this subject he says:—

The Government should not unnecessarily enter the industrial field. The development in time of peace of large private establishments, with extensive plants and a force of skilled artisans capable of building ships of the first class, making armour of the best quality in all weights, and constructing guns of every kind and supplying fixed ammunition therefore is desirable, inasmuch as the existence of such establishments may be of important service in time of war.

Furthermore it is not to be supposed that when such plants shall have been successfully established they will confine themselves exclusively to the making of ordnance for the United States. They will doubtless find markets elsewhere, and will do other work in kindred lines, thus adding to the general wealth and prosperity. Again, large numbers of skilled American workmen can not be long engaged in such a field without developing improvements in guns and their appurtenances, and in machinery for their manufacture.

On the subject of liquid fuel, the Secretary says that its success in industrial works is sufficient to warrant a trial. He adds:—

Among the advantages offered by liquid fuel are the reduction of the complement of men in the fire-room, extension of the steaming radius of vessels, attainment of maximum speed at short notice, the facility with which the boilers may be forced to extreme duty in cases of emergency, rapidity in meeting a varying load on the boilers, absence of smoke under light normal working conditions, economy of space reserved for carrying fuel, and finally the fact that oil tanks may be readily and quickly replenished. It appears to have been demonstrated by commercial experience that steam can be raised by oil fuel in one-third the time required by a coal furnace, and that the time requisite to fill oil tanks may be reduced to a fraction of that needed for filling bunkers with coal.

On the other hand, the difficulties of using a liquid-fuel plant upon vessels of war, particularly battleships and cruisers, are many and obvious.

"My own view," he concludes, "is that the use of oil as a fuel on board naval vessels is a question that cannot by any means be regarded as settled adversely."

Madras (Dry Leaf), Medium to best	—

## EXPORTS.

## RAW SILK.

Small demand and daily purchases are made to a moderate extent at our present quotations, which show a reduction of about *yen* 20 on last week's rates. Foreign markets are quiet and sellers here begin to realise the fact that they must be current.

## QUOTATIONS.

## WASTE SILK.

A fair business continues in this branch. Prices are easier (but without quotable change) in sympathy with the Raw Silk market.

# SAVE YOUR HAIR

## With Shampoos of Cuticura Soap and Light Dressings of Cuticura.

This treatment at once stops falling hair, removes crusts, scales, and dandruff, soothes irritated, itching surfaces, stimulates hair follicles, supplies the roots with energy and nourishment, and makes the hair grow upon a sweet, wholesome, healthy scalp when all else fails.

## MILLIONS USE CUTICURA SOAP

Assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itchings, and chafings, in the form of baths for annoying irritations and inflammations, or too free or offensive perspiration, and for all the purposes of the toilet, as well as by millions of women in the form of washes for ulcerative weaknesses, and many sanative, antiseptic purposes which readily suggest themselves to women and mothers.

## COMPLETE TREATMENT FOR EVERY HUMOUR,

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales, and soften the thickened cuticle; CUTICURA OINTMENT, to instantly allay itching, inflammation, and irritation, and soothe and heal; and CUTICURA RESOLVENT PILLS, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the most torturing, disgusting, itching, burning, and scaly skin, scalp, and blood humours, with loss of hair, when all else fails. Sold throughout the world. Australian Depot: R. TOWNS & Co., Sydney. British Depot: 87-88, Charterhouse Sq., London. French Depot: 5 Rue de la Paix, Paris. PORTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

**CUTICURA RESOLVENT PILLS** (Chocolate Coated) are a new, tasteless, odorless, economical substitute for the celebrated liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humour cures. Put up in screw-cap pocket tins, containing 60 doses. CUTICURA PILLS are alternative, antiseptic, tonic, digestive, and the purest, sweetest, most successful and economical of blood and skin purifiers, humour cures, and tonic-digestives.

## A perfect food

is Bovril—it nourishes,  
stimulates and reinvigor-  
ates. Bovril is of great  
value for all to whom  
strength and endurance  
are a vital necessity. Its  
regular use is a permanent  
protection against the  
dangers of colds, chills  
and diseases.

"PAIS CE OUX DOIS: ADVIENNE QUE POURRA!"

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 21ST, 1905.

## MARRIAGE.

At H.B.M.'s Consulate-General, Yokohama, on Saturday, the 14th instant, before John Carey Hall, Esq., H.B.M.'s Consul-General, JOHN CHARLES GONES, to Miss SATO OGAWA.

## SUMMARY OF NEWS.

The estimated expenditure of Osaka City for this year was yen 2,169,522.

A HUNDRED Japanese emigrants left Kobe on Jan. 13th by the *Korea* for Mexico.

PRINCE KITASHIRAKAWA was expected to arrive on Jan. 19th at Nagasaki from the front.

PROFESSOR SHIDEHARA, says the *Kokumin*, has been appointed adviser to the Korean Education Department.

DIPHTHERIA is prevalent in Tokyo. During ten days ending January 10th, thirty-three cases were reported.

MAJOR-GENERAL IJICHI, Chief of the Staff of the Army under General Nogi, has been appointed Commander of the Port Arthur forts.

PERMISSION for the construction of an electric tramway between Kawasaki and Kanagawa has been granted by the Minister for Home Affairs.

VICE-ADMIRAL SHIBAYAMA, appointed Commandant of Port Arthur, left Tokyo on Jan. 17th by the 4.20 p.m. train en route for his new post.

Two horses brought by Prince Fushimi from

America were landed on Jan. 17th from the *Mongolia* and sent to Tokyo the following day. They are of Kentucky breed.

REAR-ADMIRAL UYEMURA, Engineer-Inspector Yokoyama, Paymaster Tomita, and Engineer Inouye left Yokosuka on Jan. 14th for Port Arthur.

THREE of the Russian officers who recently arrived at Hiroshima from Port Arthur subscribed on January 16th to the Japanese Red Cross Society.

MR. M. KATO and two other members of the House of Representatives left on Jan. 16th for Manchuria and Korea to investigate business conditions there.

ON Jan. 14th, Major-General K. Harada was promoted Lieut.-General, and Colonels M. Ikeda, Y. Kato, T. Kagawa, T. Fujimoto, and T. Hayashi, Major-General.

ABOUT a hundred of the Russian prisoners from Port Arthur are suffering from dysentery or typhus, and consequently they are still detained in hospital at Ninoshima.

THE infant of a captain in the Russian Army who is now at Nagasaki died on Jan. 17th, and the funeral took place on the following day at the Buddhist temple of Goshinji.

SENIOR FIGUEIREDO, a midshipman on board the Portuguese cruiser *Adamastor*, shot himself in his cabin on January 5th. The Hongkong papers say that no motive can be assigned.

THE Russians from Port Arthur already brought to Japan number 8,108, and they were distributed as follows: 428 at Matsuyama, 2,020 at Dairi, 5,000 at Osaka and 660 at Himeji.

MARQUIS SAIONJI, the leader of the *Seiyukai*, left Tokyo on Jan. 15th for Choshi, Chiba prefecture, for the benefit of his health. Probably he will stay there during the winter.

THE *Asahi* reports that Prince Hohenzollern is now in Liaoyang. He is residing, together with Prince Kanin, in a building which had formerly been occupied by General Kuropatkin.

THE First Bank intends to add five million yen to its present capital making ten million yen in all. The proposal will be submitted to a general meeting to be held on Jan. 28th.

THE Tzarina has presented a sum of money on behalf of the prisoners detained in Japan, a portion (yen 1,370) of which was recently brought to Matsuyama by the French Consul at Kobe.

SURGEON-INSPECTOR KIKUCHI, who was recently appointed Superintendent of Field Hospitals belonging to the First Army (under General Kuropatkin) left Matsuyama on Jan. 16th for the front.

A YAMAGUCHI telegram reports that T. Shirai, a blacksmith, charged with having counterfeited yen 50 silver and circulated them has been sentenced in the District Court to penal servitude for life.

A TELEGRAM says that the business conditions in Chemulpo are dull, and certain Japanese merchants there intend to open at Dalny. Trade at Mokpho, however, is active, large quantities of rice, beans, cotton, etc., being exported.

PREVIOUS to her departure, Mrs. Stoesel for Europe asked Mr. Omori, Governor of Nagasaki, for a copy of the aims and bye-laws of the Ladies' Patriotic League. The Governor presented her with copies of the same in Russian, upon which she

told him that she would try to arouse her country-women to a similar enterprise after she returns home.

THE death of Marquis Hirohata (captain of cavalry) aide-de-camp to the Emperor, was announced on January 13th. Previous to his decease he was promoted by the Emperor to Junior Second Rank and decorated with the third class of the Sacred Treasure.

THE Austrian Red Cross Society has given twenty-five thousand yen to the Japanese Red Cross Society. Count Matsukata, President of the latter, recently sent letters to the president of the former and to M. d'Ambro, the Austro-Hungarian Minister at Tokyo, expressing his profound thanks.

VISCOUNTESS HAYASHI, wife of the Japanese Minister in London, arrived at Yokohama on the morning of Jan. 15th by the *Bayern*. She left at once for Tokyo accompanied by relatives who welcomed her at the hatoba. Some ladies in Yokohama belonging to the Ladies' Patriotic League, etc. were present at the pier.

BARON KIYOURA, Minister for Agriculture and Commerce, left on Jan. 13th for Osaka by the 6 p.m. train accompanied by Mr. S. Morita, Director of the Bureau of Commercial and Industrial Affairs. The purpose of the minister, says the *Asahi*, is to encourage trade with China and Korea in that city. He will return within about a week.

S. YAMADA, a farmer residing at Kanagawa, committed suicide on the morning of Jan. 18th by laying himself on the railway near the Shira-hata crossing where the 6.48 a.m. up-train from Kanagawa ran over him. The cause is stated to be that he was rejected at the recent examination for conscripts, an account of ill-health.

ACCORDING to latest official investigations, the foreigners in Tokyo number: 954 Chinese, 104 Koreans, 196 Britishers, 46 British Indians, 28 British Canadians, 296 Americans, 15 Philipinos, 91 French, 77 Germans, 6 Russians, 8 Austro-Hungarians, 2 Dutch, 8 Belgians, 1 Dane, 13 Swiss, 7 Italians, 1 Spaniard, 1 Portuguese, 4 Swedish and 8 Siamese.

THE Local Manager of the Hongkong and Shanghai Banking Corporation has received a telegram from his Head Office in Hongkong to the effect that, subject to audit, the Bank Dividend for the half year ending 31 December, 1904, will probably be £1 10/-; Bonus in addition to Dividend £1; added to Reserve \$10 lacs; written off Premises account \$2 lacs; carried forward to next half year about \$15 lacs.

PRINCE FUSHIMI arrived at Yokohama at 5 p.m. on Jan. 16th by the American steamer *Mongolia* from San Francisco. Before the vessel passed quarantine, Governor Suifu, Mayor Ichihara, Mr. Hamada, Superintendent of Police, officials of the Imperial Household, and the leading mercantile people in Yokohama embarked from the English Hatoba by the Harbour Office's launches *Ilinode*, *Miyako* and *Orihime* and boarded the vessel to welcome the Prince. As the ship was coming into harbour, the gunboat *Amagi* saluted in honour of His Imperial Highness. The Prince landed at the pier in the compound of the detached Palace, in rear of the Yokohama District court, where Prince Fushimi, Jr., and various members of the Board of Ceremonies were in waiting. When the steam launches arrived the crowd gave loud cries of *bansai* in celebration of Prince Fushimi's safe arrival. After taking a rest in the detached palace, the Prince left for Tokyo.

## PORT ARTHUR AFTER THE SIEGE.

Saturday, January 14.

The legend that lack of ammunition compelled the surrender of Port Arthur seems to be effectually dispelled now that we have the list of the stores found in the place. There were no less than 82,670 rounds of shot and shell for guns; there were 2,266,800 rounds of small arm ammunition and there were 30 tons of powder. It is quite plain, too, that great quantities of material must have been made away with, for only 35,252 rifles were taken over, whereas the number actually in the hands of the garrison at the beginning of the siege was at least 50,000, and as many more should have been in store. Yet, even with things as they were found actually existing there was no appreciable scarcity, above all when we remember that machinery for manufacturing small-arm ammunition existed in the arsenal. The number of men available for the fighting line, as proved by the number taken prisoners, and the quantity of ammunition actually on hand—these two things deprive the defence of a large part of its heroism. The fact appears to be that General Stoessel resolved to avert the actual capture of the towns. He apprehended that if he allowed things to come to a street fight, the destruction of life would have been needlessly great and the whole issue shocking.

General Nogi's report says nothing about the condition of the ordnance taken over. He does not tell us whether the 546 guns of various calibres are serviceable or injured. Moreover, the number of pieces is unexpectedly small, since over 600 were supposed to have been mounted in the fortress originally, and to those had to be added the field-guns remaining to the Russians after the battle of Nanshan as well as the artillery taken from the ships. If, however, we add the guns captured in the outworks and in the forts that were actually carried by assault, the total will probably reach 650.

With 1920 horses still on hand, the garrison can not be said to have been in any want of fresh meat. General Nogi says nothing about flour or other stores.

We may mention here that owing to an error of transmission the quantity of gunpowder taken by the besiegers was stated in our columns as 3,000 kilograms instead of 30,000; in other words, 3 tons instead of 30, approximately.

Order having been fully established in Port Arthur, the Japanese troops made their entry into the place on the 13th instant, and on the 14th there was to be a grand funeral service for the men who perished during the siege. No statement is yet published as to the total Japanese casualties connected with the taking of the place, but we have heard it alleged on good authority that the number was between 44,000 and 45,000 from first to last. That would probably mean that some ten thousand were killed. One of the bloodiest fights of all was that at High Hill. It lasted four days and cost the victors about ten thousand killed and wounded. Many of the other unsuccessful, or partially unsuccessful assaults, were not so sanguinary as the general public might suppose, for the reason that the number of men emerging from trenches to deliver an attack must be limited by the dimensions of the trench. Soldiers may be packed thickly in a trench prior to the moment of exit, but there is an obvious limit to such a disposition, and, besides, the

rush has to be made from the sap-head, that being the point nearest to the enemy. In the attack on Sungshushan at the close of November only about 220 men participated. It is stated that some 200 of them were killed or wounded, yet they nevertheless succeeded in effecting a lodgment at the crest of the glacis from which they were never subsequently driven out.

It appears that the Russian officers in Port Arthur all received a step in rank by order of the Tsar prior to the capitulation. Thus Stoessel became a full General, Fock a Lieut.-General, Riess a Major-General, and so on. Those who have elected to remain prisoners will be treated according to the terms of their new ranks.

General Stoessel and those accompanying him, left Port Arthur on the 11th and embarked at Dalny on the 12th in the *Kokura Maru*. They were to arrive in Nagasaki on the 14th, and will remain there until the arrival of the M.M. steamer *Australien*, which leaves Yokohama to-day (14th).

It is now pointed out by General Nogi and his staff that the action taken by Stoessel in ordering the blowing up of ships and the destruction of property at Port Arthur subsequently to making an offer of capitulation, should not be condemned from a military point of view. The saving fact is that there was no armistice. Stoessel did not ask for an armistice. The fighting continued and so long as it continued he was fully entitled to take whatever destructive steps he pleased with regard to the military and naval property under his control. So soon as the bombardment was stopped and from the moment when terms of capitulation were arranged, he is said to have shown himself altogether scrupulous in these matters. It is pleasant to be able to draw the sponge through all accusations of that nature, and pleasant also to find that the Russian General's vindication comes from Japanese officers. But even when this count is ruled out, it must be confessed that the quality of the defence has lost much of its glamour owing to the discovery that there were plenty of men to continue the fighting and that they had plenty of ammunition to continue it.

The *Manshu Maru* has returned from her second trip. She carried 4 members of the House of Peers, 6 of the House of Representatives and eleven foreign attachés, military and naval. They visited not only Port Arthur but also the Shaho. At the latter place they were not able to proceed to the lines of the First and Second Armies, these being too close to the enemy, but they went round some of the positions of the Fourth Army, and they met Marshal Oyama and his staff. The Field-Marshal looked thin but hale. At Port Arthur they found General Nogi in excellent health. They say that Commander Shiraishi, the officer whose name is celebrated in connexion with the storming of the Taku forts, was picked up wounded by the Russians after the third blocking expedition, but died of his wounds. According to their statement, there were some twenty thousand men remaining fit for duty at the time of the capitulation, and about an equal number in hospital. General Kondrachenko, they say, had originally 12,000 men under his command, and of these only 2,000 survive, from which fact the terrible nature of the casualties in the garrison may be inferred. In fact these observers estimate that the garrison totalled something like a hundred thousand men originally, but such an estimate is scarcely credible. The besieged certainly did not lose by bullet and bayo-

net more than the besiegers. Probably they did lose far more by sickness, and thus it may be safe to assume that their total casualties equalled those of the Japanese. That method of calculation would give a total garrison of from 50,000 to 60,000 of all arms.

There were 40 Japanese women found in the fortress. They were exercising the functions of nurses at the time of the capitulation but their previous employment had been less honourable.

From another source we learn that on the fall of the place the Chinese—some say the Russian soldiers—made a determined attempt to loot. But the Japanese had lost no time in posting guards so that this feature so common after a siege, was averted. The Russian officers appear to have placed the keys of their houses in the hands of the Japanese. It is indeed a most notable fact that no looting of any kind took place. Contrast the true circumstances of the fall of the fortress with the predictions uttered by Prince Radziwill in the autumn and with the comments of the shallow-brained English editor who, on the strength of the Prince's prophecies, declared Japanese civilization to be only skin-deep.

Mr. Kawara, a member of the House of Representatives, who was on board the *Manshu Maru*, says that on the 4th instant the Japanese at the Shaho constructed a number of kites on which they painted pictures of General Nogi and Stoessel shaking hands over a legend written in French, relating the capitulation of Port Arthur, and advising Kuropatkin's soldiers to go home quietly, as Stoessel was about to do, into the bosoms of their families. These kites were sent adrift so as to fall in the Russian lines.

The same informant telegraphs to the *Jiji Shimpō*, and is confirmed by two fellow-members of the Lower House who were of the *Manshu* party, that there can be no doubt of the possibility of raising and repairing several of the Russian vessels sunk at Port Arthur.

It is stated that from first to last the relations between the Russian army and navy were thoroughly bad at Port Arthur, so bad that in fact that some people find herein a sufficient cause for the failure of the defence.

Monday, January 16.

On the 13th at 10 a.m. the Japanese troops made their formal entry into Port Arthur. There was not a very large body. Each regiment sent one double company and the cavalry and artillery sent a squadron and a battery from each battalion. Assembling northward of Pehyushan, these forces marched in column, right in front, through the two towns from the old to the new. They carried their blood-stained and bullet-shattered standards, and moving to the sound of music among the signs of destruction wrought by their guns on sea and on shore during the course of the siege, they are said to have presented a most imposing spectacle. It need scarcely be said that everything passed off in the quietest and most orderly manner. Up to the 13th admission into the towns had been interdicted except to those on special duty, but from that day the place became free to the whole Japanese army.

A Japanese officer who has just returned from the front is represented as saying that the forts and fortifications at Port Arthur proved to be in a much better condition than had been anticipated. The great majority of the guns of position are serviceable. This might certainly have been expected in

the case of the sea-front forts and even in the case of those on the west, as Antszshan, Itszshan, Tayangkou and so forth. But the north-east sector must have been terribly battered, and if many guns in that part remain serviceable it will be a remarkable fact. Of course from the point of view of expense it is a matter of importance to the Japanese that Port Arthur should have survived in a defensible condition, but we imagine that all the small ordnance, as machine-guns, quick-firers and so on, will be used by Nogi's army for operations in the field.

Tuesday, January 17.

On the 14th instant in the midst of a dense fog, the Japanese troops held a religious celebration for the souls of their comrades who had died before the fortress of Port Arthur. It is said to have been a most impressive ceremony. The place was on the north of Suishiyung, where General Nogi seems to have had his head-quarters during the last stages of the siege. The General read a brief eulogy of the brave men who had perished for their country, and thereafter the usual Shinto service was concluded by the offering of evergreen sprays and the burning of incense to the spirits of the dead. As the service ended the fog lifted, and the officers and men sat down to a banquet. General Nogi was carried round shoulder-high by the young officers amid enthusiastic cheering.

General Nogi has addressed to the Governor of Nagasaki a remarkable letter urging that the best possible treatment should be extended to Russian officers and men who, having taken the oath, are proceeding home *via* Nagasaki. The General says that these persons are not to be regarded either as enemies or as prisoners, but simply as foreigners who have well discharged their duty to their country. He further notes that in everything relating to the handing over the fortress the Russian officers behaved with most scrupulous honour, thereby greatly facilitating the Japanese task. Finally he refers to the Mikado's message, sent through Field-Marshal Yamagata, ordering that honourable terms should be granted to the garrison of the fortress. It is in conformity with His Majesty's wishes that all courtesy be shown to the Russians. The date of the letter is the 7th of January. Presumably it reached the Governor on or about the 10th and it doubtless helped to secure for General Stoessel and his comrades the generous welcome given to them at Nagasaki.

Mr. Kawakami, formerly Japanese Commercial agent at Vladivostok, was serving at Port Arthur in the capacity of secretary of the Foreign Office at the time of the fall of the Fortress. On the 4th of January he was sent by General Nogi to wait upon General Stoessel and convey to him a present of champagne, claret and barn-door fowl. Mr. Kawakami, who it need scarcely be said, speaks Russian fluently, found the Russian General and Mrs. Stoessel in their quarters at the base of Golden Hill Fort. General Stoessel received Mr. Kawakami warmly. He assured his visitor that he counted it an honour to have fought against such a brave and courteous commander as General Nogi. As for his family, about whom Mr. Kawakami was instructed to inquire, he said that only his wife and himself were at Port Arthur, their son being an officer of the Guards in St. Petersburg. Mr. Kawakami explained that General Nogi had lost his two only sons during the siege, and the Russian General, after expressing

profound sympathy, declared that it was this readiness to sacrifice all on the altar of country which made the Japanese so formidable in war. Thanking his visitor warmly for the gifts of which he was the bearer, General Stoessel said that he desired to make some acknowledgement, and that he begged Mr. Kawakami to tell General Nogi that he would send to him his two pet horses, an Arab and an Austrian charger, which had long been in the stable. Mrs. Stoessel here remarked that the stout defence made by the garrison and its having held out until things had reached this pitiable pass were due to the exertions of her husband, but the General declared that she too had contributed not a little to the result. Mrs. Stoessel then led Mr. Kawakami to a room where two little boys and four girls were at play. She explained that the fathers of these children had all been officers beloved by her husband, and that the children had been cared for by him after their parents' deaths. General Stoessel here observed that throughout the siege his wife had been by turn a nurse tender, a seamstress, a children's maid and a washerman: she had suffered all kinds of hardships. Mr. Kawakami then said that General Nogi, having been informed of General Stoessel's wish to meet him, would be glad if they could arrange to come together the following morning. To this General Stoessel gladly consented, and on the 5th he came, riding on his Arab, to Suishiyung where General Nogi had prepared to receive him. Stoessel was accompanied by Major-General Raess and by a staff officer. The meeting took place at the spot where a conference had recently been held between representatives of the two armies, General Nogi being unwilling to receive Stoessel in the small and not over-cleanly Chinese house which had served for the Japanese headquarters. General Nogi was accompanied by Major-General Ijichi and by Captain Tsunoda his aide-de-camp, Mr. Kawakami acting as interpreter. After a cordial hand shaking, General Stoessel said that to have succeeded in holding out for several months against such a commander as Nogi and against such an army as he commanded, would be ever the pride of his life, and must, he thought, be recorded in history as a glorious achievement. Nogi's reply was thoroughly in accordance with the ethics of his country. "Yes," he said, "your troops fought splendidly. I deeply admired the force and valour of your officers and men." General Stoessel then alluded to what he called the grand efficiency of the Japanese artillery. He did not think that it had its equal in the world. Above all he had been astonished by the practice of the 28-cent. guns mounted by the besiegers on commanding eminences. Nothing had been safe from these pieces. Ships, forts, buildings, everything upon which they were trained had been demolished. But General Nogi averred that the Russians had outdone the Japanese. Their use of torpedoes to fire from the forts and their deadly employment of hand grenades had been a brilliant feature of the siege. Stoessel then said that after the artillery what had most struck him was the work of the Japanese engineers. They had carried forward their saps in the face of a deadly fire from the forts, and they had shown perfect skill in laying their mines and blowing up the vital parts of the forts. Sungshushan had gone up in a column of earth and stones, and the explosion had been immediately followed by a concentrated and appalling shower of shells

falling on the doomed fort. Who had commanded these engineers? The name of this commanding officer having been given, General Nogi observed that the concrete used in the forts had proved the strongest possible defence. It had defied every kind of projectile, but Stoessel insisted that the 28-cent. shells had been still more remarkable. He had fought in three wars, that of his country with Turkey, that of 1900 in China, and now this present campaign, but he had never met or heard of such soldiers as those that confronted him during the siege. His belief was that the strongest troops in the world ought not to be opposed to each other and that because they had been, this siege now stood on record as the most terrible affair in history. Above all when he reflected that the Japanese army was commanded by an officer who did not hesitate to give the lives of his two only sons to his country, he understood how hopeless it was to continue the combat against such a force. He then begged General Nogi to accept his pet charger as a memento of the siege. Nogi said that his father and his ancestors had been soldiers, and that to give his sons to the nation was a duty which he did not hesitate to discharge. He thanked General Stoessel profoundly for the offer of his pet charger, but he said that he could not accept such a gift for himself. He would, however, receive it in the name of the Army, and it should be his care to treat the horse always as General Stoessel would have it treated. This meeting ended at 1 in the afternoon. On parting General Stoessel expressed the hope that after the war he and Nogi might be firm friends throughout their lives. General Nogi grasped Stoessel's hand and said "Yes, most certainly yes. I pray for your safe journey home." On the 12th General Stoessel left Dalny whither he was accompanied by General Nishi, Commander-in-Chief of the garrison of Manchuria, who had commanded the Japanese on the occasion of the Motien-ling fight. Stoessel, bidding farewell to Nishi, said that had it not been his lot to be immured in Port Arthur, they might have seen each other across the cannon at Motien.

It is stated that General Stoessel's determination to return to Russia was taken at the suggestion of his wife. He himself proposed to remain with his men in Japan, but Mrs. Stoessel urged that he owed it to the families of the soldiers who had died under his command to return to his country and offer them what consolation he could. That was a duty that should nerve him to treat with indifference the momentary criticisms his conduct in remaining might excite.

Among the prisoners who have arrived at Hiroshima, a woman was found wearing soldiers' garb. She is described as being about 20 years of age and as resembling a man in appearance. What romance, we wonder, attaches to this incident.

Wednesday, January 18.

The *Asahi Shimbun's* correspondent telegraphs from Chiukiatun that as investigation proceeds larger stores of provisions and ammunition are brought to light, and that the greater part of the guns in the fortress are found to be serviceable. The arrangements for tending patients in the hospitals were, however, very defective. It is supposed that the complaints of the civil population and of a large section of the soldiery hastened the surrender. The correspondent further says that the residences of the officers are on a most sumptuous scale, indicating clearly

how lavish was the provision made by the Russian Government for its troops in Manchuria. Every officer from the rank of captain upwards seems to have had a carriage. The paper of the Russo-Chinese Bank no longer circulates among the Chinese.

A Russian non-commissioned officer who is among the prisoners is reported as saying that from the time when the water-supply was cut owing to the capture of Kuropatkin Fort by the Japanese, the fate of the fortress was virtually sealed. Thenceforth the bad water which the men had to drink produced typhoid and dysentery, the strength of the garrison being thus weakened daily. Inability to care properly for the sick and wounded was also a constant trouble. So inadequate was the medical staff that each surgeon had to take charge of some 400 patients. Lint for bandages soon ceased to be available and all kinds of substitutes had to be used.

With regard to this latter point, about which so much has been heard that some measure of truth must be conceded to it, those that have followed the course of events must have been perplexed by an altogether conflicting statement attributed to General Balashoff. On the occasion of the discussion, in the middle of December, about obtaining greater security for the hospitals in the fortress, the Japanese delegates offered to provide medical necessities and comforts, saying that they had heard of such things being very scarce. But the Russian General replied that they had an ample supply. Now of all men in Port Arthur General Balashoff, in his capacity of chief of the ambulance, must have been best acquainted with the actual state of affairs in the hospitals. Did he think that to acknowledge a scarcity of medical necessities would be so unwise in the interests of the defence as to justify him in refusing aid so urgently required, or did he speak truly when he represented the hospitals as amply equipped?

The non-commissioned officer quoted above goes on to say that when he left Port Arthur there were 15,000 sick or wounded soldiers and only 80 surgeons to attend to them. The wives of the officers, even those of high rank, had to act as washerwomen. The non-commissioned officers were able to change their shirts once in three weeks, but probably the soldiers never had a change at all.

It appears from all accounts that the accommodation originally provided for the wounded proved altogether inadequate. Doubtless for that reason it became necessary to distribute them here and there throughout the two towns, and there thus resulted a situation in which the only immunity for all the hospitals was to be found in a complete cessation of the Japanese bombardment. Such was the state of affairs when the Russians prepared that singular map, showing that no less than 17 hospitals had been established at various places within their lines. They knew well, of course, that such a map was in itself eloquent as to the straits to which the garrison was reduced, and in gravely presenting it by way of protest against the Japanese fire they showed, as was inferred at the time, that their circumstances were desperate.

One of General Stoessel's party—a soldier or an officer we do not learn which—is represented as saying that one of the hospitals in particular suffered from the bombardment. Among its inmates was a Japanese second-lieutenant who had been taken prisoner after receiving a bullet wound and 24 sword-cuts.

He was asked to write a letter in his own language explaining the situation of the hospital, and thereafter no more shells reached it.

Thursday, January 19.

It is stated with regard to the rolling stock found at Port Arthur, that 80 locomotives and 300 carriages are serviceable. All the guns in the forts on the sea face are said to be quite uninjured. Those in the forts on the rear are more or less damaged. Another account says that with the exception of the *Sevastopol* and a gun-boat there are good hopes that the other vessels may be saved. The *Pobieda* and one other are in an especially promising condition. The number of steamers large and small is put at 50, many of which can be used at once. Even among those sunk in the port there are said to be several which have only one or two shot-holes, and which, consequently, can be raised and repaired.

The *Fiji Shimpō* has a telegram to the effect that out of the total of 546 guns taken by the Japanese, 490 are serviceable, including several 37-mill. quick-firers. The Russians seem to have made no attempt to destroy guns or fortifications subsequently to the offer of capitulation. In that respect they acted with absolute good-faith, and it may possibly turn out that the measures they took with regard to the ships were far less serious than was at first supposed.

Friday, January 20.

It is said that the forts most injured at Port Arthur are East Keekwanshan, Urlungshan and Sungshushan. What with Japanese shells and Japanese mines they are thoroughly wrecked, and to restore them to their original condition would be a very heavy task. The forts on the western face are much less hurt. They were the target chiefly of the naval guns, and the saps do not appear to have been carried within mining distance. With regard to the section between East Keekwanshan and the sea, no appreciable damage has been done. These forts were never subjected to any really serious bombardment. All the operations undertaken against them were in the nature of diversions. On the sea-face, where the forts were subjected to naval fire only, the results are inappreciable. There the defences may be said to be intact. The naval fire, it will be remembered, was directed rather against the military building than against the forts, which are virtually impregnable from the sea. The condition of the guns has not yet been accurately ascertained. A commission of examination has been organized under Major-General Arisaka, the great artillery expert, and according to this commission's report it will be decided which guns to retain in position, which to repair *in loco* and which to send to Japan as irreparable.

#### CHINA.

Saturday, January 14.

The Governor of Sinkiang is said to have complained to Peking that a force of 3000 Russians have invaded his district and are compelling the inhabitants to serve them. He asks for instructions.

Another seizure of Russian ammunition is reported to have taken place at Sienhwa, and the seizure is attributed to the Hung-hutzu. There are said to have been 50,000 packages all wrapped in sheep-skins, as was the case with the last parcel of contraband. Sienhwa is just inside the Great Wall to the north of Peking. It would seem this ammunition was on its way down from Lake

Baikal through Mongolia. The pressure on the Trans-Asian Railway must be very heavy if ammunition has to be sent round by such routes.

Kanfontsz sends news that a body of Hung-hutzu have just attacked a Russian convoy *en route* for Mukden. The place of the encounter was Changwu. Some 30 or 40 Russians were killed and several prisoners, including some officers, were captured by the bandits. Subsequently the Chinese Authorities sent 200 troops to attack the Hung-hutzu, but these braves were driven back, perhaps not unwillingly. The scene of this affair was a little south of Hsinmintun.

Tuesday, January 17.

The Chinese in Shanghai seem to be much excited about the sentence of 4 years' imprisonment passed on the Russian sailor who was recently the cause of a man's death in the Settlement. They have held a meeting and decided to petition the Foreign Office in Peking and the Nankin Viceroy with the object of procuring a new trial. One reason for their action is that the Ningpo section of the community are profoundly agitated, and were to assemble on the 15th instant for the purpose of making arrangements to go on strike, and also to concert measures of retaliation against the Russians. The Chinese further desire that one of the Russian war-vessels now in Shanghai should be moved elsewhere, and that none of the Russians from Port Arthur should be allowed to enter Shanghai. They have further informed the Taotai, the Doyen of the Consular body, and the Municipal Council that there is no longer any possibility of pacifying the Ningpo men, and they have resolved that until some satisfactory settlement be reached, the paper of the Russo-Chinese Bank shall not be used.

Wednesday, January 18.

It is reported from Peking (*Fiji Shimpō* and *Nichi Nichi Shimbun*) that the Chinese Government denies the receipt of any circular such as, according to Reuter, Russia is supposed to have addressed to the Powers on the subject of China's neutrality. Nothing has been heard officially from any quarter about such a circular. A few days ago M. Lessar sent a note to the Waiwupu complaining that China favoured Japan in this war, and that Russia must draw her own conclusions, but such remonstrances are so habitual that they attract little attention. The Waiwupu has simply returned its usual answer, namely, that no favour had been shown nor any special facilities granted to Japan.

Are we to conclude from this that the circular was not addressed to the Powers, or that it was not worded as Reuter reported, or that Russia is purposely concealing its true import from China? It is difficult to know what to think. If, in the sequel of the circular, the Russian troops intend to march through China's neutral territory for the purpose of attacking the Japanese, it would obviously be desirable that the Peking Government should be kept in ignorance of that intention as long as possible. On the other hand if such a circular has really been sent round, there is no possibility of concealing the fact.

Friday, January 20.

Mr. Uchida, Japanese Representative in Peking, left Tokyo on the 18th instant at 6 p.m. He will pay a short visit to his native place in Kyushu, and then, proceeding to Dahn, will take the railway thence for Peking, arriving in the latter city on the 7th or 8th of February.

## THE TSAR'S ORDER.

The Tsar's general order to the Army and Navy, of which Reuter sent us an epitome on the 15th instant, can not have proved very encouraging to the Russian nation. His Majesty now speaks of the Japanese as "a bold strong enemy" and admits that the struggle with them at such a distance is "indescribably hard." A year ago such language would have sounded very strange in Russian ears, and even today it is not calculated to allay the anxiety which His Majesty evidently detects among his people or to restore their confidence shattered by an uninterrupted series of defeats. If this great Emperor, or at any rate this Emperor of a great country, could indicate to his subjects any tangible reasons for believing that the "indescribably hard" task which at present looks so desperate will soon be rendered easy, the language of the Order would be more inspiring. But there is apparently no help in sight except to invoke the aid of the God of Christianity, who must look down with anger and horror on this ruthless slaughter of human beings to gratify the ambition of a small clique of aristocrats. Some day the world will have become sufficiently civilized to denounce the blasphemy of thus appealing to the God of Love and Mercy to bless engines of destruction. In the meanwhile if the Great White Tsar has nothing to lean upon except his trust in the Deity whom his deeds defy, it can not be said that His Majesty's prospects are very bright. As to Russia having emerged more powerful than ever from even harder trials, there is nothing in history to support the assertion. Russia has never been a victorious country except when she fought on the side of powerful allies or when her enemies were comparatively weak Asiatics. She can have no hope now of outnumbering the Japanese in the field, and the experience of twelve months' fighting should have taught her that with equal numbers she can not win. That at least is plain, and for our own part we are disposed to go a great deal farther. If the Tsar recognises any duty to the nation he misgoverns, it is now his manifest obligation to abandon the wild enterprise of reconquering Manchuria and to stay the shocking butchery to which the ambition of his lieutenants and his own weakness are condemning his people.

Elsewhere we publish the full text of the Tsar's Order of the Day announcing the fall of Port Arthur. It differs little from the telegraphic epitome already known to our readers. No one will fail to observe, however, that His Majesty speaks of the garrison of Port Arthur as "a handful of Russians." That is a singular expression. After the long hardships and privations, the continuous and exhaustive fighting lasting eleven months, to which His Majesty alludes so eloquently, more than 40,000 soldiers and sailors have been captured by the Japanese in Port Arthur. At the very lowest calculation, then, the place must have had 50,000 defenders originally. Probably 60,000 would be nearer the mark, for if we are to suppose that such a siege cost the garrison only ten thousand lives from weapons and disease, then we are forced to say that it was one of the most bloodless defences on record, a conclusion which the Russians will be the first to reject. Let us, however, take 50,000 men. Does His Majesty the Tsar call that "a handful"? What then constitutes an appreciable force in the imperial eyes of the Sovereign of All

the Russias? When the siege commenced European experts estimated the garrison at 35,000 men, and spoke with bated breath of the stupendous task of reducing a first-class fortress manned by such an ample force. In fact they went so far as to blame Alexieff for allowing so large an army to be interned within the parapets of a fortress when 20,000 would have been amply sufficient. Yet now, when the place has fallen and when the fact that it had at least 50,000 defenders is ascertained, the Tsar, calls them "a handful." What force does His Majesty reckon that the Japanese arrayed against Port Arthur? Had they at any time two to one; two Japanese handfuls to one Russian handful? The tone of the whole Order is strongly exaggerated. If "the whole world bowed before the heroic spirit" of this most numerous garrison fighting behind the strongest and best armed forts that "the whole world" has ever seen, there was outside the walls another spectacle for which we should like to see His Majesty condemned to find adjectives. What a veritable sham Russia is in her official ways, and how unlike the individual Russian as we know him all this inartistic self-gratulation is! Apparently it does not occur to the Tsar that his words tell both ways, and that the inordinate eulogies he bestows on his own soldiers furnish to his subjects a dangerous standard for estimating the qualities of their vanquishers.

## A MOTOR TRAIN FOR THE HIGHWAYS.

The latest development of the automobile is its use in furnishing the motive power for a train of road cars. The new device is the invention of Colonel Renard, of the French army, and has been adopted for use in the German army. In similar experiments made in the past the difficulty has been to secure a tractor of sufficient lightness to avoid damage to the road-bed and to bridges. Colonel Renard has obviated this by employing his motor car as a generator of power which is transmitted to the others by means of a longitudinal shaft universally jointed so as to permit the train to make sharp curves. The reports from France and Germany on the tests that have been made state that the steering of the entire train was as simple as the direction of a single car, all the vehicles following the leader without skidding or loss of space at the turn. As the first car has no pulling to perform, but only furnishes the power for the others, it may be made as light as an ordinary automobile, good results being obtained in the trials with a car weighing only 3,300 pounds. A speed of sixteen miles an hour was maintained over ordinary country roads.

While the German Government expects to use the Renard invention for only military purposes, it is anticipated that it will be as serviceable in industrial uses and for the conveyance of passengers. For the carriage of passengers between railroad points the only expense would be that of equipping and maintaining the rolling stock. The Renard principle, it should be noted, is applicable not only to trains of this sort but also to mixed trains made up of minor cars and ordinary trailers, and also to trains running on rails. If it is desired the motor generator may be omitted and the power derived from some external source and transmitted as for trolley cars. The German experiments with trackless trolleys have shown the possibility of this adaptation of Colonel Renard's invention.

## BOLD RUSSIAN CAVALRY RAID.

Saturday, January 14.

The bold raid just made by Russian cavalry down the valley of the Liao brought them to points on the left rear of the Japanese armies under Oyama, and not only enabled them to inflict some slight injury on the railway, but also placed them in temporary possession of the old town of Newchwang, which, as our readers probably know, is some thirty miles above the town of Yingkow, and therefore 43 miles from the mouth of the Liao. We have no doubt that the Russians have been driven back. Indeed they can not have contemplated anything more than a desultory incursion, unless, which is highly improbable, they are the forerunners of a daring flank movement by Kuropatkin, having for object to turn Oyama's left and throw an army across his communications southward of Liaoyang. Something of that kind may possibly be on the cards, but we are rather disposed to interpret this cavalry enterprise in one of two ways: either as an attempt to destroy the railway and thus interrupt the northward carriage of Nogi's Army, which, according to the Russian calculations, may have already begun to journey towards the Shaho; or—and this appears more probable—as a feint to divert Oyama's attention to his left flank while a genuine turning movement is carried out on his right in the Hanchang district. If the latter strategy be on the tapis we shall immediately hear of a forward movement by the Russian left from Fushun, and should no such movement develop, we may conclude that the Russian cavalry was merely sent out to harass the Japanese, threaten their communications and create a general scare.

Perhaps it may be wise to emphasize the fact that the Newchwang referred to above is wholly distinct from the place commonly called by the same name but properly Yingkow, where the port and the foreign settlement are, and where, doubtless, the Japanese have large stores. The Newchwang in question is quite unimportant, and the Japanese garrison posted there must have been a very small force.

\* \* \* \* \*

Since the above was written a later official telegram shows that the attempt made by 8 sotnias of cavalry—about 1200 sabres—with 12 field pieces against the Japanese commissariat station at Niukiattun was effectually repulsed, though from the number of casualties on the Russian side we gather that the fighting was not very severe.

Tuesday, January 17.

London, according to Reuter, thinks exactly as we at this end have thought, namely, that Russia's circular to the Powers complaining of China's failure to discharge her neutral duties, is simply a cloak to hide Russia's own violations of Chinese neutrality. The cavalry raid at Niukiattun and Niuchwang was possible simply because Mischenko's men rode through Chinese territory down the west bank of the Liao.

Peking alleges that the Cossacks commenced their ride from Pehchipau, a place about 17 miles west of Hsinmintun. They thence travelled down well to the westward of the Liao and they finally crossed the latter river on the ice. In fact they deliberately and literally trampled China's neutrality under foot. Of course the incident has caused much commotion in Japan. It is not to be supposed that this

country will suffer itself to be placed at a disadvantage by Russia's disregard of all international obligations. Japan has respected China's neutrality carefully up to the present, but when she pledged herself to respect it she made the pledge distinctly conditional upon Russia's observance of the same obligation. What the results may be of the licence now taken by Mischenko, acting under Kuropatkin's orders, one does not like to contemplate.

Lieut.-Colonel Miyazaki distinguished himself greatly by his defence of Niukiatur. Had his force, a comparatively small body, been driven from Niukiatur, the Russians might not only have cut the railway between Yingkow and Tashikiau, but also might have pushed on to Yingkow and possibly scored a signal success by burning the Japanese commissariat station at the latter place. Colonel Miyazaki's men had thrown up entrenchments, and behind these they waited until the Russian cavalry came within a hundred and fifty metres, when they opened a withering fire, emptying some 200 saddles and driving back the Cossacks in confusion.

Thursday, January 19.

Some particulars of Mischenko's raid are now forthcoming. He had a division of cavalry, and he set out from Hsinmintun, moving down the west bank of the Liao through neutral territory. On the 10th he crossed the river at Sanchaho, where the Hun and another smaller affluent join the big stream. They thus reached within direct striking distance of old Niuchwang, which place they occupied on the 20th. The following day, the Division divided into three bodies. One of these, 300 sabres with a battery (8 guns) of artillery, rode towards Niukiatur, which is only 5 miles eastward of Yingkow, another, the exact strength of which does not seem to have been ascertained or, at any rate, is not stated, moved towards Anshantien and occupied a hill in the neighbourhood of the latter. (Anshantien is an important position on the line of railway north of Haiching). The third body advanced towards Haiching. It will thus be seen that simultaneous attacks were delivered against two points on the main line, namely, Haiching and Anshantien, and against one point on the branch line between Yingkow and Tashikiau (where this branch joins the main line). On the 12th instant a Japanese detachment, coming apparently by rail from Tashikiau, entered Niukiatur; while a second detachment, also travelling by train, hastened to Haiching; and a third, coming down the line from Shahochin on the north (Shahochin is between Liaoyang and Haiching), broke up into two bodies, one of which, the stronger, moved towards Sanchaho, where the Russians had crossed the Liao, while the other, passing through Haiching, advanced in the direction of Niuchwang. This force coming from the north consisted of infantry, cavalry and artillery, and was under Colonel Tsugawa. After its division into two, he retained command of the main body, which directed its march towards Sanchaho, Major Hino taking command of the Niuchwang force. Colonel Tsugawa's troops, on the evening of the 13th, came into collision with some 2,000 Russian cavalry with 8 guns, and had 21 casualties, the Russians being driven back. Major Hino's force encountered the enemy between Haiching and Niuchwang, and repulsed him, losing 50 in killed and wounded. These operations completely cleared the Russian cavalry from the east side of the Liao River,

which they crossed in retreat, re-concentrating at Shwantaitz, in neutral territory on the west bank. In the collision with Colonel Tsugawa's force, the Russians had at least 300 casualties. It will be remembered that the official report spoke of the Russians retiring to Kaukan (or Takaukan, both of which places are between Yingkow and Niuchwang). A telegram from Peking says that in their retreat they burned the houses of the people and behaved with much lawlessness. They had over 160 dead with them, and, being embarrassed to transport these corpses, they buried them, here and there by the way-side. Altogether the raid ended in a fiasco, very costly to the Russians. The lesson it teaches is that if a railway invites attacks, it also furnishes the means of quickly repulsing them. Without the command of the line the Japanese might very easily have lost Yingkow, temporarily at all events, but of course cavalry and artillery alone could not have attempted a permanent occupation.

It appears that this large enterprise was preceded by a similar attempt on a smaller scale. A party of Cossacks combined with Hunghutsz rode over to the railway between Haiching and Anshantien on the 1st instant, and placed explosives at three points, one beside the rails and two at the bases of telegraph posts. These explosives were fired just as a train passed, but they did no damage to the train. Japanese guards, hastening to the spot, apprehended a Cossack disguised as a Chinaman.

The Russian cavalry seem to be active in front of General Kuroki's Army also. A report is said to have reached Sendai that a body of troopers made an attack via Kinglungtun on the 16th (?) instant, and that a Japanese outpost of 11 men has since been missing.

Friday, January 20.

The Russian cavalry at Sanchaho have been driven back and Niuchwang has been reoccupied by the Japanese. It is stated that all the Cossacks have now been forced northward. The Chinese inhabitants say that Mischenko's force consisted of some twenty thousand troopers and that they are now concentrated at a place 25 miles north of Niuchwang. Preparations are in progress to attack them there.

London wires, on the strength of information furnished by St. Petersburg, that Mischenko had twenty thousand sabres and that his raid was intended to be a preparation for the advance of the Third Army under Kaulbars. That is what must have occurred in most onlookers. It was noted in these columns at the time. But London, on its own account, adds that the whole affair was probably nothing more than an attempt to create an international complication, under the shadow of which Russia might retire from the fight. It is hard to believe anything of that kind, or to see how the question of China's neutrality could be twisted to such a purpose. Just the same interpretation was put upon the North-Sea outrage, which, after all, had no connexion whatever with politics but was simply an example of the danger of trusting fire-arms to the hands of nervous men.

St. Petersburg says that Mischenko, carrying his wounded, has rejoined the main army. That does not agree with the Chinese statement that this big force of cavalry is still massed to the north of Niuchwang, nor does it agree with the previous assertion of St. Petersburg itself that Kaulbars with the Third Army was to follow in Mischenko's tracks.

## KOREAN RAILWAYS.

Monday, January 16.

The Seoul-Fusan railway which was opened to traffic on the 1st instant, had its practical origin in 1894, so far as projection went, but did not actually obtain official sanction until 1898, when the charter for its construction was signed. Surveys commenced at a later period and were concluded by June, 1900, work being inaugurated from both ends in September, 1901. The capital was put at 25 million yen, and 100,000 shares (50 yen each) were issued in June 1901, 335,684 in 1902 and 64,316 in 1903, the total issue being thus effected. Ten million yen of the entire capital was paid up in two years, 1902 and 1903, and the Government agreed to grant a subsidy of 6 per cent. on the paid-up capital pending the opening of the road to traffic, and thereafter to hand over such a sum as would bring the net earnings to that per-centage, this arrangement to hold for 15 years. The Korean Authorities gave the land for the road as well as for stations, warehouses and workshops free of charge, and agreed not to levy any customs duties on articles imported for the construction or use of the line or to impose any taxes on its income of whatsoever kind. It will be seen, therefore, that the Company received no small measure of State assistance. Nevertheless its work did not progress satisfactorily, and in the meanwhile the need for the line became pressing in view of the strained relations between Japan and Russia. Therefore at the close of 1903 the Japanese Government placed a sum of 1,750,000 yen at the disposal of the Company, and soon afterwards added 750,000 yen, bringing the total grant to 2½ millions. This liberality was accompanied by an injunction that the road must be opened to traffic by the close of 1904, and the personnel of the directorate was re-organized, Professor Furuichi being appointed director with Mr. Oya for his Vice. Work was now carried on day and night, and the whole length of 276 miles between Seoul and Fusan was completed. But owing to this haste temporary bridges and partially prepared tunnels had to be employed at some places, so that, although the road was opened to traffic on the 1st of January, the construction will not be solidly finished before next April. It is understood that in consequence of the haste made and the difficulties of obtaining labour during the war, a further sum of 1,580,000 yen had to be borrowed from the Japanese Treasury without interest, and thus the money given in aid by the State totals a little over 4 million yen. The cost of construction is stated by Professor Furuichi to have been about 100,000 yen per mile, which is a better result than was anticipated. The steepest gradient is 1 in 50 and the sharpest curve has a radius of 15 chains. There are 26 tunnels, having a total length of 16,399 feet, their locations and respective lengths being as follows:—

	Feet.
Songhwa Tunnel (in Kyongsando province)...	3,948
Muwolsan Tunnel (in Kyongsando province)...	1,452
Pusang Tunnel (in Kyongsando province)...	1,180
Hwanggang Tunnel (in Chhungchong-do province).....	990
Kuipok Tunnel (in Chhungchong-do province).....	924
Cheungyak Tunnel (in Chhungchong-do province).....	858
Wolyon Tunnel (in Kyongsang-do province)...	848
Hwakwan Tunnel (in Kyongsang-do province)...	825

There are 99 bridges with a total length of 23,794 feet with 501 small bridges totalling 3,418 feet in length. The principal bridges are:—

	Feet.
Over the Han River .....	2,054
Over the Nakdong River .....	1,436
Over the Keumho River .....	1,217
Over the Second Keum River .....	1,015
Over the Milyang River .....	979
Over the Kyongho River .....	848
Over the First Keum River .....	824

Of these bridges the most difficult are said to have been those over the Nakdong, the Keumho and the Han. The stations number 53, and the rails weigh 75 lbs. per yard. The gauge is 4ft. 8½ inches, which has been chosen with the object of subsequent connexion with the Chinese and Siberian lines. It was at first thought that as the line lengthened the profits would become less, but facts have not borne out that supposition. On the contrary the earnings are steadily increasing. The northern section yielded only from 3 to 4 yen per mile daily, but this has become 6.70 yen, and the southern section is earning 8.30 yen. The expectation is that the 10 yen figure, which will pay expenses, will soon be reached.

Wednesday, January 18.

The completion and opening of the Seoul-Fusan Railways, to which we made detailed allusion in our issue of the 16th instant, has directed Japanese public attention to the whole problem of railways in that part of Asia. Thus the *Nichi Nichi* writes at some length about the Seoul-Wiju line, which was at one time supposed to be on the eve of construction by a French syndicate, and which would probably have figured in Russia's programme of expansion had not events moved too quickly for her. It is not a mere military macadamized road from Liaoyang to the Yalu that would have satisfied Russia. When she found a campaign imminent, she wisely set to work to construct such a road, but unless many informants be mistaken, she had in her archives plans to join Liaoyang with Wiju by a line of railway which would subsequently have been pushed on to Seoul, thus bringing St. Petersburg into direct communication by rail with the Korean capital. What that would have portended any reader of Russian history may decipher for himself. It is not a new instrument of imperial expansion, the railway, and Russia having utilized it in Manchuria on a scale that commanded the world's admiration, was tolerably certain to extend its use to Korea. The distance between Seoul and Wiju is 300 miles, being thus some 30 miles greater than the distance between Seoul and Fusan. Therefore the whole trunk line from north to south of the peninsular empire will be 570 miles in length. At the outbreak of the present war Japan obtained the Korean Government's sanction for the construction of the Seoul-Wiju section. Immediately a sum of 16 million yen was set aside from the war fund, and work was commenced, being thenceforth carried on with such vigour, by day and by night alike, that, according to our Tokyo contemporary, two-thirds of the road have already been built, and the whole will probably be opened to traffic in March. This big enterprise has been going on quickly. Not much attention has been attracted, but the results are solid. As to the geographical features, the work has been easier than that on the southern half of the trunk line, the number of bridges and tunnels being comparatively few. The Tadong River required a large bridge, but the country selected is in the main level, and the cost of the undertaking is thus small. The following table shows the place through which the line passes and the distances:—

	Miles.		Miles.
Seoul .....	11	Pyongyang .....	16
Koyang .....	10	Sunan .....	18
Phaju .....	12	Sukchhon .....	16
Changdon .....	17	Anju .....	13
Kaisong .....	8	Kasan .....	18
Keumehhon .....	23	Chongju .....	19
Pyongsan .....	21	Souchhon .....	45
Soheung .....	12	Wiju .....	300
Pongsan .....	15	Total .....	300
Whangju .....	13		
Chunghwa .....	13		
Pyongyang .....			

The nineteen places—apart from Seoul here tabulated are the principal towns in the northern half of the Korean Peninsula.

Closely associated with the building of this line is the question of its prolongation into Manchuria so as to connect with the extramural railway system of China. Two routes are understood to be now under discussion, namely:—

(1)	Miles.	(2)	Miles.
Wiju .....	4	Wiju .....	4
Kiulienching .....	7	Kiulienching .....	18
Antung .....	38	Tangshanching .....	18
Tatungkau .....	42	Kaulimun .....	9
Takushan .....	10	Fenghwangching .....	28
Tuchingta .....	30	Shalisai .....	29
Siuyen .....	37	Siuyen .....	31
Kaukiatun .....	11	Hsiaoakushan .....	10
Tangchi .....	10	Tomuching .....	27
Tashikiao .....	22	Tashikiao .....	22
Yingkau .....	211	Yingkau .....	186

It will be observed that the first of these routes may be roughly described as a coastwise line since it runs comparatively near the shore of the Yellow Sea, whereas the other is an inland route. No statement has yet been published as to their relative engineering facilities and commercial prospects, but from a military point of view the second route would probably be the better, as an extension of it from Fenghwangching to Liaoyang would bring Korea into direct communication with what may be called the strategical base of Manchuria. Among Japan's proposals to Russia for a peaceful settlement of the Manchurian-Korean question, one was that the Seoul-Wiju Railway should ultimately be carried on into Manchuria so as to link with the system of lines in the latter district. Russia would not accede.

#### THE RUSSIAN PRISONERS.

Saturday, January 14.

It seems that the wounded are included in the number of Japanese prisoners who have been recovered at Port Arthur, for one man has died of his hurts since the transfer. The final figures then are these:—

Military rank and file .....	76
Merchant Seaman .....	1
Crew of the non-combatant steamer <i>Hanyei Maru</i> .....	10
Blue-jackets and officers (2) survivors of the blocking operations .....	16
Total .....	103

So far as treatment is concerned, the accounts differ. One of the bluejackets says that he was well treated after recovering from his wound. White bread was given to him daily and he would have fared well enough were it not for the intense cold of the place where he was imprisoned. But to the other prisoners, the non-naval men, black bread

only was given. This latter statement is borne out by the story of one of the *Hanyei Maru's* view, who complains bitterly of the food given to him and his comrades and of their general treatment. Considering that the *Hanyei Maru* was a little merchant steamer whose crew of non-combatants should not have been held prisoners at all, this cruelty exercised towards them, if it be true, is most reprehensible.

Monday, January 16.

General Stoessel landed at Nagasaki on the 14th instant. It had been his desire to avoid landing and to remain on board the steamer which brought him from Dalny until the moment of removing to the M.M. S.S. *Australien*, but as that would have involved the detention of the former vessel for some days at Nagasaki, detention very inconvenient in view of the fact that she carried a large number of prisoners, the General agreed to go ashore and take up his quarters in the hotel. On the arrival of the vessel from Dalny Mr. Arakawa, Governor of the Prefecture, went on board, and after greeting the General assured him that anything he might desire would be done if only he would indicate his wishes. General Stoessel, however, had nothing to ask for. It appears that he visited Nagasaki in former years and that he was not displeased to spend a few days there again. He is said to have been looking hale and well, though his face had a care-worn expression, as well it might. A representative of the *Asahi Shimbun* sought an interview, but was unsuccessful. Mrs. Stoessel also seemed in excellent health. With them were four young people, the children of officers who had died or been killed during the siege. Just before leaving the ship the General went aft and delivered a short parting address to the soldiers he had commanded so ably. They were drawn up, to the number of several hundreds, on the deck of the steamer, and it is related that many showed signs of deep emotion as their commander took leave of them. General Stoessel had begun to descend the gangway when his name was loudly called, and his comrade General Fock was seen hurrying forward to take a last farewell. The two officers embraced each other warmly.

The *Hochi Shimbun* contains a long and dramatic account of the last conference which took place between the Russian commanding officers at Port Arthur; the conference at which it was decided that the fortress must be surrendered. We find it impossible to credit the details given, though the Tokyo journal claims to have received them from Lieut.-General Nadin. At all events we shall not re-produce the story. One part of it, however, may be referred to, namely, the high tribute paid to the untiring energy of General Stoessel and his wife. These two are said to have perpetually ridden round the forts encouraging the men, and it is to their moral influence that the place owed its long defence.

Major-General Wilmann, speaking through the columns of the *Kokumin Shimbun*, expresses the highest admiration for the courage of the Japanese artillery and for the skill of their gunnery. His explanation of the surrender is that there were not men enough in the end to defend the forts, and that the number of sick and wounded had become unmanageable. Blood poisoning was above all prevalent, and it may be mentioned that this last explanation is borne out by the observations of the Japanese and Europeans who visited the fortress in the

**Manshu Marn.** Major-General Wilmann confirms Lt.-General Nadin's statement that the death of Kondrachenko proved an irreparable blow to the garrison. This officer appears to have been a veritable hero.

Japanese newspapers speak in very tender terms of a little girl of five who has come over in one of the steamers carrying prisoners. She is the daughter of a Russian officer long ago reported as missing, and supposed to be either dead or a prisoner in the hands of the Japanese. Her mother was killed by a stray bullet, and she would have been altogether destitute had not a Russian priest cared for her. "This same priest now accompanies her to Japan, where there is a faint hope that she may find her father. She is said to be a great pet of the Russian soldiers, who delighted to carry her about and play with her during the voyage.

Lieut.-General Nadin, who is among those about to return to Russia, is said to be in a very exhausted condition. His age is 65 and in addition to a wound received at Nanshan, the pains and privations of the siege tried him sorely. He is among the number of the Russians who have been profoundly impressed by the valour of the Japanese sailors and soldiers, and who think it an infinite pity that this mutual slaughter should continue between two nations like the Japanese and the Russians. He is persuaded that the Japanese Navy and the Russian Army, if they acted in combination, might defy the world.

This officer, who originally decided not to take the oath but to remain in Japan, has now changed his mind and will return to Russia. When the excitement of the fight had passed away, thoughts of home probably supervened with overwhelming force.

Wednesday, January 18.

Colonel Trichakoff, who is now in Nagasaki en route for Russia, has given to a Japanese interviewer the following version of Stoessel's farewell address to the officers of staff rank who served under his command in Port Arthur:—"You have all seen the things that happened to-day. It has come to our entrusting our lives and properties to the mercy of those who were yesterday our enemies. I thank you for your valiant deeds in the past, and I further thank you for unreservedly entrusting to me the duty of making a final settlement. I am now confronted by the necessity of parting from you publicly as well as individually. Remember the relations that have existed between us and carry out without violation the terms that I have arranged with the Japanese army. You have satisfied your honour as soldiers. The Japanese Army must appreciate that, and if there be any in our own country who torment you with reproaches, it is on my head that the responsibility rests. Be of stout heart, gentlemen. A brave soldier is always true to the right."

Thursday, January 19.

General and Mrs. Stoessel, together with the orphan children they have taken under their care, left Nagasaki on the afternoon of the 17th by the *Australien*. The exact number of the party is not stated, but as the steamer is understood to have taken all the officers and men who are returning to Russia on parole, there must have been something in the neighbourhood of 600.

Several of the Russian officers enrolled their names in the Japanese Red Cross Society and subscribed handsome sums to its exchequer.

The wife of a captain, whose name appears to be Helmhelm and who is a Ger-

man from the Baltic provinces, has entreated permission to remain in Japan with her 16-year old daughter. She does not ask to have quarters assigned to her in the prisoners' barrack, but only to be permitted to occupy a house in the vicinity.

The *Kokumin Shimbun* says that it has been decided to distribute the prisoners as follows:—

Matsuyama.....	3,000
Marugame.....	350
Fukuchiyama.....	800
Himeji.....	1,000
Nagoya.....	1,000
Shizuoka.....	1,000
Tengajaya.....	5,000
Hamadera.....	20,000
Fukuoka.....	1,000
Dairi.....	2,000
Ninoshima.....	4,000
	39,150

Friday, January 20.

The Russian prisoner who was discovered to be a woman has now been found, according to the *Hochi Shimbun*, to be the wife, or paramour, of a sub-lieutenant, whose name we refrain from re-producing. When the officer, who is spoken of as having a professional diploma, was taken prisoner this girl, out of her great affection for him, assumed man's garb and constituted herself a prisoner. The Japanese were a little perplexed how to deal with her, but they have finally sent her to Kobe where as a non-combatant, she will be delivered to the French Consul. It is said, however, that she is quite determined to make her way to Matsuyama and live near her lover, whatever hardships such a step may involve.

#### GENERAL STOESEL'S CONFESSIONS.

Lt.-Colonel Tsunoda, who accompanied General Stoessel to Port Arthur after the General's interview with Nogi on the 5th instant, says that Stoessel asked for information as to the whereabouts of Kuropatkin. Tsunoda replied that he could not be sure, but he thought that Tashan near Mukden was Kuropatkin's present quarters. Stoessel then explained that his last letter from Kuropatkin had been dated the 6th of October, and in it the assumption of the offensive was announced as well as the writer's intention of pushing southward. Naturally this intelligence was received with much satisfaction, but day after day brought no further news. Then a Chinese spy reported that Kuropatkin had got as far as Ying-chintz, which is south of Nanshan. This indicated the imminent relief of the fortress, and again and again Stoessel consulted his maps, following in imagination the course of Kuropatkin's march. Tsunoda explained that Kuropatkin had actually assumed the offensive, but that he had been repulsed with a loss of fifty or sixty thousand men. Stoessel then asked about the Baltic Fleet, but of course Tsunoda could not tell anything certain. He knew only that the Fleet was said to have passed the Cape of Good Hope. "What on earth can they be doing," cried Stoessel, as well he might. Asked by Tsunoda what the besieged had found most formidable in the attack, Stoessel again emphasized the immensely destructive effects of the 28-cent. guns. He declared that these weapons had destroyed all the defences. For his own part he had always been opposed to the creation of such admirable communications as those existing between Dalny and Port Arthur. He had pointed out to Saharoff the unwisdom of such means of transit should Port Arthur ever be invested with Dalny for

basis. But no attention had been paid to his warnings, and it might now be said that Saharoff himself had sealed the fate of the fortress. He went on to explain that he himself had been opposed to the war. His experiences in the North-China campaign had shown him that the best troops then in the field were the Japanese and the Russians under his own orders. No other troops could compare with them, and he had deprecated the great unwisdom of a combat between such armies. People alleged that Alexieff had been in favour of this war. There could be no greater mistake. Alexieff had been commander-in-chief of the Russians in the Peking expedition of 1900, and he had then learned the value of the Japanese as fighting men. Therefore war with them had been the last thing he desired. It was to the ignorance of the St. Petersburg officials that the failure to effect a peaceful settlement must be attributed. Stoessel added that he had been for five years in Port Arthur. He had commanded the Third Division of the Third Army, troops on which he could thoroughly rely. But the Third Army had been sent north, and he, who would gladly have accompanied it, had been obliged to remain at Port Arthur with the Fourth and the Seventh Divisions. When the Japanese made their first attack on Port Arthur, the naval attack of February 9th, the garrison was much alarmed. There were then only two or three thousand men in the place, and the defences were far from completion either in the sea-front or on the land side. Thereafter the utmost diligence had been exercised to place the fortress in a proper condition, but it could not be said that the work had been fully carried out when the investment began. General Kondrachenko had been the life and soul of these defensive preparations, and his death was a terrible blow. He fell on the 3rd of December in the East Keelwanshan Fort. A council of war was being held there, when a Japanese shell struck the place and killed a number of men, among them the brave and competent General. Stoessel concluded by saying that he had been wounded three times in his life, once in each war where he had fought. He had now done his duty to his country and he intended to spend the rest of his days in peaceful retirement. Kuropatkin was an old friend of his. They had been school-mates, and it pained him very much to think of the difficult position in which Kuropatkin now found himself.

#### WITH OYAMA'S ARMY.

Friday, January 13.

Harrowing accounts continue to arrive of the conduct of the Russians on the Shaho. They are said to be pulling down the people's houses for fuel and committing all kinds of outrages, the least of which is requisitioning supplies without payment. Thousands of the inhabitants, thus rendered destitute, have fled to Mukden and Governor-General Tseng is endeavouring to obtain means to relieve them. The Russians are probably in great straits for fuel. They have not the Japanese thrifty habit of converting every log into charcoal and them obtaining a large supply out of small materials.

Saturday, January 14.

It would seem as though the Russian cavalry raid down the Liao Valley was nothing more than an attempt to injure the railway and thus harass the Japanese. Operations of this kind might have been ex-

pected before now. In fact foreign critics have expressed surprise that something in the nature of attacks upon communications was not repeatedly essayed by the Japanese in view of the weak spot in the Russian situation, namely, the dependence upon a solitary line of railway. But if either side could have been expected to inaugurate these tactics, that side should have been the Russians, for their comparatively strong arm is cavalry. They have some 25,000 or 26,000 Cossacks in their army, and much was looked for from this powerful force at the outset of the war, especially since the critics agreed in declaring that Japan was eminently weak in cavalry. Yet the Russian mounted men have never accomplished anything worthy of note throughout the campaign, and even now when a special opportunity is supposed to be furnished by the peculiar situation on the Shaho, this essay which they have just made appears to rank with the wild foray against Anju last May. Whether any great opportunity really does exist for such enterprises we doubt, both sides having made full dispositions for the protection of their railways. Be that as it may, however, the Russians ought to be in a much better position than the Japanese for work of the kind, and it is plain that they planned their Liao-Valley ride on a large scale. The Cossacks numbered some thousands and were well supplied with artillery, but the results achieved by them may be described as virtually nil. Their gun practice seems to have been of the poorest character, and in the two places where they got within reach of the railway, they showed that the Boxers were far greater adepts than they in the art of railway wrecking. In short the raid ended in a fiasco, and is not likely to be repeated.

But it has an interesting feature, commented on, we observe, by the *Jiji Shimpō*. How did a force of 2000 Cossacks suddenly make their appearance at Old Niuchwang? It is impossible that, had they ridden down the eastern side of the Liao Valley, they could have escaped the Japanese outposts and patrols scattered through that region. There is indeed clear evidence that they travelled along the west bank of the river, in other words through neutral territory and with Chinese guides. The Russians have been uniformly violating China's neutrality in the Hsinnintun region, but the violations have been of a more or less surreptitious character. Now, however large bodies of Russian cavalry appear to have deliberately moved through Chinese territory to attack the Japanese at Old Niuchwang. This is a very serious matter. Practical demonstrations of China's incompetence to enforce her neutrality have been furnished by other questions, but it was precisely in the region westward of the Liao that she was supposed to have adopted efficient precautions against anything of the kind. We do not at the moment foresee what steps the Japanese will deem it expedient to take in the face of this new development, but there can be no doubt about its strategic importance.

Sunday, January 15.

Peking telegraphs that the Russians who attacked Niukiattun were driven back in confusion, leaving 50 dead upon the field. The Japanese casualties were 2 killed and 21 wounded.

Tientsin, on the strength of a telegram from Yingkow dated the night of the 13th inst., confirms the above, but puts the number of Japanese wounded at 11. This telegram says that the main object of the raid was to burn the Japanese commissariat station at

Niukiattun, and that a fierce cannonade was opened against it with 8-cent. field mortars, but although 2 or 3 conflagrations were started, they did not mature.

It is evident that the raid has had little effect, though it was certainly a bold essay.

Wednesday, January 18.

A part of the Russian cavalry, from the scene of the recent raid, seems to have retreated along the right bank of the Hun river via Changtan towards Hsinmintun. The remainder returned by the road which they had followed for the purpose of the attack, namely, along the west of the Liao through neutral territory.

The Japanese casualties at Niukiattun are said to have been 70. The Russians lost over 200.

Reports from the front indicate that the Russians are extending their front by following the course of the Hun in a southerly direction. They are engaged throwing up fortifications at Sufangpau and Shalingpau.

A Russian prisoner taken at Niukiattun says that the attack of that place was not a part of the original plan of the cavalry raid. What was mainly contemplated was to wreck the railway, but a reconnaissance having showed that the garrison at Niukiattun was very small, the officer in command of the cavalry decided to attack the place. Whether he would have moved on against Yingkow had the attack succeeded, this prisoner does not say.

Skirmishes continue in the Hanchang direction. The latest took place at Lutauhotsz. A Japanese outpost of 80 men was engaged, and the Russians are said to have been driven back. As to the previous struggle (on the 6th instant) at Watszing, details now forwarded say that the Russians had over a hundred casualties and that two of their guns were injured.

#### A BOLD VISIT.

The *Asahi* publishes an extract from the letter of an officer now serving on the Shaho. He describes a very remarkable incident. The Japanese being desirous of conveying to the Russians news of the fall of Port Arthur, volunteers were invited to carry letters. Two non-commissioned officers and two privates undertook the task. They rode out towards the enemy's line, the intention being to deliver the letters direct into the hands of the Russians, instead of depositing them at some mid-way point, as had hitherto been the custom. There was, however, a great danger that this change of procedure might be fatal to the little party, nevertheless they rode off stoutly. Arriving within a thousand metres of the enemy's outpost they waved white handkerchiefs. The Russians did not fire and the Japanese moved on steadily. At 300 metres they observed 30 or 40 Russians dismount and lie down in firing positions, but still the sergeants and soldiers pushed on waving their white flags. The Russians now signed to them to lay down their arms, evidently imagining that they had come to surrender, but they paid no attention, and riding on steadily, came at last within hand-shaking distance. They carried several bottles of wine and boxes of cigars. On these were inscribed in big letters:—Tomorrow will be your Xmas day. We will not attack if you do not; drink and smoke to your hearts' content and have a good time." The Russians were at first indisposed to accept these presents, but when they read what was written on the bottles and the

boxes, they changed their attitude completely, and there ensued an exchange of greetings. Then the visitors handed in their letters, speaking of the fall of Port Arthur, telling how Stoessel would soon be on his way home, and calling attention to some pictorial post-cards which accompanied the letters and which showed how Russian prisoners were treated in Japan. Finally the four men rode away in safety. Was there ever a stranger bit of outpost work?

#### HABUTAYE FOR EXPORT.

The Department of Agriculture and Commerce has issued the following regulations for the purpose of correcting abuses with reference to the manufacture of *habutaye*:—

- I.—*Habutaye* for export must not be moistened for the purpose of increasing its weight.
  - II.—In *habutaye* for export magnesium, salt, sugar or other materials indicated by the Minister of State for Agriculture and Commerce must not be used.
  - III.—Articles which violate the above provisions may not be sold, dealt in or exported.
  - IV.—Manufacturers must attach to each piece a ticket showing the name of the manufacturer, the name of his establishment, the year, month and day of manufacture and the numeral.
  - V.—Manufacturers must keep a ledger at each place of business, and must enter in it the following items:—
    - a. Year, month and day of receipt.
    - b. Numeral.
    - c. Weight of un-faced *habutaye*.
    - d. Year, month and day of facing.
    - e. Weight of *habutaye* after facing and quantity of facing material.
    - f. Year, month and day of sale (or transfer).
- The above ledger must be preserved for one year from the date of its latest entry.
- VI.—"The manufacturers" referred to in the last two articles include persons who combine the work of softening and finishing, as well as the finisher alone; and by "manufacturing" is to be understood the combined work of softening and finishing as well as the work of finishing alone.
  - VII.—Persons who engage in the business of exporting *habutaye* must not offer any obstacle to inspection of their stock in trade, their ledgers and other books by the accredited officials.
  - VIII.—Persons violating any of the provisions from Art. I. to Art. V. inclusive or of Art. VII. and persons making false records on marks or in ledgers shall be liable to a fine of not more than 25 yen.
  - IX.—Traders whose representatives, employees or other assistants violate the provisions of these regulations, shall not escape the prescribed punishment on the ground that the violation was not by their own direction.
  - X.—When traders are juridical persons, or minors their representatives shall be liable to the punishments which these Regulations provide as applicable to traders. But this shall not apply to minors who rank as majors with relation to trade.

#### SUPPLEMENTARY.

- XI.—These regulations shall go into force from February 1st, 1905.
- XII.—In the case of traders who have received permits from business associations established in accordance with the Law relating to Associations of Fellow-traders in Important Staples, the provisions of Arts II. and III. shall not be applicable until the 31st of March, 1905.

#### FORMOSA.

The head-hunters of Formosa, to the number of 40, made a raid on the 15th instant against the camphor-boiling station at Tokura. Six Chinese and one native lost their heads. An official of the Camphor Monopoly Bureau had a hand-to-hand fight with the raiders, but he escaped without serious injury.

It appears that the idea of temporarily suspending work on the grand trunk railway of Formosa was abandoned. Thousands of workmen have been employed of late, and the present expectation is that the construction will be completed by March, when it will be possible to travel by rail all the way from Kelung to Tainan.

## KOREA.

Monday, January 16.

The Independent News Agency reports that in view of the necessity of financial reform in Korea, Mr. Megata has advised that all the nickels privately coined and now in circulation should be interdicted, that the veto should be published everywhere, and that no pieces of this description should be tolerated except those struck at the Mint. The Minister of Finance and his colleagues of the Cabinet are strongly opposed to this measure. They object that in Pyongan and Whanghai privately coined nickels are used, as in many other districts also, and that, consequently, to veto them suddenly would be to cause such heavy and wide-spread loss as might produce a rebellion.

From the same source we learn that the services of the Belgian adviser engaged by the Korean Government last year for a period of 5 years, have been dispensed with, and that a rumour prevails among the Koreans that a Japanese will be appointed in his place.

Tuesday, January 17.

The Independent News Agency reports that Mr. Hayashi, Japan's Representative in Seoul, is now discussing three important questions with the Korean Government: one is the coastwise carrying trade; another the recall of Korea's foreign representatives; and the third the transfer of the country's machinery of communications to Japanese care and supervision. All these problems have an intimate connexion with the repair of Korean finance, and though some opposition is offered, the present expectation seems to be that the Seoul Government will fall in with Japan's projects.

From the same source it is stated that Korea has at length paid over the sum—240,000 *yen*—which represents compensation for losses suffered by Japanese subjects in 1895.

Wednesday, January 18.

The nickel question has been settled, according to reports from Seoul. Mr. Megata's advice will be taken, and all nickels other than those issued by the Government mint will be interdicted. Apparently the Korean Ministry has been convinced that although this obviously necessary measure may cause some loss to the holders of privately struck coins, the longer the evil is left unhandled the greater must be the pain attending its remedy.

Mr. Megata is further said to have drafted a law relating to the question of the currency in general, and to have submitted it for examination by the Government.

A riot is reported from Kyongsan near Taku. One European was killed by the rioters and one severely wounded.

Thursday, January 19.

It is stated that in accordance with General Hasegawa's advice, the Korean Government has decided to reduce the military establishment to 10 battalions, thus saving 2¼ million *yen* annually. Mr. Megata's currency bill is also likely to receive immediate approval, as well as the scheme presented by Mr. Hayashi for the improvement of communications.

Friday, January 20.

It will be remembered that the Japanese authorities in Korea recently issued a notification warning the people against forming political parties, and saying that if there were any complaints they should be preferred through the Japanese Consuls. This has

apparently had considerable effect. At Chinnampo alone seven such complaints against local officials have been preferred.

On the 17th the Emperor held a council in the Palace to consider Mr. Megata's financial proposals. The principal points are said to have been that Korea will borrow ten million *yen* in specie from Japan; that a central bank shall be established; that the circulation of privately coined nickels shall be interdicted, and that officials shall receive their salaries in paper-money. To all these things consent is said to have been given.

## THE NEUTRALITY QUESTION.

Russia's circular does not appear to have accomplished much. The Washington Government, which took the lead in securing guarantees for China's neutrality, is not at all disposed to acknowledge Russia's right to create, on the strength of her own convenience and her own assertions, a situation highly injurious to all the Powers. Mr. Secretary Hay is reported to have invited an exchange of views with regard to confirming the principles of the open door and the integrity of Chinese territory, and Great Britain, Germany and Italy have signified their approval of such a step. Japan, of course, will not remain idle. It is expected that she also will address a circular to the Powers, showing that for whatever departures there have been from the maintenance of neutrality Russia is responsible, not China. The strange thing is that the world remains in total ignorance of the acts which, according to St. Petersburg, warrant this charge against China. What has China been doing? Only the other day the public learned with surprise that St. Petersburg was about to bestow an order on General Tseng in recognition of the help he had afforded to the Russian troops, but now suddenly the tables are turned and the much harassed Governor-General is arraigned for having ignored his duties of neutrality. The whole thing is an absolute mystery. If China has forgotten her responsibility, a responsibility admirably adapted to her strangely pacific disposition, where are the evidences of her forgetfulness? Truly it is difficult to recall any previous example of such a grave charge being preferred on the strength of such invisible evidence. So far as can be detected by onlookers it is Russia and Russia only that has treated China's neutrality with contempt. That Mischenko's cavalry moved down the west bank of the Liao and crossed the river at Sanchaho is beyond all question. Japanese officers declare that there were Chinese regulars among the Russian troopers, and it is established beyond all doubt that several of the Russians wore Chinese costume. Is it possible to conceive anything more farcical than sermons about neutrality in the mouth of a Power whose troops and their Generals are acting in such a manner? The unhappy Chinese must be supposed to have yielded to *force majeure*. It was certainly not of their own free choice that they accompanied Mischenko's troopers. Equally plain is it that Japan's previous remonstrances against the use of Chinese disguises by Russian soldiers have produced no effect whatever either in St. Petersburg or on Kuropatkin, if indeed Kuropatkin knows anything about what is done by his cavalry general. The *Jiji Shimpō* naturally waxes a little impatient over the comedy, and declares that diplomatic remonstrances and repre-

sentations being quite futile where a Power like Russia is concerned, Japan's only practical course is to pay her adversary in his own coin and march her troops up the west of the Liao if she finds that course strategically convenient. But, after all, the main wonder of the incident is that the public remains ignorant of the nature of China's alleged wrong-doing. It may be that she has violated her neutrality, but apparently the violations have been all in Russia's favour and at Russia's instigation, unless the Hungtut and the *I-chun* are to be quoted as proofs of Peking's incompetence.

## A FRENCH CANARD.

Two things that have no limit are the credulity of the public and the unscrupulousness of European political agents. The former is an old established fact, more or less responsible for the latter, but the latter was never illustrated so forcibly as during the present war. Talk about Oriental cunning and trickery, why it can not hold a candle to its Occidental representatives. The Western is bigger in stature and bigger in lying. A very striking case is that of the Russian agent who has just circulated in France a document purporting to be an exhaustive statement, written by Baron Kodama in 1902, explaining Japan's ambitions and showing particularly that she has designs against French Indo-China. The forger of this document knew well that he should find some folks gullible enough to believe his unscrupulous falsehood, and counting on that he set about his work of fabrication. The proper place for such a rascal is the galleys. Indeed, a worse punishment should be meted out to him, for an ordinary forger injures only himself and one victim, whereas a forger like this Russian agent may cause a wide-spread catastrophe. There will be little difficulty in determining which of the two combatants emerges from this war with the better reputation for truth, honesty, and humanity. As a representative of Christianity Russia cuts a sorry figure.

The Russian Agent who, through the columns of the *Echo de Paris*, is endeavouring to excite the French people and resuscitate the spectre of the Yellow Peril by forging and uttering false documents, has fallen into one of those mistakes which providence often devises to confound the tricks of such miscreants. He represents Baron Kodama as addressing a secret despatch to Count Katsura in February, 1900, and he says that Count Katsura was then Minister President of State. But unfortunately for this conscienceless rascal Count Katsura was not Premier at that time; Marquis Yamagata was. Thus the liar stands self-convicted.

## POPULATION OF JAPAN.

The growth of the population of Japan is shown by the following figures, which the statistical Bureau of the Cabinet publishes:—

A.D.	
1894.....	41,813,215
1895.....	42,270,520
1896.....	42,708,264
1897.....	43,228,863
1898.....	43,763,355
1899.....	44,260,642
1900.....	44,815,980
1901.....	45,433,032
1902.....	46,022,476
1903.....	46,732,841

## THE AMERICAN ASIATIC ASSOCIATION.

When H.I.H. Prince Fushimi was in New York, the American Asiatic Society gave a banquet in his honour. During the course of the banquet the President proposed the Prince's health in the following terms:—

PRINCE FUSHIMI: I have the honour to present to your Imperial Highness a cordial greeting from members of the American Asiatic Association.

Our country, like yours, has a vital interest in the maintenance of the open door for commerce in Eastern Asia. The struggle in which your people are now engaged, and in the conduct of which their achievements have excited the admiration of the world, has for one of its objects the preservation of the principle of equality of commercial opportunity. Organized in defence of this principle, our Association cannot but follow the fortune of Japan with a sympathetic interest; cannot but recognize the fact that her battle is also ours, and that in the benefits of the ultimate triumph, American commerce will liberally share.

The ancient and illustrious Imperial House to which Your Highness belongs, has acquired new dignity and honour from having as its head one of the most enlightened rulers of this or any other age. Our people would find less satisfaction in the results of the mission of Commodore Perry, and your people would have less reason to be grateful for the breach made by the United States in the long seclusion of Japan, had the guidance of the Empire in its new career of progress fallen into less competent hands. The name of your Emperor will be transmitted to latest time beside those of the founders of nations; the fathers, protectors and benefactors of their people. It is with no ordinary pleasure that we take this opportunity to convey to him, through you his kinsman, the assurance of our profound respect and admiration for His Imperial Majesty.

Your Highness will already have discovered, in your progress through our country, that you are among a people who entertain the most friendly feeling toward your own, and who are thoroughly well informed as to the bearing of the conflict which your people are now waging on the future development of the great continent of Asia and on the well-being of that half of the human family which inhabits the Eastern portion of it. The distinguished part which your Highness has borne in some of the most heroic episodes of that conflict gives you a new title to the regard of our people and will assure you a hearty and spontaneous welcome from them wherever you may go.

In lending emphasis to that welcome, this Association merely discharges one of its proper functions by helping to draw closer the bonds between two countries whose physical proximity is reinforced by an essential identity of the great lines of their national policy and a substantial agreement in regard to the ideals of human progress. Between your people and ours there can only be the peaceful rivalries of commerce and industry, and of the noble struggle most effectually to apply the discoveries of science to promote the welfare of mankind. In the future, as in the past, our Association will make the utmost endeavour to remove all causes tending to impair the cordial relations existing between the Empire of Japan and this Republic, or calculated to obscure the essential identity of their interests and purposes. To these ends, we hail the visit of Your Imperial Highness as furnishing invaluable aid, and we trust that you will accept the feeling which animates this assemblage as the earnest of a widely diffused conviction that the increased power and influence of Japan are of good augury for the best interests of the world, and are nowhere more sincerely welcome than in the United States.

The Prince replied as follows:—

MR. PRESIDENT AND GENTLEMEN: It affords me great pleasure to be present here this evening by your courteous invitation, and I thank you most sincerely for the cordial greeting just expressed to me on behalf of the members of the American Asiatic Association. As you have just remarked, in traveling through your country I have already discovered that I am among a people who entertain the most friendly feeling toward my own, and I feel confident that the aim of our Association and the object of my mission which are identical will be greatly promoted by this friendly reunion, where I have just had the pleasure of listening to kindly and sympathetic sentiments toward my country. I assure you that your expression of profound respect and admiration which I shall not fail to convey to His Imperial Majesty will be a source of profound satisfaction to his Majesty, the Emperor of Japan. Thanking you again for the courtesies extended to me, I raise my cup to drink to the health of the President of the United States, to the prosperity of the American people and to the success of the American Asiatic Association.

An interesting feature of the entertain-

ment was that the President of the Association, immediately after the Emperor's health had been drunk, telegraphed to the Minister of the Imperial Household in Japan:—

From the President of the American Asiatic Association to His Excellency the Minister of the Imperial Household.—At the dinner of the American Asiatic Association, at which his Imperial Highness was guest of honour, the health of His Majesty the Emperor of Japan has just been drunk amidst great enthusiasm, and the sentiment was warmly applauded that the character and ability of the Emperor should prove potent in the regeneration of Asia as they had done in the new birth of His own country.

Within a few minutes and while the banquet was still in progress, the following reply was received and read amid loud applause:—

From the Minister of the Imperial Household to the President of the American Asiatic Association, New York.

I immediately submitted your message to His Majesty the Emperor and am commanded by Him to express His cordial appreciation of the kind sentiments it conveys and His earnest hope for the prosperity and success of your Association, which has done so much to promote the friendly relations happily existing between America and Japan.

## AN AMUSING THEFT.

A marked copy of the *China Review*, a pro-Russian organ published in Tientsin, has been sent to us by a correspondent. The marked paragraph is this:—

Having been able to secure a rough sketch of the plans and fortifications of Port Arthur and its immediate surroundings, we are glad to announce that, with to-morrow's issue we shall present to each of our subscribers a copy of the Sketch Map, compiled by us from the best official and other sources, showing the various positions, as they stood at the end of last week; viz.—those held by the Japanese and those still retained by the Russians; from which it will be seen that the inner ring of fortified positions—the real defence of the place—has not been touched; in addition to which there are many more Forts to the South West on the point of the Liaotashan peninsula, which are not shown on the rough Sketch plan. Subscribers or others desiring extra copies can have the same on application, by enclosing 50 cents, in stamps, at our office.

The map in question is an exact reproduction of that published by us on December 3, except that by the introduction of some random marking the ownership of many of the forts is entirely misrepresented. Mr. Chas. L. Norris-Newman, an F.R.G.S., who claims to have "compiled the map from official and other sources," has simply taken our map, changed the manner of delineating the hills, added three or four names of positions already well-known, omitted our dates showing the times of various forts' capture, interpolated some gross errors of his own, and then advertised the reproduction for sale at 50 cents as his own compilation. We are not at all astonished at theft in such a quarter, but we are a little surprised by its extreme clumsiness and its reckless character.

## POLITICAL PARTIES.

It appears that there is some slight movement in the ranks of political parties. Mr. Fukuchi Genichiro, formerly well known as the editor of the *Nichi Nichi Shinbun* and subsequently famous as a playwright, has emerged from his comparative seclusion of many years, and has enrolled himself in the Progressist Party, bringing with him some five or six votes. A hearty welcome has of course been extended to him. Still greater interest attaches to Messrs. Shimada Saburo and Taguchi Ukichi, who, some years ago, broke away from the Progressists and assumed an independent stand. These two publicists, well known to all students of Japan's modern history, show a disposition

to resume their old allegiance, but are understood to prescribe a condition, namely, that the Party shall be dissolved by way of preliminary to reconstruction. We do not know exactly what would be involved in such a step, but Count Okuma, while expressing entire willingness to re-organise the Progressists if any advantages be apparent as to strength or solidarity, does not appear to be quite clear that such a result would follow the proposed change, and there is consequently some hesitation. Certain journals ridicule the incident, regarding it chiefly as an attempt on the part of Messrs. Shimada and Taguchi to emerge from the obscurity to which they now find themselves relegated in the political world. That is certainly the least favourable view that can be taken, but the friends of these two publicists may retort with truth that their careers have already guaranteed them against anything like obscurity.

## NOTES ON CURRENT EVENTS.

The *Official Gazette* contains an order of reorganization which shows that a submarine squadron has been added to the Japanese Navy.

It appears that the *Rosalie* was not the only steamer captured on the 12th instant. An official report states that torpedo boat No. 72 seized the *Rivington* near the Tsushima Strait on the forenoon of that day. She is a vessel of 2,850 tons and she was carrying a cargo of 6,500 tons of Cardiff coal to Vladivostok.

A great deal of interest has been excited in Japan by the official announcement of the organization of a squadron of submarines. The squadron is associated with the name of Commander Oguri, who is said to be a firm believer in submarines. What interests the Japanese especially is that an opportunity may now perhaps be first furnished for testing the practical efficacy of this type of vessel, which has attracted so much attention and been the subject of so much controversy. It would suggest itself, however, that the great potency which has been now demonstrated on behalf of the mechanical mine militates against the use of the submarine, or at any rate, greatly narrows its sphere of action.

According to a German authority, the world's silk production in 1903 amounted to 30,897,000 avardupois pounds, not including what was produced and consumed in the home markets of China and Japan. By countries the production was as follows:—

	Pounds.
Italy .....	7,757,000
France .....	1,043,000
Austria .....	605,000
Spain .....	189,000
Greece and Crete .....	132,000
The Caucasus .....	880,000
Bulgaria, Servia and Roumania .....	309,000
Turkey in Europe .....	546,000
Turkey in Asia and Cyprus .....	2,990,000

The following amounts were exported from Asiatic countries whose entire production it is difficult or impossible to estimate:—

Persia and Turkestan .....	1,430,000
China, via Shanghai and Canton .....	14,016,000
Japan, via Yokohama .....	10,138,000
India, via Calcutta .....	539,000

It appears that in recent years the production of silk has increased chiefly in Asiatic countries.

Lieutenant-Generals Barons Ogawa and Kawamura have been raised to the rank of full Generals. The former commands the Fourth Division. He is celebrated for flank attacks, and it was his men that made

the march through the sea at Nanshan. General Ogawa was wounded at Shaushanpau. General Kawamura commands the Tenth Division which now forms part of General Nozu's army. He commanded the troops when they landed at Takushan, and he remained for some time in command of the Takushan Army, which finally came under General Nozu.

Nothing suggests more strongly that the Baltic Squadron is making improper use of French waters than the *Novoe Vremya's* attempt to create the impression that Great Britain is permitting the Japanese to establish a base at Labuan, a British island. Falsehood is a weapon that has been used abundantly in Russia's interests during the present war, but so clumsily used that, in a majority of cases, it has only provoked ridicule.

It is given out by the Naval Department that the Submarine Torpedo Squadron (*Senko Suiraitai-tai*), of which the organization was announced in the *Official Gazette* of the 13th instant, comprises ten vessels which were put together in Japanese dock-yards.

It is stated in well-informed circles in Tokyo that a new first-class armoured cruiser is under construction in Japanese dock-yards.

In its issue of December 2 the London *Iron and Coal Trades Review* says: "We are now able to announce the conclusion of the Anglo-German-French-Belgian rail pool the signatures of the contracting parties having been officially affixed at a meeting in London on Monday, November 28th. A certain amount of progress has been made toward fixing up an agreement with the American producers, but so far nothing definite as to terms has been settled. It is no doubt due to these negotiations that rumors have been in circulation, especially on the continent, that an agreement has been reached between the United States Steel Trust or its representatives and the German Steel Syndicate, on the basis, it is said, that the Americans have agreed not to compete in Germany, while the Düsseldorf Syndicate has undertaken to abstain from rivalry with the Steel Trust in Mexico and South America. So far as we are aware there is no truth in these reports, except in so far as they relate to rails, which, as we above stated, are not yet the subject of any fixed terms." Continuing, our contemporary says: "We are also able to announce that the representatives of the German Steel Syndicate, the Belgian Steel Works and the French works engaged in the export trade met in conference at Liege last week, when an arrangement was arrived at in respect of the joist branch. The understanding, which came into immediate operation, fixes the provisional basis price for joists at £4 5s. net per ton, f. o. b. at port of shipment."

The masters of two German steamers which had been to Vladivostok with Cardiff coal, and which had left that place on the 13th, reaching Moji on the 17th, are represented as saying that the ice is now 2 feet thick and the cold intense. The repairs of the *Rossia* have been completed, but the *Bogatyr* and the *Gromovoi* are still in dock. They are expected to come out at the end of this month. There are 12 torpedo-boats. Admiral Skrydloff left for St. Petersburg on the 12th instant. The Russians are all expecting the arrival of the Baltic Fleet. The news of Port Arthur's fall reached them on the 2nd, but they did not seem to believe it. There are said to be 35,000 troops in the

garrison. Some 14 foreign steamers are at anchor, and about 200,000 tons of coal are reported to be in store.

The *Straits Times* of Friday, December 30, says:—

Very interesting news comes to hand from Sydney to the effect that the Marshall Islands in the Pacific, about 2,300 miles west by south of the Liu Chius, or southernmost isles of Japan, have been arranged as the coaling station of the Baltic Fleet. The story is that the Russian Admiralty invited tenders for the supply of coal, and the Hamburg-American Company put in the quotation, which was accepted. Forty-two steamers are to be engaged in the contract. At a recent date according to the Australian reports, some 20 steamers were in the vicinity of the Marshall Islands with coal for the Baltic fleet. These islands have been chosen for this purpose, because they are comparatively isolated and are lying out of the track of heavy traffic. It is authentically stated that the embargo placed on British shipping was for the purpose of keeping British ships away from the Marshall Islands in order that the secret should not leak out. The naval authorities have received information to the same effect, and while the Marshall Islands are outside the jurisdiction of the Australian naval division it is probable that a vessel of the Australian squadron will be despatched to investigate and report. The embargo referred to was mentioned in these columns a month or so ago, when the case was cited of an Australian trading ship which was forced out of the Marshall Islands trade by the enormous imposts laid upon her by the German authorities. The principal objection to the scheme seems to be that Japan, having news of the project, ought easily to be able to capture all the coallers bound for those islands whither coal could only go for naval purposes.

#### SPORTING NOTES.

(WRITTEN SPECIALLY FOR THE "JAPAN MAIL.")

Local football this week has been very keen and the results of the Sixes are:

Monday 9th, Mason v. Argent, Mason won 3-0.  
Tuesday 10th, Moss v. White, Moss won 2-1.  
Wednesday 11th, Mollison v. Argent, Mollison won 2-1.  
Thursday 12th, Mollison v. Mason, Mollison won 1-0.  
Friday 13th, Moss v. Fairhurst, Fairhurst won 1-0.

Matches played to date are tabulated below:—

	W. S. Moss.	W. B. Mason.	G. N. Fairhurst.	W. J. White.	J. M. Mollison.	S. W. Argent.	Points.
W. S. Moss.....	—	(0-2)	(0-1)	(2-1)	0	0	2
W. B. Mason....	2	—	0	0	(0-1)	(3-0)	4
G. N. Fairhurst.	1-0	2	—	(1-2)	(0-1)	(0-0)	3
W. J. White.....	1-2	0	(2-1)	—	(0-2)	(0-1)	2
J. M. Mollison..	2	2	2	2	—	(2-0)	8
S. W. Argent....	(1-2)	(0-3)	(0-0)	(1-0)	(1-2)	—	5

Thus Mollison having won all his games, with one more to play against W. S. Moss, which he ought easily to pull off, should come out at the head of the list with a maximum quota of 10 points.

Should Mollison lose his game against Moss and Mason win his two against Fairhurst and White, a tie will result, when the two teams will have to play another game to decide. The odds are much in favour of Mollison, who has virtually won already.

The Interport Rugby match will probably be played at Kobe on 11th February. Training begins next week.

Oxford was beaten by Cambridge on December 10th last at Queen's Club: it was long predicted that the stamina of Cambridge would upset the Oxfordian calculation.

The Essex County Club has started football again on their Cricket ground: and footballers hope that the Oval authorities will make a move in the same direction.

Mr. H. W. Hill, a vice-president and also

the hon. treasurer of the London Athletic Club, died suddenly from heart failure on Wednesday, 23rd November. He was educated at the University College School. By hard training he became one of the most famous amateur athletes of his day. He joined the London Athletic Club in 1872, and was repeatedly a successful competitor in the half-mile challenge cup race, besides winning many events at various distances up to 1,000 yards, at which distance he once held the best amateur time on record. His finest performance was accomplished in the memorable half mile level race at the London Athletic Club's autumn meeting at Lillibridge in October, 1876. That event was won in the then best on record time (for amateurs) of 1 min. 57½ sec. by F. T. Elborough. Hill was second, 1 min. 58 sec., Slade third in a little under 1 min. 59 sec., and the Hon. A. L. Pelham fourth in a shade under 2 min. Until near the finish Hill seemed to be a certain winner.

Mr. P. F. Warner's attention was drawn to the recent letter by the Marquis of Granby, President of the Board of Control for the Test Cricket Matches, on the subject of the duration of the test games to be played between England and Australia next summer. In his communication Lord Granby said that the Counties and the M.C.C. Committee had unanimously decided that three days should be allowed for Test Matches, except the last one, which, if necessary to decide the rubber, was to be played out.

Mr. Warner was asked whether he did not think it would have been better for the Board of Control to have arranged for three games, and to have allowed sufficient time for them to be brought to a definite conclusion. His reply was:—

DEAR SIR,—Many thanks for your letter of yesterday's date. I have always been in favour of playing test matches in this country to a finish, and when the matter came up at a meeting of the Middlesex Committee in Lord's last time, I said so. However it was decided by a majority to recommend the present scheme.

I quite agree with you that it is a pity that County Cricket should be considered of such vital importance as to interfere with the bringing to a conclusion of the great international matches, but so far as next season is concerned, it is, I fear, too late to alter the arrangements which have been made.

The present scheme is a compromise, but I fancy it is the thin end of the wedge, and when the Australians come in 1908 I confidently look forward to the Test Matches being played to a finish. I favour five rather than three, as five matches are a fairer test of the abilities of the two elevens.

Yours truly,

(Signed) P. F. WARNER.

#### FIRES.

On the morning of the 15th a store-house at Maruyama took fire and three buildings were destroyed, namely, a workshop, an arms store, and a kitchen. The cause of the conflagration was that a nail when being driven into a box of ammunition came into contact with a concussion fuze. Twelve persons are known to have perished and it is expected that the list will be increased. The store belonged to Messrs. Okura and Company, and its contents were ammunition and war-material taken from the Russians and sold by the Government to the firm. These were being packed for despatch to Kyoto when the catastrophe occurred. There was a heavy explosion of gunpowder, and for a time great apprehensions were entertained of the flames spreading, but these fears were not realized.

Fire broke out on January 12th in a car of a freight train on the Kwansei Railway running between Shimoda and Oji, near Nara. Several bales of cotton were burnt. Sparks from the locomotive were the cause.

At 4.30 a.m. on Jan. 14th, fire broke out at Kanagawa destroying three houses. The cause is believed to be incendiarism.

## THE BALTIC FLEET.

THIS fleet becomes more and more mysterious. That it is making its place of concentration at Madagascar the telegrams have assured us in the most explicit manner. Thus on January 3rd Reuter told us that ROJESTVENSKY had anchored on the 2nd at Ste Marie, and on the 4th London wired *via* Bombay:—

Admiral Foelkersabm's squadron is anchored in Passandava Bay.

Admiral Rojestvensky is now at Antongil.

Both squadrons are provisioning from Nossi Bé, Majunga, and Tamatave.

It is believed that the rendezvous is to be Diego Suarez.—*Reuter.*

All these places are in the north of Madagascar. Such explicit information left no room for doubt. But subsequently to the receipt of the above telegram, the French Government was understood to have declared that at no French port would the Baltic Fleet be allowed either to rendezvous or to concentrate. In fact the statesmen in Paris were said to recognise as clearly as all jurisconsults must recognise, that to allow Russian war-ships to concentrate or rendezvous at a neutral port for the purpose of proceeding to the scene of belligerent operation, would be to abandon openly and unequivocally the rôle of a neutral and to take sides definitively with the Power thus favoured. Did France allow such proceedings as Reuter's agents attribute to her, she would virtually be declaring war against Japan. No one imagines for one moment that France has any such intention; or that M. DELCASSÉ, an eminently prudent and astute politician, would wittingly involve his country in a complication of the kind. But, on the other hand, Reuter's agents continue to circulate confident telegrams which represent Madagascar as the place of rendezvous and concentration. They informed the public yesterday that ROJESTVENSKY's flag-lieutenant is in Tamatave, and that, so far from concealing or making any secret of his presence there, he is allowing himself to be interviewed for purposes of publication and is deliberately announcing the time that will be required for crossing the Indian Ocean. It is impossible to unravel this mystery. We can not suppose the French Government to be ignorant of what is going on; we can not suppose all these circumstantial telegrams to be untrue; we can not suppose them to be true without suspecting France's good faith; we can not, in short, discover any exit from the dilemma. Presumably Japan will take up the question vigorously. She is not in any sense afraid of the Baltic Fleet as it is now constituted. Of that we are certain. But she has clear rights which neutrals must respect, and she has an alliance which brings to her side a powerful friend should those rights be deliberately ignored. If the Baltic Fleet be free to provision at Madagascar, to coal at Madagascar, and to wait for an indefinite period at Madagascar, then French ports become Russian naval bases and two results immediately ensue; first, that France having taken up arms

against Japan, England is bound to come to the latter's assistance; secondly, that Japanese squadrons are at liberty to attack Russian ships in French ports. All this opens such a shocking chapter of history that no one will readily contemplate it. France is now England's close friend, and it would be an incalculable calamity were the two Powers to become suddenly engaged in war. We therefore cling firmly to the hope that there is some mistake somewhere.

## RUSSIA'S CIRCULAR.

IT is a curious coincidence that Russia should have issued such a circular as Reuter's telegram of the 14th instant describes just at the moment when she herself had flagrantly violated Chinese neutrality by marching a strong body of cavalry down the right bank of the Liao River to attack the Japanese at Niuchwang and Niukiattun. Apparently there can be no manner of doubt that the route taken by these troops was the west of the Liao Valley, and if that be so the simple fact is that Russian troops have moved through Chinese territory to attack the Japanese. The Cossacks are said to have been guided by Hunghtsz who are in their pay, but that is a secondary consideration. Under such circumstances the despatch of this circular is by the Japanese compared to the act of the burglar who, on the morning after a house-breaking enterprise, paid a visit of condolence to the family he had robbed. Of course from one point of view China's neutrality in the present war is a mere farce. She is supposed to be neutral while the armies of two foreign States are fighting within her territories to determine whether or no her independence shall be respected. Nothing of the kind was ever previously heard of in history, nor had any jurisconsult conceived the possibility of a Power so spiritless as to suffer such treatment. But this semblance of neutrality having been agreed to, the question arises, has it been respected by Russia who now openly blames China for neglecting it. There is little occasion to marshal the facts. They are fresh in every one's memory—the *Manju* affair; the establishment of a wireless telegraphic station at Chefoo; the despatch of destroyers to the latter place for the purpose of communicating with St. Petersburg; the affair of the *Askold* and the *Groszovoi*; the constant drawing of supplies *via* Hsinmintun, and now the marching of a force of Cossacks through the west of the Liao Valley for belligerent purposes. It is Russia that has treated China's neutrality as a plaything, and her announcement that she means to do so hereafter is, from that point of view, superfluous. But why does she now make a such declaration *nrbi et orbi*? There must be some proximate cause and also some object. Perhaps the cause is that having totally and openly disregarded the neutrality of Chinese territory by this last cavalry raid, she desires now to offer a *post-facto* vindication. Perhaps what has

happened is that she finds herself grievously harassed by the Hunghtsz and the I-chun (righteous army), and that she wants to thrust upon China a responsibility which may have capabilities of future utility. There has been some talk lately of a powerful recrudescence of Hunghtsz activity, and there have also been evidences that the excesses committed by Russian soldiers in Manchuria have at length driven the unhappy peasants to take up arms in defence of their hearths and homes. These things may be highly inconvenient to KUROPATKIN and to the Russian Government, and although both the General and the St. Petersburg Authorities must be fully sensible of the farce of asking China to preserve order in regions occupied by Russian troops, there is nothing in the history of the Great Northern Power to show that the unreason of a demand disqualifies it for being preferred. But these conjectures do not help us to decipher the object of the circular. What advantage does Russia seek or expect by ignoring Chinese neutrality? She certainly can not want to arm China against her, unless indeed she sees her way clearly to crushing Japan and has mapped out for herself a programme of immense ambition in the immediate sequel of the present struggle. If that be so, it would serve her purpose to have a solid grievance against China. Such a view, however, is difficult to entertain. The more probable hypothesis is that she is looking to pending developments of the campaign now on hand, and that she means one of two things, or perhaps both, namely, to strike at the Japanese in the field from bases within Chinese territory and to utilize Chinese ports for the purposes of the Baltic Fleet. Of the three armies which she is now understood to be organizing, her idea may be to direct one against the Korean frontier *via* Fushun; to strike with a second against OYAMA's front, and to move the third down the west of the Liao River so as to recover Yingkow and thus once more re-open communications with the sea; communications which the hoped-for success of the Baltic Fleet would invest with valuable potentialities. There are obvious and large obstacles in the way of such strategy, but at all events it is not an impossible strategy and its very boldness would be an element in its favour. Perhaps before adopting it the Russian Government may feel constrained to take the precaution of ascertaining how far the Powers would tolerate such a plan. Will England and America agree that the neutrality of the Middle Kingdom which they have been at such pains to preserve, should now be openly violated by Russia under pretexts invisible to the public? If Russia be in earnest, the situation is extremely grave. If her circular be only a *ballon d'essai*, its appearance in the political sky is still sufficiently disquieting.

## THE FOREIGN TRADE OF JAPAN FOR 1904.

WHEN the blow that opened the war was delivered at Port Arthur last February those whose business was with this empire's foreign commerce saw a gloomy future before them. It was supposed that trade would suffer much. The facilities for transport would be impaired; freights and insurance rates would rise; taxes would be augmented with the inevitable effect of dispiriting buyers; the need of munitions of war would lead to a heavy excess of imports with consequent outflow of hard money and disturbance of the gold-standard system, and if Russia gained command of the sea the country's commerce with the outer world might be altogether interrupted. That these gloomy anticipations were not wholly mistaken can not be denied, but the actual record of the year's working is certainly very much more favourable than could have been expected. The figures are:—

Exports .....	Yen 319,250,436
Imports .....	371,167,029
Total .....	690,417,465
Excess of Imports .....	57,916,593

In no previous year did the trade bulk so largely, or even approximately so largely, and though imports exceeded exports as had been anticipated, the excess was by no alarming.

If we compare the records for 1903 and 1904 the results are:—

	Exports. Yen.	Imports. Yen.	Totals. Yen.
1904 .....	319,250,436	371,167,029	690,417,465
1903 .....	289,502,443	317,135,518	606,637,961
Differences...	29,747,993	54,031,511	83,779,504

Thus the exports increased by over 10 per cent., the imports by 17, and the total by 14. Such results during a year of war must be called eminently satisfactory. Even in a normal year they would have been counted good. It can not be doubted that many merchants suffered greatly, but others succeeded, and the trade as a whole must be pronounced to have been prosperous.

Looking at details, we find that the principal increases on the side of exports were 14 million *yen* in raw silk and 10 millions in *Habutaye*, while silk-handkerchiefs, matches and straw-braid were responsible for one million each of the increment. On the other hand, the chief diminutions were 4 millions in coal and 2 millions in cotton yarns, while copper, waste silk and tea showed decreases of about 1 million each. These fallings off were doubtless a result of the war, but it is noticeable that for some years there has been a tendency towards diminution in the export of raw materials (silk excepted) and rough manufactures, whereas there has been a steady increase in the case of articles of expert manufacture, *Kuiki* alone showing a diminution of half a million *yen* in 1904. In short, the indications are that Japan is steadily verifying the forecasts frequently made as to her future, namely, that her principal business will ultimately be in manufactured goods.

In imports the most bulky increases stand to the credit of rice and steamers (7 million *yen* each); kerosene (6 millions); wool (5 millions); raw cotton (4 millions); sugar and leather (2 millions each); iron, steel and machinery (one million each). The diminutions were in oil-cake (6 millions); camlets and calico (3 millions); *museline de laine* (2 millions), rails (one million), and smaller amounts in various other staples, as cotton-yarns, pig iron, paper, cloth, velvet, flour etc. The general character of the import trade may be said to have been a falling off in articles of luxury and an increase in materials for manufacturing purposes.

It is in the movement of specie and bullion that the effects of the war are most appreciable. Thus whereas in 1903 there was an excess of 9 millions on the side of specie imports despite a balance of trade unfavourable to the extent of 27½ millions, in 1904 an unfavourable balance of 52 millions was accompanied by an outflow of nearly 74 millions of specie. The detailed figures are:

EXPORTS.		
	1904. Yen.	1903. Yen.
Gold coins and bullion .....	106,026,564	16,698,129
Silver coins and bullion.....	1,759,764	2,303,070
Totals .....	107,786,328	19,001,199
Differences.		
	Yen.	
Gold coins and bullion .....	89,328,435	
Silver coins and bullion.....	— 543,306	
Total .....	88,785,129	

IMPORTS.		
	1904. Yen.	1903. Yen.
Gold coins and bullion .....	5,456,322	25,355,370
Silver coins and bullion.....	28,490,321	2,452,099
Totals .....	33,946,643	27,807,469
Differences.		
	Yen.	
Gold coins and bullion .....	— 19,899,048	
Silver coins and bullion.....	26,038,222	
Total .....	6,139,174	

Excess of Exports.....	73,839,685	
Excess of Imports.....	—	8,806,270

The foreign trade of Formosa did not show such a good record. The total of exports was only 10 million *yen*, being some 900,000 *yen* less than in 1903, but imports increased by 1,800,000 *yen*, reaching an aggregate of 12 millions. The comparative figures stand thus:—

	1904. Yen.	1903. Yen.	Differences. Yen.
Exports.....	10,413,040	11,078,381	— 665,341
Imports.....	12,620,189	10,772,372	1,847,815
Totals .....	23,033,227	21,850,753	1,682,474
Excess of Imports.....	2,207,147	—	
Excess of Exports.....	—	306,009	
Exports of gold and silver coin and bullion.....	1,177,999	940,230	237,769
Imports of do do.....	494,743	1,454,323	— 957,580
Excess of Exports.....	683,256	—	
Excess of Imports.....	—	514,093	

## FRANCE AND JAPAN.

IT is at least satisfactory to find that French statesmen have detected the hand of the forger in the extraordinary document recently published by the *Echo de Paris*, but M. DELONCLE, apparently, can not disabuse his mind of the conviction that

Japan covets Indo-China. Where this Deputy discovered evidence of such a sentiment his reporters do not tell us, but so far as concerns our own experience of the Japanese, we must disagree with him altogether. That the Japanese nation entertains one very strong ambition can not be denied: namely, the ambition of rising finally and signally above the position of inferiority to which the Occident, under the influence of its own peculiar self-conceit and exclusiveness, has habitually condemned all peoples of the Orient. If that be a reprehensible sentiment, then Japan may willingly accept the blame, but certainly it is a sentiment without which she would be manifestly unworthy of the place she aspires to. But to allege that in pursuit of her ideal she is swayed by such an aggressive appetite as would be implied by a desire to possess herself of Indo-China, is to misinterpret her altogether. France, when she added Tonquin to her dominions, was eminently frank about the whole business. It is fresh in the memory of us all that M. JULES FERRY laid down the doctrine of a nation's duty to extend its territories just as a father lies under the obligation of transmitting an increased inheritance to his children. It was exceedingly refreshing to find a great European Power thus spurning the hypocritical and inartistic clap-trap so commonly used by Christian statesmen to cloak their ambitious designs. Possibly M. DELONCLE, recalling this incident, thinks it prudent to ascribe to Japan similarly expansive impulses. No one can affirm positively that any particular nation entertains or does not entertain the aspiration which, after all, is the mainspring of human endeavour in every sphere of life. But what may be alleged with tolerable confidence is that Indo-China is one of the last directions taken by covetous eyes in Japan. The fact is that the Occident is getting flurried. We have been told by Germans that if Japan beats Russia, their tenure of Shantung—of which, it may be remarked in parenthesis, they have as yet no tenure—will be at once jeopardized, and now we have this outcry in France; the inference suggested by the two apprehensions being that they have their origin in an uneasy conscience rather than in statesmanlike analysis. England, too, might possibly feel some disquiet if right and wrong came to be duly weighed in the balance, and if Japan's rise to the hegemony of the East were to be followed by a retributive readjustment on a wide scale. We admit on England's account, within certain limitations, everything that can be laid to the charge of her rivals. But as to this overweening ambition attributed to the Japanese, it seems to us to be the outcome of insufficient knowledge—insufficient knowledge not only of the people but also of their immediate resources. The Japanese, so far as we know them, are not inflated with territorial ambition, and are disposed to under-rate rather than to over-estimate their resources and potentialities. Assuming

that they emerge victorious from this war, as we firmly believe they will, it is certain that their overwhelming desire will be for a long peace to enable them to repair their shattered resources and recoup their heavy losses. Neither Indo-China nor Shantung will present any temptation comparable with the longing for rest. Very likely men of M. DELONCLE's stamp think that Japan gladly drew the sword against Russia. Nothing could possibly be further from the truth. Japan had welcomed the English alliance mainly because it seemed to guarantee at least five years of peace. It was peace she wanted; peace before everything. She saw herself just beginning to amass some stores of the capital for want of which her material development was so much crippled, and she fervently hoped to be left in the quiet pursuit of pacific occupations. That will be more than ever her mood after the present struggle is over, and if France and Germany leave her alone, as they will doubtless be disposed to do, Indo-China and Shantung will remain quite undisturbed.

#### "MOUNTAINING IN THE JAPANESE ALPS."

The Rev. Walter Weston delivered, on Tuesday evening, before a large audience in Van Schaick Hall, his lecture describing his experiences during ten seasons of mountaineering in the Alps of Japan. His Excellency Lloyd C. Griscom, the American Minister, presided and briefly introduced the lecturer.

The lecturer, after glancing at the physical features of Japan and its relation to the mainland of Asia, proceeded to deal with the peaks that Mr. Weston has visited, the various mountains being classified in two groups, those of Hida and those of Koshiu. Among the number treated of were O-Renge, the great Lotus Peak; the Harinoki Pass and Tateyama; Yari-ga-take, the Spear Peak; Kasa-take, the Umbrella Peak; On-take, the August Mountain (where Mr. Weston saw the incantations which are peculiar to this peak); Komaga-take; H6-5-zan, the Phoenix Peak (which the lecturer described as the Aiguille du Géant of Japan); Shirane-san; Yatsu-ga-take and the peerless Fuji. Mr. Weston's observations and experiences were some times thrilling and always interesting, being illustrated by an admirable series of lantern slides from photographs taken by himself. In summing up the delights of mountaineering Mr. Weston said he was utterly unable to say a title of what he felt. Speaking of the æsthetic side of its attractions one found the great revelations of Nature's majesty were not describable. No one without experience could adequately realize the fascination of climbing in itself. The pitting of one's own intelligence and strength and skill against the physical difficulties in front. The stiffening of resolution in the face of disappointments and the determination, in spite of failure, to succeed wherever success was possible and perseverance justifiable. Those things were of moral value and gave the lie to the sneer that "mountaineering, was a mild form of madness." To those who loved them truly the love of mountains was no madness. They who went mountain scrambling had objects and rewards surely worthy of their best efforts. They believed in the superiority of fixed purpose and perseverance to brute force. They knew that each height, each single step, must often be gained by patient laborious toil and that wishing could never take the place of working. They knew the benefits of mutual aid and the need of mutual unselfishness. If they went climbing in the right spirit they would come back to their daily work better fitted to fight the battle of life and all the more bravely overcome the

obstacles in their way because they were strengthened and cheered by the memories of victories won in other fields.

The Chairman, at the close, expressed his confidence that he was only echoing the sentiments of those present when he tendered on their behalf their thanks for the entertainment and instruction given them by Mr. Weston who, he said, was without doubt the best-informed and most daring mountaineer in Japan.

During the evening a short concert programme was gone through, the chief numbers of which were a new song composed by Mr. Heydrich, with violin and piano accompaniment, which Mrs. James Walter rendered with her usual grace, and a very beautiful rendering of another song by Mrs. Harrison.

#### YOKOHAMA LITERARY SOCIETY.

Another highly interesting and successful meeting of the Yokohama Literary Society has to be placed on record. It was held last evening at the Van Schaick Hall. The speaker was the Vice-President, Mr. W. Karl E. Vincent, and he took for his subject "Lakeland"—the English Lake district—which he visited a few years ago. In the course of his remarks Mr. Vincent said he was of opinion that in no place under the sun was there so much natural beauty to be found in so small a compass as in the English Lakeland. "Here, in an area of under a thousand square miles, are gathered the highest English mountains, the sweetest dales, burns, and waterfalls, and the clearest and most translucent of lakes. The reflection in the water of the rich and varied foliage which beautifies and adorns the shores of the lakes is one of the many charms of Lakeland. Here there is no monotony. Ever changing, ever new; it is always delightful and restful to gaze upon, whether in budding spring, rich summer, golden autumn days, or when the mountains, trees and valleys are covered deeply in a mantle of snow and the lakes and waterfalls are fast bound in winter's icy grip." Mr. Vincent then made reference to some of the men famous in English literature who had made a home in the Lake district, Wordsworth, Southey, Coleridge, De Quincy, Ruskin, Dr. Arnold of Rugby, and others, and passed on to the great mass of the people who live among the dales. These he said were a pastoral race, hardly affected by the various excitements of the outer world, or by the usual feudal and social cleavages; neither makers of history, nor builders of castles and abbeys, nor passionate advocates of kings, princes or chieftains; a people who, within measureable times, have neither been trampled upon, nor trampled on others; who have merely desired to be left alone, and from their situation have offered small temptation to others to meddle with them. To the folk-lorist, ethnologist, or the specialist in kindred paths, the Lakeland people and their history possess of course much that is of interest, but for the casual reader their history will fail to excite to any great degree. Sheepfarming is the great industry of the district and Mr. Vincent went on to describe the great hardships which the sheepfarmer had to endure as well as some of the delights which fell in his way. The speaker gave a brief description of the sports of the dalesmen, particularly hunting. This, he said, was very different to the fox-hunting which prevails in other parts of England. "All the hunters, including the master and whip, go afoot, a proceeding which one glance at the country would soon explain. These mountain bounds, needless to say, have been carefully bred for special work for generations, and can make fast going over precipitous and rocky ground that would bring an ordinary foxhound to a halt. The killing of foxes, too, has in this district a two-fold significance—that of real necessity as well as sport; for even four or five packs of hounds find it by no means easy to keep the stock of foxes in the Lake country within reasonable limits, and the toll levied on lambs is a high one." After a passing reference to John Peel, and the famous song associated with his name and doings, Mr. Vincent alluded to the sport of fishing and told some

amusing tales picked up by himself in the lake district; he then referred to otter-hunting, skating and curling, and last but not least to crag-climbing. For this last he claimed a high place and quoted Mr. Mummery, the well-known mountaineer, as declaring that "climbing in the Caucasus is safe and easy; in the Alps it is often difficult but generally safe; but rock-climbing, as practised at Wastdalehead is at once difficult and dangerous." Mr. Vincent concluded an interesting lecture by a long quotation from Ruskin in which the great writer painted in glowing terms the beauties of this most charming portion of England which he loved so well.

Some fifty lantern slides illustrated the lecture, and many of these possessed exquisite beauty and were evidently hugely enjoyed.

The President having moved the usual vote of thanks to the lecturer—a vote which was accorded with great heartiness—announced that he had been asked to give notice, on behalf of Miss Hall, Mr. F. S. Booth, Mr. S. W. Argent, and Mr. C. H. Thorn, all members of the Committee, of a suggestion for the further encouragement of literary talent among the younger members of the Literary Society. The proposal was that the Society should hold an essay competition open to members between the ages of 18 to 30. When the suggestion first came before him he, as President, thought it best to hand the subject to a small committee whom he asked to enquire into the matter, and this sub-committee now put forward a few tentative rules to govern the competition, while at the same time they also tentatively suggested three subjects as appropriate for essays such as were contemplated. They were: (1) Experiences of a Jirikisha Man; (2) A Japanese Farmer's First Visit to Yokohama; (3) Japanese Women (or Men) as we find them in the present time of war. Subjects such as these depended entirely upon the imaginative faculties and descriptive powers of the competitors; the essay therefore would have to be written without the aid of books. The essays would consist of from 2,500 to 3,000 words. The prizes should take the form of a souvenir in silver or otherwise, the first being of the value of yen 25, the second of yen 15, and the third of yen 10 respectively. The winning essay would be read at a regular meeting of the Society. The suggested rules further provided for the appointment of three Judges, an essay committee, etc., etc. Already eight young ladies and gentlemen had signified their intention of entering should the Society see fit to inaugurate the competition. The President having read the suggestions *in extenso* said that the proposals embodied therein could not be decided upon at that meeting; he would therefore allow a fortnight to pass and at their next regular meeting would declare at the interval that the members present constitute themselves an extraordinary general meeting when the suggestions could be properly debated and duly passed upon. He hoped that the debate would give the Committee some idea of the feeling of the Society generally upon the proposal.

The following programme of music was then taken up and carried through with zest:—

Pianoforte Duet....."Memories"..... } Hamish  
(a) "At the Burnside" }  
(b) "On the Lake" } McCunn.  
(c) "Harvest Dance" }  
Mrs. A. Bellamy Brown and Mr. W. Karl Vincent.  
Song....."The old Black Mare".....Squire.  
Mr. S. H. Somerton.  
Recitation....."Lucy Gray".....Wordsworth.  
Miss Iris Irvine.  
Pianoforte Solo....."Sketches".....Sterndale Bennett.  
(a) "The Mill".....(b) "The Fountain."  
Miss Elsie Blundell.  
Solo & Chorus....."John Peel".....Graves.  
Members of the Yokohama Literary Society.

#### NEXT MEETINGS.

Friday, January 27th, 1905.  
"Canadian Indian,"  
Rev. C. J. L. Bates.  
Friday, February 10th, 1905.  
"An Evening with Eugene Field,"  
Rev. I. W. Cate.  
Friday, February 24th, 1905.  
"Some Familiar Words and Phrases,"  
Rev. George Wallace.

## FOOTBALL.

There was a slight break on Saturday in the glorious weather we have been enjoying since the middle of December, the morning opening with rain, much to the disappointment of local football players who had been anticipating the game arranged for the afternoon with much zest. As the morning wore on, however, the weather cleared, and though a grey mantle of clouds blotted out the blue all the afternoon, still no more rain fell, and the game came off under satisfactory conditions. As usual play could not be started at the time fixed, owing to late arrivals, and thus beginning at three o'clock it had to be finished in failing light. When will the young men of Yokohama realise that it is displaying quite as shocking bad form to be late at a football match where the time and convenience of many men are involved, as to be late in keeping a business engagement? Unpunctuality means lack of moral stamina somewhere, and we evidently have a very large measure of it in Yokohama.

The game began with Colours taking the offensive, their forward line being well fed, while their combination was excellent, and Powys in the White goal had to be pretty spry to keep his lines clear. Several attempts by Colours to score proved fruitless and then Whites secured the leather, and it seemed as though they must score. But the vigilance of the opposing backs and goal-keeper, together with some ill-directed shooting, prevented them from gaining a point, and the ball returned to the other end of the field. Ford at length drew first blood for Colours, and then Whites, by some clever passing and good combination managed to equalize, Strome securing the kick in front of goal. On restarting Colours again pressed vigorously and in the sequel H. W. Kilby made the second goal for them, thus giving Colours the lead before half-time. Changing ends, the game was resumed with less vigour, both sides evidently feeling the results of the strenuous first half. One more goal was secured by Colours, Kilby, receiving from Cooper, making the point. Altogether the match was the best played this season. Teams:

Mr. A. Strome's		Mr. W. J. White's	
Forwards.		Backs.	
E. Powys Jr.	Goal	C. T. Mayes.	
N. G. Maitland.		W. S. Moss.	
A. W. S. Austen.	Backs	D. Weed.	
T. W. Kilby.		W. B. Mason.	
S. W. Argent.	½ Backs	G. N. Fairhurst.	
A. Kingdon.		W. J. White (Capt.)	
J. F. Drummond.		A. E. Cooper.	
A. Strome (Capt.)		S. R. Ford.	
K. van R. Smith.	Forwards	H. W. Kilby.	
W. B. White.		J. E. Drummond.	
J. M. Mollison.		A. W. Read.	

Referee.—Mr. F. Pollard. Linesmen.—Messrs. W. Goddard and V. A. Hearn.

In the Association Sixes game on Tuesday, Mason's team won by two goals to one.

## FRENCH SCHOOLS IN THE FAR EAST.

The Paris correspondent of *The Globe* sends his journal a brief account of the debate in the French Chamber of Deputies upon the vote for the maintenance of French religious schools in the East and the Farther East. The discussion began on the ninth clause, which deals with these credits. Says the writer:—

In China, Japan, and other parts of the East it has long been an acknowledged fact that most of the work of extending French interest has been done by the Jesuits, who are not only wonderful colonists, but also undertake in a most successful manner the work of extending and looking to the success of a colony once established. This, to Republicans, is no doubt, a bitter pill to swallow; but they have, in order to establish its truth, only to turn up their history books and there it is, so, when M. Coulondré, a Radical-Socialist Deputy, reproached M. Delcassé with favouring the Congregational establishments in foreign parts his remarks were, although the ever-alert M. Delcassé did take the trouble of answering, listened to with the almost general contumely that awaits the man of one idea.

The Minister of Foreign Affairs first answered by remarking that M. Coulondré's colleagues at Hérault would tell him that at Beyrouth he had re-

commended an excellent Republican, and that as to the subventions given to certain Congregations, this was only done where the schools had to war against the influence of foreign schools. He then said, in answer to another remark by M. Coulondré, that the higher school of Beyrouth (for he was, of course, not long in discovering the object of M. Coulondré's attack) possessed only professors belonging to the faculty of the State, and that the report of the instructor was to the effect that the pupils of this particular school received better instruction than did those in France. As to religious instruction, it was not given at all. Then M. Coulondré—who I should suspect of being a gentleman with a bee in his bonnet—said that he demanded the suppression of Congregational schools in the East, which was the logical conclusion of the law on Congregational education. He did not think that the Republic ought to be, either in France or in the East, the servant of Rome. M. Delcassé replied that at the present, out of a credit of 800,000 francs, the lay schools received more than 240,000 francs. He had done for the lay schools more than for the Congregational ones, and the results had probably not been equal to his efforts. To arrive, however, at such results, it required a unique class of instructors, and that "en attendant" he should not be asked to abandon the children of other institutions. Neither should it be forgotten that the Minister of Foreign Affairs is supposed to watch equally over all French interests, nor should he be demanded to sacrifice any sort of any instrument that could be used in the interests of France abroad. He had made great efforts in favour of lay schools, but he repeated that it would be a great pity were he forced into throwing 80,000 children into foreign schools, which did not ask better than to receive them. M. Coulondré persisted, however, in his demand for a vote asking M. Delcassé to encourage exclusively the lay schools in the East, but his proposition was rejected by 352 votes against 205. M. Delcassé knows his business too well to be easily defeated in this manner.

## THE LAW COURTS.

## PROTEST ON THE SEIZURE OF PROPERTY.

In connexion with the seizure of property belonging to the well-known Buddhist temple Hongwanji in Kyoto by the Kitahama Bank, claiming yen 510,000, Count Otani, Lord Abbot of the temple has presented a protest in the Kyoto District Court petitioning for the cancellation of the decision as to seizure. In the petition, the Lord Abbot stated that the loan had been made by the whole of the Shingon Sect under his administration, and that its redemption had been promised with money to be presented by the believers of various temples belonging to the sect. The Hongwanji alone was consequently not responsible for the debt. On Jan. 13th the Court decided to temporarily cancel the decision on receiving a deposit of yen 3,000.

## THE KUHN-BOYES CASE.

The appeal of Mr. S. H. Kuhn was heard on the morning of Jan. 16th in the Tokyo Appeal Court, and was adjourned till Friday the 20th, when the decision will be delivered.

It may be remembered that on Dec. 14th, in the Yokohama District Court, the accused was sentenced to fifteen months' imprisonment with hard labour, on a charge of having assaulted Mr. F. S. Boyes on Oct. 12th.

## THE COLLINS CASE.

The trial of Mr. H. B. Collins began on Jan. 19th in the Yokohama District Court before Judge Danno and Public Procurator Miki.

Mr. Ohashi was present under the instructions of the Court to act for the defence. (It may be remarked that in the case of an accused charged with *jurai*, a grave crime, who is unable or disinclined to employ counsel the Court may appoint a lawyer to act for the purpose. Compensation for such counsel will be borne by the Court.)

The Court sat at 10.30 a.m. when the presiding Judge declared the opening of the trial of Mr. H. B. Collins, who is charged with having infringed the regulations with regard to military secrets.

The Court conducted a preparatory examination in the course of which the accused stated that he is a British subject and was born in Hongkong. He is 40 years old and was residing at No. 179, Yamashita-cho, Yokohama,

when he was arrested. His parents died in Yokohama some years ago.

The Public Procurator made an address to the Court to the effect that the accused arrived at Yokohama accompanied by his parents when he was an infant. In 1898, he went to China and thence to Port Arthur where he was employed by a firm. After the outbreak of the war, he removed to Tientsin in June, 1904, when he received instructions from Colonel Ogorodinkoff to proceed to Japan to act as a spy. At the same time, the accused received from the Russian officer a thousand dollars and a letter addressed to Major-General Dessino residing in Shanghai. In July, the accused met the Russian General at Shanghai when he promised to act as a spy in Japan. Having been ordered by Major-General Dessino to make communication by letter and telegram in cipher, the accused made a copy of the cipher from a book shown him by the general. On the 18th of the same month, the accused arrived at Yokohama and put up at the Hotel de Paris, No. 179, Yamashita-cho and subsequently he employed himself in attempting to discover Japanese military secrets. The accused wrote a letter on Oct. 24th addressed to Major-General Dessino, in which he communicated in cipher the date of the departure of Japanese troops, their number, destination, and purpose, etc., which were regarded as secrets by the Japanese military authorities. On the 29th of the same month, he posted this letter. It was found, however, by the military post inspectors at Nagasaki and confiscated. For this crime the evidence against the accused was sufficient. The Public Procurator asked the Court to close the doors when the trial should reach such a stage as to disturb the public peace.

After the conclusion of the address, the Court examined the accused. The latter stated that about 8 or 9 years ago he left Yokohama for Shanghai. In Yokohama, he was engaged in various ways. His object in leaving Yokohama was simply to seek a fortune in Shanghai. He was in Shanghai for about 4 or 5 years, after which he removed to Port Arthur, where he resided for 3 years. During his stay there he was employed by several Russian firms. On the 5th or 6th of March, he left Port Arthur for Tientsin where, in June, he met Colonel Ogorodinkoff of the Russian Army. The Russian officer instructed him to proceed to Japan, to ascertain military secrets and to communicate them to him or Major-General Dessino at Shanghai. The accused received a thousand dollars from Colonel Ogorodinkoff and a letter recommending him to Major-General Dessino. The accused, however, was intimately acquainted with Major-General Dessino when they were residing at Port Arthur before the outbreak of the war. General Dessino gave him two kinds of cipher in July. One of them was assigned for use by letter and the other for telegrams, and the Russian general ordered the accused to despatch telegrams to Colonel Ogorodinkoff, but letters to him.

The Court showed accused Exhibits 1-2, which are copies of code-words, and the latter replied, "Yes these are ciphers copied from a book of General Dessino." For telegram words, the names of various merchandise were employed to represent places in Japan and places at the front where the Japanese armies were concerned. On the 18th or the 19th of July, the accused came to Yokohama with his wife. His wife was a Russian to whom he was married at Niuchwang. The accused is a Roman Catholic. His wife left Yokohama in the end of July for Shanghai for the benefit of her health. The accused was an acquaintance of Mr. Sekimoto, a detective of the Kaga-cho station.

The Court—What did you tell the detective the first time after your arrival at Yokohama?

Accused—I told him that I was trying to obtain money from the Russians by fraud, and the purpose of my visiting Japan was due to that object. If my mission was considered to be dangerous in Japan, I told him, I would leave at once. Mr. Sekimoto told me there was no danger in my purpose of obtaining money by fraud from the Russian Government. Thus I told him about my instructions from General Dessino and Colonel Ogorodinkoff.

Accused further stated that he did not make enquiries of the Kagacho detective as to the organization of the First, Second, or Third Japanese armies or the army which had landed at Takushan. He sent General Dessino by telegram, a Japanese official report with regard to the Liaoyang battle, but no other reports that could be considered to be Japanese military secrets connected with the battle.

The Court showed the accused exhibit 3, as to which he replied—"Yes, it is one of my reports to General Dessino."

In further examination, accused replied that he did not make enquiries of Sekimoto about the number of soldiers whose number increased as the result of the revision of the Conscript Law, or about the Japanese intentions whether they would make preparations to pass the winter at Liaoyang and whether they would commence operations in the direction of Vladivostok.

Having been shown a paper, Exhibit 4, by the Court, accused said—"It was written by me. I gave it to Mr. Sekimoto and asked him not to lose it."

The Court showed two letters dated Oct. 24th, 1904, as to which the accused said—These were letters written by me and posted in the end of October at Yokohama in order to send to General Dessino. I addressed the envelope to Mr. Mondon. The Russian General in Shanghai has a special arrangement with that gentleman who would hand over my communications to the former."

At this stage the Court was cleared in accordance with Art 59 of the Imperial Constitution on the ground that the further examination might be injurious to the public peace.

The Court was closed at 11.05 a.m.

#### NOTES FROM CHINA.

A fire doing damage to the extent of \$21,000 took place in Elgin Road, Kowloon, on Jan. 3rd. Water was scarce, and appliances for extinguishing fires equally so.

A Law School is about to started by the Board of Punishments in Peking, where officials connected with that Board may learn something of foreign laws in addition to those of the Empire. For this purpose several foreign law experts are to be engaged to instruct these Chinese officials and to lecture to them on international law and foreign civil and criminal laws. H. E. Wu Ting fang, Junior Vice-President of the Waiwupu, is also understood to be engaged in the onerous work of translating foreign law books, with the intention of compiling such foreign laws as may coincide with Chinese and that may suit the special conditions governing his country.

The harm done by the almost universal credit or chit system in Shanghai has been often adverted on, remarks the *N.-C. Daily News*, and in these days when bank notes of all denominations and fractional currency are so plentiful, and one is not obliged to carry about cartwheel dollars, there is no reason for the continuance of the system, except old custom. Too often young men on moderate salaries have been tempted, and are to this day, by the chit system, to run up bills beyond their means at clubs and hotels, where the supervision is necessarily not so strict as it is in stores. The clubs have learnt to protect themselves by posting the names of defaulters after a certain time has been given them, and we understand that the hotels are now contemplating following the example of the clubs. The hotels have, it is known, been heavily victimised from time to time, and they are perfectly justified in protecting their shareholders by this means, while they are at the same time doing a real kindness to those who may by this menace be deterred from carelessly incurring liabilities beyond their means.

The capture of contraband destined for the Russian Army in Manchuria at Changchiak'ou (Kalgan), has revealed some strange surprises to the Chinese captors, according to a Chinese paper published in the North. An examination of the captured ammunition showed that the

cartridges were manufactured ten years ago and destined for rifles with bores two-thirds larger than the Japanese rifle now used in Manchuria. This discovery, says the *N.-C. Daily News*, has given the Chinese the idea that the Russians have used up their modern rifle ammunition and have to resort now to old large bore rifles of a decade ago. Perhaps, however, these bullets were really destined for use in the underground mines with which the Russians are protecting their defences before Mukden and Tieh-ling.

The Tien Tsu Hui (Natural Feet-Society), started ten years ago in Shanghai by ten foreign ladies, are making great progress with their humane crusade, and despite the many drawbacks encountered can look back with satisfaction on the work accomplished. The other day they induced Taotai Shen Tun-ho to preside at a big meeting held in Shanghai at which it was proposed to form an entirely Chinese branch of the Society, and the proposal met with great favour. Since the formation of the Society an Imperial Edict has been issued, and proclamations put out against binding by five Viceroy; one is naturally already promised by the newly-appointed Viceroy, who, as Governor of Shantung, memorialised the Throne to forbid binding in the houses of all high officials under the penalty of losing office if they transgressed. Nor is it likely that the energetic Wei Kuang-tao of Fukien will allow himself to be left out in the roll of Viceroy enforcing the Imperial Edict. Whether the Viceroy of Shensi and Kansu will then remain alone neglectful of the Empress's appeal to all high officials to use their influence to prevail upon Chinese not to mutilate their daughters' feet, remains to be seen.

The following is the translation made by the *N.-C. Daily News* of the short judgement delivered in the Russian murder case in Shanghai:—

This is a trial by a special court appointed by Admiral Reitenstein in accordance with direct instructions from the Imperial Russian Government. It consists, therefore, of a commander of the second rank, viz., Commander Teshe as president; the members of the court are Lieutenants Brovzyn, Mandrapi, and Eklmoff, and sub-Lieutenant Ordovsky-Tanarevsky, Sub-Lieutenant Medvedeff is Clerk of the Court. By special instructions the sitting of the Court is in Shanghai in the Russian Consulate-General, is in public, and is held on the 13th of January of this year. It has heard the charges against the sailors Ageef and Diak, who have been brought before the Court, the first on a charge of wounding a Chinaman without the intention of doing so, and the second with resisting the orders of the police who arrested him, with causing a disturbance, and making a noise. A preliminary enquiry has already been held and at this evidence was given and questions put to the accused themselves.

The Court finds that on the 15th of December, a certain part of the complement of the *Askold* were late on shore, and among them were the sailors Diak and Ageef. They left the Restaurant Pichon, the first, Ageef, being very drunk, and Diak not so drunk. The men went towards Frenchtown in richas. Along the Bund, Ageef, before reaching the French concession, stopped near Nanking Road, and went in the direction of the jetty. Diak followed him. When the richas stopped there was some misunderstanding between the sailors and the richamen, who had been demanding their fares from the sailors. Ageef stopped and turned from the richamen and tried to turn away. The sailors had then reached a pile of planks on the jetty, where some Chinese carpenters were engaged at work. Taking up an adze which was lying close by, Ageef had the intention of sending away the richamen, but in doing so he made a quick movement from left to right with the weapon. The richamen saw the movement and went away. At that moment there was passing by a complete stranger, a Chinaman, who was hurt accidentally by Ageef with the adze. The Chinaman having moved into the direction of the sailors, was struck behind the ear by the reverse end of the weapon. The medical assistance given to the Chinaman at the Shantung Road Hospital was not sufficient to save his life. From the evidence given by the doctors it appeared that death was the result of the wound, of loss of blood, and of shock as the result of the blow. Without making any comment on what he had done, Ageef proceeded in the direction of the jetty, where he was arrested by the police, taken to the central station, and locked up. Diak at first was behind Ageef, but afterwards went in front of him, also without taking any notice of

what had occurred. Diak was also arrested by the police, for the reason that he was very close to the place at the time of the accident. On being arrested Diak disobeyed the orders of the police and held by his hands to the rails of the jetty, and tried to escape. He was eventually taken to the same police station as the first prisoner.

The Court finds Ageef guilty; that on the 15th of December, under the circumstances stated, he took up an adze and made a movement with it; that he ought to have foreseen that by such a movement, which was in itself unlawful, he might put one or several people in danger; that the movement was so strong that without any intention he touched with the end of the weapon a passing Chinaman, who was quite innocent of any connection with the dispute; the blow caused a wound, which was followed by the man's death. Thus the crime falls within the provisions of Article 1058 of the code, in regard to the degree of punishment to be awarded. Taking into consideration all the circumstances the lowest punishment arranged for under this article is the loss of all privileges and sentence of hard labour for eight years. But the Court think that the crime committed by Ageef was quite accidental, and consequently it is open to them to deal with it under Article 134 of the Naval code, which fixes the seventh grade of punishment as applicable. The judgment of the Court is that the sailor Ageef lose all his privileges and suffer hard labour for four years.

The sailor Diak is found guilty of disobeying the lawful commands of the police, a crime provided for by Article 30, and he is to be punished by a fine of Roubles 15, or in the alternative five days under arrest.

It is now settled that Hongkong footballers will go to Shanghai at the China New Year.

The *Singapore Free Press* says—There is to be a re-arrangement of what has been hitherto known as the Hongkong-Singapore Battalion R. G. A. (Native). In future Hongkong is to have its own Corps of five companies. Singapore is to have two companies which will be interchangeable with one at Rangoon and one at Calcutta, this last yet to be formed. The Mauritius-Ceylon Battalion R. G. A. is to be interchangeable with companies at Bombay and Karachi.

A strike of workmen recently occurred at the Naval Yard, Hongkong, in consequence of a Chinese electrical fitter being sent to gaol for two months, for assaulting a European electrician on board H. M. S. *Albatross*. The facts of the case, as stated before the Court, were that the defendant, on being spoken to about his work, challenged the European to fight and struck him on the back of his head with a pole. The Chinese version, which appears to be believed by the strikers, differs from this. According to it the European aimed a kick at the Chinaman but missed him and fell on the deck causing the wound to his head. Believing this to be so 48 fitters struck work at the Naval Yard when the sentence passed on their companion became known to them, and they have since remained out. On being spoken to on the matter they declared that they knew that they had good jobs but said that they had to cease work unless their companion was released from gaol, so that it would seem as if their guild was forcing them to action. The strike, while it lasted, caused considerable inconvenience at the Naval Yard.

An example of Chinese methods of keeping order in the domestic circle has come under the notice of the Hongkong police. The people in question were Hakkas and lived at Shauiwan. The husband became suspicious of his wife and, finding her in a house with a man of whom he was jealous, seized the latter and took him up on the hillside where he was tied to a tree and severely beaten with bamboos. This punishment having been administered, the husband, with some friends, returned for his wife and she was dragged off home where she also was tied up and fastened to an iron stanchion in one of the rooms. The door was then locked and she was told that she would be thrown into the sea at midnight. Whether this threat would have been carried into effect or not it is difficult to say, but the police, hearing of what had taken place, went to the house a little before 12 o'clock and effected the woman's release.

## LITERARY GOSSIP.

Miss Adeline Sergeant, the well-known novelist, died at Bournemouth on December 4th, after a long and painful illness. Miss Sergeant, who was 54 years of age, had had bad health for some years, and during the last two months endured much suffering. She was born at Ashbourne, Derbyshire, and was the youngest daughter of the Rev. Richard Sergeant. On the death of her parents she began professional life by teaching, and later turned to literature. She was for some time on the staff of the *Dundee Advertiser* after which she moved to London. Miss Sergeant was a prolific writer of fiction. Her first novel appeared in 1882 and since then about thirty different works have been produced by her pen.

One of the most interesting old ancestral chateaux in the Department of the Loire has been ransacked by burglars in the most complete manner during the absence of the family of its owner, Count Charpin-Fougerolles. The library was gone through and many old books and manuscripts valued in the catalogue at from £50 to £60 each abstracted; the plate chest was removed, so was a strong box full of jewellery, and various other property worth considerable sums of money. The burglars evidently knew as much about the interior of the house as its owners, as access to most of the apartments containing valuables had not only been opened with special keys, but these had been obtained from secret hiding places. The amount of the booty will have to be estimated in thousands.

From Messrs. Williams and Norgate, of 14 Henrietta Street, Covent Garden, London, we have received a copy of the current issue of their extremely useful "International Book Circular." It is practically a bibliographical résumé of the world's best literary production in all branches of science and learning during the last few months, and especially a trustworthy guide to foreign literature. Its German lists are particularly ample.

For a considerable period the caricaturing of musical subjects was almost entirely confined to comic and serio-comic themes. The song-caricatures became the natural complement of the song-parody, and vocal efforts of the "How Happy Could I Be with Either" order generously lent themselves to the pencil of the cartoonist until well past the middle of the nineteenth century. But in an age when nothing whatever is sacred, it was not long, says Mr. Percy Cross Standing, writing in the *Windsor Magazine*, ere the caricaturist was emboldened to seize upon the great majority of serious and sentimental ballads of a popular order, from "The Lost Chord" to "Bid Me Good-bye." Great vocalists, of the class of Sims Reeves and Santley, were not spared; while in the eighties, when all England was ringing with the melody of Tosti's "For Ever and for Ever," one of the brilliant cartoonists of *Vanity Fair* presented a lifelike caricature of the celebrated composer, identified by the title of that song. A tribute to the popularity of Miss Florence Ayward's well-known "Beloved, it is Morn" is a witty cartoon wherein the young lady is made to complain to her mother that, although it is one o'clock in the morning, her admirer will not go. "Sing to him: 'Beloved, it is Morn,'" suggests her mother. The perennially popular "Violets" has, of course, been caricatured. Also the illustrated papers of the day devoted some space, at the time, to Mr. James Blakeley's clever parody of "Violets" in the Coronet Theatre pantomime, beginning:—

Ev'ry morn I bring the washing  
Which by twilight I have-boiled.

The publishers of this song, the Messrs. Ricordi, promptly sent down to the theatre and, whether wisely or otherwise, enjoined Mr. Blakeley from singing the parody. For the next night or two thereafter, it was very amusing to watch that excellent comedian enter as usual with his—or, rather, with "her"—basket of laundry-produce, and, with an agonised expression of countenance ("she" was the Window Twankey, dear to the

hearts of all children), make the bald announcement, in strictly conventional tones, that he had "brought the washing." Witty Mr. Owen Seaman contributed to a former Christmas number of the *World* a particularly clever "skit" upon the lyrical efforts of Mr. Frederic E. Weatherly. But in the realm of pictorial parody the late Phil May is by all odds the prince of these song caricaturists. The wholesome, irresistible fun of the inimitable series of "Songs and their Singers," which he contributed to *Punch*, renders it for ever memorable even in the memorable annals of that journal.

Referring to an article in the December *Cornhill* on the charms of Wensleydale, the *Athenæum* modifies the writer's statement that though Wensleydale has bred a Queen of England, a Prince of Wales, and other great people, it has produced no poet. Mr. William Watson, who was born at Burley in Wharfedale, descends on the maternal side from a race of Wensleydale farmers, and he is proud of the fact. He has written:—

This is the summit, wild and lone.  
Westward the Cumbrian mountains stand.  
Let me look eastward on mine own  
Ancestral land.

The same authority notes that in the collected edition of Mr. Watson's works, now in hand, one of the many new lyrics is called "The North has my Heart."

Dr. Erich von Drygalski, who led the German South Polar Expedition in the Antarctic ship *Gauss* in 1901 and the two following years, has just published his account of the journeys and discoveries made by him and his men. It is entitled "To the Continent of the Icy South," and is illustrated with 400 photographs and drawings. Dr. von Drygalski gives a vivid, minute, and scientific account of the work accomplished. English people who cannot read the book in the original will be glad to hear that a translation is being arranged for.

Mr. John Lane is about to publish an original comedy in blank verse, by Dr. Richard Garnett, entitled "William Shakespeare, Pedagogue and Poacher" the plot being based on traditions of the poet's early life.

No one who takes the trouble to study the topography of English literature can fail to make the discovery that London is its Mecca. It is the merest truism to say of London that she is the metropolis of commerce and the centre of the Empire; but it is not so obvious to the average mind that she has also been throughout the centuries the chief mother of genius. Yet a majority of our leading poets have been London-born—Chaucer, Spenser, Jonson, Milton, Pope, Byron, Keats, Browning, Swinburne, and a host of lesser lights. All the masters of English prose—Bacon, Sir Thomas Browne, Lamb, Macaulay, Newman, Ruskin, F. W. Robertson, Theodore Hook—claimed London as their place of birth; whilst nearly every man and woman of eminence in English letters has owed something to association with the city of the Thames. Thus it is not surprising that London teems with rich interest to the student of literary history. Her streets are filled with echoes of the dead. Her buildings are sermons in stones, telling of triumphs and failures, stimulating imagination and memory with scenes from famous poems; or, more often still, giving new power and pathos to the story of some tragedy in the authors' lives.

Mr. Stanley Weyman's romance "The Abbess of Vlaye," is already in its twenty-third thousand.

The success of Mrs. Mandell Creighton's splendid biography of her husband may be gathered from the fact that it has already been four times reprinted.

Sir Frederick Treves' new work, "The Other Side of the Lantern," in which the author describes his recent tour round the world, was not ready for publication before Christmas as anticipated, but will be published by Messrs. Cassell & Company early in the New Year.

Since his return to England, Mr. Edmund Candler has been busily engaged in completing his account of the Tibet Mission. The MSS. is now in the printer's hands, and the book, with the title, "The Unveiling of Lhasa," was to be published by Mr. Edward Arnold immediately after Christmas.

Messrs. Macmillan & Co. will publish immediately a Biblical romance by Mr. A. S. Way, the well-known translator of the *Odyssey*, Euripides, &c. "David the Captain" is founded on the narrative of three chapters in 1 Samuel. The military genius of the first of Hebrew strategists is the main study of the book.

With the publication of the January number, the price of the *Pall Mall Magazine* is reduced to sixpence. No change will be made in the general character of the magazine, which will maintain its high reputation in both art and literature. Among the special features of the January number will be a poem by Mr. Thomas Hardy. The Christmas number of the magazine is a charming and interesting number.

For some time past Harry Vardon has been engaged in preparing a new book on golf; and it has now reached such an advanced stage that its early publication is assured. It will be issued under the title of "The Complete Golfer," by Messrs. Methuen, in the spring.

Dining with the Omar Club the other day the Japanese Minister to London said that he was pleased to find himself in the middle of such a large number of writing men. He himself could hardly lay claim to being "a writing man." But in his country a *litterateur* was known by a word signifying "the wielder of the pen and the knife." "I wield the pen in writing acceptance for diners with good friends, and the knife in destroying invitations to open bazaars!"

Apocryph of the death of that veteran actress Mrs. Gilbert, in her eighty-fourth year, it is interesting to reproduce Mrs. Clay's reminiscence of her, told in "A Belle of the Fifties," published by Doubleday, Page & Co. Mrs. Clay says:—"A most amusing metrical farce—'Pocahontas' was acted during the winter of '57 and '58, which set all Washington laughing. In the cast was Mrs. Gilbert. Two of the ridiculous couplets come back to me as if they were yesterday, reviving the amusing scenes in which they were spoken. Mrs. Gilbert's role was that of a Yankee schoolmarm whose continual effort it was to make her naughty young charges behave themselves. 'Young ladies, the cue with that inimitable austerity behind which one always feels the actress' consciousness of 'the fun of the thing' which she is dissembling; 'Young ladies, stand with your feet square; Miss Pocahontas, just look at your hair.' And as she wandered off, a top-knot of feathers waving over her head, her wand with which she had been drilling her dusky maidens held firmly in her hand, she cut a pigeon wing which brought forth a perfect storm of applause."

The recent death of General Lew Wallace, author of "Ben Hur," brings freshly to mind the extraordinary career of this novel. Published by the Harpers on November 12, 1880, the book for the first year of its existence showed no signs of popularity, nor did its sale improve much in the second year. Then it began to grow, and has grown steadily, until now, twenty-four years after its first appearance, the sale is greater than it has ever been. The book succeeded on its own merits, and made its way not only with the American public, but with the people of many other countries in which foreign translations have been printed. Furthermore, and what is very remarkable in the history of this novel, it has never been issued in a cheap edition. Fourteen luxurious editions of the book have been published from time to time by the Harpers, but never a cheap one, as in the case of "Uncle Tom's Cabin," the sale of which was, of course, greatly expanded by the circumstances under which it was published, many thousand copies having been issued in paper as a tract. No edition of "Ben

"Hur" cheaper than the regular \$1.50 form in which it was first published has ever been made. It is estimated that the book has now sold well on to a million copies; and the royalties from it, and from the play founded upon it made General Wallace a rich man. And every indication points to its continued popularity for years to come. It is interesting to note that the other novels published contemporaneously with "Ben Hur," those that have kept alive until now—with the exception of the works of Mark Twain and W. D. Howells—could be counted on the fingers of one hand. "Ben Hur" has survived by reason of its own intrinsic charm as a story, and the remarkable fineness of its workmanship, upon which the author expended patient and loving care. It is probably the most widely read novel of modern days, and it has been said that not to have read it argues oneself ill-read.

#### NEWS OF THE WEEK.

Rear-Admiral Ogura who was recently appointed commander of a squadron, left Yokosuka on Jan. 17th for Saseho.

All the officials of the Department of Education held a banquet on the evening of January 13th at the Fujimi-ro to celebrate the latest success at Port Arthur.

A correspondent at Matsuyama reports that Admiral Alexieff, formerly Viceroy of Kwantung, has remitted yen 260 to Mr. Tagieff, a Russian war correspondent detained at Matsuyama.

Rear-Admiral Shimamura, Chief of Staff of the Combined Squadron, left Tokyo on Jan. 15th for the western provinces. Some of the Tokyo papers report that he has been appointed Commander-in-Chief of the First Squadron.

Dr. Matignon, a first surgeon of the French Army who recently arrived at Tokyo, proceeded Jan. 17th at 10.30 a.m. to the Palace accompanied by the French Minister when he will be received by the Emperor. It is said that he will leave for the front to inspect the condition of the Japanese field hospitals.

On Jan. 18th, the Emperor presented a standard to a new regiment of the army. The ceremony took place at 10.30 a.m., at the Palace when the Imperial Princes, Marquis Yamagata, Chief of the Staff Office, and other high officers of the army were present. General Terauchi, Minister for the Army, and an ensign were summoned to the Imperial pavilion and the Emperor delivered the colours to the Minister, who handed them to the ensign.

#### AMERICAN TOPICS.

President Roosevelt has given consideration to suggestions looking to a reduction in the membership of the Panama Canal Commission, but thus far no definite decision has been reached. It is known that Representative Hepburn of Iowa, chairman of the Interstate and Foreign Commerce Committee of the House, is inclined to the opinion that the chief engineer of the canal ought to have greater initiative authority than he now has.

According to a cablegram from Baron Kiyoura, Minister of Manufactures and Commerce of Japan, Mr. D. R. Francis, late President of the Louisiana Purchase Exposition, is to be decorated with the gold medal of the Order of the Rising Sun. Mr. Frederick J. Skiff, director of exhibits, and E. J. Smith, who were sent to Japan to solicit the participation of the nation, as well as of private exhibitors, are also to be decorated.

Washington's birthday on February 22 next will be celebrated for the first time in Paris by Frenchmen, enthusiastic admirers of America's first President. They will not apotheosize him as a warlike hero, but as the world's greatest artisan of peace. At a banquet to be celebrated in his honour, M. Frederic Passy will preside, and speeches will be made for the speedy return of peace and the establishment of a parliament of the nations and a federation of the world.

Ten thousand dollars awaits the town which will adopt the name of Cushman. By the death at Salem of Mrs. Anna Cushman, widow of the late Lieutenant Governor Henry W. Cushman, formerly of Bernardstown, this amount of money held in trust goes to Bernardstown if it takes the name of Cushman. In case Bernardstown fails to avail itself of the money any Massachusetts town of more than 1000 population may have the money under the same condition. In the event of the failure of a Massachusetts town to take the money in five years the offer is open to any town of 1000 in the United States.

Attorney General Moody has given an opinion to Secretary Morton in the case of Paymaster General A. S. Kenny, United States Navy, retired, who some time ago made a protest against being designated in the navy register and in official correspondence as "pay director." The contention was that he should be designated as "paymaster general, United States navy, retired." The Attorney General holds that the title of paymaster-general and of the chiefs of other staff duty in the United States Navy Department goes over to the retired list with the officers and stays with them thereafter.

While Mgr. Chappelle, Archbishop of New Orleans and papal delegate to Cuba and Porto Rico, will soon be relieved of his post in the Antilles, he will retain the Archbishopric of New Orleans. With the relinquishment by Mgr. Broderick of the post of auxiliary Bishop of Havana, it is said that he will be entrusted with the confidential mission of urging greater offerings of Peter's pence in the United States, because of the relations now existing between France and the Holy See. Recommendations have been made to the Vatican to have Mgr. Edward Fowler, secretary of Archbishop Harty of Manila, appointed auxiliary Archbishop of Havana in succession to Mgr. Broderick.

It seems likely that Mr. J. Pierpont Morgan will be the next president of the New York Metropolitan Museum of Art, if he will consent, as he is now first vice president, and it has been the usage to elect that officer to the presidency when there is a vacancy in that office, as there is now by the death of Frederick W. Rhinelander. Mr. Rhinelander himself succeeded in that way to Henry G. Marquand in 1902, as Marquand had succeeded to John Taylor Johnson after the latter's resignation in 1888. Mr. Morgan has given some hundreds of thousands worth of treasures to the Museum, and the Garland collection of Chinese porcelain, which cost over \$700,000, is his loan.

The lawyers and the judges of New York gave a dinner at the Waldorf-Astoria on December 21, to Judge Alton B. Parker to welcome him as a practising attorney at the bar. The hosts included all the lawyers inside and outside the Bar Association. The speakers, beside ex-Judge Parker, were: Justice O'Brien, Messrs. Elihu Root, John E. Parsons, ex-Governor Black and William Hornblower. The other guest at the table of honour was Chief Judge Cullen of the Court of Appeals, who was appointed to the place from which Judge Parker resigned. Mr. John E. Parsons made the speech of welcome, and Judge Parker's response was mostly devoted to a eulogy of the high character and good feeling of the New York bar. Mr. Elihu Root's address was warm with praise for the ex-chief justice, and was greeted with great enthusiasm.

In honour of their 1-year-old daughter, Kathleen, and by way of a Christmas offering, Mr. and Mrs. Reginald Vanderbilt have established in Lincoln Hospital, One Hundred and Forty-first street and Southern boulevard, New York, a completely equipped infant ward. It will be known as the "Kathleen Vanderbilt Ward," and its formal opening took place at noon on Dec. 26 with a Christmas treat for the little inmates of the hospital. The ward is on one of the upper floors with a southern exposure. It is regarded as the best located ward in the institution. All of the usual up-to-date apparatus, furnishings and conveniences have been installed.

It is practically certain that the future maintenance of this part of the hospital work will never want for proper financial support. The ward will accommodate twenty infants, and provision will be made for a larger number if necessary. Glazed tile and other microbe proof material form the walls of the ward. The beds, apparatus and fittings are of the most approved sanitary character. Physicians and nurses regard the ward as a model of its kind, and are unstinted in their praise of Mr. and Mrs. Vanderbilt for their generosity.

The Secretary of the Interior has withdrawn from entry 52,600 acres of land in Colorado pending the action of Congress, by which it is expected this tract will be set aside as a national park. The withdrawal was made at the request of a number of prominent citizens of the West who are interested in this particular section. The tract includes within its borders the great limestone cliffs, where the ancient cliff dwellers made their homes, the remains of which can be seen. Mrs. W. T. Peabody, wife of the Governor of Colorado, is the head of a committee which is particularly interested in the establishment of a national park at this point and the preservation of these curious specimens of the handiwork of the first Americans for posterity. The cliff dwellings form one of the greatest archaeological wonders in America. They are to be found on the Colorado River in the limestone cliffs and in some places along the Rio Grande. The walls are skillfully constructed of stone, laid in mortar, made of the native adobe clay. Many of the houses are small and occur singly, occupying restricted niches of shelves in the cliffs, but where the recess in the natural stone is large the plan is often expanded and the structure becomes a communal dwelling or village of many rooms, irregularly arranged to fill the spaces and with the exterior walls corresponding to the irregular margin of the precipice. Two and even three stories are not unusual. The villages or towns are called pueblos, and the most striking example of this particular style of ancient architecture is found near the town of Pueblo, Colo., the place where it is proposed to establish a national park.

According to figures compiled by the Insurance Press of the United States, the underwriting profit of fire insurance companies in the decade ended with 1903 did not exceed \$1.90 in each \$100 of premiums handled, or less than 2 per cent, and were it not for the interest earnings on investments most of the companies would have been bankrupt long ago, 1904 has been particularly disastrous for the insurance companies and most of the large companies have lost \$500,000 or more from their surplus. The total fire loss this year will probably exceed \$250,000,000. A unique compilation is presented showing the concentration in American cities of values destructible by fire. Values of single blocks are given in nearly all of the more important cities of the country, running from a few hundred thousand dollars in the smaller places to \$25,000,000 in New York city. It is pointed out that Chicago, at the time of the great conflagration in 1871, was not much larger than Newark, N.J., is to-day and that "a \$1,000,000,000 conflagration is scarcely an impossibility." When flames attain a certain volume and atmospheric conditions are right, a fire will burn until it burns itself out. The burning of a single block would wipe out the combined local receipts of premiums for years. An interesting table shows the number of frame buildings in many of the leading cities. Chicago is at the head with 145,560 frames against 122,500 of brick or stone. Boston comes next with 59,293 frames, 26,390 others: San Francisco, because of special conditions there, has 54,427 frames and 4,280 others. In many of the smaller cities the proportion of frames is 14 to 20 times the number of buildings of brick or stone.

The termination of the Louisiana Purchase Exposition and the preparations for the Lewis and Clarke Centennial Exposition lend interest to some figures compiled by the Department of

Commerce and Labour through its Bureau of Statistics with reference to the production and business conditions in the area included within the various great additions to American territory. The land area of the Louisiana purchase exceeds that of the original 13 states, being 875,025 square miles, against 820,944 square miles in the original 13 states. The 14 states in this territory produced in 1890, 164,000,000 bushels of wheat, and in 1903, 374,000,000 bushels, at a value in 1903 of \$235,000,000. Their total wheat production being nearly 60 per cent of that of the entire United States. They produced 603,000,000 bushels of corn in 1890 and 973,894,000 bushels in 1903, with a value in 1903 of \$352,375,000, their total corn crop forming 40 per cent in 1890 and in 1903 over 43 per cent of the total corn crop of the United States. Of oats they produced in 1903, 331,000,000 bushels, or 42 per cent of the total product of the country, with a valuation of \$99,000,000. Their production of barley in 1903 was valued at over \$25,000,000, and of rye at over \$3,000,000; while their production of potatoes in 1903 was over \$34,000,000; of hay, \$117,000,000, and of cotton (1899) \$50,000,000. The population of the three states formed from the original Oregon Territory was in 1890, 747,524, and in 1900, 1,093,411. Their production of wheat in 1903 was 37,553,159 bushels, valued at \$27,214,465. The value of the hay crop was in 1894, \$15,655,831, and in 1903, \$24,129,350. The wool produced was in 1894, 31,297,223 pounds, and in 1903, 37,060,000 pounds.

A strange tragedy occurred at Brockton, Mass., on Nov. 30th when the local manager of the Standard Oil Company, Mr. H. G. Masters, was electrocuted while standing at his office telephone. Mr. Masters had called up his wife to announce that he would be late for dinner, and as he finished talking, reached for the electric light switch beside the telephone in order to turn off the light in the office. With his right hand still on the metal cap which covered the electric light switch, Mr. Masters replaced the telephone receiver on the hook at the side of the instrument. As his left hand came in contact with the metal hook, an electric circuit was completed, and Mr. Masters was instantly killed.

#### THE STATE OF RELIGIOUS OPINION IN ENGLAND AND ITS BEARING ON JAPAN.

(COMMUNICATED.)

One of the disadvantages of long residence in the Far East is a certain inability to realize the extent to which public opinion in the West has changed during the past thirty years. It is true that the press gives us a large amount of information on this subject, but this does not quite take the place of personal observation carried on in one's native land. The question, what is English opinion on the subject of religion? has a distinct bearing on the attitude of England to Japan during the past 5 or 6 years and will affect the future policy of the English Government in regard to this country in various ways. But to us the state of religious opinion in England is interesting for quite another reason. We are steadfast believers in the progressiveness of thought on all subjects, and it seems to us that English opinion on religion and ethics for downright rationality and impartiality is to-day miles ahead of English opinion thirty years ago. "W. E. G.", in a letter recently published in these columns, tells us that in America the dogmaless, creedless, rational form of Christianity is to be the Christianity of the future. It may be so, but in that case the term Christianity is a misnomer, as we shall demonstrate later on. That the tendency among the majority of educated laymen and even of some of the clergy in England is to reject unequivocally the alleged supernatural basis of Christianity and to explain the creed in a manner that shall admit believers in other creeds to equal consideration and rank with Christians, is quite indisputable. It may be said that neither truth nor error is to be determined solely by numbers. That is true; but still among educated men and women numbers stand for a great deal. When the majority of

serious-minded people, whose lives are beyond reproach, reject entirely one set of doctrines and adopt another set from earnest conviction it is not enough to attribute it to the influence of the Devil or human depravity and blindness, as certain of the clergy do. It is far more natural to think that the religious searchers for truth are getting nearer to the object of their quest every step they take. As to the state of religious opinion in England at the present time we beg leave to quote the remarks of writers whose whole lives have been passed in close contact with the men and women of whom they write. It certainly cannot be said that the *Spectator* favours the unorthodox, or regards with complacency the general departure from old standards. But it feels it to be its duty to record facts, and here is a quotation from its comments on religious opinion in England: "Yet it is as certain as anything can be which occurs in that fathomless sea, the general mind, that belief in a future state is becoming, to use the most moderate possible language, less universal, that Christ is regarded more and more as one of the greatest of philosophers, and that a curious kind of instinctive agnosticism, a belief that almost anything may be true, but that we can only know what our senses tell us, is with hundreds of thousands superseding all other faiths whatever. The defiant disbeliever is becoming rare, while the unbeliever who distrusts, but does not say, or even feel the impulse to say, 'Lord, help thou my unbelief' is daily adding himself to a great host." (Nov. 9th, 1901).

The *Saturday Review*, it is said, attacks everything but the Church of England. It is a consistent defender of high church views. But every now and again it voices public opinion on church teaching. Here is a quotation from what it wrote in 1899 on Easter: "The primitive Christian celebrated Easter without the shadow of a doubt crossing the horizon of his mind, and striking the chill of a terrible anxiety into his heart, but the thoughtful modern Christian no longer enjoys that attitude of unsuspecting belief. The resurrection of Christ is matter of history and they are no mean authorities which affirm that the attestation to this fact is directly cumulative and ample. That may be the case as long as the character of the fact is left out of count, but when this is reckoned with, who can, on the basis merely of the evidence, affirm the Resurrection? What at best is the value of human testimony? Experience accumulates examples of the insecurity of that basis for belief; but, allow its sufficiency, what is the actual testimony which we possess to the fact of Christ's resurrection. Can it be successfully disputed that the New Testament documents are mutually inconsistent? Is the description of the risen Christ in the narratives of St. Luke and St. John either coherent or even thinkable? How can we reconcile in a single conception a body which passes like a ghost through doors and walls and that which has flesh and bones and nourishes itself with material food? And even if these difficulties can be removed, is there any escape from Harnack's position that however firm may have been the faith of the disciples in the appearance of Jesus in their midst, and it was firm, to believe in appearances which others have had is a frivolity which is always revenged by rising doubts." (April 1st, 1899).

At a meeting of the Churchmen's Union for the advancement of Liberal Religious Thought, held last year, Sir M. E. Grant-Duff is reported by the *Times* to have said that a very large proportion of the clergy seemed to be living in a dream. The number of laymen of his generation who sincerely believed in a large proportion of the doctrines they listened to was not very great; and the number was decreasing. There was only one remedy. Let the clergy make up their minds to allow their hearers to see things, historical and philosophical, as they really were, while the laity lived as the Church desired. At this meeting Dr. Rashdall, of New College, Oxford, said that "Inspiration was not limited to the Bible; the Incarnation did not rest on the fact of the virgin birth; and there were plenty of grounds for believing in personal immortality apart from belief in the historic fact of the Re-

surrection." Canon Henson said he had been denounced as "a stone of stumbling and rock of offence," as a "traitor and infidel" by the orthodox party.

In the last number of the *Spectator* (Nov. 12th) to hand there is a most extraordinary article bearing on the subject we are discussing, entitled "The Soul of the Church." It is full of sophistry and casuistry which though not entirely, seems to be partially, endorsed by the *Spectator*. It practically explains away Christianity as known to the world altogether. We make a few quotations to show the gist of the whole article: "In a sermon preached in Bow Church on the last Sunday in October, and reported in the *Daily Telegraph* of November 1st, the Rev. R. W. Hutton \* made use of the following words:—'To the soul of the Church, if not to its body, certainly belong hundreds and thousands of reverent men and women, who could not, not anyhow at present, make explicitly even so short a confession of faith as that which I have sketched. Implicitly they probably believe more than they think; but explicitly to affirm such a creed, or any creed, they would hesitate; and yet even these I would claim as really members of the mystical body of Christ, which is the blessed company of all faithful people.'"

The *Spectator* then quotes from a Roman Catholic orthodox Divine, Dr. J. Faadi Bruno, the following words:—"The Roman Catholic Church holds that Christians outside her pale who have no suspicion of their religion being false, or have not means to discover the true Religion, and who are so disposed in their heart that they would at any cost embrace the Roman Catholic religion if they knew it to be the true one, are Catholics in spirit, and in some sense within the Catholic Church without themselves knowing it. She holds that these Christians belong to, and are united to the 'soul,' as it is called, of the Catholic Church." The *Spectator* proceeds to say much in defence of this view thus:—"Are there then men belonging to every division of the Christian faith who dream of a Church Universal—a Church not straitened by doctrinal tests, not divided by dogmatic differences? The two quotations we have made above would seem as if it were so. That such a Church can ever have any visible shape few are so sanguine as to hope; but that it already has a spiritual existence there are evidently those who believe. Probably there is no man of any religious imagination to whom the dogmas and rules of the church have not appeared at times to be so much dry legality, so much subtle metaphysics, so many disputable historical statements. The sensation is no new thing, though in the present day it may have taken a new form. . . . A particular development of the Christian conscience has lately led more and more worshippers outside the walls of the Church.† They have come out from among their fellow-Christians, yet they have not, so to speak, deserted to the world—to that world, we mean, friendship with which St. James declared to be enmity against God. That is, they have not become fleshly, or cruel, or malicious, or even indifferent to religion. . . . The most ardent member of the 'body of Christ' must admit that the number of these men is growing ever greater and greater, and he cannot deny that whatever religious test they fail to fulfil, they cannot be excluded from the spiritual Church by the only test which Christ suggested for membership, since they do bring forth the fruits of the spirit. If they are to be regarded as essentially divided from the Christian Church, they do by their very existence undoubtedly weaken her position, proving to the satisfaction of her enemies that as good results can be produced without Christianity as ever its various forms can show."

We have no hesitation in denouncing this logic as dangerous and misleading in the extreme. In the first place, according to this argument the Buddhists may claim all Christians as essentially belonging to the Buddhist Communion, since if they knew Buddhism to be true they would accept it. They join in no Buddhist rites, they worship at no Buddhist temples, they

\* A well known broad Churchman.  
† The italics are ours.

\* The italics are ours.

profess no Buddhist dogmas, but in their lives they carry out Buddhist precepts and act on Buddhist principles, so they belong to the "soul" of the Buddhist Church. In the first sentences quoted above it is implied that the persons referred to possess all the essentials of Christianity, though they do not worship either at home or at church, though they deny the miracles, the Divinity of Christ, and all other parts of the supernatural basis of the Christian Creed and only retain that part of Christianity which it has in common with other religions. The whole article plays fast and loose with the term "Christianity," as, we observe, is getting to be the fashion in both England and America; the object being none other than to make Christianity include everything that is superior in the ethical line from whatever source derived and to give it credit for what virtue exists in the world. If Japanese conduct is equal to the highest Christian conduct, then the Japanese are Christians without knowing it according to this theory. Baptism is not needed. Teaching is not needed. They already know what it is essential to know. Missions are a superfluity. This is the logical issue of the *Spectator's* train of reasoning. To what subtle subterfuges are men driven when the facts they are called on to explain do not fit in with their traditional theories! The *Spectator* goes on falsely to assert that the seceders referred to "owe their whole philosophy to Christianity." Do they, forsooth? It is because they have studied systems of philosophy which are not based on Christianity, but, on the contrary, are directly antagonistic to some of its theories that they have separated themselves from the Church. Principal Fairbairn in an excellent article published in the *Contemporary Review* dealing with the character of the late Dr. Martineau, perhaps the greatest of all English Unitarians, says that Dr. Martineau in his earlier days held most strongly that "in no intelligible sense can anyone who denies the supernatural origin of the religion of Christ be termed a Christian." So Dr. Martineau himself ceased to be a Christian. This Principal Fairbairn admits. His views, he says, were only "nominally Christian." That this opinion has always been maintained by the leading writers of the Roman Catholic, Greek and Protestant Churches; that it is the view of all the great missionary societies, and of the great majority of the clergy, and of the missionaries, and that it is the only view that is compatible with the continued existence of the Christian churches, known to us all admits of no question whatever. If people in England by the million purposely keep away from Christian worship, if, as certain leading clergymen have lately asserted, the practice of holding family prayers is more and more being discontinued, if no definite religious instruction is given to children by their parents, if the general feeling is that many of the Old Testament stories are not fit to relate to children and that the New Testament is much beyond most children, and is too full of the miraculous in its simpler parts; if the parents are content with high moral tone in their families and with imparting noble ideals to their children that have nothing distinctively Christian about them, let this great change in the public opinion of the nation be recognized as having actually taken place and let it be dealt with honestly and fearlessly without any attempt at misrepresentation. That the change to which we refer has come over the English nation there is more evidence to show than we can give in this article. But seeing that the two great universities of Oxford and Cambridge have always been considered to be the stronghold of English Christian orthodoxy, we will quote from two learned essays which were published some little time ago dealing with religion at the two great seats of English learning. They both appeared in the *Church Quarterly Review*. The point of view of the writers, both of whom are thoroughly versed in their subjects, is that of men who deplore the present state of religious opinion in Oxford and Cambridge. Taking the articles in the order in which they appeared, here is what

is said about religion in Oxford. The essay from which we are about to quote was perhaps suggested by a series of articles that appeared in the *Guardian* beginning on Aug. 14th, 1901, and going on for six months, entitled *Dearth of Candidates for Holy Orders*. "Whatever the causes, there are no great influences in Oxford. This is true of the whole University, but it is especially true of the only side of it with which this article will attempt to deal, the religious side. What then is the aspect of the University of Oxford now as a place of religion? The question is appalling, and no one could give it a satisfactory answer. A university is a teaching institution, though many parents think the contrary. It is right, therefore, to consider first the teaching of religious subjects as part of the university course." We are then told that the students of theology as a serious science are but few in Oxford, only 34 per year on the average during the last 5 years; that the lecturers on Theology, though learned, are unphilosophical, and hence fail to interest the students or to solve their doubts. Dr. Moberly is a "theologian's theologian," but "separated by continents and oceans from modern men trained in other sciences." The religious training at the University is so bad, we are informed, that the undergraduate when he goes up for the compulsory scripture examination, which a Sunday school child could pass, fails in the proportion of three out of every four candidates. We are next informed that the teaching and preaching at Oxford are dry, perfunctory, doctrinal, orthodox, but altogether out of date and that the feeling of the undergraduates who listen to this teaching is that much of it is "humbug." The don is ignorant of the doubts that are passing through the minds of undergraduates. "The difficulties of the present generation are with fundamentals. Can God be known? Is prayer reasonable? Or can it be supposed to alter anything? Was Jesus Christ more than man? If so, what is meant by calling Him God? In other words, what do you mean by the Incarnation? May I not take the whole of his moral teaching and leave the question about his person? Is not sin after all only imperfection? Is not the ordinary Christian's view of the Atonement blasphemous? Is not traditional Christian morality unscientific, obsolete, or at best partly invalid?" "It is worth remembering that there is a certain amount, perhaps a large amount, of feeling abroad among young men that clergy are people who profess to believe a great deal more than they themselves actually do or any sane man can." The preacher has to remember that in the minds of his audience the following postulates have a very strong hold:—"The Bible has to be judged and used as any other book; the historical documents in it must be judged as historical documents; it is a suspicious circumstance if a preacher rests an inference on a position refuted by current historical criticism; historical accuracy and intrinsic reasonableness where either seems lacking to a passage in the Old or the New Testament cannot be supplied by any theory of inspiration; there is some good in all religions; Christianity is on its trial; the inquirer of this generation must not make or accept the assumption that it will turn out to be superior to Buddhism or a modernized Greek culture; it is quite possible to be a gentleman, genial, honourable, active and successful, without being religious and the few religious men who have all these qualities do not necessarily owe them to their religion. It is doubtful whether, now we know in science what certainty is, we can believe in anything less certain." These statements are the analysis of the vague principles of thought which the undergraduate inhales like an atmosphere." After giving an outline of the religious work that is done in Oxford the writer we are quoting puts over against the slight influence there is for religion the enormous influence there is against it. These anti-religious forces are summed up under six headings, thus:—(1) Self-indulgence that is characteristic of the place—a reaction from the discipline of the public school. (2) An affectation of elegant indifference. "We learn at Oxford," said an undergraduate, "to do things with a graceful air of not caring about them." (3) The prevalence of criticism of all

traditional opinions—made most dangerous by the affectation of indifference to the issues. (4) Enormous tolerance, at least in word, of almost all diversities of moral practice. The weak take this for a weakness in public opinion.\* (5) The recollection of sermons heard in parish churches, which are too often a mixture of error and obsolescence inexcusable. (6) Reaction. A boy who has been stuffed with religion *ad nauseam* at one of the "definitely religious" schools is so delighted to be free in Oxford that he shuns religion as an enemy. The remedies for the deplorable state of religion at Oxford are thus set down at the close of the article we are citing. (1) To rethink and restate the fundamental truths of Christianity. (2) To gain recognition for Christian thought as a necessary part of any curriculum of studies in the Universities, but especially of any studies philosophical or historical. (3) A new sincerity, profundity, and audacity of preaching, imaginatively modern and ancient. (4) The reform of academic teachers, which they can only do for themselves. (5) A change in the opinions of parents as to the kind of training a University should give.

Now let us turn to Cambridge. Oxford and Cambridge, despite their strong superficial resemblance, are strangely diverse and demand very different treatment, says the *Church Quarterly* writer we are about to quote.

"The two Universities diverged from each other at a very early period, and no revolutions have been able to change the *genius loci* of either.

While Oxford asks for and endeavors to supply a restatement of Christian truth, Cambridge rather demands to be shown that Christianity is true, and that its retention is desirable. Paley's *Evidences* are now pronounced to be hopelessly out of date. A Cambridge training prompts men to ask for proof not for re-statement.

Modern theology is still at Cambridge under the spell of the old mathematical 'tripes.' Naturally it looks to facts rather than fancies, and many Cambridge men have a strong disposition to consider textual criticism as the most important branch of divinity. . . . The present theological school owes its origin to three great men, Lightfoot, Westcott and Hort. . . . Despite the powerful impression made by these three great divinity professors upon the University, the present professoriate exercises but little influence upon the life and thought of the place. . . . With a laudable anxiety to show that theology is a science, the present professors seem in danger of forgetting that it must either be practical as a living power or merely an interesting anachronism. . . . The question of compulsory chapels is perhaps less to the front than it was a few years ago. The regulations of most colleges in this matter are not very stringent."

"The neglect of theological learning in the largest and most famous college of the University (Trinity) is one of the most discouraging signs of the times." . . . "The influence exercised by the town churches is almost certainly on the wane. No parochial clergyman has been able to attract large numbers of students as was often the case a quarter of a century ago. In fact, the undergraduate is no longer a church-goer. Unless the preacher is exceptionally eloquent or popular the University sermon has but few auditors." . . . "Till the time of the last University Commission, Cambridge, like Oxford, was a clerical body, the lay fellows being in a distinct minority. Now the reverse is the case; it is the clergyman who is the exception. The professors, tutors, and lecturers are consequently much like other professional men in regard to religion. Their pursuits do not naturally lead them to take any particular interest in the subject, and while some at Cambridge, as elsewhere, are really religious men, a few are directly antipathetic, and the majority comparatively indifferent." The article goes on to refer to the growing power of the science teachers and then adds, "It is to be feared that a large proportion of them have scant respect for anything ancient in the University except the endowments. . . . While doubtless many

\* The first in Oct. 1902; the second in the fall of last year (1904).

\* This tolerance, it is explained, is chiefly the result of an intense hatred of priggishness and hypocrisy which characterizes the Oxford undergraduates.

scientific students have assumed an agnostic position, it by no means follows that Cambridge science is antagonistic to Christianity. . . . Moral philosophy in Cambridge has never flourished so widely as at Oxford. . . . Regarded as a whole, the philosophers are not sympathetic to Christianity, and the subject has hardly been represented hitherto on the Christian side. . . . The intellectual school may at present be described as consisting of a few brilliant young men at Trinity and King's, whose opinions find utterance in the *Independent Review*. Its religious news are agnostic and even anti-Christian; the men of whom it is composed are full of high aspirations and unselfish aims. . . . Their bias is anti-clerical, the influence they exert is wide-spread, and the ranks of agnosticism are recruited by young men of promise, who easily lay aside what religious impressions they may have received at their public schools on seeing that men to whom they are inclined to look up to have apparently outgrown them. . . . "The fact that some of the ablest theological students at both Universities continue their studies without taking Holy Orders shows that one result of modern methods is to make men increasingly averse to committing themselves to any definite system of belief. . . . The average man, who belongs to no particular school and makes no great profession of religion forms the bulk of the University. . . . His instincts are not strongly religious, and tend to conform to the tone of the society to which he belongs—that of ordinary, decent well-conducted men. . . . He is not particularly intellectual, but he is neither an idler nor a fool." . . . "It is said that men are in great danger of losing their faith at the University, and the authorities are naturally blamed for this. . . . But they are not solely responsible. . . . A university by necessity is a hot-bed of new ideas, of intellectual perplexities, nor has it ever been otherwise." . . . "It is after all not a very satisfactory result of our boasted religious training in the public schools that their most brilliant products so frequently drift into agnosticism directly they come in touch with university life and thought. Nor can the ordinary middle-class home, with its profession of Christianity as a respectable religion and, too often, its practical disregard of its ordinances, be regarded as a good preparation to enable the young to resist the temptations of life. If parents really cared for the spiritual education of their children, they would surely discourage the laxity in regard to religion which is alas! so characteristic of many a modern household; and they would be more vigilant as to the anti-religious influences under which their sons may be brought at the university." \*

The real situation in England, then, may be correctly described in a very few words. The majority of laymen and a great many broad-church clergy have rejected the supernatural basis of Christianity. The high-church party, the evangelicals and certain orthodox nonconformists are striving hard to defend the ancient citadel of supernatural Christianity and by the aid of various secondary influences, social, literary, musical, and the like, still in a big population and among many rich people obtain a good deal of pecuniary and moral support. But this support is no evidence of definite belief in those who give it; for as a reviewer of one of Dr. Caird's books remarked a short time ago: "The British mind has a singular and perhaps fortunate capacity for resting contentedly very far short of finality. It thrives in an atmosphere of antagonism. It never tries to press the axioms of one department into conformity with those of another. It can pursue with happy inconsistency two parallel or even hostile courses of thought, without being troubled by the problem of reconciliation. This temper has been its characteristic since Bacon's

\* This argument, it will be observed, is based on the assumption that morality which has no religious foundation is ineffective, an assumption which the history of the world has proved to be entirely unwarrantable and the absurdity of which Japanese moral attainments especially have clearly demonstrated.

time. Englishmen love to think in watertight compartments with no communication possible or desirable." Hence Englishmen support and help causes that are diametrically opposed to each other with striking inconsistency. But while the bulk of the English nation has rejected supernaturalism, it clings to traditional commonsense morality, and the training English parents give their children, despite the omission of family prayers, and constant reference to heaven and hell, to-day undoubtedly better, as certain writers in the *Spectator* have maintained, than that given by parents fifty years ago. The nation is not deteriorating because it refuses to accept supernaturalism. The people who don't go to church are as a whole quite as good as those who do and sometimes they are a great deal better. Ethics can thrive and exercise all the influence desired in England as in Japan without the aid of supernaturalism.

It is because the English people have come to think thus that they welcomed the Anglo-Japanese Alliance, and it is because they think thus that during this war they have openly acknowledged that Japan without Christianity has succeeded in training men who are no whit inferior to any Christians on the face of the earth in all the finer traits of human character. To say, as the military correspondent of the *Times* said when commenting on the *Bushido*, that Englishmen were not pleased to find that a non-Christian system of ethics could produce such fine results, is a sincere expression of personal opinion, was nothing more than ignorant prejudice, but if a mere politic address to an imaginary English gallery, was quite despicable. Anyhow it was inaccurate; for the ordinary modern educated Englishman does not care a brass farthing for the name when he is sure about the reality, and he is in this case quite positive that the higher types of Japanese character are not surpassed by anything produced in Great Britain despite all the professions of orthodox special pleaders to the contrary. Had not religious opinion advanced in the way we have described, the Anglo-Japanese Alliance could never have become the thing it is—the knitting together of two nations which unreservedly and most sincerely admire each other's moral ideals. That liberal thought in England should have made this great advance in the last two or three decades is a subject for great congratulation and its bearing on the political situation in the Far East will prove in our lifetime even of the highest importance. The potentialities of two nations which admire each other as much as the English and Japanese do to-day are almost incalculable in as far as this quarter of the world is concerned. We are quite sure that it is Japanese character that is the real basis of the Alliance. It was liberal-mindedness of a remarkable kind in old conservative England that persuaded her statesmen four years ago that Christian England could yoke herself to non-Christian Japan without the slightest risk of reaping anything but lasting benefit thereby.

In this article we have aimed at collecting a number of facts and with hinting at their significance. There is a great upheaval in both England and America throughout the religious world; which certainly is worthy of being brought to the notice of residents in the Far East. How it will all end it is hard to foresee. But public opinion in its pursuit of truth has a grand way of booming ahead despite all opposition. *Magna est veritas, et prevalebit.*

#### CORRESPONDENCE.

HERR WOAS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—It is a pity that such importance should have been given to the utterances of Herr Woas, as he really does not deserve it. Mr. W. was formerly an architect in the German Government's employ in Kiautschou and left the service (dismissed?). He then acted as a sort of war correspondent for the *Ostasiatischer Lloyd* in Japan but soon was released of this post owing to his silly reports. The writer knows the man personally and can assure you that he had little or no contact with his countrymen here and therefore his wisdom on things Japanese could not

have been derived from this source, at any rate his opinions are hardly shared by any of them. You did him too much honour and although you deal with his statements quite fairly, justly, and impartially, still it means confusion, if the Germans are judged by his altogether misplaced remarks. As owing to our difficult position in Europe *vis-à-vis* Russia it is rather hard of the nation to keep neutrality without being suspected at every paltry occasion. It would have been much better if this Mr. W. would have avoided any comment.

A GERMAN.

Yokohama, 13th January, 1905.

#### LADIES LAWN TENNIS AND CROQUET CLUB.

The Annual General Meeting of the Ladies Lawn Tennis and Croquet Club was held at 119 Bluff on January 10th. The following is a statement of receipts and disbursements during the past year.

L. L. T. & C. C. IN ACCOUNT WITH H. SYME THOMSON, HON. TREAS.

1904—January to December.

	Yen	Yen
To Balance .....		611.93
To Fees 69 active members.....	690.00	
3½ at ¼ fees members .....	17.50	
107½ honorary members.....	1,290.00	
15 entrances .....	150.00	
17 visitors .....	51.00	
74 entrances to handicaps .....	74.00	2,272.50
To Sale old balls, &c. ....		96.35
To Donation .....		5.00

By Balance .....		1,067.77
		3,008.28

E. & O. E.

H. SYME THOMSON, Hon. Treas.

The ballot for the new committee resulted in the election of the following ladies and gentlemen, who have kindly consented to act: President, Mrs. James; Vice-President, Mrs. Litchfield; Hon. Treasurer, Mrs. Syme Thomson; Hon. Secretary, Mrs. Abbott; Committee, Mrs. Walter, Mrs. Read, J. Carey Hall, Esq., Herr Von Syburg.

#### THE GRAND HOTEL LIMITED.

The following is the Report of the Directors to be submitted at the Thirty-First Semi-Annual Ordinary General Meeting of Shareholders, to be held at the Grand Hotel, Yokohama, on Friday, the 27th day of January, 1905.

The Profit and Loss Account, and Statement of Assets and Liabilities, for the half year ended December 31st, 1904, accompany this report.

The net profit for the half year, after providing for general expenses, Directors' and Auditor's fees, and Sundry Creditors, and after writing off bad or doubtful debts, amounts to

To this is added by Transfer from Suspense account .....	12,563.33
which it is proposed to apply as follows:—	
In payment of a dividend of ¥6.00 per share for the half year .....	12,298.61
For depreciation .....	15,000.00
Mr. Howard and Dr. Hall retire from the Board by rotation, but offer themselves for re-election.	9,851.94

It is proposed that the dividend shall be payable on the 28th day of January, when warrants will be issued.

C. H. H. HALL, } Directors.

L. MOTTET, }

E. B. S. EDWARDS, AUDITOR.  
Yokohama, 14th January, 1905.

## NIPPON RACE CLUB.

## ANNUAL MEETING.

The annual meeting of members of the Nippon Race Club was held at the Masonic Rooms on Tuesday, Dr. Wheeler presiding. There was a large attendance of members.

The minutes of the last meeting were taken as read, as also were the report and accounts.

Mr. BUGBIRD suggested that as a mark of respect to the retiring committee and in return for the good work done by it the members constituting it should be re-elected en bloc.

The President thought they should follow the usual course in electing the committee by ballot. Mr. Blad explained certain points in the report wherein it differed from those of previous years, and answered various questions as to details.

Mr. WILLIAMSON-JONES suggested to the permanent committee that a portion of the funds of the Club should be invested in connection with ground which could be converted into golf links. He had no definite proposal to make, but he thought that as this was a sporting club, golf links would be a suitable investment. Of course the security would have to be examined, but golf links had

succeeded elsewhere and there was no reason why they should not succeed in Yokohama, and enable the Club to get as good a return for their money as from the bank deposits. He therefore suggested that the permanent committee take into consideration any proposal brought before them.

Some discussion took place as to various matters, and it was announced that the former committee had been unanimously elected, as follows:—Messrs. V. Blad, A. J. Easton, C. de C. Hughes, J. de Cuers de Cogolin, D. Marshall, K. Mori and F. M. Tegner.

A vote of thanks to the Chairman concluded the proceedings.

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

## AMERICAN RAILWAY CONCESSIONS IN CHINA.

London, January 12.

The American Government has informed China that it disapproves of the proposed cancellation of the concession of the Hankow-Canton railway. As regards American concessionaires, America considers that they are entitled to the protection of the American Government.

## A PARIS SENSATION.

The publication in French of an exhaustive statement written by Baron Kodama in 1902, explaining Japanese ambitions, and setting forth particularly that country's designs against French Indo-China, is creating a sensation in Paris.

The Japanese Legations deny the authenticity of the document, but nevertheless it produces a profound sensation.

## THE THIRD BALTIC SQUADRON.

London, January 13.

Admiral Bolroosky's squadron has entered the Canal.

## SKRYDLOFF.

Admiral Skrydloff has left Vladivostok for St. Petersburg.

THE PRESIDENT AND THE  
TARIFF.

President Roosevelt strongly advocates a special session of Congress for a readjustment of the tariff, but the session is unlikely to open before autumn.

## THE NEW RUSSIAN LOAN.

Later.

The subscription to the new Russian loan was opened in Berlin and closed almost immediately, the applications being unusually large.

## BRITISH POLITICS.

The British Parliament meets on February 14th. There are persistent rumours in Parliamentary circles that there will be a dissolution in the month of March.

THE RUSSIAN SUPPLEMENTARY  
SQUADRON.

London, January 14.

Botrovosky's squadron leaves Suez to-day.

## U.S. SHIPPING SUBSIDIES.

The U.S. Senate's Commerce Committee has increased the maximum subsidies mentioned in a telegram of the date of the 7th inst. to eighty thousand dollars for a monthly and one hundred and sixty thousand dollars for a fortnightly service.

[Note—The telegram in regard to the above did not get beyond Shanghai. It reads:—

London via Bombay, December 7.

News comes from Washington that the joint commission of the Senate and House of Representatives has reported, recommending annual subsidies of £60,000 sterling for monthly, £120,000 for fortnightly, sixteen-knot services from the Pacific Coast to Japan, China, and the Philippines, and £42,000 and £84,000, respectively, for thirteen-knot services.]

RUSSIA AND CHINESE  
NEUTRALITY.

Russia has issued a Circular to the Powers complaining of China's violations of neutrality since war began, and claiming the right to act according to her own interests in the matter of China's neutrality.

BRITAIN'S PREPAREDNESS FOR  
WAR.

Mr. A. J. Balfour, the British Prime Minister, speaking at Glasgow, dwelt on the achievements of the Government in the direction of Army and Navy reform. He said that the problem of the British Army arose at a point where there alone was a possibility of conflict with a great military empire, and that the problem of the Army was the problem of the defence of Afghanistan. The changes recently effected in the War Office would enable Britain to intervene more effectively in any contest on the north-west frontier of India. Moreover, under the strong grasp of Lord Kitchener, the forces of India were being reorganized, so as to add enormously to their efficiency without material addition to their numerical strength. Mr. Balfour added that the Army's new field gun was the most powerful in the world, and said that the result of the naval changes was that the fighting power of the Fleet during the first twenty-four hours of hostilities would be augmented threefold.

## ACTIVITY OF RUSSIAN CAVALRY.

London, January 14.

The whole Russian cavalry has recently been formed into one enormous force under General Mischenko, and is displaying considerable activity, a detachment having damaged the railway between Anshantien and Haicheng and between Yingkow and Tashikiao on the Japanese line of communications.

## RUSSIAN FINANCE.

London, January 15.

The Russian Minister of Finance in presenting his Budget statement estimates that the expenditure for 1905 will show a decrease of 65½ millions of roubles compared with 1904. The decreases are chiefly in the Departments of Finance and Communications. Ten millions of roubles are assigned to the doubling of the Siberian railway; 1,800,000 roubles extra expenditure is allowed for the trans-Baikal line. Everything has been done that can be calculated to strengthen confidence in the finances of Russia, whose monetary system and national economy is unshaken after eleven months of war.

## OUTWARD BOUND.

Admiral Botrovosky's fleet has left Suez. A MESSAGE FROM THE CZAR.

The Czar has issued an order to his Army and Navy, announcing the fall of Port Arthur. He eulogises the glorious struggle of the garrison, whose heroism Russia witnessed with pride. Peace be to the ashes of the dead, and glory to the living.

The order proceeds to say: "Our enemy are bold and strong and the struggle at such a distance is hard. But Russia is powerful and has undergone harder trials, always emerging more powerful than ever. While lamenting our losses we must not become distracted. With all Russia I trust that the hour of victory will soon dawn. I pray God to bless my troops and the fleet and that he will enable them to uphold the glory of Russia."

## AN IMPROBABLE STORY.

London, January 16.

The *Novoe Vremya* publishes a telegram

from Java, stating that the Japanese have established a base at Labuan, and that the cable has ceased working for the purpose of concealing the fact.

#### THE FRENCH CABINET.

During a disorderly debate in the French Chamber, M. Combes, the Premier, vigorously repudiated the charge of sowing dissension among the Republicans by his anti-clerical persecution.

The Chamber passed a vote of confidence in the Ministry by 289 to 279 votes, but the Cabinet is expected to resign owing to the smallness of the majority.

London, January 17.

Owing to the death of President Loubet's mother, necessitating the absence of the President from Paris, the resignation of the Cabinet has been postponed till Wednesday.

#### JAPAN AND FRENCH INDO-CHINA.

Later.

M. Deloncle does not believe in the authenticity of General Kodama's plan, though he is firmly convinced that Japan ardently covets Indo-China. He insists that the Government must immediately submit to the Chamber a programme for the maritime defence of the Far Eastern colonies.

#### THE CAVALRY RAID.

All independent accounts show that General Mischenko's daring cavalry raid was wholly unsuccessful, cavalry being powerless against entrenched infantry.

#### AMERICA AND CHINA'S NEUTRALITY.

London, January 18.

Mr. John Hay, U.S. Secretary of State, has cabled to the American Minister in Peking calling attention to the Russian neutrality note. He expresses the hope that China will earnestly consider the charges.

#### SEVERE WEATHER IN ENGLAND.

A blizzard swept over England yesterday. The Thames estuary was frozen for a considerable distance from the shore. Showers of ice fell in London, where traffic was disorganised. The coast is strewn with wrecks, and there have been several deaths from the cold.

#### THE BALTIC FLEET.

London, January 19.

French correspondents in St. Petersburg state that the Baltic fleet has sailed from Madagascar.

#### CHINA'S DENIAL.

It is announced in Washington that China is issuing a general denial of the Russian charges made on the 13th of January.

#### PROPOSED JOINT ACTION.

The officials in Washington consider that joint action on the part of the Powers, with a view to preserving China's neutrality, is necessary, owing to the danger of an anti-foreign outbreak.

China will circularize the Powers to this effect if circumstances compel her.

#### RISE IN COAL FREIGHTS.

A sudden German demand yesterday raised the prices of coal in England, especially for bunker-coal. In some cases the rise was two shillings a ton.

#### GREAT STRIKE IN ST. PETERSBURG.

Later.

A great strike of ironworkers and kindred trades in St. Petersburg is assuming a menacing aspect. Fifty thousand men are already under arms. All work is stopped at the Government dockyards on the Neva. The whole movement is directed by capable organizers.

#### RUSSIANS IN THE RED SEA. A Russian squadron has passed Perim. CHINA AND HER NEUTRALITY.

##### RUSSIAN THREATS.

It is announced in Washington that Russia has thanked Mr. Secretary Hay for calling China's attention to the alleged violations of neutrality. Count Cassini declares that Russia has positive proof of the violations, and that unless China mends her ways, Russia will be forced to look after her own interests.

#### REPORT FROM THE LIAOTUNG GARRISON.

(Received at the Imperial Military Head Quarters on the 12th instant.)

On the forenoon of the 11th instant a detachment of our cavalry on the west of Tungmasai encountered about 4 sotnias of the enemy's cavalry, and after a fight which lasted until 2.30 p.m., drove them back, inflicting heavy loss. Subsequently the enemy, reinforced by 8 guns and several sotnias of cavalry, approached Liurlipau where a hot fight is now going on.

From last night until this morning several bodies of the enemy's cavalry appeared at Anshantien and Haiching and between Yingkau and Tashikiao. They inflicted some injury on the railway but it was at once repaired and traffic resumed.

Yesterday afternoon a force of over 2,000 cavalry with artillery attacked Newchwang (the old town) and our garrison in that place was obliged to retire temporarily. It has been reinforced and is now vigorously driving back the enemy. At Newkiatun also the enemy's cavalry pushed close up but we did not suffer.

#### THE CAVALRY ATTACK.

(Received at the Imperial Military Head Quarters on the night of the 13th instant from the Army in Liaotung.)

The enemy who was driven back in the neighbourhood of Yingkow on the 12th instant, retreated in disorder to the north of Takaukan (i.e. along the road to old Niuchwang). He left 62 dead and 6 wounded on the field, and judging from the arms abandoned his casualties can not have been less than 200.

On the 13th a body of our troops drove the enemy from Niuchwang (the old town) and threw him into confusion.

#### OFFICIAL REPORTS.

(Received at the Imperial Military Head Quarters, on the afternoon of the 11th. From the Army in Korea.)

A detachment of our troops in the neighbourhood of Hongwon in the direction of Hamheung attacked a force of cavalry belonging to the Ninth Regiment of Siberia Cossacks and drove them back in confusion. The enemy left 9 dead upon the field, including an officer, 9 rifles, 8 swords, 2 lances, 11 horses and some other spoils.

(Received at the Imperial Naval Head Quarters.)

On the 11th instant H.I.J.M.S. *Tokitama* seized in the Sea of Japan the British steamer *Rosalie* (about 4,300 tons) bound for Vladivostock with a cargo of 6,500 tons of Cardiff coal.

(Received at the Imperial Military Head Quarters on the afternoon of the 13th instant from the Liaotung garrison Army.)

The enemy's force consisting of some 8 sotnias of cavalry with 12 guns surrounded our commissariat station at Ninkiatun from 2 p.m. on the 12th instant and opened an attack from the direction of Sankiatz. They were completely repulsed and their casualties were not less than 80.

From the dead and wounded left by the enemy on the field and from other sources of intelligence it would appear that the enemy consisted of the cavalry brigade attached to the Second Infantry Regiment of Railway guards, and that they were under the command of Major-General Mischenko.

(Received at the Imperial Naval Department.)

#### ANOTHER COLLIER SEIZED.

On the 16th instant a Japanese torpedo-boat stopped the Dutch steamer *Wilhelmina* (2,791 tons) in the Tsushima Straits, and finding that she had a full cargo of Cardiff coal for Vladivostock, seized her and sent her to Sascho.

(Received at the Imperial Military Head Quarters.)

#### RUSSIAN CAVALRY SURROUNDED.

On the 14th instant a force of our troops surrounded a body of the enemy's cavalry near Sanchaho, and threw him into disorder. The enemy had over 300 casualties and left a quantity of weapons and other things in our hands.

According to the statement of staff-officers attached to our force, who were in the engagement, they saw a large number of Chinese regular soldiers in the enemy's ranks.

On the 16th instant some 5,000 or 6,000 of the enemy's cavalry with 14 or 15 guns, which had been driven from Niuchwang, passed through Laotuniulu, retreating north-west. On the evening of the same day a detachment of our cavalry had a collision with the enemy near Laohoshe. According to the reports sent by our officers there were among the enemy's troopers some who wore Chinese overcoats and Chinese head-gear, and many who were dressed entirely in Chinese costume and had Chinese queues. The enemy appeared thoroughly exhausted.

(Received at the Imperial Naval Department.)

#### ONE MORE STEAMER.

On the 17th instant at 11 a.m. a Japanese war-ship stopped the British steamer *Bawtry* in the Tsushima strait, and finding on examination that she was laden with provisions, machine oil and ship-building materials for Vladivostock, arrested her and took her to Sascho. The *Bawtry* is a steamer of 1,542 tons register.

(Received by the Japanese Naval Department.)

#### ANOTHER COLLIER SEIZED.

On the 12th instant at 4 p.m. a Japanese war-ship in the Tsushima Straits stopped and visited the British steamer *Oakley* (2,456 tons register). She was found to have left Cardiff on the 17th of November with a cargo of 5,900 tons of coal for Vladivostock, and she was accordingly seized and taken into Sascho.

(Received by the Independent News Agency.)

#### KOREAN NEWS.

Seoul, 0.12 p.m. January 19.

The Foreign Adviser of the Korean Government has delivered the opinion that the mining concessions asked for by Great Britain, Germany and Italy are of a nature to be granted, but that the grants should be within such limits as shall secure Korea against loss.

(RECEIVED IN TOKYO.)

#### THE FRENCH CABINET RESIGNS.

With the exception of the Minister of Foreign Affairs, the whole of the French Cabinet has resigned.

#### THE BALTIC FLEET.

Two destroyers belonging to the Baltic

Fleet have struck rocks near Madagascar, and are now undergoing repairs in a private dock.

(Where is this dock, we wonder. The situation becomes worse and worse from the point of view of French neutrality.—Ed. J.M.)

It is not true that the flag-ship sunk. She is said to have collided with one of her consorts.

(RECEIVED AT THE FOREIGN OFFICE.)

#### RESIGNATION OF THE DANISH CABINET.

There being a difference of opinion among the Ministers of the Crown in Denmark on the subject of maritime defences, the Cabinet has resigned. The new Cabinet will be from the same political party as the old, four of the former Ministers being associated with four others. Thus the former Minister of Education will become Premier, holding simultaneously the portfolios of War and of the Navy, and the wholly new statesman Mr. Christiansen will be Minister of Foreign Affairs.

#### A MILD WINTER.

The Japanese Consul at Chinnampo telegraphs.—

The season being exceptionally warm, the ice in the neighbourhood of Pyongyang melted about the 7th instant, though the upper reaches of the Tadong River remain frozen. Still future changes of temperature can not be foreseen, and as the branches of the Tadong are frozen and Korean boats are said to be ice-bound, there is no movement of cereals, and although goods for Pyongyang are now laden on the river, boats are deterred from passing up farther than Kyo-nipho through fear of floating ice near Pyongyang. No ice has yet been carried down to this place (Chinnampo). If things continue as they are the navigation at this port will be open next month.

#### THE RUSSIAN BUDGET.

A Reuter's telegram says:—

In the explanation of the Russian Budget it is stated that, in accordance with the law of 1890, the Budget does not include the outlays directly incurred for warlike purposes. Up to the close of last year, the extraordinary expenditures made by the various departments totalled 621 roubles.

In the extraordinary appropriations for railway construction there is a sum of 10 millions of roubles for doubling the Siberian Railway, and a sum of 1,800,000 roubles for the circum-Baikal line.

The hard money in the Treasury at the end of 1903 was 1,058 million roubles, and in consequence of the 5-per-cent. foreign loan this amount was increased on the 14th of July, 1904, so that it rose to 1,237 millions, since which time until the 21st of December it had not undergone any diminution.

#### THE TSAR'S ORDER OF THE DAY.

London, January 15.

Reuter under date of Jan. 14th telegraphs from St. Petersburg:—

The Tsar has issued to the Army and Navy the following Order of the Day.

"Port Arthur has fallen into the enemy's hands. The defensive struggle lasted eleven months; the garrison for over seven months was isolated, but without murmuring they endured privations and moral torture. A handful of Russians, not sparing blood and life, sustained the enemy's furious onslaughts, firmly hoping for relief. Russia proudly witnessed their heroic deeds; and the whole world bowed before this heroic spirit. But resources became exhausted whereas the onset was constant, and the garrison had to yield to superior

numbers. Peace and eternal memory to the dead, glory and God's blessing to the living! Our enemy is bold and strong and the struggle, at a distance of 10,000 versts from the sources of our strength, is indescribably hard. But Russia is powerful. During her thousand years of empire there have been harder trials and more threatening dangers but she has always emerged stronger. Now although our failures are severe and our losses lamentable, we will not be distracted. I trust with all Russia that the hour of victory will soon dawn, and may God bless the Army and Navy for overthrowing the enemy and upholding Russia's honour and glory!"

#### THE STRAITS DOLLAR.

The Governor of the Straits Settlements has issued a proclamation, operative from the 16th inst., that no Straits dollars shall be exported beyond the limits of the Malay Peninsula, the Dutch East Indies and Borneo.

#### INTERNAL AFFAIRS OF RUSSIA.

The *Russ* says that the only course is to have the situation honestly considered by representatives chosen by the people who can discuss the whole conditions. Any council of the people's representatives will certainly oppose improper disturbances, and will also oppose incompetent, unpopular and irresponsible officials who enforce their own mandates, idly waste the country's resources and bring the State into ever-increasing danger. But these representatives would not oppose any government appointed by themselves.

#### RUSSIA'S NEW LOAN.

The same paper, discussing the new loan, says that its terms are very disadvantageous from the point of view of the flourishing condition of Russia's resources. On the other hand, considering the paucity of Japan's producing power, it must be admitted that her credit stands very high. The reason of this difference is that the governmental and social conditions of the two countries are different. Therefore whether for continuing the war or for amending these conditions, radical reforms are essential. Even from points of view independent of the war, the present state of the Russian people is intolerable.

#### RUSSIAN PAPERS AND PEACE RUMOURS.

The Russian newspapers hitherto opposed to the war have become more vehement in their tone since the fall of Port Arthur. On the other hand, the journals in the opposite camp allege that the time for peace has become more distant than ever. The war, they say, has been calamitous, but a dishonourable peace would be a still greater calamity. The *Novoye Vremya* maintains its view that the fight must be continued to the bitter end. Its editor, after marshalling several reasons for continuing the war, says:—"Union is strength. On the other hand, discord brings ruin. If the various classes of the people are hostile to each other, the fate of the State is sealed. Of course the people must decide whether the war is to cease or to continue. With regard to this the former Sovereigns of Russia, in times of national crisis, have frequently not hesitated to seek the people's opinion. There is nothing for it but to follow that precedent. But it is essential to know the view of the present Government as to continuing the war or ending it. The time has come when a decision must be given such as shall constitute an accurate basis for calculation."

#### ECONOMICAL STEAMING.

The machinery performances of His Majesty's ship *Terrible* during her recently completed voyage to Wei-hai-wei and back, now carefully collated, afford, says a *Times* correspondent, noteworthy commentary on the communication made by Admiral Sir Compton Domville in connection with the Boiler Committee's final report. Sir Compton Domville, it will be remembered, referred to the great improvement effected in the working of the Belleville boiler, and the voyage of the *Terrible* proves this most convincingly. This ship, launched in 1895 from the Clydebank works of Messrs. John Brown and Co. (Limited), recently underwent a complete overhaul, and steamed this year to China and back at deeper draught and at faster speed for one-half the consumption of coal required in the same voyage two years ago. In 1902 she steamed home from Wei-hai-wei to England, a distance of 11,045 sea miles, at a mean speed of 11.8 knots for an expenditure of coal of 11,163 tons, including all purposes and even harbour requirements. This year the round voyage to China and back, a distance of 21,741 sea miles, was accomplished at a mean speed of 12.6 knots for a total consumption of coal of 10,092 tons. The coal actually used for propulsion worked out at 1.78 lb. per hour per indicated horse-power developed by the main engines, as compared with 2.9 lb. in the voyage two years ago. With a mean draught of 27 ft. 3 in., as compared with 26 ft. 7 in., and notwithstanding that a much longer time had elapsed since the vessel had been dry docked for cleaning the hull, and, although the rate of speed was 0.8 sea miles per hour greater, this year's voyage was thus accomplished with a fuel consumption for all purposes equal to 1 ton per 2.34 miles steamed, against 1.22 miles. Taking the coal for the main engines only, the coal used equalled 1 ton per 3.37 miles steamed, as compared with 1.55 miles two years ago. The result is thus exceptionally satisfactory for its economy. Engineer-Commander A. W. Turner, who was in charge of the engines of the *Terrible*, was the first naval engineer to go to sea with Belleville boilers in a British ship, as he was with the *Sharpshooter*.

#### THE P. AND O. CO'S REPORT.

The P. and O. Co.'s Annual Report states that the net surplus for the year ended September 30, inclusive of £11,197 brought forward, was £219,335, and after making a distribution of 13 per cent. on the Deferred Stock, a balance of £10,535 is carried forward. The Directors have been able to charge the loss of the *Australia* to the ordinary working of the year without infringing on Reserve, and similarly they have increased the amount set aside for depreciation by £123,296 over and above the normal 5 per cent. on the original cost of the fleet, the total appropriation under the head of Insurance and Depreciation being raised to £500,000. A considerable diminution in receipts from transport work is one prominent feature of the returns, and this was to be expected when the African transport work came finally to an end. On the other hand, there is an increase, although only a slight one, in passenger revenue, which is the more satisfactory as a decline was anticipated in this quarter owing to various causes, and more particularly to modifications made in favour of the passenger, when the price of coal had retreated to something like a normal point from the extreme figures of two or three years ago. But, on the score of freight, a considerable advance accrues, not owing to any improvement in rates, but to the growing capacity of the fleet. The increased size of the Company's ships tends largely to augment the disbursements in every direction. One example may be quoted in illustration, viz., in the Company's payments to the Suez Canal Company, which have been increased by £50,000 during the financial year, reaching the large figure of £322,000, notwithstanding the fact that the dues were reduced by the Canal Company from January 1, 1903. Fortunately, the coal expenditure has been more moderate than anticipated, and is actually below that of last year, although the quantity of coal consumed is 30,000 tons greater than in the former period. This is due entirely to the low coal freights which have recently prevailed. At the present moment, shipping prospects appear rather brighter than they have been for some time past, but tonnage is so abundant in every direction that no striking improvement can be looked for. With reference to the *Malacca* affair, the Directors state:—"The seizure of this ship by a Russian cruiser in the Red Sea, and of her sister ship, the *Formosa*, only a few days afterwards, were incidents so widely known that any detailed explanation concerning them is rendered unnecessary. Owing to the firm attitude taken up by his Majesty's Government, both ships were released, and in the case of the *Formosa* this

took place so immediately after seizure that the delay and inconvenience might be held to be only of a trifling character, although the annoyance and anxiety was very great. But the *Malacca's* case was different, and the delay before she could resume her voyage was such as to throw out completely the working of the Company's Service on the China Intermediate Line, involving a very serious loss, and the Company have, therefore, claimed compensation from the Russian Government for the damage thus sustained. It need scarcely be added that from the outset of the war between Russia and Japan, the Company have been very careful to avoid any infringement of neutrality, or the conveyance of munitions of war or contraband in any distinguishable shape. But the uncertainty as to whether ordinary mercantile shipments might not be treated as contraband by Russia and lay the ships open to seizure, determined the Directors to decline all shipments to Japan for the time being, a decision which has involved a very considerable sacrifice of legitimate freight."

## BAD COMPLEXIONS

Dry Thin and Fattening Hair and Red Rough Hands Prevented by

## CUTICURA SOAP

MILLIONS use CUTICURA SOAP, assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itchings, and chafings, in the form of baths for annoying irritations and inflammations, or too free or offensive perspiration, in the form of washes, for ulcerative weaknesses, and for many sanative, antiseptic, cleansing purposes which readily suggest themselves to women, especially mothers, and for all the purposes of the toilet, bath, and nursery. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA OINTMENT, the great skin cure, with the purest of cleansing ingredients and the most refreshing of flower odours. No other medicated soap is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in ONE SOAP at ONE PRICE, the best skin and complexion soap, and the best toilet and baby soap in the world.

## COMPLETE EXTERNAL AND INTERNAL TREATMENT FOR EVERY HUMOUR.

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales, and soften the thickened cuticle; CUTICURA OINTMENT, to instantly allay itching, inflammation, and irritation, and soothe and heal; and CUTICURA RESOLVENT PILLS, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure torturing, disfiguring humours, eczema, rashes, and irritations, with loss of hair, when all else fails. Sold throughout the world. Australian Depot: E. Towers & Co., Sydney. British Depot: 27 St. Christopher Sq., London. French Depot: 5 Rue de la Paix, Paris. POTTER DRUG AND CHEM. CO., Sole Props., Boston, U.S.A.

CUTICURA RESOLVENT PILLS (Chocolate Coated) are a new, tasteless, odourless, economical substitute for the celebrated Liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humour cures. Put up in screw-cap pocket vials, containing 30 doses. CUTICURA PILLS are effective, antiseptic, tonic, and digestive, and beyond question the purest, sweetest, most successful and economical blood and skin purifiers, humour cures, and tonic-digestives, yet compounded.

## WASTE SILK.

A fair demand, and considerable daily settlements. Here and there some concessions in price are obtainable, especially on the lower grades.

## HOLLOWAY'S

### OINTMENT

IS A HOUSEHOLD NECESSITY

It cures Rheumatism, Sciatica,

Stiff Joints,

Glandular Swellings,

Sore Throat, Quinsy, Mumps,

Burns, Piles, Fistulas, &c.

AND EVERY  
FORM OF SKIN DISEASE.

Manufactured only at 78, New Oxford St. (late 583, Oxford St.),  
London. Sold by all Chemists and Medicine Vendors.

### The Bovril Bottle

is familiar in the homes of Britishers the world over—in Great Britain itself Bovril is looked upon as the great national "stand-by" in case of failing strength. Bovril is the very embodiment of nourishment. It imparts strength in a most effective manner, and is, at the same time, extremely palatable.

"FAIS CE QUE VOIS: ADVIENNE QUE POURRA!"

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 28TH, 1905.

## BIRTH.

At No. 203-B Bluff, Yokohama, the wife of Mr. J. H. ROSENTHAL, of a Daughter.

## SUMMARY OF NEWS.

With this issue appears the Index for the *Japan Weekly Mail* for July-December, 1904.

COLONEL SAITO has been appointed Commander of a new brigade organized at Kumamoto.

THE Emperor of China has presented the Second Order of the Double Dragon with Star to Prince Fushimi.

MR. SON, Chinese minister to Seoul, who has been home on official business, arrived at Seoul on Jan. 23rd.

GENERAL PRINCE FUSHIMI and Admiral Prince Arisugawa have been appointed members of the Supreme Military Council.

SURGEON TANIGUCHI, Superintendent of garrison hospitals in Korea, arrived on Jan. 24th at Shimonoseki from the front.

ABOUT 300 Russians from Port Arthur will leave Nagasaki by the French mail steamer *Ernest Simons* on Jan. 31st for home.

THE members of the Lower House decided on Jan. 24th to donate yen 15 each to the *Juppei-bu*, which relieves soldiers and bluejackets at the front.

FIRE broke out on January 22nd at Todoroki,

Usutsuki district, Miyazaki prefecture, burning down some two hundred houses and injuring some persons. Details are not yet given.

A RUSSIAN detained at the Buddhist temple Chokenji, Matsuyama, escaped on Jan. 19th but was arrested the same evening.

A TELEGRAM from Mito reports that during a gale, a fishing boat capsized on Jan. 23rd off Isoura, the result being that 15 persons are missing.

DIPHTHERIA is still prevalent in Tokyo. On Jan. 22nd, six fresh cases were reported. Since the first appearance this month the patients have numbered fifty.

MR. NOMA, Japanese Consul at Hongkong reports that during the week ended Jan. 7th a fresh case of plague appeared there and an old patient died.

THE *Kokumin* reports that the Koreans in Hawaii have presented a petition to their Foreign Office to establish a consulate at Honolulu. Some six thousand signed the petition.

GENERAL HASEGAWA, Commander-in-Chief of the forces in Korea, has been decorated by the Emperor of Korea with the Grand Cordon of the Plum Blossom.

MRS. RICHARDSON, who is attending the Nippon Red Cross Society's hospital in Tokyo, will shortly remove to a military hospital in reserve in Hiroshima.

A MOJI correspondent of the *Kokumin* reports that the P. & O. steamer *Masagon*, of some 5,000 tons, has run on a rock off Fukura, Hikoshima. Details are not yet to hand.

THE funeral of Lieut.-Commander Shiraishi and twelve other naval officers who died at the third blockading operation took place on January 25th at Aoyama Cemetery.

DURING the period from March 13th to Jan. 18th, 2,338 orders of the Golden Kite were conferred on officers and men of the Army and Navy who had died at the front.

MAJOR-GENERAL MUTA, Commander at Maidzuru, has been ordered to command a detachment of artillery at the front. Colonel Osawa has been promoted Major-General.

THE crews of the steamers *Wilhelmina* and *Oakley* recently captured off Tsushima, were released on Jan. 23rd by the Saseho Court. They were removed to Nagasaki.

VICE-ADMIRAL MISU, commanding the 2nd squadron of the combined fleet under Admiral Togo, returned on Jan. 23rd from Hakodate. He will, it is said, take up a new post.

MARQUIS NAKAYAMA, Director of the Bureau of the Imperial Household's auditors, was appointed Superintendent of the Office of the Crown Prince's Affairs on Jan. 23rd, *vice* Mr. M. Saito.

THE *Nichi Nichi* believes that Vice-Admiral Shibayama, Commandant of Port Arthur, and Vice-Admiral Samejima, Commander of Saseho, will shortly be promoted full Admiral.

LIEUT.-GENERAL MURAI has been appointed Commander-in-Chief of the Tokyo defences. On Jan. 20th, he left Tokyo for Yokosuka, where he has established his head quarters.

THE Russians from Port Arthur who have already left Nagasaki for home are as follow: 159 military officers, 8 naval officers, 6 surgeons, 4 veterinary surgeons, 14 non-commissioned officers, 22 officials, 2 military musicians, 3

engineers, 5 priests, 2 interpreters, 1 student, 32 women, 23 children, 213 soldiers and bluejackets and 1 servant.

THE net profits of the Yokohama Electric Light Co. for the last half of 1904 was yen 58,001.06 and the interim dividend was yen 3.75 per share, the rate being 14 per cent per annum.

THE German-mail steamer *Bayera* arrived on the morning of January 24th at Nagasaki. She left there at 2 p.m. the same day taking 265 Russians from Port Arthur including some women and children.

LIEUT.-GENERAL TSUCHIYA, who was treated at Takamatsu for wounds sustained at Port Arthur, is reported by the *Yiji* to have entirely recovered. The general intends to return to the front at once.

It is reported by telegram from Taipeh, Formosa, that Rigyo Mountain erupted on Jan. 22nd and subsequently a severe shock of earthquake was felt. Cultivated land surrounding the scene was damaged.

APPEALS lodged in the High Prize Court, Tokyo, by the owner and shippers of the *Manchuria* captured by the *Tatsuta* on Feb. 9th, against a decision given in the Saseho Court, have been rejected.

CAPTAIN NAGATA AND LIEUTENANT YAMAGUCHI have been decorated with the Fifth Class of the Golden Kite, and sixteen bluejackets with the Seventh Class of the same Order. They died at Port Arthur when making an attack on the *Sevastopol*.

DURING the absence of General Baron Okazawa, Chief Aide-de-Camp to the Emperor, at the front (where he is ordered to make enquiries of the troops regarding their hardships in the cold season), Rear-Admiral Inouye has been ordered to fill the temporarily vacant position.

THREE Russian ladies, wives of officers from Port Arthur, who wish to stay in Japan, have applied to the military authorities, through the Governor of Nagasaki, to accompany their husbands in detention. On Jan. 23rd, permission was granted.

REAR-ADMIRAL KATO, Chief of Staff of the Second Squadron, has been appointed to the same position in the First Squadron. He is succeeded by Captain Fujii, Commander of the cruiser *Atsuma*. Captain Nakamura, Chief of Staff of the Third Squadron, was removed to the Torpedo Work Investigation Department as Superintendent, and his former place occupied by Captain Saito, an adjutant of the Naval Department.

OFFICIAL statistics show that the number of offences committed in Tokyo Fu during 1903 was 39,557. Of the total, forgery of coin reached 363; robbery, 186; theft from vessels, 1,119; theft from hotels, 640; theft from private dwellings etc., 5,871; fraud, 2,670; incendiarism, 146; and sundries, including those charged with having infringed various regulations, 2,555. The numbers of cases of theft and fraud are gradually increasing.

THE man Stojan, alias Tahaiya, who some time ago stole the famous picture of Our Lady of Kazan from the convent in which it was preserved, has been sentenced to 12 years' penal servitude. The picture, which Stojan burned after he had removed the jewels with which it was covered, had been an object of devotion throughout Russia for centuries. Konow, the accomplice of Stojan, has been sentenced to ten years' penal servitude. Three other accomplices have been sentenced to various terms of imprisonment.

## PORT ARTHUR.

Friday, January 20.

The Russian non-combatant population of Port Arthur seems to be rapidly leaving for Chefoo, and it is stated that some 5,000 Chinese labourers are to be sent away from the place. The reason for this latter step is not published.

In the *Asahi Shimbun* it is stated that the reports hitherto made show 18,556 men in hospital at Port Arthur, including 3,657 naval men. Our contemporary speaks of these as though they were all combatants, and says that the number will probably be increased. Assuming them all to belong to the two services, we have the following figures:—

Prisoners (including those subsequently released on parole).....	24,349
Sick and wounded.....	18,556

Total ..... 42,905  
His Russian Majesty's "handful of men" becomes a more and more remarkable quantity.

A staff officer, whose name we do not decipher clearly, is quoted as saying that the garrison abandoned all hope from the moment when they saw a Japanese officer standing on the summit of 203-metre hill. They knew then that the fate of the fortress was sealed, and having lived in the company of that knowledge for three weeks, they made no objection to the final capitulation.

Saturday, January 21.

It appears that the railway between Port Arthur and Dalny is not yet serviceable through a length of some 12 miles at the fortress end, so that a day is required to make the journey between the two places. Most of the brick buildings in Port Arthur are repairable. It is again repeated that many of the ships sunk in the harbour will probably be raised and made serviceable without great expense or much loss of time, but we may observe that Stoessel expressed a different opinion when questioned on the subject in Shanghai. Stoessel, however, spoke in avowed reliance on the destructive effects of the work done by the Navy. Should it prove that the sailors have carried out this last task in a perfunctory manner, the public will be furnished with a new weapon of attack against their incompetence. The dock is very little injured and can easily be made usable, but the entrance to the harbour will require considerable clearing. It continues to be partially obstructed by the Japanese blocking steamers, despite of all the pains taken by the Russians to blow them up, and this obstacle has been augmented by the sinking of Russian ships.

The *Asahi Shimbun* affirms that the investing army is still in its lines, as barrack arrangements for its accommodation can not easily be arranged. The men will probably move north without taking up their quarters in the town. They will leave a mixed brigade to garrison the place, the components of the brigade being selected from the various units of the army. Such is the *Hochi's* version. The general impression had been that the garrison would consist of territorial troops sent direct from Japan.

Sunday, January 22.

Later news shows that the railway from Dalny to Port Arthur has been completely repaired and is now open to traffic throughout its entire length.

The Russian officers who were in Port Arthur are said to have expressed the opinion that had their troops been the investing army it would not have been possible

to preserve such admirable order as the Japanese preserved at the time of capitulation. That is probably more than true. We have not heard of a single outrage or a solitary excess committed by the Japanese. Indeed, the whole story of the capitulation constitutes a unique page of history from the point of view of the besiegers.

The Captain of the *Sevastopol* is represented as saying that the attack on the 8th of February took them by surprise. They had not expected such an incident so soon after the rupture of diplomatic negotiations. As to the ships being outside the harbour, that was natural, as the port was too small for such a force. The fact was that had Japanese torpedo-craft entered the harbour while all the Russian vessels were crowded together there, terrible damage might have ensued. Still they were not prepared for such a sudden attack, and their own destroyers, posted in the offing, acted the part of mere onlookers. Speaking of the Japanese blocking expeditions, he said that each had been more skillful than the preceding and that the third had very nearly effected its purpose. Still the Russian ships could get out, especially if towed, and it had been possible subsequently to blow away most of the obstruction. The Japanese war-ships enjoyed the great advantage of being within easy reach of repairs, whereas the Russian, once crippled, were almost without hope. The sortie of August had injured every vessel. There were degrees of heavy and light hurts, but all had suffered more or less, and it had become quite evident that every idea of offensive success must be abandoned. It was then that sand-bags were piled on the decks of the vessels and the defensive definitively adopted. After the fall of 203-metre hill, however, nothing could save the ships. The *Sevastopol* had succeeded in getting out so as to be under the shelter of Tiger's Tail, but she did not entertain the least expectation of escaping altogether. After the attack by the Japanese torpedo-boats and the capitulation, there had been nothing for it except to take the ship further out and sink her. She had not been blown up and was therefore not greatly injured, probably, but as she had capsized and was in deep water, there could not be much hope of raising her. He believed that none of the vessels in the harbour would prove repairable. They had all been blown up. The Russians had not been so silly as to abandon such a prey to their enemies. From August nearly all the crews of the ships had been landed as had also most of the guns, beginning with the secondary armaments. The *Sevastopol*, when she steamed out to the shelter of Tiger's Tail, had a crew of only 100 men, and her armament consisted of only 3 guns. In fact from August there had not been the smallest idea of fighting the Japanese fleet. Captain Essen concluded by denying the rumour that bad relations existed between the army and the navy. In the presence of a national crisis the two services were not likely to make such a suicidal mistake.

The Captain of the *Pobieda* is reported to have declared that the war has only just begun. The fall of Port Arthur may be considered as a mere opening incident. Many years of fighting are still in view. This gentleman seems to be thoroughly imbued with the spirit of Russian bluff.

A private now serving with General Nogi's army, writing under date of January 9th, says:—"On the 3rd instant I entered the old town of Port Arthur, in company with one of the committees appointed to take

over the forts and their appurtenances, we being the first of the investing army to set foot within the fortress. We had for ultimate destination the Russian barracks in this quarter and when still a long distance—probably 3¼ miles—from it, we passed a formidable array of wire entanglements (partly connected with electricity-generating apparatus) which had been laid across a narrow path between two high forts. These entanglements covered the approach to the strongest gate I have ever seen in my life. At the gate we met the officers forming the Russian committee. They all came in carriages. After some discussion we proceeded towards the barracks and their attached stables, passing en route three fortifications like the first. On the roadside were many Russian soldiers, all more or less drunk, who saluted effusively and insisted on shaking hands with every one of us that was on foot. Reaching the barracks we were astonished at the solidity of their construction, but we found that all the windows had been broken by the concussion of exploding shells. Inside the barracks crowds of men, many of them tipsy, were dancing to the strains of a fine band. Some would come to us and offer sugar in exchange for tobacco which seemed to be in great request. We were astonished to find so many fighting men in the garrison, and we were equally astonished that they had surrendered, for if these terrible forts had been defended resolutely by such a force, their capture must have cost us something like the whole of our four divisions. Going on to the new city we found that nearly every one had been living under ground there. The houses and streets were covered with marks of shells, and the dead war-ships presented a pitiable spectacle as they lay aground."

Monday, January 23.

From the official account of the Third Blocking Operation, which we publish elsewhere, it will be observed that only 17 men survived out of the crews of four of the blocking steamers. This account was not previously obtainable, because all the survivors had fallen into Russian hands. But now that they have been rescued from confinement in Port Arthur the facts have been ascertained. There were in all 8 steamers engaged in this expedition. From four of them some members of the crews were saved and the exact fate of the vessels could consequently be ascertained, but nothing certain was discovered as to the crews of the remaining four. The final figures, as now corrected by adding the 16 prisoners rescued at Port Arthur, are that 80 were saved out of a total of 154. In other words, 74 perished and 80 escaped, which means that one man out of every two approximately, was lost. In two of the steamers, the *Sakura Maru* and the *Asagao Maru*, not a single man escaped out of a total of 38. In two others, the *Otani Maru* and the *Sagami Maru*, 16 escaped out of 40. If we consider these last four steamers alone, the saved were 16 and the lost 62. This gallant enterprise attracted much attention at the time and caused no little excitement. But there was always a hope that out of the 80 men reported missing one-half at least might be ultimately found to have escaped into the harbour. That hope has now to be abandoned. The Russians seem to have treated the few survivors with all kindness. They honoured these brave men.

We read in Tokyo journals that after the battle of Nanshan the Russians retreating,

left the railway intact as far as Changliutsz. Thus it remained until the capitulation, when the Japanese took it in hand, and relaid the injured portion, changing all the sleepers and putting down new rails. The work was completed in less than two weeks, and the whole length of 27 miles from Dalny to Port Arthur was opened to traffic on the 15th instant.

At the Shinto service performed in reference to the spirits of the dead who fell in their country's cause at Port Arthur, the task of speaking the invocation (*saimon*) was of course performed by General Nogi. He read a document of which the following is a translation:—

This day, the fourteenth of the first month of the thirty-eighth year of *Meiji*, I, Nogi Kiten, commander of the Third Army, with these my comrades, observing due ceremony, offer reverence to you, Spirits of officers and soldiers of the Third Army, who have died for your country.

More than two hundred and ten days have passed since the Army landed on the Kwantung Peninsula, and throughout all that time you bravely and stoutly fought. You gave your lives to the points of the enemy's weapons. Many a one of you perished amid raging waves and buffeting storms. But your valiant deeds were not in vain. If we have seen the enemy's war-ships completely destroyed in the harbours of Port Arthur; if we have seen his fortresses fall, it has been in truth through the might you left behind you. We, your comrades, who should have shared your fate, are the recipients of a most gracious message from His Majesty the Commander-in-Chief. But is there one of us who, looking back and remembering what we owe to you, our dead, can bear to accept this honour? Ah! How shall we that remain venture to share such an honour with you that have passed beyond? Here, entering Port Arthur, we stand on places overlooking the hills, the rivers, the fortifications that your loyal blood has dyed. Noble Spirits, with due rites of purification and offering, we invoke your presence. Come among us, we pray you, and receive our reverence.

It has been agreed that three Russian naval officers on the retired list who were taken prisoners at the time of the seizure of the *Ekaterinoslav*, shall be exchanged for three Japanese naval officers captured by the Russians when the *Kinshu Maru* was sunk.

#### RUSSIAN PRISONERS.

Friday, January 20.

Evidence of the strained relations between the two services at Port Arthur are still adduced. Major-General Ihann, who has abandoned his intention of returning home on parole, declares that the blame for his country's disasters must be attributed solely to the extreme incompetence of the Navy. Vice-Admiral Gregorovitch alleges that the inferiority of the Russian squadrons to the Japanese was well known from the outset, and that the military men who pushed the country into war despite this acknowledged weakness are the authors of all the catastrophes. It was Bezobrazoff that deceived the Tsar by misrepresenting the condition of the navy.

The *Asahi* has a singular paragraph alleging that among the Russian women now staying at the Japan Hotel in Nagasaki, there are several who fought during the siege in male dress. Some women lost their lives in this way, says our contemporary. That is a little incredible.

Sunday, January 22.

General Stoessel, during the stay of the *Australien* at Woosung, remained on board the vessel, landing only once for the purpose of luncheon with General Dessino. A correspondent of the *Jiji Shimpo* learns from an officer present at the time that the Russians were loud and unanimous in their praise of the humane and courteous conduct of the Japanese, and in their applause of the latter's bravery. There appeared to be much re-

pugnance to fighting against such a nation. Major-General Reis described how Major-General Ijichi had asked him about the money remaining in the exchequer at Port Arthur at the time of capitulation, and how he had replied that there was only 130 roubles. Ijichi inquired what then had become of the three million roubles paid into the treasury some time previously, and Reis explained that it had all gone into the pockets of the Chinese. Ijichi further asked about the regimental colours, none of which were found in the fortress, but did not press the inquiry, and subsequently told Reis that according to a telegram just received from Tokyo, the Japanese now knew that these colours had been sent to Chefoo in the fugitive destroyers.

As to the money here mentioned, there can not be much doubt that it was distributed among the officers and soldiers of the garrison at the time of the capitulation, for those that have been carried prisoners to Japan are observed to be in possession of considerable sums.

At the same luncheon it was stated that the ships' guns had been landed in August, presumably after the last unsuccessful sortie of the Squadron, and that they had enabled the fortress to hold out for two months longer than would otherwise have been possible.

It is telegraphed from Shanghai that since the visit of General and Mrs. Stoessel to that place, the pro-Russian organs, namely, the French journal, the German journal and one turn-coat English journal, have greatly changed their tone toward the Japanese.

Monday, January 23.

The Russian community of Shanghai gave General and Mrs. Stoessel a great welcome. Stoessel did not land except for a few hours. His country-men had to visit him on board the steamer. They presented to the General a silver gun with the inscription, "To the heroic defender of Port Arthur," and to Mrs. Stoessel a set of gold napkin rings bearing the word "Heroine." Mrs. Stoessel spoke in the highest terms of the courtesy of the Japanese and the good order and discipline of their troops. She seems to have been specially struck by the feeling which dictated a conspicuously graceful act not hitherto mentioned, namely, that the Japanese flag was not hoisted over Port Arthur until General Stoessel had embarked at Dalny. She added that there had not been a single act on the part of the Japanese calculated to humiliate the Russians, and that their soldiers had in no single instance shown the least disposition to loot or behave with any kind of licence. They had conducted themselves like true warriors and good men of business. The General spoke again of the Japanese eleven-inch guns, which he seems to regard as his most formidable enemies. He declared also that though the fortress might have held out for a few days longer, nothing could possibly have been gained by continuing a hopeless resistance. His forces had been reduced so that he could not keep more than five thousand men in the fighting line which extended to a length of 16 miles.

This last statement is precisely what was pointed out by us two or three times. Men must have rest. They can not be kept forever on duty. A garrison of 24,000 men means that if 6,000 are kept on duty always, the men have 3 nights in bed out of 4. That is about as great fatigue as troops can bear, and even that could not be maintained for any great length of time. It is probably owing to the confusion between men actual-

ly on duty and men available for duty that talk was heard about the garrison being reduced to five or six thousand. Of course the calculation cuts both ways. It applies even more fully to the attack than to the defence, for the fatigue of the former is aggravated by the work of digging saps and parallels.

General Nogi's letter to the Governor of Nagasaki prior to the arrival of General Stoessel and the other Russian officers at that port, should be placed on record. The following is a translation of it:—

SIR,—It has been arranged to send round by your port the Russian military men and officials who are returning to their country on parole. I do not doubt that you have received some official communication as to their treatment, but I desire to state my own views for your information. It need hardly be said that persons released on parole are not prisoners, neither are they enemies. They are merely foreigners who have performed loyal service in their country's cause. So long as combat continued due vigilance had of course to be exercised, but I trust that the officials and the people of my country will not now regard these men as prisoners. Moreover, at the time of the capitulation conference, His Majesty the Commander-in-Chief, mindful of the valour shown by General Stoessel, directed that he should receive honourable treatment. I may further mention that after the capitulation when the forts and their armaments had to be handed over, General Stoessel and his officers behaved with the strictest and most scrupulous honour, thus greatly facilitating matters for our Army. For all these reasons it appears to me proper that you should go a step further, and show the fullest courtesy in your treatment of the Russians. It is a very signal distinction for Japan to have formally received the capitulation of a great Russian fortress, and I think that we can best complete this distinction by exercising the virtue of humanity. This is the sentiment in accordance with which I am regulating the army's treatment of the Russians, and it is my earnest wish that when they reach your port the same principle should inform your acts.

Tuesday, January 24.

We can not tell exactly how much credence should be attached to accounts published by the *Hochi Shimbun* of interviews with Russian officers. The details thus elicited are very interesting, however. Lieut. Marchenko, an aide-de-camp, who is represented as being versed in international law, says that the Lieutenant's original idea was that the men be allowed to march out with arms in hand and colours flying, after having removed all the war material and blown up the casemates in the forts. General Stoessel, however, would not listen to anything so drastic. He said that he had no idea of re-conquering Port Arthur, and that if the garrison were allowed to march out with all the honours he would be content. General Ries was entrusted with the duty of conveying this proposal to Nogi. But the latter declined it *in toto*. When Ries returned to the fortress, Lieutenant Marchenko says that evidently the question of terms had ceased to be considered. Officers and men had left their posts. Some were packing up their valuables, others were drinking champagne, and all showed that they regarded capitulation as inevitable. Presently some 40 officers of the army and navy assembled to hear the report. General Nogi's refusal was announced to them by Major-General Ries, and they were asked whether they were still in the mood to surrender or whether they would fight again. For a moment there was silence, and then a general officer—Fock or Smirnoff—spoke. It was useless now, he said, to talk of terms. Whatever happened they were disgraced, but having once sent a messenger to discuss surrender, and the fact having become known to the whole garrison, they must simply take what they could get, not what they wanted. General Stoessel was not present at this conference. The next

day the Russian delegates again waited on General Nogi, and asked to be treated as were the garrisons of Metz and Plevna. Still Nogi declined, and the deputies, declaring that in that case there would be no surrender, took their departure. Three hours later Major Yamaoka arrived on behalf of General Nogi to say that the officers would be allowed to retain their swords.

Major-General Ries also is quoted by the same journal. He confirms the statement that Nogi refused all terms. Ries feared that when this intelligence was conveyed to Stoessel the latter would be much concerned. But Stoessel received the news quite calmly. "Just so, just so," he said. Asked whether Nogi's refusal did not enrage him, he merely smiled, and directed Ries to issue orders to all the commanding officers in the sense that full inventories of everything must be prepared and handed in that evening. That day at 3 o'clock Stoessel mounted his horse and, attended by his staff, rode round the forts. He shook hands with all the officers, told them they had well performed their duty, praised their courage and endurance, and declared that the whole responsibility for the surrender would rest on his shoulders.

The number of prisoners that will actually remain in Japan—apart from the sick and wounded who are still at Port Arthur—is said to be 20,053, including 355 officers. Evidently the greater part of the officers have given their parole, and each has taken back with him one private. The distribution of these prisoners is to be as follows:—

At Dairi .....	1,618
At Osaka .....	15,349
At Fukuoka .....	999
At Nagoya .....	524 (including 12 officers.)
At Fukujiyama .....	402
At Matsuyama .....	1,161 (including 343 officers.)

Three of the officers at Matsuyama refused to give up their swords and broke them across their knees, using intemperate language to the Japanese. These men were placed in confinement. A corporal also seems to have behaved with violence when arrested by the police for going out of bounds, and three privates attempted to escape. The corporal was wounded slightly by the police in the struggle.

Wednesday, January 25.

Each day the record of Russian prisoners coming to Japan from Port Arthur increases. To-day it is 355 officers and 21,348 rank and file.

The *Kokumin* says that the Japanese, especially the cavalry, became aware that a force of the enemy's cavalry some 3,000 strong was approaching. The natural course would have been for the Japanese to retreat with all possible speed, the object of their reconnaissance having been accomplished. But it was too late for any such step, as the cavalry must speedily have overtaken them. Nothing remained, therefore, except to choose the best possible position and make a resolute stand, meanwhile sending intelligence to the rear. A place highly favourable as to defensive capabilities was selected, and at 4.30 p.m. on the 10th the two forces came into collision. The Russians, seeing themselves confronted by only a handful of men, rode forward boldly, but the first volley of the Japanese brought down 3 officers and over 60 troopers. They therefore dismounted and continued the attack on foot. Being enormously outnumbered the small Japanese force saw that their only chance was to obtain possession of a solidly constructed building on an

recriminations. But it certainly is unexpected to find that General Smirnov condemns General Stoessel, and ridicules the idea of calling Mrs. Stoessel a heroine. Smirnov alleges that Stoessel decided upon surrender without consulting the other senior officers, except General Reis, and that his sole reason was to avert the catastrophe that might have resulted from a final capture by storm. Such, at all events, is the view said to have been expressed by General Smirnov to a representative of the *Nichi Nichi Shinbun* who waited upon him in the temple at Nagoya, and apparently the other Russian officers endorsed this version. Real-Admiral Wren, interviewed by a member of the *Kokumin's* staff, made virtually identical statements, but, as we have said, this is not so unexpected as are the allegations attributed to Smirnov. Concerning Mrs. Stoessel, the officers interviewed are understood to have said that she by no means deserved the panegyrics bestowed upon her.

There arrived at Chefoo on the 23rd instant 1,875 Russian fugitives, who had crossed from the fortress in six junks. Among them are said to be some combatants who escaped in disguise. That is very likely, we should think.

All the Russian Staff officers are to be confined at Nagoya. The temple Hongwanji has been allotted for their accommodation, and those that know the place will understand how comfortably and commodiously these officers will be lodged. The senior among them is General Fock. There are besides two Lt.-Generals, three Major-Generals and a Rear-Admiral.

Friday, January 27.

Some of the Russian officers at Matsuyama have shown a foolish disposition in the matter of giving up their swords. They appear to have imagined that the terms of capitulation entitled them to retain their swords and pistols during all the time of their detention in Japan. The great majority of them were not troubled by any unreason of the kind, but at each of the temples where they were lodged one or two rebellious spirits were found. At Miyosai-ji, for example, a lieutenant and an ensign behaved in a most insulting and childish manner. They declared that the demand for their swords had its origin in the poverty of the Japanese, who wanted these weapons for the purpose of carrying on the war. The Russian, especially as he had the Red-Cross on his arm, they left him, only to see to their horror that the Russians seized him and threw him into the flames, where he perished miserably. They did the same to a wounded private who, however, was happily insensible. Apparently only 28 men of all ranks escaped from this gallant company of about 100. They seem, however, to have killed or wounded a greater number of the enemy than their own force totalled, and they may claim the credit of having fought an enormously superior force over six hours.

Wednesday, January 25.

We read in Tokyo journals that three thousand of Mischenko's cavalry were for a time in a very perilous position. They could not succeed in recrossing the Liao and joining the army. In fact they were cut off by the Japanese and although the ice on the Liao was strong enough to bear them, it was in such a hummocky condition that horses could not pass. A division of Russian infantry with artillery made a fierce attack on

## THE SHAHO.

Saturday, January 21.

An officer of the Guards, who has just returned to Moji, says that anything like a battle on a large scale is out of the question for the present in the Shaho region. The cold is altogether too intense. Recently there was an affair of outposts lasting only three hours, yet several soldiers were frost-bitten. Until the great cold ceases, in some measure, fighting can not be contemplated. This becomes the more evident when we remember that the next battle is not unlikely to resemble the last in respect of duration; in other words, it will be an affair of days and nights, and the troops engaged must be prepared to spend long hours in the open after sunset. That would be far more fatal than even a succession of 203-metre hills.

This same officer explains that the main concentration of the Russians is in the immediate neighbourhood of Mukden. They have made good their Shaho losses and their numbers are now increasing. Their force confronting the Japanese right was comparatively small for a time, but has been augmented. At Fushun, where they have coal mines of vital importance, their dispositions for defence are very thorough, and they have constructed a railway for conveying the fuel to various points of the position. There was an idea at first that so soon as the fortifications at Tieling were completed Kuropatkin would withdraw his army thither, but such a movement seems very improbable. He will not withdraw unless he is compelled to do so.

Mischenko's cavalry are said to be still on the west bank of the Liao. According to Japanese intelligence there is no other marked change in the situation, but St. Petersburg, as London telegrams to the *Fiji* state, believes that Kuropatkin has assumed the offensive. The programme attributed to the Russian Commander is to employ his cavalry in the plains of the Liao; to support them by means of Gripenburg's army, thus threatening to roll back the Japanese left; to attack on the right with the army under Kaulbars, and to direct the forces of Linevitch against the Japanese communications with Liaoyang. The last feature of the strategical scheme is not quite intelligible, but the general fact that Kuropatkin has assumed the offensive stands out clearly enough. We strongly suspect, as to the Hunghutz, as to the Hunghutz, it is an established fact that the Russians themselves have used them for their own purposes and there is not a tittle of clear testimony that the Japanese have done anything of the kind, certainly not with Chinese official collusion. The Hunghutz have always been able to defy Chinese authority and they were able to defy Russian Authority when the Russians administered Manchuria. Therefore to lay upon China's shoulders the responsibility for any increased activity they may have shown in districts where the presence of Russian armies makes its impossible for Chinese troops to move freely is so unjust as to be almost frivolous. As to the second charge, that relating to Japanese officers in China's employ, it might have validity were the case reversed; that is to say, were Chinese officers in Japanese employ. But it is precisely because China is neutral and has no part in the war that she is entitled to engage the services of any officers she pleases. Then with regard to the naval base at the Miao Islands, the first question is, does

eastward, directing his blows at the Korean frontier rather than at the Kwantung Peninsula. But it has long appeared to us, and indeed we have often stated, that such extensions and distributions as are now reported to be taking place, might have been anticipated from the moment when Russia decided to place in the field three armies, which, although coordinated under one leader for general purposes, would move in a large measure independently within their respective fields of operation. Russia has now three objectives. It is true that Port Arthur and Dalny have passed into Japanese hands, as has also Yingkow. But it is equally true that unless these places be recovered, Manchuria becomes a wholly worthless possession. Here then we have two lines of action clearly indicated. The third line is Korea. For reasons too obvious to need explanation, the advantage of carrying the struggle into Korea would be enormous. These are the broad indications afforded by the situation, and consequently what we anticipate is that Gripenberg will operate towards Yingkow, Kuropatkin towards Liaoyang and Kaulbars toward Korea. Possibly the positions of Kaulbars and Gripenberg may be exchanged, but that does not affect the general plan. And another point concerning which no reasonable doubt seems to offer, is that the southward movement of the Russian right army, whether led by Kaulbars or by Gripenberg, will be largely if not wholly through the territories westward of the Liao. To this army will be attached the main bulk of the Russian cavalry, since the flat lands of the Liao Valley offer good opportunities for utilizing it.

A telegram from Takou says that up to the 20th instant there had been no change in the situation on the Shaho. The enemy's industry in connexion with defensive works seemed to have abated somewhat. Every second day the Russians send up a balloon. They did so at noon on the 20th, and the Japanese opened fire on a force about a battalion strong which was observed to have assembled at the place of the balloon's ascent, namely Hwangshan. The enemy dispersed, a part—apparently the staff—moving towards Kaukiatun. Two prisoners who came in and gave themselves up on the 18th instant, are reported to have said that a great number of the Russian soldiers are anxious to surrender.

A despatch to the *Asahi* from the front says that the Russian forces have increased in number, but that a full supply of winter clothing has not yet been received, and many of the men are still in summer costume. The consequence is that numerous cases of sickness from exposure occur. Slight cases are treated at Mukden or Tieling, the serious ones being sent to Harbin. Food is insufficient, and strenuous exertions are made to obtain supplies of cattle from Kirin and Hsinmintun. Many of the men wounded in the battle of the Shaho have recovered and rejoined the ranks. In the new lines—presumably the lines recently reported to have been extended along the right bank of the Hun—the troops under the orders of Kaulbars are being posted, and works of defence are under construction in their rear. In these works some 200 guns appear to have been mounted.

The Empress Dowager of China is reported to have sent a sum of 300,000 taels for the relief of the sufferers in Manchuria, and to have urged General Tseng to spare no effort in their behalf.

Tuesday, January 24.

A telegram to the *Asahi* says that the Russians have made Hsinmintun a central point of concentration, and have established a commissariat station for the troops in this part of the field at Sankiatz (?) which is said to be some 40 li (13 miles) west of Hsinmintun. If this be true it is evident that Russia has thrown to the wind all scruples about Chinese neutrality. The meaning of her circular was simply an announcement that she intended thenceforth to pay no attention to such matters.

The *Hochi Shinbun* has news to the effect that the hour for a big fight on the Shaho seems to be very near. The Russians are concentrating their strength on the right. Apparently, then, they intend to attempt a turning movement down the west of the Liao Valley.

News has reached Peking that the Governor of Mukden has been arrested and put into confinement by the Russians.

Wednesday, January 25.

News continues to arrive that the Russians are steadily strengthening both their flanks in the Shaho region. They are said to have now massed from thirty to forty thousand men in the Hsinmintun vicinity and also to have considerably added to their Fushun forces. Meanwhile deserters continue to come to the Japanese lines.

These reports probably indicate, as we have already pointed out, that the Russians are carrying out the three-army scheme of re-organization decided on in St. Petersburg after last October's battle. Gripenburg is to advance from Fushun, Kaulbars from the Hsinmintun, direction and Kuropatkin himself will direct the movements in the centre. It must be assumed that the Japanese have made all due dispositions to meet this strategy.

One of the Russians who has come over represents himself as a Jew and alleges that with the exception of the pure Russians, all the men in Kuropatkin's army are heartily tired of the campaign. Bad food and general hardships have worn them out. In his own company there are 25 Jews and 30 Poles all of whom would surrender at once could they find any opportunity of doing so. But when a man leaves the lines he runs a double risk, the risk first of being shot by his own people and then of falling under a Japanese bullet. This man confirms the rumour recently circulated that when the Russians received their winter overcoats, they were deprived of their tunics. Consequently they are suffering much from cold.

Thursday, January 26.

Mr. Morimoto, a member of the House of Representatives, who was one of the party recently transported by the *Manshu Maru* to the scene of operations, relates that when he was visiting the left wing of the Japanese Army in the Shaho Valley, the enemy's fire was for a time incessant. The Japanese officers remarked that although Kuropatkin was undoubtedly a famous general, the waste of ammunition taking place in his army would be historical. They also said that it was difficult to induce wounded Japanese soldiers to go into hospital. They persisted in attending to their duties, conduct which, though very brave, could not be always called judicious. Mr. Morimoto gathered that the Russian defences in the valleys of the Hun and the Shaho are very complete and that there is little expectation of a general engagement for some time. That is also what our own information tends to

show. To attack the Russian positions would be like assaulting semi-permanent fortifications, and the same is true of the Japanese positions from the enemy's point of view. It is upon the Russians, however, that the onus of assault falls. They have been driven out of the only parts of Manchuria that give value to the possession of the Three Provinces, and unless they can recover the sea-board they may lay down their arms.

Friday, January 27.

Again there comes news from the Shaho that the Russians are extending their front eastward. They appear to think that their centre is sufficiently fortified to justify the withdrawal of some of its defenders, and they are utilizing their reinforcements to widen their front. A place called Chiung-tai is now referred to as the present limit of their eastern extension. Meanwhile General Kaulbars is reported to have arrived at Tashan, and to have held a council of war with Kuropatkin. Everything tends to indicate that the great engagement which may be expected to take place in the early spring, will be fought over a very wide range of country. Tashan, where Kuropatkin has his head quarters, is opposite Kuroki's position, and this strengthening of the Russian left would seem to show that the plan of the next engagement will follow broadly the lines of the Shaho battle, namely, an advance in the centre and a powerful turning movement on the left. A Japanese military expert quoted by the *Jiji* is of opinion that the Russian General is now under heavy pressure from home, where the need of some signal success in the field is keenly felt. Nothing, in fact, but such a success can save the domestic situation in Russia, and St. Petersburg is probably urging Kuropatkin to strike at the very earliest opportunity. Of course the massing of his cavalry on the right of his line does not by any means prove that a turning movement on the left may not be the main feature of Kuropatkin's intended strategy, for the nature of the country on his left offers very little opportunity for using cavalry whereas the broad plains of the Liao Valley are excellently suited for that purpose. But although a turning movement on the east may be in chief contemplation, it certainly looks very much as though Kaulbars is intended to lead an army down the west bank of the Liao for the purpose of attacking Yinkow and striking at the Japanese communications on that side. It would be a highly hazardous adventure unless the Russians can be quite sure of holding their Mukden position against all attacks.

#### NAVAL FUNERAL IN TOKYO.

On the afternoon of the 25th instant a funeral service was performed in Tokyo to the memory of 13 officers of the Navy, 12 of whom met their death on the occasion of the Third Blocking Expedition at Port Arthur, and 1 was killed in the torpedo-boat attack on the *Sevastopol*. Vice-Admiral Matsunaga read the invocation. It spoke in warm terms of the valour and loyalty of the deceased; said that through their exertions the Russian fleet had been destroyed, and declared that the force of their valiant example would go down from generation to generation. The service was performed at the Suikoshia, and the cortège moved thence to the Aoyama Cemetery.

be borrowed by Korea from Japan has been fixed, it is not 10 millions, as hitherto stated, neither is the money to be handed over in specie: it will, on the contrary, be paper, one idea being to get Japanese notes into general circulation.

The Minister of Finance resigned on the 19th instant immediately after the promulgation of the new Coinage Law. He has been succeeded by Mr. Cho Pyongho. But a later telegram says that Cho has declined the honour and that Min Yonghwi has resumed his duties.

Mr. Maruyama, a Japanese Inspector of Police, has been appointed adviser to the Korean Police Department. We read in the *Nichi Nichi Shimbun*, in connexion with this appointment, that Mr. Maruyama will be concerned chiefly with the police business of the Central Government, and that further a Japanese adviser will be placed in each of the localities: namely, in each of the 13 administrative districts. Attached to each inspector will be two or three Japanese assistants, so that altogether some forty Japanese subjects will be connected with the police work of the empire.

Sunday, January 22.

With regard to the Japanese loan to Korea, the *Asahi* says that the amount will be 5 millions and that about 2 millions of the total will serve as a reserve to cover the nickel currency.

It is stated that steps have been taken to actually commence the line from Yuesan to Seoul, a distance of over 140 miles. There are said to be one or two engineering difficulties near the centre of the route, but on the whole the work will be much easier than that on the Seoul-Fusan road.

Four wounded Japanese officers and 15 rank and file reached Pyongyang on the 19th instant from the Hanchang region, and were immediately sent on to Japan.

Another skirmish is reported from this district. On the forenoon of the 20th a force of the enemy consisting of 100 Cossacks with two guns attacked Pautszyen but were repulsed.

Thursday, January 26.

General Hasegawa has issued a proclamation interdicting all sales of real property in Hamyong-do within the limits where martial law is in force.

Mr. Maruyama is to be engaged by the Korean Government for the purpose of re-organizing the police of the empire. Japanese journals give the gist of the agreement which now awaits signature. It is simply that he is to prepare draft regulations embodying all the reforms which seem essential in his sight, and that he is to have the right of direct representation to the Throne.

From an official report published in Tokyo on the 24th instant it appears that on the 23rd the Japanese took Weitszku, which was held by about a company of Russian cavalry. There was also a sharp skirmish on the same day near Changching, a place which is not marked upon any map, but is known to be in the Hanchang district. In this latter fight the Russians lost 20 killed and wounded and 5 were taken prisoners. Weitszku is a place of some importance, being the point where the main road to Fushun meets the Hanchang road.

Mr. Massingham in the *Speaker* tells a story of Lord Salisbury: "Some time after the outbreak of the South African war a distinguished man asked him how long it would take to get rid of its effects on English policy and finance. 'Thirty years,' said Lord Salisbury coolly."

### THE RECORD OF MERCHANT STEAMERS SUNK AND CAPTURED.

A very interesting question is that of the merchant vessels sunk or captured by the Japanese and the Russians respectively since the war broke out. As yet no accurate list showing tonnage and nature of cargo has been published, and in the case of some of the vessels protests, still *sub judice*, have been lodged against confiscation. So far as is known, however, the vessels taken by the Japanese are these:—

Name of Ship (S.S.)	Nationality.	Date of Capture.
Rossia .....	Russian .....	7th February, 1904
Mukden .....	do .....	6th do
Argun .....	do .....	7th do
Nicholai .....	do .....	10th do
Michael .....	do .....	10th do
Alexander .....	do .....	10th do
Manjuria .....	do .....	17th do
Rosnick .....	do .....	10th do
Ekatrineslav .....	do .....	6th do
Junidea .....	do .....	17th do
Manjuria (second of this name)	do .....	9th do
Kotik .....	do .....	10th do
Talia .....	do .....	13th April, 1904
George .....	French .....	19th August, do
Fukping .....	German .....	12th October, do
Veteran .....	British .....	December, do
Nigeria .....	do .....	do
King Arthur .....	do .....	do
Rosalie .....	do .....	11th January, 1905
Redington .....	do .....	12th do
Wilhelmina .....	Dutch .....	16th do
Bawtry .....	British .....	17th do
Oakley .....	do .....	18th do

There are here 23 steamers, the great majority of them fine vessels. No merchant steamer flying the Russian flag, nor any merchant vessel of non-Russian nationality carrying contraband of war has been sunk by the Japanese.

In addition to the above, two sailing vessels were captured in February last, namely, the *Nadegita* and the *Bobrick*.

The ships that have been captured and released upon examination are these:—

Name of Steamer.	Nationality.	Date of Seizure.
Helms .....	Norwegian ..	9th Feb. 1904
Otsuy .....	do .....	7th June do
Hsiping .....	British .....	14th July do
Peking .....	Chinese .....	17th do do
Hsishan .....	British .....	7th Oct. do.

If we now tabulate the Japanese vessels sunk by Russian warships the following is the result:—

Ship.	Gross Tonnage.	Date.	Owner.
Nagano-wa Maru .....	1,084	11th Feb.	Not recorded (private owner.)
Hanyei Maru .....	75	26th March.	Asahi's despatch boat.
Goyo Maru .....	600	25th April.	Hori Kwaio-ten.
Kusku Maru .....	3,853	26th April.	Nippon Yusen Kaisha.
Haginouta Maru .....	very small	26th April.	Hori Kwaio-ten.
Hitachi Maru .....	6,175	15th June.	Nippon Yusen Kaisha.
Izumi Maru .....	3,229	15th June.	Nippon Yusen Kaisha.
Seisho Maru .....	150	30th June.	Not recorded (private.)
Takashima Maru .....	318	...	Tokyo-wan Kisen Kaisha.

It will be observed that among the above 9 steamers no less than 6 were privately owned, only 3—marked Nippon Yusen Kaisha—being public vessels, that is to say chartered by the Government for the service of the State. Moreover 5 were vessels of altogether insignificant dimensions. In addition to the above 4 small sailing ships of Japanese build, were sent to the bottom. Not so much as one vessel was captured by the Russians; they resorted solely to sinking.

In this context note must be taken of the steamers sunk by the Japanese themselves

for the purpose of blocking Port Arthur. There were 17 of these steamers with a total tonnage of 35,208 tons.

An interesting point which belongs to this subject is the question whether the Japanese mercantile marine has diminished or increased during the war. If we omit from the last table the three little steamers *Hanyei Maru*, *Seisho Maru* and *Takashima Maru*, whose aggregate tonnage was only 543 tons, it appears that Japan had 6 steamers sunk by the Russians, that they themselves sunk 17 at Port Arthur and that 6 were lost during the year 1904 owing to ordinary disasters of the sea. These 29 steamers aggregated 67,730 tons. On the other hand the number of steamers purchased abroad in the same period was 53 and the number built in Japan was 5, the total tonnage of the 58 being 144,258 tons. Hence the net result is that the number of the steam mercantile marine increased by 29 ships and the tonnage by 76,528 tons. Adding the 23 steamers captured, we find that the increase in ships has been 52.

### THE THIRD BLOCKING EXPEDITION.

[Report from Admiral Togo dated 21st January.

Received by the Naval Department.]

The following are the main facts reported with regard to the circumstances of the Third Blocking Expedition by survivors of the crews of the blocking steamers *Otaru Maru* and *Sagami Maru* who, having become prisoners of the enemy in the sequel of the Expedition, were rescued by our army at the time of the capitulation of Port Arthur:—

That night at 2.30 a.m. the *Otaru Maru*, under the command of Commander Nomura, reached the outside of the harbour at Port Arthur, and in company with the other blocking steamers, passed through the field of the enemy's search-lights under a heavy fire and steered direct for the light on Golden Hill Fort. At 3.05 a.m. she broke through the boom at the harbour's mouth and succeeded in entering the channel. But she then received at close range the heavy fire of the enemy's guard-ship—a vessel resembling the *Giljak*—within the channel as well as of a torpedo-destroyer, and her steering gear being at once injured, she was unable to keep her direction, and finally, anchoring near the west shore of the channel with her head pointing about W. N. W., she blew herself up. After the explosion her Commander, Nomura, quietly observing the result, ascertained that she completely blocked a part of the west half of the channel, and then assembling the crew beside No. 1 boat, gave them the order to leave the ship. But a shower of the enemy's shells falling on the boat, destroyed it and it dropped into the sea. Commander Nomura and two men were killed here. Lieutenant Kasahara at the head of the remainder of the crew, lowered No. 2 boat and embarked in her. But by this time the steamer had almost completely sunk, her chimney-stack and masts alone being above water, and the boat, just escaping being overturned, barely succeeded in clearing the vessel. Owing, however, to the violence of the enemy's fire, the crew were struck one after another. At last the boat being wrecked, all her inmates were precipitated into the water. Most of them, being now too exhausted to have any hope of surviving, died then and there, but on the following morning Engineer Iwase and 7 men were saved by the enemy.

The *Sagami Maru* under Commander Yuasa, following the *Otaru Maru*, reached the outside of the harbour at 2.40 a.m. the same night, and advanced slowly, strewing mechanical torpedoes near the mouth of the port. At 3.30 a.m. she entered through the gap in the boom, and keeping along the eastern shore, brought her head nearly level with the spot where

the *Otaru Maru* had sunk. Her bows were then pointing nearly N.W., and she seemed to be blocking a part of the eastern half of the channel. Her blowing up was thereupon successfully effected. Up to this time she had been heavily fired on by the enemy, but not one of her crew had been killed. After the blowing up, however, and when they were about to leave her, she was re-assailed from all sides by the enemy's shot and shell. Almost all her boats were shattered and rendered unserviceable. One small boat alone, which also had been injured, was lowered and in it the crew embarked. But she was making water fast and she upset at once. The crew swam off in various directions and disappeared. Commander Yuasa and the greater part perished here. Only 9 who remained were rescued by the enemy next morning.

Besides the above two steamers the *Sakura Maru* was blown up and sunk near the light-house at the entrance of the harbour, and the *Asagao Maru* went ashore on the southern coast of Golden Hill, but as not one person survived out of the crews of these two ships there are no means of ascertaining the final circumstances. According, however, to what the survivors of the *Otaru Maru* and *Sagami Maru* learned from the Russian soldiers, one brave lieutenant, with many wounds in the head, the stomach and the back, and 13 or 14 badly injured men were picked up on the following day, but all had subsequently died. Further, about 30 bodies of officers and men which floated ashore the following day had been buried by the Russians.

#### THE TROUBLES IN RUSSIA.

Monday, January 23.

It is of course quite within the range of possibilities that a charge of shrapnel might be accidentally left in the chamber of a field-gun after practice, and that a saluting cartridge might be subsequently inserted without the gunners observing the presence of the shrapnel. These things can happen with breech-loading pieces. But the degree of carelessness necessary to bring about such an accident is difficult to conceive, for no part of artillery practice is more essential or more scrupulously observed than the sponging out of a gun after being fired, above all, where shells have been used, and it need scarcely be said that had the St. Petersburg gun been sponged out after the alleged firing on the day prior to the incident, no shrapnel could have remained in the bore. The world will be disposed to suspect design, and if the thing was purposely contrived, it would suggest that the disaffection is spreading to the army. In that case the situation in Russia would be grave indeed.

Thursday, January 26.

It seems quite useless to make any comment on the troubles now afflicting Russia. Events are unfolding themselves so rapidly as to be more eloquent than any words could be. If this war brings the overthrow of the bureaucracy which enfeebles Russia and exposes her people to calamities such as are now overtaking them at home and abroad, it will have been a great benefactor and the Russians should feel grateful to the Japanese instead of regarding them as enemies. It is notable, however, that the unfortunate demonstrators in St. Petersburg do not appear to have any efficient organization or any provision of arms. Their butchery by Cossack troops may shock Russia and even Europe, and may produce an aftermath of assassination and incendiarism, but if they can be coerced into submission, as they certainly can in the absence of all the elements making for success in an appeal to force, there is an end of the matter for the present at all events. Only for the

present, though. Apparently the reform movement in Russia has gone too far to be permanently checked.

The leading Japanese journals refrain from any very definite expression of opinion. The *Fiji* and the *Nichi Nichi* agree that the Government of St. Petersburg can scarcely give practical attention to any sweeping proposals for reform just at this juncture, but both newspapers are evidently persuaded that no present measures of suppression can be permanent. The general attitude of our Tokyo contemporaries, however, is simply observant. They see that a great and very shocking drama is being unfolded in the sight of the world, but how it will eventuate they are evidently unwilling to predict.

#### JAPANESE SECURITIES AT HOME AND ABROAD.

The *Keisai Zasshi* draws attention to a phenomenon which has become sufficiently remarkable to invite comment. It is the great difference between quotations for Japanese securities in Tokyo and in London. The facts are thus tabulated by our contemporary:—

Class of Security.	Tokyo Quotation of same date	
	London Quotation 14th instant.	Yen.
Six per-cent. Bonds - - -	£98.17s-6d	90.50
Five per-cent. War Bonds -	£92.12s	84.30
do Consols - - -	£93.13s	84.30

There is a difference of from 7 to 8 yen per 100 yen, and it is plain that if Japanese bonds could be sent from Tokyo to London the profit would be very large. Naturally were this possible the London quotations would fall, but even if they stood midway between the present figures and the Tokyo figures there would be a fine margin. The question is, however, whether or not the Japanese Finance Department will endorse the Tokyo bonds. Without such endorsement the two markets could not be brought into touch. Endorsement means an engagement on the part of the Japanese Government to regard the yen as 2s. ½d. when paying interest and principal. The *Keisai Zasshi* contends that such a guarantee might have been printed on the bonds originally and that, in view of existing international circumstances, there is no occasion whatever to set up a distinction between domestic and foreign. If any holder of Japanese securities wants to sell them in London, he should be able to procure the endorsement at once. As things now stand the Japanese Government, if it needs to obtain money abroad, is obliged to send special committees to discuss matters with foreign financiers, and is further obliged to pay the latter heavily for their assistance. But if all Japanese bonds carried on their face or on their back an official guarantee as to the value of the yen in terms of British and American currency, the Treasury would have nothing to do except to carry its bonds to London or New York, and dispose of them whenever necessity arose. "Japan's military capacity," writes the *Keisai*, "stands now on a level with the military capacity of European and American States, but her financial capacity is on a lower level. We have no regrets about the capital sunk in this war, nor do we, looking back, fail to see how astonishingly Japan's financial capacity has increased. But the high price of low-interest securities in Europe and America shows that we are still their inferiors financially. Once upon a time there were folks

who angrily abused as sellers of their country men that wanted to dispose of land, mines and railways to foreigners, but now we have advocates of complete liberty in these matters. Public opinion has changed, and the best way of turning the change to account is to provide for the export of our securities. We invite the authorities to come to a speedy and definite decision on this point."

#### THE HABUTAYE PROBLEM.

It does not appear to be clearly recognized that the Government's recent legislation with respect to *habutaye* is universally regarded as necessary. The contention of the authorities is that for a long time the manufacture of this promising staple has been disfigured by abuses which must ultimately impair the demand for it in foreign markets. Originally the hope was that by the exercise of the power vested in guilds of correlated traders these abuses would be rectified. But such was not the practical result. The guilds could not exercise any influence outside their own ranks, and in the meanwhile the evil practices spread instead of diminishing. Hence in the end the Government considered that recourse to law was the only effectual method. Writing on this subject the *Keisai Zasshi* admits that recourse to law for such purposes may be inevitable and regrets much that this should be the case with regard to *habutaye*. "We trust," it says, "that manufacturers will open their eyes and will secure for their staple a strong and permanent trade." At the same time our contemporary is evidently doubtful as to whether the situation demanded this legal remedy. Thus it quotes figures showing the export of *habutaye* during the five years ended in 1903:—

Year.	Quantity.	Value.
1899 .....	818,346 <i>tan</i>	15,799,014 <i>yen</i>
1900 .....	968,319 "	17,436,381 "
1901 .....	1,420,356 "	23,912,356 "
1902 .....	1,855,149 <i>catties</i>	24,685,408 "
1903 .....	1,985,250 "	27,510,478 "

Here there are certainly no evidences of a declining trade. "Does the Department of Agriculture and Commerce seek to stimulate the trade still further," asks the *Keisai*, "or does it aim at improving the quality of the staple even though the export diminishes? We have some notion that this new law is a needless interference." That strikes us as a criticism not so profound as might be expected from the *Keisai Zasshi*. There can be no serious belief that the Government has enacted the new law merely as a legislative pastime, nor is it to be forgotten that many complaints have been heard about deterioration in the quality of *habutaye*. Unfortunately Japanese manufacturers do not appear to have yet fully developed the faculty of commercial farsightedness. There have been many instances of their burning their mouths by taking too large a mouthful.

#### GENERAL FOCK AND REAR-ADMIRAL WIREN.

General Fock has explained to a representative of the *Kokumin Shinbun* that he was in command of the five regiments which originally constituted the guards of the Kinchow isthmus. After the defeat at Nanshan he retired upon Dalny, but Dalny also being untenable, he made a further retreat down the peninsula, and took up a position extending from Yingchintz on the north to the Hwangni River and Tashangtun on the south (*vide* our map of October

## THE WAR.

IT has been confidently asserted in several quarters that this war must be waged to exhaustion because neither of the belligerents can reach a vital part of the other: Russia can not get at Tokyo; Japan can not strike at St. Petersburg. If that doctrine were tenable we should be forced to conclude that no two Powers whose capitals are mutually inaccessible should engage in war, because the struggle must be virtually interminable. An island empire like England, then, would be disqualified to fight any continental State unless the latter were so weak as to be unable to guard its metropolis against an over-sea expedition, and a country situated as America is must always refrain from quarrelling with a European Power. In fact, the United States should not have fought Spain and when England addressed to Paris an ultimatum about Fashoda or to St. Petersburg a peremptory demand in connexion with the North-Sea outrage, she was merely talking in the air. Evidently the doctrine does not survive when tested by practice. And it is obviously inapplicable to the present war. Japan and Russia are fighting for a definite object. It is the fate of Manchuria and of Korea that is at stake. If the inviolability of these two places were guaranteed against Russia all immediate cause of quarrel would disappear. Neither belligerent ever entertained any idea of marching into the other's capital or even crossing the other's border. A certain definite stake has to be fought for, and so soon as it is won or lost the war is over. Our own conviction is that the end is already in sight, if it has not been actually reached. Russia may be said to have been driven from Korea. She never had any firm footing there, but she fought the opening fight of the contest on the northern border of the peninsular empire with the plain intention of invading it if the battle went in her favour. That dream is at an end. It is true that she still retains a small force of raiding Cossacks in the north-east of Korea, but their tenure depends solely on Japanese sufferance. Korea may truly be said to have passed entirely beyond her reach. As for Manchuria, she is still there; has still a powerful army massed about the chief city of the three provinces. But she has lost almost everything that invests Manchuria with any value for her. She has lost Dalny and Port Arthur; she has lost Yingkow; she has lost the whole sea-board. Of what conceivable use would Manchuria be to her were she cut off from its littoral? It is well to keep the geographical situation clearly in view. Russia wants Manchuria because without it her only avenue to the Pacific is Vladivostock, and Vladivostock may be described as a port situated upon a Japanese lake. The Sea of Japan is for all practical purposes an inland water, since Japan can at any moment close its three exits. From this defect two consequences flow directly. One is that if Russia keeps Vladivostock, she must also have a naval station on the

straits of Tsushima. Otherwise Vladivostock can be isolated by Japan. That is why the moulders of Russian destiny fix their eyes on Korea. But even were it thus guaranteed against blockade, Vladivostock is a most imperfect outlet. The Liaotung Peninsula alone fulfills Russia's requirements in that respect, and it is for the sake of the Liaotung Peninsula that she covets Manchuria. That is the second consequence. But she has lost the Liaotung Peninsula: lost it irrevocably unless she can accomplish the feat of recovering the command of the sea. For even supposing—a supposition inconsistent with any experience hitherto recorded—even supposing that she succeeds in rolling back the Japanese from the Shaho, driving them out of Liaoyang, and pushing them down to the Kinchow Isthmus, can any one think that to force the isthmus would be within her capacity? The Japanese accomplished that feat solely because they had command of the sea on the west. A Japanese army entrenched at Nanshan and having its flanks protected on both sides by war-ships, could not be displaced by any force that Russia might bring against it. And even supposing that Nanshan were passed, conceive what would be involved in attempting to take Port Arthur defended by a garrison constantly reinforced and supplied from the sea. Years of effort would probably find the place still impregnable. Russia's one chance consists, therefore, in recovering the command of the sea. A victory for her on the Shaho would not materially effect the general situation unless it were a victory which involved the annihilation of the Japanese army. That is why we venture to think that the war approaches a termination so far as its intelligible objects are concerned. There is, of course, an alternative plan of campaign. Now that she has lost Port Arthur, Russia, abandoning the practically impossible task of recovering the Liaotung Peninsula by direct attack, may concentrate all her strength upon an attempt to invade Korea. Were she in possession of Seoul, terms of peace might be easy to formulate. She can not, however, strike at Korea until she first sweeps back and incapacitates OYAMA's armies, which otherwise would immediately sever her sole line of communications if she uncovered it for the purpose of an eastward movement towards the Yalu. On the other hand, could she recover the command of the sea, OYAMA's forces would be compelled to fall back, giving up Liaotung and retracing their path across the Yalu. Thus, from every point of view, the issues narrow themselves to the command of the sea. If the Baltic Fleet can be crippled the war is practically over. Russia, be she ever so obstinate, must extend some recognition to hard facts, and we may accredit the Japanese with at least equal reasonableness. Neither Power is fighting to reach the other's metropolis or even to crush its adversary.

## TOKYO AMATEUR DRAMATIC SOCIETY.

This Society gave, on the evening of the 25th, one of its rare and much appreciated performances, the object being to assist local charities. The following was the programme:—

Overture by the Imperial Band.

"THE BLIND BEGGARS."

MUSICAL PARCE.

Capt. HARRISON, R. E. & Mr. H. HORNE.

Mr. Montpelier's Recitation... Mr. BRADY.

Song ..... Mrs. HARRISON.

Music by the Imperial Band.

"DEAREST MAMA."

COMEDIETTA.

Harry Clinton ..... Mr. PIGGOTT, R. E.

Nettle Croker ..... Capt. CALTHROP, R.A.

Brower ..... Capt. HARRISON, R.E.

Jones ..... Mr. PHIPPS.

Mrs. Breezely Fusseil ..... Baroness D'ANETHAN.

Edith Clinton ..... Miss H. TAKAYANAGI.

Mrs. Honeywood ..... Miss BOVILL.

National Anthem.

The house as usual was filled to overflowing and among the audience were two of the Japanese Imperial Princesses. Of the overture we need not speak further than to say that it was faultlessly played. The first piece ought to have been called a burlesque rather than a farce, for two such beggars were never seen. The main point is, however, that they made themselves exquisitely funny, and that they sang withal in a manner as attractive as it was comical. Mrs. Harrison playing the accompaniment with much skill. Mr. Brady next occupied the stage. He chose for recitation a piece quite novel to us, and of the quality of his work the best evidence is that every one carried away the impression of having seen three people at the foot-lights, the *raconteur* himself, Mrs. Montpelier and Mr. Montpelier. Mr. Brady's power of impersonification is so great that without any assistance whatever from accessories he could project into independent existence at one moment a little bent-kneed, hen-pecked weakling, and at another this half-witted husband's very much better half. A convulsed audience did homage to Mr. Brady's excellent art, and gave him an ovation when Montpeliers' catastrophe marked the climax of the recitation. Mrs. Harrison then sang, Mr. Horne playing her accompaniment. This lady, new to Tokyo, has a mezzo soprano voice of great power, compass, and—rare adjunct of these two qualities—honey sweetness. The house would have kept her singing till day-dawn had such exaction been possible, but with two songs and a storm of applause she was reluctantly suffered to leave the stage. Some good music by the Imperial Band then preluded the *pièce de résistance* "Dearest Mama"—a poor thin comedietta without wit in the dialogue, originality in the conception, or effects in the action. It is generally the fault of play-wrights—unless they belong to the "empyrean sphere of art"—that to obtain essential contrasts they construct some colourless parts too slight to be assigned to the stars of a caste yet too difficult to be successfully represented by lesser lights. Such parts in "Dearest Mama" are those of "Henry Clinton" (Mr. Piggott) and "Edith Clinton" (Miss Helen Takayanagi). They demand the highest feat in histrionics, natural simplicity, and they offer to the awkward amateur no asylum of eccentricity or extravagance. In these roles Mr. Piggott and Miss Helen Takayanagi won applause, the former showing himself frank and unartificial, while the latter made an ingenuous and attractive bride. Of course "Mrs. Breezely Fusseil" (Madame la Baronne d'Anethan) was strong and effective. By many previous successes this talented lady had prepared her audiences to expect much, and they were not disappointed. "Mrs. Honeywood" (Miss Bovill) took the smallest part as to the arithmetic of her lines, but a good deal was demanded of her in the matter of coquettish display. She certainly satisfied the requirements of the piece, and very nearly succeeded in imparting "opal tints" to the pale blood of the inveterately cynical old bachelor "Nettle Croker," whom Captain Calthrop portrayed with real talent, giving to the role salient originality which went far to redeem the inherent dullness of the piece.

Browser (Captain Harrison) too won the right to be remembered. A most complacent creature of habit, he showed himself as subservient to his *pince-nez* as to his pocket-handkerchief, and one of the truly mirth-provoking features of the play was the vivid contrast between his good-humoured imperturbability and Mrs. Breezely Fussie's stormy outbreaks. There was, of course, the much hackneyed A-less footman—Jones (Mr. Phipps),—and a conspicuous addition to the stage property presented itself in the form of a new drop-scene painted by Captain Harrison. It is understood that all the trouble of getting up this performance devolved upon Sir Claude and Lady MacDonald, in whose debt the foreign communities find themselves constantly deeper.

We apologise for these meagre remarks. Our excuse is that the *contenances* of criticism where amateurs are concerned and where the performance is for charity impose reticence which, though it can not be observed with justice, may not be broken without offence.

### THE IMPERIAL DIET.

#### HOUSE OF REPRESENTATIVES.

The House met at 1.06. The President announced that all necessary steps had been taken with regard to the resolution of congratulation to the Emperor and of thanks to the Army and Navy on account of the fall of Port Arthur.

The Order of the Day was then changed for the purpose of discussing a supplementary budget providing for an outlay of 9,847,800 yen at the Tokyo Arsenal and 1,630,818 yen at the Osaka Arsenal. This budget had provoked some criticism. At first a notion had been entertained that in spite of the Cabinet's promise to abstain as far as possible from presenting supplementary budgets, that objectionable system was now again resorted to. The Government Delegates explained, however, that the sum in question was not an addition to the General Budget, nor did it call for any provision of new funds. The object was merely to obtain sanction for a certain outlay out of the funds already voted. A question was then raised with regard to the nature of the work contemplated at the two Arsenals, some members of the Committee being disposed to think that this vote indicated an admission as to the inferiority of the Japanese artillery. That was denied by the Government Delegate, but when fuller information was asked for, the Minister of War declined to speak except in secret session. He then fully satisfied the Committee as to the necessity for the supplementary budget, and on the forenoon of the 24th the Committee decided to recommend it, which they did when the House met in the afternoon. The House voted the Budget without a single question or dissentient voice.

A number of Government bills (8 in all) were then handed to special committees.

A special committee should then have reported on a bill seeking post-facto approval of a Government Ordinance with reference to the better prevention of the forging and uttering of coins by Japanese subjects beyond the seas. The report was postponed, however, in consideration of the fact that drafts of law in the same sense had been presented by members, and the sense of the House seemed to be that such an important matter should be dealt with by law, not by Ordinance.

The House rose at 2.30 p.m.

#### HOUSE OF PEERS.

The House met at 10.10 a.m., and the President having reported that he had offered congratulations on the birth of an Imperial grandson and had attended to welcome Admiral Togo and Vice-Admiral Kamimura, Count Okimachi moved that the Order of the Day be changed for the purpose of discussing the Supplementary Budget providing outlays at the Tokyo and Osaka Arsenals. The House decided to hand the Budget at once to the Budget Committee and to call for a report on the 20th instant.

Eight bills presented by the Government were then handed to special committees.

The Government bill sent up from the Lower House for affording protection to practical alterations, adjustments or improvements effected by mechanics or others in connexion with manufacturing instruments or articles, was then briefly discussed and passed.

The following bills also were passed as sent up from the Lower House and as recommended by the special committees:—

A Bill for exempting from income tax the interest on Treasury Bills and Savings Bank Debentures.

A Bill authorizing holders of Treasury Bills to assess them at their lowest issue price for purposes of security.

A Bill for reducing to 150,000 yen the yearly grant by the State to old temples and shrines, such reduction to continue so long as the war lasts.

A Bill for supplementing the working capital of the Tobacco Monopoly and the Iron Foundry in the event of any deficiency arising, such supplementing to be effected by means of negotiable cheques, not exceeding 7 million yen in the case of the Tobacco Monopoly Bureau and 5½ millions in the case of the Iron Works.

A Bill relating to the Capital of the Naval Factory (*Kaigun Kōsai*). (The Naval Arsenals and the Naval Dockyards to be amalgamated into Naval Factories, the latter's funds to be placed in a special account, and their surplus to be annually added to their capital up to 9½ million yen.)

A Bill for amending the Finance Law relating to the Empire's settlements in Foreign Countries, in the sense of raising the limit of temporary loans from 1 million to 1½ million yen.

The House rose at 11.40 a.m.

#### HOUSE OF PEERS.

The House met at 10.09 a.m.

Count Tokugawa, Chairman of the Petitions Committee, reported that 139 petitions had been received, among which the Committee had rejected 76, had selected 6 for the House's consideration and was still considering 57.

The Budget Committee then reported favourably upon the supplementary budget for the Tokyo and Osaka Arsenals, and the House at once passed the budget.

A Government Bill sent up from the Lower House for preventing diseases of silk-worms was then taken. Viscount Tani opposed the measure on the ground that such matters did not properly belong to the domain of law, that the trade guilds should be left to deal with them and that multiplicity of laws was one of the abuses of the time. The Government Delegate, however, contended that the measure was necessary, and the House passed the Bill by a small majority.

The House rose at 11.17 a.m.

#### HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m.

Mr. Sato Torajiro introduced a question relating to the Nagamori application for a charter to reclaim waste lands in Korea. This affair, he said, had created much attention at the time, but for some reason it had passed out of public observation in spite of its importance. He desired to know what connexion existed between the Cabinet and Mr. Nagamori, and also he wished to learn what had been the fate of the application.

Several Government Bills (7 in all) were then read for the first time and handed to special committees. These Bills related, for the most part, to the increased taxes.

Five measures relating to post-facto approvals of expenditures from the reserves in 1902 and five from the reserves 1903 were entrusted to a committee of 18.

The House rose at 1.50 p.m.

### THE AMATEUR DRAMATIC PERFORMANCE.

The dramatic performance given at the Public Hall on Friday night by local amateurs for the benefit of the Yokohama General Hospital proved a signal success, not only furnishing one of the pleasantest evening's entertainment enjoyed by the theatre-going public of Yokohama for a long time past, but also resulting in what should prove a substantial contribution to the funds of one of the most deserving of our local institutions. Nearly

all the tickets of admission were disposed of before Friday at noon and a bumper house rewarded the efforts of the ladies and gentlemen—and little ones, we must not forget the Midgets—who took part in the performance. The programme opened with an overture, the "Star and Stripes Forever" march, by the Bijou Orchestra, which was capitally rendered and warmly applauded. Then the curtain rose on the first of the two dramatic items selected, the one act comedy "As Once in May," by J. Hartley Manners. The comedy is full of bright dialogue and interesting situations. The scene opens in the sitting room of the Cloister Hotel, Tideminsters, whence Tibbles, the waiter, sees a carriage and pair arrive at the Inn with a lady and gentleman, "real swells," as Tibbles recognises at a glance. The visitors, Sir Charles D'Orsay and Miss Helen Wargrave, enter the room and Sir Charles orders lunch for two. While the meal is preparing Sir Charles takes time by the forelock and makes ardent love to his lady companion, who, however, ridicules his advances and keeps him at arm's length, but allots him the pleasant task of gathering for her a bunch of roses from the porch of the Inn, with which she illustrates a lesson in the language of flowers and lets him see a little into her heart—or mind, which is it?—and tells him a little of her history; how only six weeks before she had thought herself an engaged woman, but now alas! In the midst of these soft passages another guest arrives at the Inn, The Hon. Bob Gossett; and Miss Wargrave, who is afraid of being seen with Sir Charles, vanishes into an adjoining room just as the Hon. Bob, who is an intimate friend of Sir Charles and a noisy, rollicking, jolly good fellow, enters. Then ensues a bad quarter of an hour for Sir Charles and for Helen Wargrave. The Hon. Bob invites himself to join Sir Charles at the lunch preparing, but on learning that Sir Charles is awaiting the arrival of a lady guest, jumps to the conclusion that his friend is expecting his wife, Lady D'Orsay, to join him, and knowing that the married pair had been living apart for two years, owing to a quarrel soon after their marriage, felicitates Sir Charles on the supposed reconciliation. That gentleman assures him that no such thing has occurred, or is possible, but still the Hon. Bob won't go, and insists on having a bottle of wine and a cigar, and unobtrusively to his old friend before the arrival of the lady. Between the gasps of innumerable futile attempts to get his cigar to draw, the Hon. Bob relates how he had been seeking to win "an angel" by following out his "system" of laying siege to a woman's heart. This system consisted, in the first course, of everlastingly haunting his enamoured, and performing every possible service for her, in fact, making himself indispensable to her enjoyment of life, and then, in the second course, of absenting himself. He had not yet asked his angel, Helen Wargrave, to marry him. Sir Charles can scarce contain himself on learning the lady's name. At last the Hon. Bob leaves the room and Helen Wargrave re-enters it, having overheard all the conversation between Sir Charles and the Hon. Bob. She overwhelms him with reproaches and with contempt, when in the midst of it the Hon. Bob suddenly returns, with the startling news that Lady D'Orsay having heard that her husband was in the Inn, was now waiting in the hall to see him. In this terrible dilemma the Hon. Bob comes to the rescue. Miss Wargrave is to be his guest at the Inn, and not Sir Charles. Lady D'Orsay is shown in and introduced by the Hon. Bob to Miss Wargrave, as his fiancée, and receives her congratulations. Husband and wife are left together and a scene of reconciliation follows, while the Hon. Bob also improves the time by making it up with Helen Wargrave, throwing all the blame for his desertion of her on his boasted "system." Joy all round, and curtain! As Helen Wargrave Mrs. McWilliams had a congenial rôle; words and action seemed to come spontaneously and naturally to her, and we do not remember that in any of the various parts which she has taken in the local amateur drama, she has ever been seen to greater advantage. Mrs. J. Davis-Allen was also most happy in her impersonation of Lady D'Orsay. The scene of recon-

colligation between her and her husband is not a long one, but it is rather trying to act. It received full justice at Mrs. Davis-Allen's hands, and the clever impersonation was warmly applauded by the audience. Dr. Bernard Leonard had no easy task to pourtray the double-sided character of *Sir Charles D'Orsay*, the separated married man who heartlessly seeks consolation in his loneliness by flirting outrageously with an unmarried woman, and the repentant husband who is truly glad to be reconciled with his young wife, but he may be congratulated in having made a decided success in the part. As the *Hon. Bob Gossett* the rollicking, jovial, jolly good fellow, Lieut. Thomas was quite in his element, and if any fault could be found with his performance it would be in his having a little overdone the boisterous noisiness of the character. Mr. C. Aslet may be congratulated on having made the minor part of *Tibbles*, the waiter, quite a clever little comedy sketch.

During the interval between the two comedies the Bijou Orchestra performed, with much spirit and in excellent style, the stirring march "When the Boys go Marching by," which was received with well merited applause by the audience. This clever and useful little orchestra has been strengthened recently by the addition of a Cello, and as composed on Friday night numbered three First Violins, the Misses Page and H. Page and Mr. C. H. Thorn; Second Violins, Messrs. M. Mendelson, E. Hermann and H. Kroenig; Piccolo: Mr. A. E. Cooper; Cello, Mr. E. Salinger; Bass: Mr. L. E. McChesney; Triangle and Cymbals: Mr. M. Mollison, and Piano and Conductor: Mr. B. R. Berrick.

After this performance, the Midget Orchestra played the "Neapolitan Duet" in very creditable style for such youthful performers. The Orchestra consists of three First Violins: Misses Leslie McWilliams, Doris Dunlop and Phoebe Leppere; two Second Violins: Masters Ferris Booth and Allen Tipple; and Accompanist, Miss Ralphia Martin. It was rather hard on the promising little musicians to have to follow on directly after the performance of the so much stronger and more developed instrumentalists of the Bijou Orchestra, but their efforts were fully appreciated and applauded by the house.

The second dramatic piece, the one act comedieta "Withered Leaves, by Fred. W. Broughton, opened on a very pretty scene: a picturesque glen, with a lake, or broad river, in the background and mountains on either side. It might be in the Lake country of England, or amid the Scotch or Welsh mountains. Here, in the lovely glen, under a spreading tree with a rustic seat at its base, *Cecil Vane* is discovered conversing with *May Rivers*, his affianced wife. She does not like his conduct, which is far from considerate or lover-like, but considers herself bound by her promise to him, while he himself does not yet feel quite sure of her. Her heart is back in the past, with the lover of other days, whose last gift of a bunch of violets, now dead and withered, she still cherishes, while he cares little or nothing for her, but all for her fortune. Then *Arthur Middleton* and *Tom Conyers* appear on the scene, young men and old friends, the former the erstwhile lover of *May Rivers* and the latter somewhat wild and wayward, but withal good-hearted young man, who had quarrelled with his father, *Sir Conyers Conyers*, years before and was now a waif without means or occupation. *Arthur Middleton* tells *Tom* of his love episode and the latter relates to *Arthur*, with all the melodramatic action and swagger of a heavy tragedian, the serio-comic story of his last adventure, in rescuing and returning to the beautiful owner, a lady's hat which had been blown off and scuttled down the mountain side—rescued with much labour and at the cost of considerable damage from brambles to the gallant rescuer's unmentionables. Anon in the same glen, under the leafy boughs of the spreading tree, the rustic seat is occupied by *Sir Conyers Conyers* and his newly married second wife, *Lady Conyers*. *Sir Conyers* evidently dotes upon his young wife and regrets the fact

that he is old enough to be her father, but is comforted by the assurance that he is also young enough to be her husband. Then the plot develops rapidly. *Tom Conyers* again meets his divinity of the hat adventure, who is really *Lady Conyers*, and does all he can to make himself agreeable to her, little knowing that she is his step-mother. The relationship is soon known to the latter, however, and she determines to effect a reconciliation between father and son. After many amusing scenes, in one of which the father catches his son, whom he does not recognise, making love to *Lady Conyers*, and threatens to horsewhip him, a reconciliation between father and son is effected by *Lady Conyers*; *Arthur Middleton* discovers *Cecil Reane* to be a scoundrel who married his (*Arthur's*) sister for her money and left her to die of a broken heart, exposes him to *May Rivers*, his old sweetheart, in whom he claims reversionary rights, and all ends happily for everyone but the fortune hunting villain *Cecil Vane*, who disappears from the scene foiled and baffled.

Mrs. McWilliams scored another success as *Lady Conyers*, the charming wife and beneficent step-mother of *Conyers pere* and *filis*, Miss R. Cameron, who made, we believe, on this occasion, her second appearance on the local stage made a charming *May Rivers* and was letter perfect in her part. Mr. Cyril Allen hit off the dignified bearing and courtly wooing of the elderly lover and husband, *Sir Conyers Conyers*, to a nicety. Mr. Ward's impersonation of *Tom Conyers*, the somewhat cynical and wayward son, was worthy of high praise and his effective dialogue with *Arthur Middleton* repeatedly called forth the applause of the audience. Mr. B. C. Foster played the part of *Arthur Middleton* most creditably, and Dr. Bernard Leonard was equally successful in the rôle of the villain of the play, *Cecil Vane*. The whole company well earned the enthusiastic ovation which they received at the conclusion of the very enjoyable performance, which was brought to an end by the Bijou Orchestra with the selection, the "Jolly Pickaninnies." We must not forget a word of thanks to the able stage manager, Mr. E. Beart, who had taken great pains to ensure the success of the performance, and to Mr. C. F. McWilliams, who mounted the comedies most artistically and appropriately.

#### THE HIGH PRIZE COURT.

Viscount F. Tanaka, President of the High Prize Court, gave a decision on Jan. 17th on an appeal lodged by the Russian East Asia Steamship Co. of St. Petersburg against the judgment rendered on May 26th, 1904, in the Saseho Prize Court confiscating the *Manchuria* and a portion of her cargo. According to the *Official Gazette* of Jan. 26th, the appellants contended that (1) the steamer belonged to a Russian association many of whose shareholders are Danish; (2) the steamer was captured on Feb. 9th, 1904, off Port Arthur, when the Declaration of War had not been proclaimed by Japan; and (3) she left St. Petersburg in November, 1903, for Port Arthur, and during her voyage the crew could not possibly have heard of the rupture of international relations between the belligerent countries, so that the steamer and her cargo should, in accordance with Imperial Edict No. 20, issued in 1904, be allowed to go free. The appeal was rejected on the ground that the steamer was owned by a Russian company, though many of its shareholders might be Danish subjects, and hoisted the Russian flag when she was captured by the *Tatsuta*; that belligerent conditions existed before the declaration of war and consequently any hostile action could be carried out, and finally Imperial Edict No. 20 did not apply to the *Manchuria* and her cargo.

Another decision has been delivered in the same Court on an appeal instituted by Mr. A. Geise, Nagasaki representative of Messrs. Kunst and Albers, against a judgment given in the Saseho Prize Court confiscating 14 cases containing machinery carried by the *Manchuria*, captured by the Japanese warship *Tatsuta* off Port Arthur. It appears that the cargo was shipped by a

factory in Stockholm and consigned to the appellants, German subjects, in Port Arthur. They therefore held that the property belonging to the subjects of a neutral country could not be seized by either of the belligerent countries and that the appellants did not intend to assist Russia with the machinery or to injure Japanese interests. The appeal was not sustained.

#### TO THE DEAR DEAD.

##### 1.—FAIR MY SISTERS.

O fair my Sisters, on whose spring-time gay  
His Angel's shadow fell, while yet the May  
Had scarce awaked led up to Heaven's day,  
How oft my heart for your kind solace sighs  
Since I have seen in other maidens' eyes  
That Light you took too early to the Skies,  
And learned, tho' late, how large the wealth I lost  
When your white feet the shadowy River crossed!  
How many seasons your low bed have mossed!

In those long vanished days of Girlhood white  
We saw you fair, sweet Sisters. In what bright  
And fragrant Beauty do you walk to-night!

To you 'tis given to view with unveiled gaze,—  
From glory changed to glory all the days,—  
The shining of His Face, Whose Name we praise.

##### 2.—MOTHER MINE.

Long hast Thou walked amid those shining trains  
Who barest with joy for me such mortal pains,  
Whose smile smote all my tears to silver rains.

My years beyond thy years of earth have grown.  
Alas, that all these winters I have known  
No Mother Heart to beat against my own!

O Mother mine, whose Love and Sorrow bare  
Thy hapless weans, soon orphaned of thy care,  
The Blessed One with us thy heart doth share.

I know that tho' in Heaven no sigh may breathe,  
No shadow stain the brow that God doth wreath,  
Thy Love is ours who walk the skies beneath.

Whom God makes Mother of immortal men  
She is forever Mother, now, and when  
In that high Home we win her kiss again.

C. K. H.

Yokohama.

[Note.—The above verses, with others that may follow, are selections from a poem of which "Keep me True," which we published at the beginning of January, formed part.]

#### ALLIANCE FRANCAISE.

A very successful meeting of the Alliance Francaise was held on Saturday at the Van Schaick Hnll. There was a large attendance, presided over by Mr. J. de Cuers de Cogolin.

The first part of the programme consisted of a lecture by Mr. R. Jamin on "The Fables of La Fontaine," which was very highly appreciated by the audience. Mr. Jamin said La Fontaine wrote that the fable (of which he is and will remain the peerless master) is a little narration which conceals morality under the veil of fiction, and for that purpose animals usually fill the characters. The apologue is composed of two parts, of which one may be called the body, the other the soul; the former the fable and the latter the moral. The fable and apologue had been long in existence before they came to take their place as a variety of light literature. Where was the origin of the fable to be found? Not merely on that day when a witty slave, desirous of conveying lessons to his master without irritating him, covered his truths with the veil of fiction. The fable had a more remote and universal origin. It sprang from the need felt by man for expressing his thoughts by means of images and emblems. The apologue flourished particularly in the Orient, the land of myth and legend, of servitude and despotism. For the ancients the philosophical part of the fable, the moral, was the essential—the narration was merely the means, and the more we advance into the history of the fable the more we shall see the sentence disappearing for the benefit of the plot. According to Taine the fable had three distinct forms before it reached perfection under La

Fontaine. The first age was when the moral was the chief point. It was the age of Oriental fables,—of India and China, of Tibet and Persia—and, finally, of Greece with *Æsop*. With *Phedre* we have the second age of the fable. The apologue became a real gem of beauty; *Æsop* conversed, improvised; *Phedre* wrote; thence all the difference. Narration began to lengthen under *Phedre's* pen. From *Phedre* to *La Fontaine* there were many fabulists who might be named, but few of them are really important. We find the fable in the romances of the XIIIth century, among the literary works of the middle ages; some were known by *La Fontaine*—"fabliaux," or narrations full of spirit and satire. In the XVIIth century, with the Renaissance, attention was turned to the fable as well as to other literary "genres" cultivated by the ancients, and *Rabelais*, *Marot* and *Regnier* did not hesitate to insert fables in their works. With the coming of *La Fontaine* the XVIIIth century saw the birth of the golden age of the fable. *Jean de La Fontaine* was born at *Chateau-Thierry* on July 8th, 1621. After a rather dissipated youth at *Reims* his family had him married in 1647, but his marriage was not happy and he parted amicably from his wife. During his whole life *La Fontaine* was extremely careless of his own interests, but he had, fortunately, many patrons, among whom may be named *Fouquet*, *Louis XIV's* Superintendent, and also, and specially, *Madame de la Loubie*, in whose house he lived for twenty years. At the court of *Louis XIV.* he was not in credit owing to the independence of his opinions and character. After *Colbert's* death he was elected a member of the Academy. The last years of his life were exemplary; he occupied himself with grave thoughts and reading. He expired on April 13th, 1695, at the age of nearly 74. The poetical glory of *La Fontaine* is founded above all on his fables. He published his first six books of fables in 1668 for the *Duc de Bourgogne* at the instance of *Fénelon*. His fables possess an irresistible fascination; they are the marvel of every age, of every condition. *La Fontaine* transformed the apologue into a complete little drama in compressed limits. If he borrowed from others most of his subjects, he interpreted them with such originality that he made of them real creations. He loved animals and plants; they are the true heroes of his drama. If you add to all these qualities his precious and wonderful gifts as a writer you will not be surprised at the popularity of his fables. This immortal fabulist far excelled all his predecessors and has never been equalled by any of his successors.

Mr. Jamin then read four of *La Fontaine's* fables, namely: (1) "The Cat, the Weasel and the Young Rabbit"; (2) "The Cockerel, the Cat and the Young Mouse"; (3) "The Oak and the Reed"; and (4) "The Two Pigeons."

The second part of the programme was opened with a brilliant piano solo ("Weihnachten-Tschaikowsky," by Mrs. E. P. W. Skrimshire. The second number was "Les Deux Mulets" of *La Fontaine* by F. Thome, charmingly sung by *Madame Lacroix* to the highly sympathetic accompaniment of Mrs. Skrimshire. "Je vous aime" (*Alphonse de Launay*) was then recited with great effect by *Madame R. Ruegg*; and Mrs. J. P. Mollison gave a delightful rendering of *L. Denza's* "Si tu m'aimais," responding to an enthusiastic recall with a second song which evoked much applause.

## THE LAW COURTS.

### THE RUSSIAN SPY CASE

In the Yokohama District Court, sentence was given by Judge Danno at 2.20 p.m. on January 24th in the penal case of *Henry B. Collins*.

The official translation is as follows:—

#### JUDGMENT.

H. B. Collins, aged 40 years, British subject, residing at the Hotel de Paris, No. 179, Yamashita-cho, Yokohama, no occupation.

Judgment is delivered by this Court as follows in the case in which the above named person is charged with having divulged military secrets.

#### FORMAL ADJUDICATION.

The accused is sentenced to eleven years' confinement with hard labour. The things taken will be returned to their respective owners.

#### REASONS.

The accused was born in Hongkong and has lived at Yokohama since he was an infant. He had formerly been engaged in newspaper business and some eight or nine years ago left Japan and went to China. He resided at Ryojuko (Port Arthur) for about three years, till about March of 1904, during which time he married a certain Russian woman. About June of the same year he was, while at Tientsin, requested by *Ogorodnikof*, a Russian Colonel residing there, to proceed to Japan and watch and report the military secrets of this country. Complying with the request he got from the Colonel \$1,000 as expenses and a letter addressed to Major-General Dessino of Russia. In the beginning of July he came over to Shanghai and saw Dessino, from whose note-book he took a copy of two kinds of cypher codes to be used in communicating military secrets. One of the codes represented Roman letters to be used in writing letters and the other a list of proper nouns representing names of articles or things to be used in transmitting telegrams. About the 18th of the same month he came to Yokohama with these codes and put up at the Hotel de Paris, No. 179, Yamashita-cho, of this city. Since then he has been exclusively engaged in detecting Japanese military secrets and knowing that they were Japanese military secrets he collected matters which should properly belong to them, such as the steps to be taken in transporting troops to a certain place for a certain period of time, from a certain date, their destination, kind of troops and plans of the War Office relating to their despatch. He then wrote a letter embodying these facts in cypher. The letter was dated Oct. 24th, 1904, and addressed on the envelope to Dessino but it was enclosed in a letter of request to Mondon (?) in Shanghai, and posted from Yokohama on the 29th of the same month. It happened, however, that the letter was seized at Nagasaki by a military inspector. The offence therefore is not at all of a light nature. Of the facts above mentioned all of them with the exception of the fact that he had taken efforts to discover Japanese military secrets and that he collected matters belonging to Japanese military secrets knowing that they were so, are clear enough since they have been admitted by the accused. The other facts may be gathered from the statements in Nos. 1 to 4 of preliminary examination Exhibit No. 17 (as to writings in cipher referring to cypher codes in preliminary examination Nos. 2 and 3); that the accused wrote a letter giving in cipher the steps to be taken in transporting troops to a certain place for a certain period of time from a certain date, their destination, kind and number of troops and plans of the War Office relating to the despatch of the troops, and that the letter was dated December 24th, 1904 and addressed on the envelope to Dessino and enclosed in a letter of request to Mondon in Shanghai, and from preliminary examination exhibit No. 16, which is a letter from *Mishimura Senoi*, military inspector at Nagasaki, dated the 4th November last, stating that the accused's letter was inspected on the 18th of the same month and considered to have related to the divulging of military secrets and that therefore it was sent back; that the accused's letter was seized by a military inspector at Nagasaki. That the matters in the communication above stated are Japanese military secrets is evident from No. 2 of preliminary examination exhibit No. 18, which is a letter from *Terauchi Seiki*, Minister of War, stating that the matters mentioned in the enclosed letter dated the 24th Oct., 1904 are, considering the present situation, military matters required to be kept strictly secret not only at the time of communication but still remained so. Indeed not only is it clear from this but even if these matters themselves were considered with ordinary common-sense at

this time of the Japan-Russian war it could be clearly recognised that they were military secrets.

It goes without saying then that the accused, knowing that they were Japanese military secrets, collected them and despatched a letter giving mention of these matters. The accused stated that taking advantage of a request made by a Russian military officer to detect Japanese military secrets he did no more than attempt to get money by communicating unfounded facts and that he never made efforts to discover military secrets and also that he did not know whether the matters which were communicated were military secrets or not as he mentioned only unfounded facts. However, according to the record of the first preliminary examination of *Sekimoto Torajiro*, witness, it appeared that about the 19th or 20th of July he received an order from the Chief of Police to watch the movements of the accused. The witness, therefore, approached the accused and when an interview was held on the 11th of September he was told by the accused that he (the accused) was selected at Tientsin and had to come to Japan, that as he was to receive a monthly remittance of some yen 2000 he could not make a report of any matter which was a mere rumour and that therefore it would do well to have even one or two facts if they were true. On the 16th of the same month when the witness saw him the accused said that he wanted more news. The witness asked him what kind of matters he wanted and he said that he wanted information about the organisation of the First, Second, Third and Takushan (Taikoshan) Armies and gave him a chit (No. 1 of Procurator's Exhibit No. 1). The accused then asked the witness where he would keep the chit as it was an important paper. Then witness replied that he would put it in his *haramaki* and did so in his presence and the accused seemed to have felt very easy. (In Preliminary Examination Exhibit No. 5, which is a pocket-book taken from accused, there is mention under date of September 16th of the fact that he gave *Sekimoto* a general outline of his scheme. This corresponds to *Sekimoto's* evidence under review). The witness also stated that after the accused had given him this chit he began to place great confidence in him and was diligently engaged in the detection of secrets. On the 19th of October the accused told witness that the former could not make any useless communication. The witness asked him what kind of matters he was going to communicate. The accused replied that as there would be no doubt that *Kuropatkin* would make a counter attack on *Liaoyang* he wanted to know, firstly, how many men were really killed and wounded on the Japanese side at the battles of *Liaoyang* and other places; secondly, whether the Japanese army would make a farther attack or take winter quarters at *Liaoyang* or other places; thirdly, whether preparations for an attack on *Vladivostok* would be taken or not. The accused said that were these three points discovered and reported upon it would not be necessary for him to do any work. He therefore asked the witness to investigate these points without fail. From the above statement of the witness it is not difficult to see how strenuously the accused engaged himself in finding out Japanese military secrets. Moreover, the accused's wife, a Russian woman, having left Japan, he had nobody to provide for. In despatching the accused a Russian officer would not be so unwise as to give him a thousand dollars or allow him to take a copy of the ciphers without first ascertaining the determination and ability of the accused. Moreover, according to the admission made by the accused the arrangement was that a remittance would be made to him from the officer according to the value of the communication. It is therefore easy to see that if the matters communicated by the accused were unfounded or well-known, such matters being worthless the officer would not have sent him any compensation.

It may be considered therefore quite natural for the accused to have done all in his power to secure military secrets. It is certainly clear that the plea of the accused is groundless when to the

above evidence the facts admitted by the accused are added, namely, the mode of communication explained above, the experience he had in newspaper business and the fact that he has had no occupation since he came to Yokohama.

At the same time there is not the least doubt that the offence of the accused is not of a light nature. It is proper therefore to recognise the facts of the offence as above stated.

The act of the accused falls within the purview of Art. 1 of the Law relating to the Protection of Military Secrets, which says that "persons detecting and collecting information, drawings, documents or things which are military secrets, knowing that they are of such nature, shall be punished by major imprisonment." Therefore the accused should be punished accordingly. The Public Procurator argued that the act of the accused falls within the scope of Cl. 1 of Art. 131 of the Criminal Code, but considering the spirit of legislation and the meaning of the provision of the Code it is clear that it cannot be applicable to persons having no nationality in Japan, that is to say foreigners like the accused. Therefore the present case does not belong to the special jurisdiction of the Court of Cassation. Counsel for the accused stated that the same generosity with which the countrymen of the enemy have been treated should be extended toward the accused. The present case, however, does not refer to a question of international law or a law of humanity. The Court therefore in punishing the accused according to the provisions of law, reports that the offence of the accused, being of a most dangerous nature, there remains no room for the consideration of circumstances mitigating the offence. As to the things taken Art. 202 of the Code of Criminal Procedure is applied and decision given as in the formal adjudication.

Public Procurator Miki Itaro attended the case. Given at the First Criminal Division of the Yokohama District Court this 24th day of January, the 38th year of Meiji (1905).

DANNO YOSHIYUKI, Judge President.  
HASEGAWA KIKUTARO, Judge.  
NAGOYA UMESABURO, Judge.  
HANAGAMI FUKUZO, Clerk of the Court.

The Tokyo Court of Appeal has rejected the appeal of Mr. S. H. Kuhn in the Kuhn-Boyes assault case. The defendant was not present in Court.

#### ELECTRIC APPARATUS TRANSACTION.

The Yokohama District Court rejected on Jan. 24th the case filed by Mr. James Macbeth, of New York (whose Yokohama representative is Mr. C. Weinberger) against K. Kanamaru and M. Ikeda, ammunition dealers, claiming yen 2,833.06.

#### FIRE.

At 5.40 a.m. on Thursday (Jan. 26th), fire broke out in the factory of N. Takarada, foreign furniture dealer, No. 118, Moto-machi, Sancho-me, Yokohama. Owing to a strong northerly wind, which had been blowing since the previous evening, the flames immediately spread to the street in the rear, which is very narrow, and thus hampered the firemen, and those who struggled to carry away their property. At 7 a.m., the conflagration was put out. Twenty houses were destroyed and seven partially damaged. According to the Kotobuki-cho police, the cause has not yet been ascertained but it is believed to be negligence. It is added that there is no water supply in the street, except from an 8-in. pipe which terminates at the foot of the Shiokumi-zaka (Motonachi School hill) and therefore the pumps could not be employed for some minutes till the hose was extended to the canal.

Fire broke out on the night of Jan. 24th at Toyoura, in Yamaguchi prefecture, destroying 200 houses, 15 godowns and a post office. Three persons were killed.

A fire occurred at 11.20 p.m. on Jan. 24th at Saka-machi, Yotsuya, Tokyo, burning down 22 houses and a telegraph pole. Three firemen were injured. The cause was negligence.

#### PROFESSOR HEYDRICH'S CONCERT.

The concert given by Professor Hermann Heydrich at the Public Hall on Monday evening drew a very good house and needless to say passed off very successfully. The programme was excellently chosen and though it introduced no novelties it revived old memories by the capital rendering of works which have long since established themselves in public favour as well as in the esteem of the *cognoscenti*. The honours of the evening fell to Miss Ko Koda. Yokohama music-lovers have too seldom an opportunity of listening to such passionate music as she can draw from her violin and it was therefore not to be wondered at that at the close of *Vieuxtemps' "Fantaisie Appassionata"*—played with a breadth of power and sincerity of feeling rarely achieved—the audience simply abandoned themselves to a furor of applause. At first the accomplished executant bowed her thanks, but again she was recalled, and yet again, until at last she consented to repeat the closing movement. Miss Koda's reluctance was very natural. She had taken part in the opening Sonata, the whole three movements of which were given, and after her solo had still to appear in the closing trio, so that the demands upon her physical strength alone, putting aside for the moment the emotional strain, were sufficiently heavy to justify hesitancy at acceding to a demand which called so greatly upon her resources. But the average Concert audience is selfish to the core and thinks only of its own sensations. As we said above, Miss Koda in the end acceded to the insistent demand for an encore and once again threw her hearers into a state of enraptured delight. Another instrumentalist who is too seldom heard in public nowadays is Mr. E. C. Davis. His rendering of some Hungarian dances was particularly dainty and one was sorry when they came to an end. The player was encored, as he deserved to be, but merely bowed his thanks. Mrs. N. G. Maitland's pianoforte solo, a fine piece of writing by Mendelssohn, was very pleasing, though we have heard her in less ambitious pieces which have shown her high qualities as a pianiste to greater advantage. Professor Heydrich won much applause by his rendering of Chopin's Nocturne in D. flat Ma., Op. 27, while his work in the other items was excellent, and if anything a little above the high standard of execution and deep feeling to which he has accustomed us. Once or twice in the Grand Trio he rather obtruded upon the work of the stringed instruments, but these faults were trifling and never sufficient to blemish a very masterly performance. The vocalist of the evening was Mrs. Harrison. She was in beautiful voice and sang most delightfully. In the second part, after the "Song of Thanksgiving," the house refused to let her depart without an encore and this she graciously gave to the supreme satisfaction of all. The whole concert, it will thus be seen, was most enjoyable, and a rare musical oasis in the grim Sahara of Yokohama's too arid life. Programme:—

- 1.—Sonata for Piano and Violin in F. Ma. op. 8..... E. Grieg.  
Mr. H. HEYDRICH and Miss KO KODA.
- 2.—Aria from "Samson and Delilah"..... C. Saint-Saens.  
Mrs. HARRISON.
- 3.—Piano Solo: Prelude and Fugue in E. Mi. op. 35..... Mendelssohn.  
Mrs. N. G. MAITLAND.
- 4.—Cello Solo.... "Danse Hongroise"..... A. Fischer.  
Mr. E. C. DAVIS.
- 5.—Piano Solo.... Nocturne in D. flat Ma. op. 27... Chopin.  
Mr. H. HEYDRICH.
- 6.—Violin Solo.... Fantaisie Appassionata..... H. Vieuxtemps.  
Miss KO KODA.
- 7.—Song..... A Song of Thanksgiving..... Frances Allitsen.  
Mrs. HARRISON.
- 8.—Andante and Allegro Molto from "Grand Trio in D. Mi."..... Mendelssohn.  
Mr. J. HEYDRICH, Miss KO KODA and Mr. E. C. DAVIS.

#### CHINA NOTES.

Over one thousand leading Chinese merchants of Shanghai attended the meeting at which it was resolved to boycott the Russo-China Bank until satisfaction was given in the Bund murder case. Taotai Sheng Tung-ho moved the resolutions and Taotai Tseng, of Fukien, seconded them. They ran:—

(1) All the local guilds for various provinces and trade will send joint petitions by wire to the Waiwupu and Viceroy at Nanking to have a satisfactory solution of the matter.

(2) To write to the Shanghai Taotai, Senior Consul, Municipal Councils of International Settlements and French Concession informing them that the natives are all indignant and that unless a satisfactory settlement be obtained it is impossible to pacify them.

(3) To stop negotiating Russian banknotes pending a satisfactory settlement being obtained.

The speeches delivered on this occasion lacked nothing in vigour. Taotai Sheng said:—"The Russo-Chinese Bank and the Russian merchants in Shanghai from the beginning of the war have been doing business with the natives without any disadvantage, though I do not know if they have been able to deal with a certain portion of the natives as to get military supplies. In any case if we stop dealing with the Russians in business it is quite certain that the Russians will suffer from the effects. The Russian Consul once told me that though a Russian might kill a Chinaman he would never lose his life. Such is the way we are looked down on by the Russians." Another speaker remarked, "The Russian sailor killed an innocent Chinese and the Russian authorities are taking the side of the Russian sailors and we understand that they are treating the Chinese worse than beasts. If we do not take up proper action in this matter to protect our own interest it means that we are recognizing ourselves as similar to beasts ourselves. If so it is no wonder that foreigners look down on us."

Mr. Wilhelm Disch, chief clerk of the Shanghai German Post office, committed suicide on January 15, by shooting himself through the heart. Financial troubles are said to have been the impelling cause.

The Shanghai Taotai has asked the consuls for Germany and France to inform the Russian Consul-General that he must stop the Russian crews now detained in Shanghai under parole from coming into the foreign Settlements as the Chinese authorities cannot extend control over them properly. Apropos of this, the same Taotai wrote to the Japanese Consul asking that Japan should prevent any Russians at Port Arthur from coming to Shanghai. Mr. Odagiri naturally replied that Japan could not influence the movements of non-combatants and that it was only non-combatants that would go to Shanghai from Port Arthur.

Mr. T. Sercombe Smith, Puisne Judge of Hongkong, while playing cricket the other day was badly hit on the leg by a cricket ball. Although hurt, he did not think much about the matter; but two days later, after sitting all day on the Bench, he found his leg badly swollen. He went to the Government Civil Hospital, where he now remains. The wound is not healing as it should.

Nine Chinese were burnt to death in Hongkong on the night of January 11th, in a four-storied house in Hollywood road. It was the residents of the third and fourth floors who perished in the flames. There is no right-of-way between the two houses which caught fire hence when the staircase was burnt, the residents on the upper floors were caught in a veritable death trap.

A gentleman who has just arrived at Hongkong from the interior informs the *Daily Press* that there is every indication of a serious general uprising in Kwangtung Province, especially in the delta of the Canton River. Well-informed wealthy natives even consider it advisable to leave their homes to take refuge at Hongkong and elsewhere. Piracy is rampant, rendering the inhabitants of small towns in constant fear of being either robbed or kidnapped for ransom.

At Tongka (in Heungshan District) the pirates captured the baggage of several Chinese returning from the United States—baggage containing money, etc. to the value of \$5,000. On one side of Wongmuon (at the mouth of the West River) the natives were prevented from cultivating their autumn rice crop because they refused to pay blackmail—so much per mow. The officials are quite incapable, and police boats are even known to witness acts of piracy without attempting to guard the shipping and country. The other day the pirates captured the guard boat at Taiping Creek without meeting any resistance, and took away all the arms, ammunition, etc. Arms are being smuggled into the country in large quantities.

A Nanking dispatch reports the arrival in that city of Admiral Yeh, formerly Commander-in-Chief of the Peiyang Squadron and now substantive Commander-in-Chief of Kwangtung province. It is reported that Admiral Yeh's presence in Nanking is in connection with a scheme of Viceroy Yuan Shih-k'ai and Chou Fu, who are High Commissioners, respectively, of the Peiyang and Nanyang Administrations, to combine the two Squadrons under one command, the first incumbent of this post to be Admiral Yeh himself. The *North China Daily News* also understands that Viceroy Yuan Shih-k'ai and Chou Fu intend soon to memorialise the Throne on the subject.

The *China Mail* gives the following account of the piratical act which occurred in Hongkong harbour on January 13th. The victim was a passenger junk which plies between Shauiwan and Hongkong and the pirates made a haul running into about \$2,000. As the junk was making her usual trip, some time between 2 and 4 o'clock, another boat was seen to come out from the shore of the mainland and approach rapidly in the passenger junk's direction. That her intentions were hostile soon became apparent, and she had no sooner reached the junk than 12 armed men sprang on board showing knives and revolvers. The crew of the passenger boat, about six in number, were thoroughly taken by surprise and before they could offer any resistance, even if they had thought of doing so, they were placed *hors de combat* by the pirates throwing cayenne pepper in their eyes. This proved to be just as effective as using more deadly weapons and while the crew were affected with temporary blindness the pirates made their way to the cabin where the money was stored and helped themselves, taking everything valuable that they could lay their hands upon. The pirates then made off but the junk's crew were unable to see which direction they took. The piracy was reported to the police at about 5 o'clock and detectives were at once sent out to look for the offenders. Their efforts were rewarded with success, for during the morning they brought in three men, one of whom was found to have nearly all of the money missing on his person.

The many friends of Bishop Burdon, late Bishop of Victoria, Hongkong, will be interested to hear that his elder son, Major J. A. Burdon, First-class Resident, Protectorate of Northern Nigeria, has been honoured by His Majesty King Edward VII. with a C. M. G.

The absolute lack of interest on the part of ratepayers in Shanghai's local government resulted in the quite unnoticed return of the Municipal Council for the ensuing year. There are several changes from last year's nine, remarks the *N.-C. Daily News*, and it looks as though there was some difficulty in finding candidates even for uncontested seats. The re-elected members are Messrs. F. Anderson, H. de Gray, E. S. Little and O. Meuser. Messrs. C. L. H. Iburg, H. Keswick, J. O. Liddell, E. F. Mackay, and W. A. C. Platt, fill the vacancies caused by the retirement of Messrs. A. W. Burkill, D. Landale, A. M. Marshall, J. Prentice, and C. W. Wrightson. Mr. W. D. Little was also re-elected without opposition, as the nominee of the Land Owners, on the Land Commission.

The *North China Daily News* prints the

following official translation of the finding of the Russian court in the Bund tragedy case:—

"The sentence passed by the Special Court upon Terente Ageef, 1st Class fireman of His Imperial Russian Majesty's cruiser *Askold*, and Jacob Diak, sailor of the 2nd class of the same cruiser, by the Special Commission appointed by Rear-Admiral Reitsenstein and consisting of the following members:—

Commander Teshe, chief officer of the *Askold* (President), Lieutenantis Brovzyn, Mandraji, Eximoff, and Sub-Lieutenant Ordovsky-Tansievsky; Sub-Lieutenant Medvedeff, Secretary; and confirmed by the Admiral in the following order:

I confirm and order the commander of the cruiser *Askold* to fulfil the sentence, according to the judgment, which was as follows:

"The Court, taking into consideration all the circumstances, decides that the 1st-class fireman Terente Ageef has to lose all his rights and privileges and to be transported for four years with hard labour.

"And as it is impossible to transport him at the present time to Russia, to be imprisoned in the French Municipal gaol for the time being.

"Diak, of the same cruiser *Askold*, has been brought before the Court only through the exceptional circumstances, and as it is clearly found by the Court that he, the second class sailor Diak, did not offend but simply disobeyed the orders of the Police, and taking into consideration his good conduct and service, and his perfect military service, for which he was decorated with the Fourth Order of St. George, I, by virtue of the power given to me, forgive his fine. (Sig.) REAR-ADMIRAL REITSENSTEIN.

In a subsequent issue our contemporary said:—

H. E. Sheng Kung-pao and Mr. Kleimenoff, the Russian Consul-General, had an interview on Tuesday which lasted four hours, during which the question of the trial of Ageef was thoroughly discussed. The dissatisfaction of the Ningpo men here arises from the fact that no Chinese official was present at the recent court-martial, and that some of the Chinese witnesses who saw the incident were not called. The Consul-General expressed his great regret that the incident should have aroused the Ningpo men here as it has done, and promised to send H. E. Sheng a report of the whole of the evidence as soon as possible. H. E. Sheng has promised the Ningpo gentry here that he will investigate the matter as soon as he receives this evidence.

At 3.30 p.m. yesterday, H. E. Sheng appointed a Russian-speaking Taotai, Mr. Liu Tsung-hui, who has recently been appointed by the Viceroy, H. E. Chou Fu, to the post of Deputy for Foreign Affairs at Nanking, to take charge of the investigation.

We cannot doubt that when the evidence is carefully weighed, the Ningpo men will realise that Ageef has been very heavily punished for what, after all, now seems to have been a very deplorable accident, and the great pity is that the enquiry was not held directly after the incident occurred.

The German Admiral on the China station is still ready to pay a reward, up to five thousand dollars, for information of the whereabouts of the German Commander Hentschel von Gilgenheimb who, with the French Naval Attaché, left Port Arthur in a junk on the 17th of August last. As the fall of Port Arthur opens new possible sources of information, the father of the missing officer is anxious to know how his unfortunate son met his death, if he be no longer living.

The following extract is taken from the *North China Daily News* of Friday, Jan. 20th:—

The large crowd which assembled at the M.M. jetty yesterday morning in hope of seeing General Stoessel was disappointed as the gallant general was not among the passengers on the tender which came up at about 10 a.m. The General decided not to come up to Shanghai, though it is possible that his wife may pay us a visit to-day. The tender which met the *Australien* on her arrival contained a number of Russian officials who went down to greet their compatriots from Port Arthur. When the party got on board the steamer General Stoessel was presented, according to Russian custom, with bread and salt, the latter in a salt cellar surmounted by a small silver gun which was suitably inscribed. Madame Stoessel was presented with a magnificent bouquet by the ladies of the party. General Stoessel still wore a bandage round his head. He looked very well, but his wife, on the contrary looked as if the siege had told on her very much. The General is reported to have said, what is already well known, that it was the big 11-inch guns of the Japanese which rendered his fortress untenable. He could only have held out for three or four more days at the outside if he had not surrendered when he did. With regard to the large supplies of shells found inside the fortress by the Japanese, General Stoessel stated that

these were only for the guns of small calibre. The large guns had only a few rounds apiece left, and the small arm ammunition was barely sufficient to ward off one Japanese attack. He denied the report that any of the Russian fleet could be raised and put to further service.

All the officers spoke in high terms of the Japanese, who carefully avoided doing anything that might make them feel the humiliation of their position. It is even stated that they did not fly their flag over Port Arthur until the transport on which General Stoessel had embarked had sailed. The guns left in the forts are stated to be practically useless and the reason for not eating horses was that the garrison was short of hoses for the hauling of ammunition, etc., as it was. The men, it seems, were on very short rations for some time, and were only served out horse meat once or twice a week.

During the day a number of officers and men came up to Shanghai, and they attracted a great of attention as they walked about the streets. We understand that the *Australien* will take on about 150 officers, and an equal number of soldiers as servants. The other officers and men will have to stay in Shanghai until a vessel can be found to take them. General Stoessel has booked his passage to Suez, where he will doubtless change for a Black Sea port. The officers who came up found temporary quarters in various Shanghai hotels, in some instances five or six having to be crowded into one room. The hotels found it extremely difficult to understand what the guests wanted, as contrary to the general supposition, few of the officers could speak any tongue but their own. During the day the Russo-Chinese bank was crowded with Russians who had come to cash their drafts.

General and Mrs. Stoessel went up to Shanghai next day and lunched quietly with General Dessino.

According to treaty, says a Chinese native paper, the Russian Consul-General at Kashgar is allowed a guard of fifty Cossacks, but a dispatch recently received by the Waiwupu from H. E. Sung Fan, Viceroy of Shensi, Kansu, and Chinese Turkestan, and the Governor of the latter province, Pan Hsiao-su, has complained that the Cossack guard has lately been increased thirty-fold, in spite of the protests of the Taotai of Kashgar, and that there is also now gathering a large Russian force on the Kashgar-Ferghana (the last-named a Russian province) frontier, which makes no pretence in hiding the fact that they intend to cross the border to take possession of Kashgar in the immediate future. To oppose these Russians the Chinese in Kashgar have scarcely any troops on hand, and the Governor of Chinese Turkestan therefore asks for help from Peking. Affairs appear to be in a terribly unprepared state in that portion of the Chinese dominions; not only is it declared at Urumtsi (Tibet), the capital of Chinese Turkestan, that there are not 5,000 troops all told in the whole province but there is no money to pay even this small body of men their wages, these being, it is asserted, in arrears at least six months. It is further confidently stated by those who know how things stand in Chinese Turkestan, that a thousand Russians could overrun the whole province easily and practically unopposed.

#### CONSULAR REPORTS.

Japanese consuls abroad have telegraphed the following business reports to the Foreign Office.

Shanghai, January 23.

Demand for Japanese cotton yarn has been continuous during the week ended the 21st. About a thousand bales changed hands. The price, however, is stationary. Demand from the Yangtze valley for Indian yarn of 10 counts was repeated and prices advanced. There is no remarkable transaction in native spinning cotton yarn, beyond contracts for future delivery. The stock of Japanese was 6,684 bales, and Indian 50,244 bales.

Bombay, January 23.

The price of cotton for present and future delivery has slightly fallen, the standard being as follows: "Fine Bengal," hand ginned, 166 rupees; same brand, mechanically ginned, 168 rupees; and "Good Broach" for delivery in March 184 rupees. The estimate of stock was 390,323 bales.

The net profits of the 100th Bank for the last half of 1904 was yen 148,972.14, and a dividend was declared of 15 per cent., for the half year.

## TO THE DEAR DISTANT.

## I.—THY FATHER HEART.

To Thee, my aged Sire, how great the debt  
To my insolvent name the years have set!  
Mine were a thankless heart could I forget  
The dews of toil, Love's Christ, upon thy brow,  
The load to which thy willing soul did bow,  
Thy Father Heart that did my life endow.  
In what short years thou may'st thy Crown await!  
That debt by which I came to Man's Estate,  
I cannot pay, who learned its sum so late.  
Thy Sorrow and thy Love I might not know  
Till thro' my life should Love and Sorrow flow  
From Altar where His Love and Sorrow glow.  
By Cradle side, and by the lonely Grave,  
From my insensate heart He did me save,  
The dumb, dead rock to genial fountains gave.  
Thy head unsnowed, thy strength unwithered bears,  
Thy heart uncowed, lightly thy fourscore years.  
Be far the day that asks my filial tears!  
By purpose high and cheerful faith upborne  
To tranquil eve from cool of rosy morn,  
Thou waitest the Stars beside thy sheaves of corn.  
Nay, by the Peace of that untroubled Sea,  
Thou bidest the Dawn, while the cold shadows  
    flee  
Which followed long from thy Gethsemane.

## 2.—BROTHERS TRUE.

God made the Brother for adversity,  
The Good Book saith. How many woes for me  
Must be in store, who have such store of Ye!  
But, in good sooth, upon your faithfulness  
My heart hath leaned in Childhood's oft distress,  
Nor in my Manhood's years hath found it less.

In sheen of blue-and-white midwinter days,  
Safe at your valorous side, in mimic frays  
I won the joy of war, the victor's bays;  
Or 'neath the Milky Way's resplendent Wheel,  
And round white Moon, on magic shoe of steel  
Outflew the gale, hard at your flashing heel.  
On summer eyes upon the golden tide  
Our slender shallop rode, the River's Bride,  
Her snowy veil in the red sunset dyed;  
Or like white wraith hung hushed in dusky space,  
Above, the unbounded Heaven's majestic face,  
Below, an equal Heaven of starry grace.

I learned with you the secrets of the Wild:  
Where the red berries blushed, and where there  
    smiled  
'Neath the fir-boughs the fair arbutus' child;  
When the strong maples yield their treasure sweet;  
Where the shy hare had made her close retreat;  
Why the gay squirrel chattered, indiscreet.

By the still pool and by the bickering stream,  
And where amid the rocks the rapids cream,  
We saw the red trout leap, the grayling gleam.

O sweet first Home, long lost but unforget,  
That radiant morn thou didst my life allot  
Nor toil's dull hand nor sorrow's tears can blot!  
How fair those scenes to Manhood's sultry noon  
When Memory's wand swings back the rolling  
    moon  
And shews Youth's smiling Eden, white with June!  
To-day, wide severed by th' unfriendly Deep,  
We walk the world apart. The while you sleep  
Across the dial my mid-day hours creep.

But soon, or here or there, the night of rest,  
Hushed in the great kind Mother's ample breast,  
Life's doom of toil outwrought, to sleep is best!  
To sleep, to wake, to hail a nobler Day  
With soul new youthed,—Heaven's ever during  
    May,  
Love's morn of June that passeth not away!  
There, to your side and greetings glad returned,  
I'll see His Face, Whom thro' your love I learned,  
That Brother Heart thro' your true hearts that  
    burned.

## 3.—"RUTH."

When Ruth, the Pride of Moab's mountains bare,  
To Bethlehem came, the twilight in her hair  
And in her face the sunrise, who might share  
Her morning walk afield, her gleaming song,  
Her friendship true, her heart that knew no wrong,  
Found never evening late, nor labour long.

Would I might walk beside Thee, gentle "Ruth,"  
Thy soul serene, thy heart of utmost truth,  
Treading with buoyant step thy Hills of Youth!  
In Life's wide field thy hand its store doth glean  
Behind the sturdy reapers, and when E'en  
Calls all to rest no richer shall be seen.

Upon no human arm dost thou depend,  
Sufficient if thy shining Lord attend,  
Thy Brother and thy Lover and thy Friend.

No gentle lips thy childhood's cheek caressed,  
No pillow thine of Woman's tender breast,  
Unmothered and unsistered and unblest.

With what rude skill a boyish hand may gain  
I dried thy Tears and soothed thy childish pain  
And waked thy Smile to sunshine after rain.

In Girlhood's charm, in Woman's grace arrayed,  
With what large wealth thou oft hast over-paid  
The meagre loan, the insufficient aid!

That filial part which lay beyond my hands,—  
Far wandered over Seas and over Lands,—  
Thou madest thine own, and met its high demands.

God give thee Peace and Joy and Love and Rest,  
Till, in His shining Presence, Welcome Guest  
And Faithful Servant thou shalt stand confest!

C. K. H.

Yokohama.

## NEWS OF THE WEEK.

General Kawamura left Dalny on Jan. 20th for home.

Russian sick and wounded at Matsuyama number 1,047, including 33 officers.

Mr. Nagai, a naval engineer, and 72 workmen left Tokyo on Jan. 23rd for Port Arthur.

It is reported from Ujina that 338 Japanese invalids arrived there on Jan. 25th from the front.

A telegram from Nakatsu reports that at 11.15 a.m. on Jan. 25th, a shock of earthquake was felt there.

An Osaka telegram says that the Russians detained at Tengajaya numbered 16,999 on Jan. 25th.

Mr. Y. Sawaki, Secretary of Finance, has resigned and entered the employment of the Bank of Japan.

Of the Russian prisoners from Port Arthur, the wounded number 18,556, including 3,657 bluejackets.

On Jan. 23rd, 661 sick and wounded men were brought to Ujina from the front; 57 were removed to Osaka.

One of the Russian prisoners at Matsuyama died on Jan. 24th. The funeral took place on the following day.

Tokyo papers report that Lieut.-General Nicholson, who is now in Tokyo, will leave on Jan. 30th for home.

The *Kokumin* reports that Admiral Togo, Commander-in-chief of the combined squadron, will leave on February 1st, for his post.

On the morning of Jan. 25th, a landslide occurred at a hill in Minami-Ota, Yokohama, when two coolies who were working there were crushed.

Sir Claude MacDonald paid a visit at 10 a.m. on Jan. 23rd to Baron Komura, Minister for Foreign Affairs, at the latter's office and left about 11.30 a.m.

The steamer *Wingsang* has brought to Nagasaki silver bullion valued at yen 309,076, being

the interest on the Chinese indemnity. It will be removed to the Osaka Mint.

A suspicious case of plague appeared on Jan. 25th at Hiroshima. The sanitary authorities are carrying out an examination. The patient is a coolie.

According to official investigations made on Jan. 21st, the Russians from Port Arthur already brought to Matsuyama and five other places number 15,521, including 295 officers.

Vice-Admiral Shibayama, Commander-in-Chief of Port Arthur Naval Station, left Kure on Jan. 24th for Sascho on his way to his post. Major-General Fujimoto left Ujina on the same day for Dalny.

The prices of Japanese and Russian bonds, according to a telegram received on Jan. 23rd by the Specie Bank, have generally fallen in London. In New York, however, Japanese bonds were inactive.

A Kyoto telegram reports that on Jan. 18th, an explosion took place in the compound of the Uji Ammunition Factory, the result being that one building was damaged and four persons were injured.

Mr. T. Ito, a clerk of the Takeshiki Court Martial, committed suicide on Jan. 23rd in his house by hanging himself with a cord. Temporary insanity is said to be the cause.

The various Departmental Ministers, Mr. Goto, Director of Administrative Affairs of the Formosan Government, and others held a conference on the morning of Jan. 17th in the official residence of the Premier.

The *Korea Daily News* of Jan. 14th stated that an aged Councillor of State, Mr. Choi Ik-hyen, who is a strong advocate of reform, had been sitting outside the Palace gates for the past five days and announced his intention of staying there until the desired reforms have been carried out.

Small-pox is prevalent at the village of Otsu and at Aioi-machi in Osaka. On Jan. 23rd, a Russian detained at Hamadera was attacked with the disease, and on the following day, three other prisoners were infected with it. The sanitary authorities are investigating the origin of the disease.

Mr. T. Yamada, a writer for the *Shin Nippon*, a Japanese daily journal published in San Francisco, who is now in Tokyo was arrested on Jan. 24th. The charge is reported by the *Asahi* to be that he gave a false statement on the previous day in the Tokyo District Court where he was examined as a witness in connexion with the case of a lawyer named S. Tada.

The new chief of police, says the *Korea Daily News*, is certainly going vigorously to work. Following upon his campaign against "Devil" shrines, their proprietors and patrons, he gives notice that all men able to work who are found begging will be taken charge of by the police and provided with sufficient exercise to keep them warm. Consequent upon this, says our Korean reporter, most of the beggars commenced to work themselves and some of them became soldiers!

The Rice Exchanges of Tokyo, Osaka and Kobe show a fall in prices as follows:—

	TOKYO.	
	Closing Price on the 18th.	Closing Price on the 17th.
	Yen.	Yen.
January delivery .....	12.6400	12.6900
February delivery .....	12.8400	12.0250
March delivery .....	12.9900	13.0250
OSAKA.		
January delivery .....	12.7325	12.8200
February delivery .....	12.8550	12.9100
March delivery .....	13.0400	13.0700
KOBE.		
January delivery .....	12.7400	12.7600
February delivery .....	12.8100	12.8150
March delivery .....	13.0100	13.2350

The cause of the fall is believed to be the depression in the provinces.

MONTHLY SUMMARY OF JAPANESE  
CURRENT LITERATURE.

In addition to the bulky standard works which pour forth from the Hakubunkan press month after month, this house publishes no less than eight well known and widely read magazines. (1) The *Taiyō* at present stands alone as a magazine. There is no other publication that approaches it, as we have often pointed out in these columns. (2) The *Bungei Kurabu* (Club) is almost exclusively devoted to fiction. Prizes are constantly being given for the best short stories and the productions of the successful competitors appear in this magazine. It is issued on the first of each month. (3) The *Jogaku Sekai* deals with the education and general training of girls and commands, we observe, the services of such writers as Mr. Shimada Saburō and Mrs. Sasa. The magazine has been in existence about 5 years. The subjects discussed in this month's issue are Female Education, New Energy among Women, New Occupations for Women, the Renovated home of the 20th Century, Household Management, the English spoken by Japanese School Girls, the Pleasures of Old Age, Sanitation, and Methods of Letter-writing—a very good and useful programme. (4) The *Jitsugyō Sekai Tai-aiyō* (The Business World's Pacific Ocean), a fortnightly, has just been greatly enlarged and improved. It now covers 120 pages and contains some good illustrations. It supplies the business world with a large amount of useful information and acts as a guide to many young business men. (5) The *Shōnen Sekai*, a monthly which has been running for over 10 years, supplies suitable reading matter for young boys and girls. Dr. Ishikawa has contributed a story to the January number entitled *Hibi no hanashi*. (6) The *Chūgaku Sekai* has recently been enlarged. It deals with middle school topics and aims at acquainting the Japanese student with the school life passed by the European or American lad. It is said to have a wide circulation. (7) The *Nichi-Ro Sensō Shashin Gwaō* is a collection of photographs and pictures of war scenes. It sells at 20 *sen* a copy and appears on the 8th of each month. (8) The *Nichi-Ro Sensō Jikki* appears three times each month and contains a carefully compiled record of the war. Forty-seven copies have been already issued. It sells at 10 *sen* per copy.

\* \* \*

We are pleased to be able to announce the publication of a new Dictionary on Philosophy. The dictionary published by Dr. Inoue Tetsujirō and Dr. Ariga about a quarter of a century ago, which reached its second edition in May, 1884, though correct as far as it goes, has long been felt to be inadequate. Mr. Asanaga Sanjūrō is the compiler of the new work called *Tetsugaku Jiten*, which was issued by the Hōbunkan, Tōkyō, last month. This reference book is far more elaborate than anything that has appeared in the same line. Mr. Asanaga is one of the Professors at the Buddhist Shinshū University and teaches also at the Tōkyō High Normal School. Mr. Asanaga's Lexicon gives all philosophical terms in English, French, German and Japanese, explaining their meaning and in some cases giving their derivation. It also supplies short biographical notices of all noted philosophers. The work sells at 2 *yen* a copy.

An extremely elaborate and promising work on household management, hygiene, and every subject connected therewith is now in the press. The book is called *Nihon Kaizen Jiten* (事典). This encyclopedia is being compiled by a committee headed by Dr. Haga Yaichi and Mr. Shimoda Jirō, M. A. It is founded on German, English and American works on home life and its requirements. The book aims at being a reference book on almost every subject, light or heavy, that may interest educated men and women. But unfortunately the type is lamentably small, judging from a specimen page that lies before us. The Fuzambō are the publishers.

Dr. Tsubouchi's book on Ethics, noticed in these columns some time ago, has, we observe, already reached its fifth edition.

The number of English-Japanese dictionaries in circulation among students, ranging in price from 35 *sen* to about 75, is legion. Among them the Sanseidō's *Shimayaku* (新譯) *Ei-Wa-jiten*, compiled by a learned committee, has not been surpassed, smallness of type being its only disadvantage. Two very capable scholars, Dr. Ueda Mannen and Mr. Ueda Bin, M. A., have just issued through the Fuzambō a dictionary called *Saishin Ei-wa-jiten* (The Latest English-Japanese Dictionary). It covers 1,300 pages and sells at 55 *sen*; so it may be premised that the size of the type and the quality of the paper used are not likely to tempt many foreign purchasers. The demand for such dictionaries is so enormous that new works appear every year. To print in larger type would mean a great reduction in the number of purchasers, as the Japanese student usually expects to obtain a dictionary for less than 60 *sen*. Comparing some of the definitions given by this dictionary with those of the Sanseidō's *Shimayaku Ei-wa-jiten*, we find that the latter is fuller and on the whole more accurate. "For love or money" is translated by *Izumi shite mo* by the "Latest English-Japanese Dictionary," a very inadequate rendering surely. The definitions given under "love" are twice as numerous in the Sanseidō dictionary as in those of the later book; the Sanseidō work giving even the Japanese equivalent of the plant "love lies-bleeding" (*himoketō*).

The Ōkura Shoten announce the publication of a work entitled *Ei-wa Jukugo Ruigo Shin-jiten*, the English title of which is "A Treasury of the English Language. A Dictionary of Synonyms, Idioms, Phrases, Uses of Prepositions, and Various Difficult Words." The work sells at 75 *sen* a copy. It is stated that 10,000 copies have been printed and are ready for sale. Here are a few of the definitions taken from the specimen sheet sent to us: "Hand and Glove," *Taihen ni shinmitsu naru*. "From hand to mouth," *Onore ga yeta tokoro no mono wo tadachi ni tsuyashite; sengo no kangaye mala keisai to iu kangaye nashi ni; hinkon no jōtai ni iu*. The compiler is an English Literature graduate of the University, Mr. G. Tatsuno, and the work as far as we have been able to examine it seems to us to have been very carefully done.

The Fuzambō announce the early appearance of two new Readers designed for the use of soldiers and naval men. They are called *Tsūzoku Ganji Tokuhon*. They are said to be written in easy Japanese and to explain everything likely to be interesting to men belonging to the two services and contain war stories and the like.

The well known publishing house of Yoshikawa Hanshichi has recently been converted into a joint stock publishing company known as the Gōshi Kaisha Yoshikawa Kobunkan. This step was rendered necessary by the departure of the representative of the Yoshikawa family for the front. The business, it is announced, will be carried on on the same lines as heretofore.

\* \* \*

Viscount Watanabe contributes an article to the January *Taiyō* entitled "The Point of Contact between the Oriental and Occidental Civilisations." Many readers will doubtless take exception to some of the Viscount's generalizations on the ground that there are no data for drawing such sweeping conclusions as those which he lays down. Here is the substance of his article. As a result of the bloody battles Japan has waged she finds herself in a position to contribute to the 20th Century civilisation certain qualities that are unique in character. She has begun to realize that she occupies the place of a leader in the moral world. It would seem as though in this 20th Century we were about to witness a blending of two distinct types of civilisation into one, and as though Japan were going to be the medium for uniting Eastern and Western ideals. The two systems of civilisation are certainly radically different; the Oriental, being founded on religion, has self-denial as its chief object; the Occidental, being developed on the lines of political competition, has self-assertion as its leading principle. Hence the tendency of Oriental civilisation is all towards union and that of Occidental to disunion. The

former attracts minds to each other, the latter separates mind from mind. China with its extreme form of despotism, which despotism is as strong to-day as it ever was, may be said to be the centre of Eastern civilisation. Germany, the home of an all-powerful social democracy, may be said to be the centre of Western civilisation. Hitherto the chief obstacle to the blending of Eastern and Western civilisation has been the lack of free intercourse between Occidentals and Orientals. Now, not only have they grown to know each other but we have seen an Oriental country like Japan borrowing wholesale from the West material appliances, ideas, political institutions, and the like, while retaining all her distinctive Oriental qualities—all her loyalty, patriotism, and oneness of purpose. So, while keeping all that is best in Oriental civilisation—all the consolidating forces connected with the worship of one ideal—we have appropriated to ourselves the differentiating influences of the West, and so, having made our own all that is best in the West while retaining all that is of value in the East, we have grown to be regarded as a unique nation. Japan is fast becoming the centre of Eastern Civilisation, and the Chinese, Koreans, Siamese and Indians are disposed to look to her for guidance. There are at the present moment some five or six thousand students from other Eastern countries in our schools and colleges. In addition to this, Europeans and Americans are being more and more attracted by what they have heard of our civilisation and are studying it with increased care and assiduity, and there are not a few of them who anticipate that we shall in the near future figure as the originators of an entirely new type of civilisation, which will commend itself to the judgment of the wise world over. If it should appear later on that by the enormous sacrifice of human life which this war has involved we have given proof to the world that we possess certain moral traits, a certain spirit and will that is nowhere to be found in the same degree, we shall have thus won for ourselves the honour of giving a new type of humanity to the world; and in that case our losses will be more than atoned for by what we shall have gained.\*

To a foreigner reading Japanese with tolerable ease there is perhaps no part of the *Taiyō* that will prove month by month so interesting and instructive as Mr. Toyabe Shuntei's "Character Sketches." It is not easy for any foreigner to get behind the scenes in the political world and to see and hear all that goes on there. Mr. Toyabe has shown himself to be thoroughly conversant with modern Japanese politics, with the ideas and principles of the chief wire-pullers, and he takes the public into his confidence in a thoroughly modern Western fashion. In reading many Japanese articles one feels that the writers do not tell us half of what they know. They whet our curiosity and leave it unsatisfied. Not so Mr. Toyabe. He seems to aim at presenting all the different sides of the subjects he is discussing, of saying all that can be said in favour of the men whose characters he is analyzing as well as all that is alleged against them with any shadow of truth. And we have usually found that Mr. Toyabe's criticism is nothing but the embodiment of prevailing public opinion, though for one reason or another journalists have elected to leave it unexpressed. The character sketches this month are specially interesting. Beginning with Mr. Tokutomi Ichiirō, Mr. Toyabe goes on to discuss Mr. H. W. Denison's character and work, and touches on the services rendered to the country by Mr. Stevens and Captain Brinkley. We will now epitomize the article as it stands. It is entitled *Goyō Shinbun Shuhitsu* ("Editors of Government Newspapers"). The term Government newspaper, says Mr. Toyabe, was first used in the seventh or eighth year of Meiji in reference to the *Nichi Nichi Shinbun*, which was then relied

\* To speak of Japanese civilisation as typical Oriental civilisation is most misleading. It is in many respects as unlike Chinese and Indian civilisation as it is possible to conceive. In numerous particulars, as some foreign writers have taken pains to show, ancient Japanese civilisation resembled European civilisation to a far greater extent than it resembled Chinese or Indian civilization.—(WRITER OF SUMMARY.)

on by the Cabinet for giving expression to its views. It soon came to be applied as a term of reproach to all papers that defended the Government. At the present time the *Nichi Nichi Shinbun* is the property of Mr. Katō Takaaki and is thoroughly independent. The paper that has taken its place is the *Kokumin Shinbun*, which is under the control of Mr. Tokutomi Ichirō. Though we retain the term "Government Newspaper" for the sake of convenience we do not, says Mr. Toyabe, attach to it any meaning that implies reproach. For as a matter of fact it is no more a reproach for a paper to defend the Government than it is for a journal to defend a political party, and when an editor who pleads the cause of the Government brings to his task considerable literary power, critical insight and fairness, instead of being despised, he should receive the respect of all right-thinking persons, and Mr. Tokutomi, the subject of this character sketch, is eminently a man of this type. Now, the Tokutomi of to-day is not the Tokutomi of 15 years ago. Neither his writing nor his reputation is what it was in the days when his brilliant periods on the subjects of the day attracted the attention of a wide circle of readers to whom his ideas were both new and attractive. He then figured as the champion of the people, when championship of the kind was a novelty. If his writing to-day attracts little attention compared to what it used to do, it is not because Mr. Tokutomi's style has deteriorated, but because readers have become more knowing (*Tokusha no me no koyetaru ni yoru nomi*).<sup>\*</sup> Though his style cannot be said to have much deteriorated, neither can it be said to have strikingly improved beyond possessing that mellowness, sobriety and gravity which years confer on most writers. As a political writer to-day, while possessing some merits which do not characterize ordinary journalists, Mr. Tokutomi has his defects and shortcomings. So it would be rather interesting to know what it was in him that induced the Cabinet to apply to him. In what way he will further the interests of the Government in the newspaper political world it is not easy to see; for it cannot be pretended that as a Government advocate he will ever produce the impression made by the weighty, polished and lucid prose of Mr. Fukuchi Genichirō when setting Government programmes before his readers or that as a revealer of the sophistry, the weakness and the unreliability of many of the arguments urged by anti-Government organs he will ever approach Mr. Asaina in logical subtlety and rhetorical force. It is not likely that the Government will again obtain such a champion of their cause as Mr. Fukuchi. His leading articles made delightful reading and they were so free from spite, malice and personalities that his opponents read them with almost as much pleasure as his supporters (*Yūe ni tōji gosōshi no ronsetsu to ieba, hantai to to iedomo kore wo aidoku too kinzuru koto atawazariki*). And as for Mr. Asaina, though he did not maintain the same high level, the same stateliness of style as that of which Mr. Fukuchi is such a master, and though he lacked the art of presenting unpleasant truths in a taking and quite inoffensive manner, yet he always wrote in the *Nichi Nichi* with great perspicuity and force and showed a most thorough acquaintance with the subjects under discussion. Both these writers were serious politicians whose views carried considerable weight; hence their Government advocacy was on the whole very effective. But as for Mr. Tokutomi, whatever may be said in his praise as the master of a literary style which has many admirers, as a publicist his name carries little weight. Compared with the views of the two men referred to above, his political opinions are crude, and

lacking in grasp. There is, too, a certain want of gravity and calm rationality about the material which appears in the *Kokumin Shinbun*.

But though the *Kokumin Shinbun* has become a Government organ, it will occupy a different position from that of the *Nichi Nichi* in former days; since it is a paper that owes its prosperity solely to the skilful management of Mr. Tokutomi. The *Nichi Nichi* depended on its subsidy almost entirely, and neither of the above mentioned editors could be pronounced good business men. Mr. Tokutomi will doubtless continue to control every department of his paper, and we do not for a moment think that he is the kind of man to allow his personality to be effaced while acting in the new rôle he has undertaken to play. What many people say is probably true; it will be Tokutomi first and the Government second. To not a few this step of his will appear like the abandonment of his principles, but it need not necessarily be so.

Mr. Tokutomi has in the past been most careful to keep himself free from all political entanglements. While more or less connected with the formation of various parties and while keeping in touch with their prominent members he has joined none of them. He has to a large extent fraternized with each set of politicians in turn but hitherto has never become the tool of any of them. And it is doubtful whether he is the sort of man to succeed as a politician. So there comes the question, can he make a success of this new venture? Can he, while acting up to the ideals which he has preached for a lifetime, serve the interests of the present Cabinet? It cannot be pretended that Count Katsura knows much about the art of using a newspaper skilfully, and as for Mr. Shibata, the Chief Secretary of the Cabinet, though an extremely good man of business, he has never shown any capacity for putting a literary organ to a good use. Then there are the veteran statesmen at the back of the Cabinet, who constantly interfere with and control its action and who have something to say on all matters; so that unless we are much mistaken the path on which Mr. Tokutomi has entered will be found a very difficult one to tread.

The article which we have summarized above closes with an extremely laudatory account of Mr. Denison's career in the Foreign Office and with a few remarks on the connection of Captain Brinkley and Mr. Stevens with the same Department. Mr. Toyabe says that Mr. Denison's long tenure of office in the Foreign Office is a surprise to those who remember how numerous have been the foreigners who have been dismissed by the various Departments of State during the past 20 years. But to those who know the Foreign Office well Mr. Denison's retention in the service of the State is no cause for astonishment. There is no man living who has a better acquaintance with Japan's foreign diplomacy in the Meiji era than Mr. Denison. He is regarded in the Foreign Office as a perfect living dictionary, which may be consulted at any moment on any knotty question that may come up on which accurate information is needed. Though there are now numbers of Japanese who have studied every branch of law and who are thoroughly acquainted with all the details of correct diplomatic procedure, there is no one in the Foreign Office that has had so much diplomatic experience and that is so thoroughly conversant with Japan's attitude to foreign countries during the last quarter of a century as Mr. Denison. He has served under no less than nine Foreign Ministers and has been highly respected by them all. But notwithstanding his long service, wonderful to say, Mr. Denison does not speak Japanese. He has no call to do so, however, for at the Foreign Office everybody can speak English. There are, says Mr. Toyabe, two foreigners who may be said to have conferred more benefit on this country by their advice and work than any other foreign employees. One of these is M. Boissonade de Fontarabie, the great French lawyer, and the other is Mr. H. W. Denison. Mr. Denison has pleaded Japan's cause on every important occasion on which his services have been solicited in a most whole-hearted way. He is most thoroughly devoted to this country

and has, it is said, resolved to leave his bones here. A man of a retiring disposition, who cares little for society, with simple habits, and an indefatigable worker, he suits the Department which he serves perhaps better than any man that could be found.

\* \* \*

The January number of the *Jitsugyō no Nihon*, writing on the keen competition that goes on between various nations in the business world, says that the most successful countries are those where labour-saving inventions are most numerous. The writer thinks that in Japan great inventions are comparatively few. Most of the processes for which patents are taken out are no more than slight modifications, if they are not facsimiles, of foreign inventions. In the year 1902 out of over 3,000 applications, 870 patents were granted. But among these there was not one that could be pronounced to be a startling invention. For inventions that aid industry two qualities are needed, says the *Jitsugyō no Nihon*: one is imagination and the other adeptness in handicraft. In the latter the Japanese are to the front, but in the former they have not hitherto excelled.

The *Jitsugyō no Nihon* is one of the best supported of the many existing business magazines. It publishes a number of articles written by such well-known business men as Baron Shibusawa and Mr. Sonoda Kōkichi. Baron Shibusawa, in an article entitled *Senshō Teikoku no Jitsugyō Seinen ni tsugu* ("A word to the Young Business-men of this Victorious Country"), first dwells on the manner in which the pluck and dash of the old samurai class have been successfully imitated by ordinary peasants and townsmen; so that instead of the fall of feudalism involving the extinction of the military spirit, as some predicted, it has only intensified it by making it the common characteristic of all classes of the community. The Baron then proceeds thus:—Turning to the business world, one finds a striking contrast to the spirit manifested by our Army and Navy in the present war. There is no want of business organization in this country, and as for business education, it has made wonderful strides within the past decade, so much so that there are over 60 ordinary Commercial Schools in the country at the present time and our high commercial schools are on a level with the business universities of other countries. But business methods and the business spirit are still undeveloped among us. One cannot admire the ways of business men as one admires the conduct of our warriors. We have to create a new business world. Even to-day many of our business men make promises that they think nothing of breaking (*Kyogen* (虚言) *wo motte shōgyō no hōben to kokoroete oru koto wa, ima mo mukashi to tai sa ga nai. Yakusoku wa yaburu koto wa nan'to mo omowanu*). They frequently show no consideration whatever for the men with whom they are doing business, greedily pressing their claims and demanding their full pound of flesh regardless of the fact that by so acting they are ruining their own prospects. Our business men, moreover, possess too little of the spirit of co-operation. It is everyone for himself. Though our business is developing rapidly, the minds of our business men are not keeping pace with it by any means (*Jitsugyō no hattatsu to doji ni jitsugyō no seishin mo dekiō na mono desu ga, sore ga ikkō dekite orimasen*). When I was in America some little time ago I had an interview with President Roosevelt. In the course of conversation the President praised our military organization and our bravery and went on to speak highly of our art, but he said nothing about our business. Hearing my country praised so much, I felt quite uncomfortable and observed that when I came to the United States next I hoped that our business would have so far advanced as to merit his Excellency's approbation. The President looked surprised and said that he did not mean his silence on business to be understood in the sense of depreciation, but that he had the greatest respect for my earnestness in this matter. We both laughed over the affair, but it was not without its significance. "Whatever else we are praised for, we are not praised at all for our

\* This is a good example of the highly figurative manner in which certain Japanese verbs are used. The eye "growing fat" is put for increased intelligence in readers. The daily newspapers are full of figures of speech given in no dictionary that has been published and this constitutes one of the difficulties of studying Japanese.—(WRITER OF SUMMARY.)

† Mr. Fukuchi was in the habit of writing the characters *gosōshi* for *magazine*, hence his articles are called *gosōshi* (吾曹子) *no ronsetsu*. (WRITER OF SUMMARY.)

business. This is not because those who withhold the praise are bad, but because there is nothing worthy of praise.\* Our business men and our military men belong to the same race of people, and yet in character they are as different as heaven from earth. How is this difference to be accounted for? This is a question which for years has greatly puzzled me. I have made some attempts to solve the problem and have reached the following conclusions. Among the numerous complicated causes that have produced out of the same nation two distinctly opposite types of men, one is a radical difference in moral character. Our warriors are characterized by great sincerity in all they do. They say what they mean and do what they promise to do. This trait may be said to characterize all military and naval men in this country. There is no trimming, no pretence, no double-facedness among them. This quality is not imparted to them by books or schools, it reaches each man in the form of an all-pervading spirit in both services which he cannot resist. To become a warrior is to accept the high standard of conduct which is firmly established in the two services. It is his thorough sincerity that carries the Japanese warrior through fire and water in the discharge of his duty. When he undertakes to fight and die for his country he has no thought of sparing himself in any way. Hence he is to be trusted always to obey orders whatever they may be. He goes to battle with an ideal before him—that ideal being entire devotion to his country. Were he a hypocrite, he would shrink in the hour of trial and think of his own safety. It is his sincerity that carries him through the hail of bullets to willing death or welcome victory.

Now, when we look into the hearts of business men that which strikes us most is the lack of sincerity among them (*Shikaru ni jitsugyō no hōmen de wa, ikan nagara, shitei no shūyō ga sukoburu bakete oru yō ni omowarema-u*). There are numbers of our business men who seem to think that lying, and false representations, trickery and the like, are necessary for the successful transaction of business. Sincerity and truthfulness are quite outside the thoughts of such men. There are of course some honourable merchants, but they are as a rule isolated and when they mix with other business men they find that their standard of business morality is not respected.† So it is that business men as a body are not worthy of being mentioned in the same day as military and naval men. Until our business as a whole is founded on truth and sincerity, until other nations are able to trust us as implicitly as they trust each other we can never become a great business people. Were our business men known as a body to-day for their scrupulous honesty and truthfulness our trade would be many times double what it is, and in Europe and America the respect now, felt for our warriors would be felt in no less degree for our business men. This, young men, is what you must all labour to bring about. This is what the country expects of you beyond everything else.

\* *Dōmo, waga kuni wa hoka no ten de wa shujō homerareru ga, jitsugyō de wa ikkō homerarenai. Shikashi kore wa homenai kata no warui no de wa nakute, homeru hodo no tokoro ga nai kara de arimasu—jitsu ni ikan no shidai de arimasu.*

† *Kore de wa mattaku makoto, sumawachi seijitsu wo dogwai ni oite oru mono to wamakereba narimasen. Yūze ni mama (聞 々) seijitsu naru jitsugyōka ga attemo, atsumareba jun-ichi de nai.*

#### HOW ENGLISH IS TAUGHT IN INDIA AND HOW IT IS NOT TAUGHT IN JAPAN.

(COMMUNICATED.)

The general success of the Japanese in this war will, it is to be hoped, make them anxious to abandon educational methods that in the opinion of most of the best judges have proved failures. In our opinion there are many things in the present system of state education in this country that need reform, but certainly nothing has so signally failed in its object as the teaching of English. Contrast reveals everything, and so it has happened that during the past few years the Japanese educational authorities have been inquiring how English is taught in India and with

what results. Last summer Mr. Sharp, a professor connected with a Bombay college, was giving addresses all over the country on this subject; to one of which we ourselves listened. Then Mr. G. N. Potdar, B. A., an Indian, at the request of Baron Kanda, stated his views at some length, to a meeting of educationists held in Tokyo last April. One thing was made quite clear by these two gentlemen, and that is, that Indians do get to write and speak English well in a comparatively short time. How is the thing done? Here is the programme. In India boys are generally sent to school at the age of 6 or 7; though it is not obligatory on all parents to send their children to school, and Mr. Potdar states that 60 per cent. of the population is quite uneducated. The lad begins with a 4 years' course at a primary school, where all the teaching is in the vernacular. Here he learns writing, reading, arithmetic, geography, history and grammar. Say at the age of 11, he enters a middle school, where for 5 years he studies English under teachers whose pronunciation and knowledge of the language are above reproach. He is first taught thoroughly how to read, how to spell and how to compose very short, easy sentences. The Readers used in the Middle Schools are the Royal Readers, the New Royal Readers and the Orient Readers. In addition to the Readers, for the first three years, a graduated set of translation text-books are used. These books contain a number of exercises in translation from the vernacular into English and from English into the vernacular. They are furnished with copious notes and explanations of the structure of English sentences, of the use of adverbs, prepositions, &c., in the vernacular. They carry the student on from short, easy colloquial phrases to more difficult and more complicated English. During the fourth and fifth years the student is taught all subjects in English, and he is required to express himself orally and in writing in English exclusively. During these years he is obliged to take up a second foreign language, either Sanscrit, Persian, Latin or French. This language he studies by the medium of English only, translating from it into English. One of the most useful of the exercises of the fifth year students is paraphrasing poetry and rather difficult prose in English. For this a good vocabulary is needed and readiness of speech. The teachers ask questions and criticize the whole time. From the beginning of the students' sixth year the high school course commences. This lasts two years, and one of its principal features is the development of the student's composing power. He begins by letter-writing and then goes on to compose short essays on a great variety of subjects, commencing with description and ending with logical presentation of abstract thought. During the 7th year of his English course, that is, during the 2nd year at the High School he writes an original essay twice a week. Next comes the college course, sometimes called the university course, which lasts 4 years. It is to be noted here that in India the universities are examining bodies only. The term university in Europe as in Japan is used in the sense of a number of affiliated colleges and the university has no existence apart from these colleges. But in India the examining body called a university is quite distinct from the colleges where students receive instruction on various subjects. There are five such universities in India; that of Calcutta, Madras, Bombay, Allahabad and the Punjab. These universities hold examinations for students who are receiving instruction at the various colleges at the end of the first and the second two years of the course. The examinations are very severe. It is seldom that more than a third of the students who go up are passed. Considering the difficulties the Indian student has to master, it is generally felt that the examiners are too mercilessly rigid. To quote Mr. Potdar's words, given in the *Kyōiku Kōhō* (No. 289), "It is a pitiful sight to look at such a vast army marching with the hope of success and the cruel hand of the examiner mowing down two-thirds of them as a sturdy boor cuts the ears of corn with his merciless scythe." In the first university examination the students have to pass in 5 appointed text-books, and in 7 in the second examination

for the M.A. degree. The student has on these occasions to compose an essay of about 200 lines on some difficult subject in the space of three hours. Among the text-books required by the university are Macaulay's Essays and History of England, standard novels, Shakespeare, and Scott's poems. Classes are held during 5 hours only in the Indian middle and high schools and only for about 4 hours during the college course. Mr. Potdar thinks the Indian system of education contains many defects. It leaves, he says, little room for individual initiative and for the development of originality and ingenuity. The students moulded by it are too much alike. Then too much cramming is required, and the examinations are so perpetual through all the courses that the student has no time to investigate anything but the specified subjects. But Mr. Potdar admits one thing, and that is, that the Indian students who pass out of the high schools are far away ahead of the Japanese high school students in their knowledge of English. The students in India use English among themselves from morning to night, they correspond in English, they read English newspapers, they attend English lectures for the pleasure of listening to the language. They have debating societies where all the discussion is carried on in English. And yet these Indian students are Asiatics, and can speak and write their own languages with facility. It is said that as a rule continentals are better linguists than islanders, and it seems to be the general opinion of those foreigners who have been engaged in teaching Japanese students for many years that the majority of them make very slow progress in acquiring a foreign tongue and that much of their knowledge is anything but scholarly. It perhaps then cannot be denied that the Indian student starts in the race better equipped mentally than the Japanese student; but this alone is not enough to account for the poor results obtained in this country.

From the above remarks it will be perceived that in India enormous importance is attached to the drilling the student receives during the first five years of study in the middle school. Beginning that course at the age of 11, he has a distinct advantage over the Japanese student who is 14, 15 or 16 years old when he commences the study of English in the middle school. In the middle school teaching in Japan none of the subjects to which the Indian educationist attaches enormous importance are properly taught. Pronunciation is not properly taught; dictation is not properly taught, composition is seldom taught at all unless in the few schools where within the past few years foreigners have been employed. Not only is correct English not taught, but incorrect English as regards pronunciation is habitually used by the teachers in the class room. The consequence is that in Japan the High School foreign English teachers have to do work which ought to be done in the Middle Schools, and not only the High School teachers have to do this work, but even University professors have to do it. We are informed that the late Mr. Lafcadio Hearn took to giving dictation lessons to his students at the University towards the close of his career there, — he said their spelling was most defective. If the Mombushō would only radically alter the system of teaching English in the Middle Schools, forbidding the practice of writing, or rather caricaturing, for they cannot be written, English words in Japanese *kana*, insisting on the employment of competent teachers of pronunciation only and introducing translation text-books for teaching elementary composition as they do in India, and if during the last two years of the Middle School course all instruction could be given in the English language as it is done in India, we should see a great change. In reference to the employment of foreign teachers in the Middle Schools, the men engaged are picked up in too haphazard a fashion. The Middle Schools are at present being exploited in the interests of Christian propagandism in a way that is detrimental to high class education. The young men who are being rushed into the Middle Schools are doubtless earnest Christians, but some of them are very poor teachers, and teaching is only taken up by them as a means of spreading Christianity. The foreign teaching profession in

this country has been greatly spoilt by the practice of certain missionaries. These men are paid to do spiritual work, and at very low salaries they undertake purely secular work. Some of them do it well and some of them very badly. Even with the salaries they are now paying it would be possible for the Middle Schools to bring out from England or America a number of well-trained and thoroughly educated teachers if these teachers were promised permanent employment. To our knowledge some of those who as Christians have filled posts in Schools have not been properly educated. This the Directors of Middle Schools ought to be made to see. Whether secular teaching in schools where the teaching of Christianity is strictly forbidden is a means of propagating religion is a question on which the Missionaries themselves do not agree. But this is beside the point. Our contention is that men who can't spell correctly or compose a grammatical letter should not in the name of Christian piety be entrusted with the education of Japanese students. This kind of thing brings reproach on the whole body of foreign teachers, and we have no hesitation in condemning it in unmeasured terms. If, on account of the cheap rate at which they are to be procured, the Middle Schools employ a number of incompetent foreign teachers in the place of the Japanese teachers hitherto relied on, it will be a case of "out of the frying pan into the fire." From accounts that have reached us we fear that this is what is being done. Looking around on the High Schools of Japan, we cannot but think that they are well manned as regards foreign instructors. But these teachers all complain of the slovenly work that is done in the Middle Schools. Students enter the High Schools without a good deal of what may be pronounced elementary knowledge of English. They will stumble over the translation of a Japanese phrase consisting of only 4 or 5 easy words. They don't know how to use the articles, how to use the auxiliary verbs. They mix up the tenses, use prepositions before adjectives and do every other conceivable incorrect thing; and in the course of three short years, with endless holidays coming between lessons, the High School foreign teacher is expected to train these grown-up men in the art of understanding oral English and in the art of writing English correctly. The High School teacher says, "Give us straw and we will make bricks, but such Middle School stubble as is now given to us cannot be converted into bricks worthy of the name within three short years." Every one of these teachers is doing his best with the material he has; but he is always regretting that he is not supplied with something better. So we reach the conclusion that Japan must make a new start in the teaching of English in the Middle Schools. The thing ought to be systematized and only such men employed as understand the system, approve of it and are in every respect competent to make a thorough success of it. Private schools in this country have succeeded in teaching English far more efficiently than Government schools, because they have had no such abuses as exist in the Middle Schools to contend with. If once the Middle Schools are set right, the whole thing will go ahead like clock-work. And this can be done without much expense by putting the right kind of men in power and giving them a free hand.

#### YOKOHAMA AMATEUR ROWING CLUB.

The following is the report of the Committee of the Yokohama Amateur Rowing Club to be presented at the meeting to be held on the 31st inst.:-

The Committee have pleasure in presenting to the Members the Thirty-Third Annual Report of the Club.

ACCOUNTS:—These show a Credit balance of yen 514.94, the profits accruing from the Bar amounting to yen 530.30.

ROWING:—Increased interest has been shown during the year. In addition to the usual Spring and Autumn Regattas, two unofficial Regattas were held at the end of the Season. At the Spring Regatta the usual Interport event took place, our representatives being successful in all four events. In justice to the K. R. & A. C.'s representative in the

Single Sculls, it should be mentioned that he was rowing in a boat that was strange to him and did not suit. The Club's best thanks are due to the Rev. W. Weston and Mr. M. Schellenberg for the able manner in which they trained our representatives. The Juniors continue to show great interest in rowing, the entries in the Junior events being large and their races well contested.

BOATS.—In order to give the now rather old Pair Oar and Double Sculling Boats a thorough overhaul, the services of the carpenter have been requisitioned for a longer period than usual, so that for the coming season all the craft should prove fully satisfactory and serviceable. The *Randau*, the picnic-boat, is also undergoing some minor necessary repairs, as well as the London Four. Rowing members will, however, kindly bear in mind that the upkeep of boats is a heavy item, and more care should be used in handling same. The past season has more than shown negligence in this respect, and the incoming Committee would do well to adopt strict measures to safeguard against rough usage.

With oars and sculls we are well provided, and there should be no need to add to our stock during the coming season.

SWIMMING:—The Swimming Races and Aquatic Sports were held as usual, and provided excellent sport. Water Polo was assiduously practised throughout the season and more than usual interest has been shown in this branch of sport.

BATHING BARGE AND LANDING:—The Bathing Barge is in good condition, requiring only a new coat of paint to serve us again for next season. The Landing Stage will require re-calking and new outer casings before launching. Both the barge and stage have been hauled up at Cook's Yard, Honmoku, for the winter.

HOUSE AND PROPERTY:—The repair of the two Slips demanded an outlay of yen 120, but it is to be hoped that no further large expenditure for them will be necessary during the coming season; it has to be borne in mind that owing to the nature of their construction, periodical heavy expense has to be incurred. The interior of the House was painted at a cost of yen 115, but the exterior of the building has not been painted for several years, and it would be well to have this done before next Spring; in this connection your Committee would remind members that the lease of the property expires next November, so that it will be necessary for the incoming committee to arrange (through the trustees) for a renewal.

Hon. Treasurer.

#### CHRIST CHURCH, YOKOHAMA.

The following are the annual report and accounts, to be presented at the annual meeting of seatholders to be held on Wednesday, 1st Feb., in the vestibule of the Public Hall, at 5 o'clock:—

At the commencement of the year, the statement of accounts showed a *General Account* with a Debit balance of yen 1,397.16, and a *Christ Church Rebuilding Fund*, with a Debit balance of yen 1,584.85. These two items were at once brought into the one account, as being more simple to handle, with a Debit balance of yen 2,982.02, and this Debit balance, during the course of the last twelve months, has been reduced to yen 643.04, against which yen 40 has since been received for *Pew Rents* for the past twelve months, making yen 603.04, which amount represents the entire indebtedness of the Church at the close of 1904, a result which, considering the frequent and important calls which have been made upon the community, is indeed highly satisfactory.

While there still remains this small debt on the Church funds it is well to observe that the congregation has contributed through the Church collections no less a sum than yen 1,384.88 towards charitable objects outside. The items are as follows:—

	Yes.
Relief of Sufferers by the War .....	570.00
St. Andrew's Mission, Yokohama .....	745.06
Sunday School .....	2.00
Society for the Propagation of the Gospel, £1. ...	9.86
Dr. Barnado's Homes for Waifs and Strays... ..	28.53
Homes for Waifs and Strays .....	28.53

If we compare the past four years since the new Church was opened, it may be pointed out that the amount received from pew rents and Church collections during the year ending 31st December, 1901, amounted to yen 7,443 and after remaining practically stationary in 1902, has since been steadily increased to yen 9,365 during the year under review. Nevertheless, the Committee, recollecting that the regular income of the Church is derived solely from the above mentioned sources, would ask subscribers to do their utmost to induce their friends to become seat-holders, and by so doing to qualify themselves for active participation in the management of Church affairs.

In accordance with precedent, the collection on Easter Day was presented to the Chaplain.

The Accounts have been audited by Mr. A. E. Pearson and the Committee tender their best thanks to him for his services.

A very handsome Altar Cross, made of brass, has been presented to the Church, in Memory of Miss Kathleen M. L. Stone, and the thanks of the Committee are also tendered to Mrs. Lowder, who very kindly furnished a Litany Desk, and two Hymn Boards.

The Committee also desire to take this opportunity of expressing the appreciation of the kind service rendered by Mrs. Field, who has gratuitously presided at the organ during the past twelve months, and also of the services of other ladies and members of the congregation who have given ungrudging service towards maintaining the musical character of the services and in keeping the Church itself in a state of cleanliness befitting the House of God.

The apparatus for heating the Church has upon one or two occasions become out of order, and the Committee express their regrets that the congregation should have suffered inconvenience thereby; the buildings of the Church and the Parsonage will be in need of some repairs in the coming spring, but it is to be hoped that these repairs will not be extensive. At the General Meeting it will be necessary to elect a new Committee.

## CORRESPONDENCE.

### THE AMATEUR THEATRICALS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—The committee of the Yokohama General Hospital desire, through the courtesy of your columns, to express their appreciation and thanks to Mr. and Mrs. McWilliams for the entertainment so ably and kindly given under their auspices for the benefit of the Hospital. Their thanks are also heartily extended to the ladies and gentlemen who assisted by taking part, and also to the members of the Bijou and Midget Orchestras whose playing contributed much to the pleasure and success of the occasion.

By Order of the Committee,

Yokohama General Hospital.

Yokohama, Jan. 21st, 1905.

### COLONEL EMERSON AND GENERAL STOESEL.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—I hold no brief for Col. Emerson, who is well able to take care of himself, but with a knowledge of the chagrin of the Japanese reporter, who has probably undertaken to confute the interview, it should not be difficult to discover which account merits the distinction of being "a figment of the imagination."

I understand it was only a few Sundays back that a reporter presented a card to Col. Emerson bearing the name of the paper which gives currency to a denial of the Nagasaki interview. This emissary expressed himself as desirous of gathering information concerning Port Arthur, which request was readily acceded to. He first enquired "How old is Mlle. Stoessel?" to which he received the answer "I don't know, and if I did I wouldn't tell you. You may ask me my age." This gentleman was asked if there were anything else he would like to know, but as the knowledge of the foregoing was evidently the limit of his curiosity, he left.

Knowing that I was interested in his project for seeing General Stoessel, Col. Emerson telegraphed me from Nagasaki on the 14th inst. the word "successful," and I venture to say he would not have done this were he responsible for such an account as is epitomised and reproduced in this morning's *Daily Mail*. Interviewed are liable to be misunderstood, and interviewers to have their accounts denied, as has occurred with far more famous personages, but in the distortion presented there is a tang of coloration by a reporter who is apparently wailing in the wash of his own disappointment.

Colonel Emerson has not yet returned and I therefore beg the courtesy of the insertion of this short comment on the paragraph in question, so that the impression conveyed may not go unrefuted.

I am, Sir, yours faithfully,

T. F. NONWEILER.

Tokyo, January 21st, 1905.

### BARON KIKUCHI.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—Several friends both in England and here have been kind enough to send me cuttings from *The Times*, containing a letter from Mr. G. H. Lindsey-Renton, making me "the hero of a very chivalrous action" while at Univ. Coll. School, London, in 1873, in lending my notes to my competitor for "the Cook Prize." In fairness to my old school-fellow and friend, Sydney White, I have written to *The Times* to correct the above statement for it was he who lent me his notes for the lectures I missed. I trust you also will be able to find space in your valuable paper to insert this letter, for the above incident has been one of my most pleasant memories, and it is actions like these that have caused me to regard with grateful remembrance the training I have received in an English School and University.

Your, faithfully,

DAIROKU KIKUCHI.

Tokyo, January 19th, 1905.

## AMERICAN INSURANCE METHODS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—Your article in to-day's edition of your paper headed "American Insurance Methods" has attracted my attention because it vaunts American Methods as being superior to British Methods, and in support quotes a solitary instance.

If the reputation of an Insurance Society is to be publicly influenced by a solitary instance I will quote my own experience with the Equitable Life Assurance Society: In August, 1897, it was my luck to go to the Klondike. My life was insured with the Marine and General of London and the Equitable of New York. I notified both Companies I was going into the Klondike. The Equitable Society informed me they would have to charge me an extra premium of £65 for one year's risk in the Klondike (I had already paid four annual premiums, month of March, of nearly £20 each, on a Policy of £500.) The Marine and General informed me they noted the fact I had gone to the Klondike and there was no extra premium. I considered the Equitable charge to be an extortionate one, closed my insurance with them, and added to my life risk with the Marine and General.

With my experience before me I cannot help but take exception to the method of getting an English Newspaper (*Globe*) to advertise an Insurance Co. in an impersonal manner. Such a thing should be discontinued, because if they (*the Globe*) desire to benefit the community by showing them the best Company to insure with they should find out more and not endeavour to build a reputation by quoting a solitary instance.

My only object in writing this is to state my experience with an English and an American Co. Outside of my Life Policies with the Marine & General I have no interest whatever in Life Insurance Companies. But, I am a lover of "Fair Play" and eventually find out where fair treatment is to be obtained.

Yours faithfully,

RENNIE TIPPLE.

Yokohama, January 25th, 1905.

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

### M. COMBES RESIGNS.

London, January 20.

M. Combes, the French Premier, has resigned.

### THE STRIKES IN RUSSIA.

Eight thousand cotton operatives have struck work in St. Petersburg.

The employees of the St. Petersburg-Warsaw line threaten to join the strike.

The *Standard's* St. Petersburg correspondent says that three meetings of strikers have been held. Besides the eight hours' day, they resolved to demand the convocation of a popular assembly; the cessation of the war; the granting of an amnesty to political prisoners; freedom of the press; freedom of creed; freedom of meeting.

### RUSSIA AND THE AREA OF THE WAR.

It is semi-officially announced in St. Petersburg that the scene of General Mishchenko's operations on the west of the Liao river were specifically included in the area of hostilities at the beginning of the War.

### POPULAR DEMANDS IN RUSSIA.

Later.

The strikes in St. Petersburg have ceased to be a trade movement and are assuming a distinctly political character. The demands include the recognition of the rights of the people as a remedy for poverty; the redress of the oppression of labour by capital; attached to these are also large demands for free education, popular liberty, and representative government.

organization of his cabinet. He has decided to adhere to M. Combes' programme; M. Delcassé remains as Foreign Minister.

### THE SITUATION IN ST. PETERSBURG.

The centre of St. Petersburg is practically deserted at night except by troops who are

### Other trades are joining the strikes. STRANGE OCCURRENCE AT ST. PETERSBURG.

London, Jan. 20.

It is officially reported that during the firing of the usual salute after the blessing of the waters of the Neva at St. Petersburg, a gun of the battery near the Bourse fired shrapnel instead of blank shot, with the result that four of the windows of the Winter Palace were broken. The Tsar was, however, some distance from the Palace at the time.

Another account says that the shrapnel had been inadvertently left in a gun belonging to the Horse Artillery, the most aristocratic corps in Russia, after practice on Tuesday, and the ceremony of blessing the waters was carried out according to programme.

The occurrence occasioned wild rumours that the affair was the outcome of a military plot.

The men of the saluting battery have been arrested.

### AMERICA AND THE INTEGRITY OF CHINA.

Mr. Hay, U.S. Secretary of State, has issued a circular to the Powers on the subject of China's integrity after the war, and has received satisfactory assurances.

### RUSSIAN CHARGES AGAINST CHINA.

Russia, replying to the note of Mr. Hay, reiterates her complaints of China's violation of neutrality.

### THE BALTIC COMMISSION.

At a public sitting of the Baltic Enquiry Commission at Paris, the British and Russian cases were read.

### THE RUSSIAN STRIKE.

London, January 21.

Bands of strikers, about 5,000 strong, are parading the streets of St. Petersburg and are enforcing a general strike, even at the Government Printing Works. A petition to the Tsar, circulating among the workmen's meetings, bitterly complains of the desperate condition of the men and their deprivation of human rights. The petition concludes:—"Be compassionate, and let us live! Under present conditions, we prefer to die."

### TSAR LEAVES ST. PETERSBURG.

The Tsar has departed for his palace at Tsarskoe Selo.

### THE STRIKE SPREADING.

London, January 22.

The St. Petersburg strike is spreading like wild-fire. The police remain passive, apparently fearing to precipitate a conflict, but the troops of the garrison are standing to arms.

### MR. HAY'S CIRCULAR.

The Circular of Mr. John Hay, American Secretary of State, whose direct purpose is to prevent land-grabbing at the end of the war and to preserve the open door and the old territorial status in China proper, has been formally and warmly accepted by Great Britain, Germany and France. It does not apply to Manchuria, for which Russia and Japan are now fighting. It is thought in diplomatic circles that the acceptance arrests any scheme that may be afoot for the readjustment of China's boundaries and removes a potential cause of future friction.

### GRAVE SITUATION IN ST. PETERSBURG.

London, January 23.

The situation in St. Petersburg is of the most serious character. The city is in partial

darkness. Every one is buying candles in anticipation of the stoppage of the gas and electric light supplies. The newspapers are not published. The civil employees of the arsenals have joined the strikers. Sinister demonstrations were to take place on Sunday before the Winter Palace in connection with the presentation of the petition, which is one of the most remarkable and most outspoken documents ever presented to an autocrat. It declares that the people are insulted, treated like slaves, burdened with labour beyond their strength, and stifled by despotism and the intolerable yoke of officialdom. The injustice has reached the limit of endurance, and death is preferable to the intolerable sufferings. "National representation is indispensable, and an immediate convocation of representatives of all classes, these are the sole balm for the people's wounds. Satisfy these demands and you will make Russia happy and glorious. If you do not reply to the people's prayer we will die in the square before the Palace." A Prefect's notice has been issued especially in view of the notification that 400,000 men will march to the Palace on Sunday afternoon headed by a young priest, Father Gapon, in canonicals and with crucifix, who leads a stout movement of workmen that insist on seeing the Tsar himself. Three workmen have gone to Tsarskoe Selo, who will try to deliver the text of the petition in order to enable the Tsar to consider it before the monster demonstration. Troops are being hurried up from all districts.

### THE ST. PETERSBURG DEMON- STRATIONS.

#### TROOPS FIRE ON RIOTERS.

London, January 23.

Early on Sunday morning Cossacks and other troops marched to the Winter Palace. Detachments of Cavalry and Infantry, each 150 strong, were stationed in various parts of the city but the artillery was concealed from view. Fifteen thousand strikers started from the Neva Works for the Winter Palace, but the route was barred by Cossacks, who opened fire and drove back the demonstrators. Fighting then became general everywhere throughout the city. A crowd at the Nicholas Bridge was stopped by Infantry, Uhlans and Cossacks. The strikers appealed to the soldiers not to shoot their brothers. The Infantry laid down their rifles but the rest of the troops charged.

The Tsar remains at Tsarskoe Selo.

The strikers, now infuriated, are forming wire entanglements by tearing down telegraph poles and raising barricades and organizing an armed resistance.

A sanguinary conflict took place all over the city. Father Gapon was wounded and many women and children killed and wounded. The scenes were indescribable. The air was rent with the cries of women and the angry shouts of men.

The city seems plunged in open revolution, with a night of horror in prospect.

The mob have erected two barricades on the Basil Island, from which they refuse to retreat in spite of repeated volleys. They are also trying to erect barricades on the Nevsky Prospect.

All classes appears to be similarly inflamed. A number of officers were wounded and fell into the hands of the mob who deprived them of their swords and tore off their epaulettes. Ambulances are busy everywhere.

### THE FRENCH CABINET.

London, January 24.

M. Rouvier has practically completed the

camped in the snow. Some infantry has been withdrawn, being replaced by bluejackets.

### RUSSIAN SITUATION GROWING WORSE.

London, January 24.

The precise whereabouts of the Tsar is unknown, being carefully concealed.

Large fires have broken out near Warsaw station.

The vast dock-yards at Sevastopol are also on fire.

The fighting at St. Petersburg, which had stopped yesterday morning, has again been resumed.

The ruthless slaughter of unarmed crowds has horrified the public, and scathing comparisons of the bravery of the military against the defenceless public in contrast to the conduct of the Russian troops in Manchuria, are heard on all sides.

The former mutual distrust between the educated reformers and the workers has now vanished.

### THE FRENCH CABINET.

London, January 25.

The organization of the French Cabinet has been completed; M. Etienne is Minister of the Interior, Bienvenu Martin, of Worship, Bertaux de War, and Clementel of Colonies.

### SYMPATHETIC DEMONSTRATIONS IN RUSSIA.

The employees of large iron-works in Moscow have struck in sympathy with their comrades in St. Petersburg. They paraded the City calling out the workmen in all establishments, who for the most part responded at once. The movement there is following the lines of that in St. Petersburg.

### SPREADING TO THE CRIMEA.

The *Standard's* correspondent at Kieff says the fire at Sevastopol was the outcome of a revolutionary outbreak on the part of 8,000 sailors of the Black Sea Squadron. The troops, who were called out, refused to fire.

### CANADA AND THE JAPANESE.

The Dominion Government has disallowed the Act of the British Columbia Government establishing an education test with a view to the exclusion of Japanese. The Dominion Government regards the Act as a menace to Imperial interests.

### DISAFFECTION SPREADING TO THE PROVINCES.

Later.

The strike in Moscow is spreading rapidly. The police have cleared all the gunsmiths' shops.

There is a temporary lull in St. Petersburg. A general strike has taken place in Korno and Vilna. This extension to the provinces is regarded as a serious symptom.

### CHINA'S NEUTRALITY.

London, January 26.

The Chinese Government has replied to the circular of Mr. Hay denying that China has ever swerved in one iota from the obligations imposed upon her by neutrality. It is considered that Russia has violated the neutrality of China in a number of instances.

### THE TROUBLES IN RUSSIA.

Serious rioting has taken place in Radom, Kovno, and Wilna. Father Gapon has issued fresh letters to the troops and to various classes of society urging them to unite for the purpose of exacting vengeance from the blood-thirsty Tsar and all his reptile brood. His Ministers are said to be pillagers. These letters have been manifolded and are being distributed in thousands.

## ST. PETERSBURG.

Later.

Apparently the censorship is being enforced. News is scanty, and the authorities seem to have gained complete mastery in the capital.

(RECEIVED AT THE FOREIGN OFFICE.)

## THE TROUBLES IN ST. PETERSBURG.

The strike among workmen at the Russian arsenals, machine-shops and other works shows signs of spreading more and more. This fact is stated even in the telegrams published by semi-official organs in St. Petersburg. The Berlin newspapers, observing the strike, say that it is of a revolutionary rather than an economical character. The strikers have presented a petition to the Tsar which says:—"Our condition is no other than that of slaves so cruelly are we treated and so much are we oppressed. The bureaucrats are national thieves. They have thrown the country into a condition of confusion and affliction. They have imposed upon it the burden of an inglorious war. There is no way for the people to make their views known about State affairs. It is better to die than to live under such conditions." They demand that popular representative machinery shall be established to afford them relief. The petition goes on to detail various grievances, and concludes by saying:—"We have only two courses to choose between—liberty and submission. Otherwise it is the grave."

A very large number of strikers, accompanied by women and children, set out from various quarters on the 22nd instant as previously determined, and began to move in the direction of the Winter Palace for the purpose of presenting a petition to the Tsar. They waited for His Majesty's return from Tsarskoe Selo. Troops were posted at important positions to check their advance. The first collision took place at 11 a.m. The troops, especially the Cossacks, began to fire at random. Men, of course, and women and children also were shot down in very great numbers. One body of the strikers armed themselves with swords and erected barricades, but these were destroyed. By evening the disturbance had somewhat subsided, but the whole city presented the appearance of a battle-field. According to present calculations the killed aggregate from 1,500 to 2,000 and the wounded from 4,000 to 5,000. The whole country is enraged against this cruel drama enacted by the military.

On Monday, one Vienna newspaper published telegrams headed "The revolution in Russia." The others issued extras containing statements of which the gist was that on the 22nd instant about 10,000 workmen, according to a previously arranged plan, quietly approached the Winter Palace, but were driven back by the Cossacks and the Uhlans. Father Gapon seems to have been at the head of the workmen. Their leaders, observing due ceremony towards the Tsar, took every precaution to conduct their movement quietly. The petition addressed by Father Gapon to the Emperor was couched in the most respectful terms, and moreover the workmen explained to the Cossacks that they had not the smallest intention of perpetrating any violence and that their only object was to state the facts to the Sovereign. They pointed to their orderly behaviour as proof. The circumstances of the disturbance that subsequently occurred are not yet known, but the number of killed is put at 180 at least, and several

hundreds are said to have been wounded. One account says that the killed totalled a thousand.

Reuter.—On the night of the 22nd the workmen came together and decided to resist to the bitter end. They smashed and sacked a number of shops. Wherever they found a picture of the Emperor they destroyed and insulted it. On the morning of the 23rd the streets in the centre of the city were quiet, but at the factories in the suburbs the disturbance continued. A number of large stores and one school closed their doors. The police shut shops where arms were sold. The courts of civil law and several offices were closed. Owing to a strike at one electric-light factory a number of lights were extinguished. In the evening another collision took place between the troops and the people in the Nevsky Prospect. The troops fired again into the crowd.

The Moscow workmen, affected by the St. Petersburg strike, went on strike on the night of the 23rd.

A conflagration broke out at the Naval Yard in Sevastopol on the 23rd instant. The dock escaped. Nothing is yet certain as to the origin of the fire, but there is a suspicion that it was the work of rioters.

The journals of St. Petersburg are all astounded and enraged at the barbarity of butchering unarmed people. They point out that the sentiment of superstitious loyalty towards the Emperor has been shaken.

(RECEIVED IN TOKYO.)

It is stated that the battery which saluted the Palace in St. Petersburg with ball cartridges was the First Company of the Guards Brigade.

The gist of the petition presented by the workmen of St. Petersburg is:—"The people of Russia are not allowed to have any rights. The working and the agricultural classes are lawlessly oppressed. The Government officials are robbers. The officials have thrown the State into utter confusion and plunged it in an inglorious war. All avenues for declaring the people's aspirations and desires, or for allowing them a share in the administration are closed. This is contrary to human rights and the will of heaven. We prefer death to life under such conditions. Your Majesty, we pray you to help your people; to break down the barriers that separate Your Majesty from them, and to open for them a path to share administrative functions with Your Majesty. If this our petition be granted, it will be fortunate for Russia. Otherwise we shall die. Liberty or the grave, we have only these to choose between."

The petition asked also that the war should be at once terminated.

(RECEIVED BY THE "JIJI SHIMPO.")

London, January 22, 9 p.m.

The newspaper employees also have struck and the newspapers can not be published. A priest, Father Gapon, placed himself at the head of 15,000 men for the purpose of presenting a petition to the Tsar. The Cossack troops used their swords against the crowd. The rioters broke the telegraph wires, and manufactured wire entanglements and other obstacles. In the square before the Palace a very large number were killed or wounded. Fifty thousand troops are fighting with the reformers and shooting them down. The Tsar is still in the Palace at Tsarskoe Selo.

Berlin, January 22.

In St. Petersburg the strike has extended to all workmen.

(RECEIVED AT THE FOREIGN OFFICE.)

## THE BALTIC FLEET.

Penang, January 20.

A Reuter's telegram says that four Japanese warships are near Po Langkawi Island on the north.

(RECEIVED BY THE "JIJI SHIMPO.")

Colombo, January 23.

The German coaling steamer *Dortmund* arrived here from Madagascar to-day. She says that 20 coaling steamers accompany the Baltic Fleet; that the operation of coaling takes place at sea and that 110,000 tons are in store. The Fleet is awaiting the arrival of the Third Squadron. The officers know of the fall of Port Arthur, but it has not been disclosed to the men. The war-ships are in good condition, and the crews are receiving supplies of provisions from a French steamer of special construction. The officers know that a Japanese squadron is near Penang.

(RECEIVED BY THE "ASABI SHIMBUN.")

London, January 25.

The disturbance in Russia spreads with alarming rapidity. Order is completely destroyed throughout the whole country. Revolutionary movements have commenced in Poland and Finland. The people are all crying out loudly for vengeance against the perpetrators of the Sunday massacre in St. Petersburg. It would seem that a tempest is about to burst from the thick black clouds on the horizon. What may happen can not be foreseen.

Kuropatkin has made frequent requisitions for troops, provisions and under existing circumstances there is the greatest difficulty in forwarding military supplies.

It is rumoured that over 20 miles of the Siberian Railway have been destroyed, but the fact is not yet fully ascertained.

Berlin telegraphs that the Russian Home Minister Traitoff has been appointed Governor of St. Petersburg.

From the same source it is stated that the strike in Russia increases more and more but that there is no fighting. The celebrated novelist Maxim Gorky is said to have been arrested.

(RECEIVED AT THE FOREIGN OFFICE.)

All the Berlin newspapers agree in regarding events in St. Petersburg as the beginning of a revolution. They say that the armed measures adopted were a massacre, and they regard the affair in the same category as the French Revolution at the end of the 18th century. The liberal newspapers say that Russia has indeed to fight a bitter enemy abroad as well as a traitor enemy at home. The Tsar and his government are placed between two fires.

Telegrams reach Berlin constantly with reference to collisions between the troops and the strikers in St. Petersburg. The strikers have armed themselves and are bent upon taking vengeance on the Government. The strike is spreading throughout Russia. In Moscow there are fears of disturbance. The Naval Arsenal at Sevastopol has taken fire. The Imperial Bank in St. Petersburg is closed and guarded and there is no electric light in the streets. The guards at the foreign legations have been doubled.

The Berlin stock market is much depressed. Russian securities have fallen heavily. Four per cents. have dropped 2 points to 87 and 4½ have fallen to 94.40.

According to Reuter the night of the 23rd

passed quietly at St. Petersburg and so did the following morning though thousands of strikers wandered about.

On the evening of the 23rd barristers of St. Petersburg met and passed the following resolutions:

- (1) To co-operate with the strikers.
- (2) To protest against the acts of the Government in shedding blood.
- (3) To plead in the Courts of Law in behalf of the strikers.
- (4) To subscribe for the assistance of the strikers.

On the night of the 23rd many well-known professors and editors of newspapers and barristers who advocate a liberal policy were arrested. On the 24th the Cossacks drove back the strikers and wounded many of them. Most of the Government offices are empty, the officials failing to attend. The attendants in all drug-stores have joined the strikers. On the morning of the 24th the Government printers returned to their work.

According to the Central News many of the strikers are disposed to resume their work, their employers having promised to reduce the working hours from 14 hours to 9.

Wolf's agency says that the new Governor of St. Petersburg has determined to adopt a severe policy.

On the 24th a number of the strikers carrying a petition started for Tsarskoe Selo but were driven back by the troops. Many were killed and wounded. They twice attacked the railway between St. Petersburg and Tsarskoe Selo, but were on each occasion repulsed by the troops. Reuter says that the service of trains between Tsarskoe Selo and St. Petersburg has ceased.

The strike at Moscow is spreading. By noon of the 24th the number of strikers had reached 20,000, and was increasing rapidly. In Wilna and Kovno the strikes began on the 24th.

There are various rumours about the Tsar's whereabouts. Some say that he is at Gatchina, some that he has gone to Copenhagen, and some that he is on board his yacht, but the general belief is that he is still at Tsarskoe Selo.

Madras (Dry Leaf), Medium to best	

## EXPORTS.

## RAW SILK.

The market is dull and declining and quotations are lower, and every purchase made seems to be at some reduction in price. Reports from both Lyons and New York are discouraging for present operations here and we seem already at the far-end of the season—three months earlier than usual.

## BAD COMPLEXIONS

Dry Thin and Falling Hair and Red Rough Hands Prevented by

## CUTICURA SOAP

MILLIONS use CUTICURA SOAP, assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itchings, and chafings, in the form of baths for annoying irritations and inflammations, or too free or offensive perspiration, in the form of washes, for ulcerative weaknesses, and for many sanative, antiseptic, cleansing purposes which readily suggest themselves to women, especially mothers, and for all the purposes of the toilet, bath, and nursery. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA OINTMENT, the great skin cure, with the purest of cleansing ingredients and the most refreshing of flower odours. No other medicated soap is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in ONE SOAP at ONE PRICE, the best skin and complexion soap, and the best toilet and baby soap in the world.

## COMPLETE EXTERNAL AND INTERNAL TREATMENT FOR EVERY HUMOUR.

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales, and soften the thickened cuticle; CUTICURA OINTMENT, to instantly allay itching, inflammation, and irritation, and soothe and heal; and CUTICURA RESOLVENT PILLS, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure torturing, disfiguring humours, eczemas, rashes, and irritations, with loss of hair, when all else fails. Sold throughout the world. Australian Depot: R. Towns & Co. Sydney. British Depot: 27-28, Charterhouse Sq., London. French Depot: 8 Rue de la Paix, Paris. POTTER, DAVE AND CHEN, COME, Sole Proprietors, Boston, U.S.A.

## CUTICURA RESOLVENT PILLS

(Chocolate Coated) are a new, tasteless, odourless, economical substitute for the celebrated Liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humours cures. Put up in screw-cap pocket vials, containing 80 doses. CUTICURA PILLS are alternative, antiseptic, tonic, and digestive, and beyond question the purest, sweetest, digestive, yet compounded.

## WASTE SILK.

A fair business continues with daily settlements at or about quotations. Concessions can be obtained here and there to a small extent, but the high grades maintain the ground well, while inferior quality is easier in price.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 4TH, 1905.

## BIRTH.

At Kobe, on Monday, January 30th, the wife of Capt. E. J. LIDDLE, of a Daughter.

## MARRIAGE.

On the 2nd and 3rd, at the Roman Catholic Church, Yokohama, by the Rev. Father O. Pettier, FRANCISCO DA ROZARIO BAPTISTA to VIRGINIA MARIA RITCHIE. China papers please copy.

## SUMMARY OF NEWS.

COLONEL T. MATSUKAWA has been promoted Major-General.

M. FALLIERES has been re-elected President of the French Senate.

Two Russian officers at Matsuyama are suffering from small-pox.

THE death was announced on January 6 of the singer, Madame Belle Cole.

THE death of Viscount Tachibana is announced. The funeral took place on Feb. 4th at Aoyama.

MR. K. TAKAHASHI, Vice-President of the Bank of Japan, has been appointed a member of the Upper House.

ADMIRAL SHIRAYAMA, Commander-in-Chief of Port Arthur Naval Station, arrived on Feb. 1st

at Dalny, and immediately left by train for his post.

FIRE broke out on the morning of January 28th in the Isshin Bank, Yobuko, near Karatsu, destroying 44 houses.

H.M.S. *Vengeance* has won from the *Ocean* the trophy for the best shooting on the China station with heavy guns.

DR. T. YAMAGUCHI, a professor in the Kyoto University, has been appointed Vice-President of the Peers' College.

A SPECIAL telegram to the *Englishman*, dated London, January 6, states that Lord Milner leaves South Africa in August.

MAJOR-GENERAL OGAWA, an attaché of the Imperial Headquarters, left Shimbashi on Jan. 31st for the western provinces.

THE battle of Heikantai, reported in this issue, lasted for three days and three nights and terrible losses were suffered by either side.

THE death is announced of Dr. Davidson MacDonald, an old resident of Tokyo, from heart failure. His loss will be greatly felt.

ADMIRAL SHIRAYAMA, Commander-in-Chief of the Port Arthur Naval Station, and his staff left Saseho on January 29th for Liaotung.

SMALL-POX is prevalent in Osaka and Matsuyama. Several fresh cases are reported in those cities including a Russian officer at the latter place.

A NUMBER of Russians from Port Arthur, including some women and children, left Nagasaki on Jan. 31st by the *Ernest Simons* for Shanghai.

THE TEIKOKU Life Insurance Co. held a general meeting on Feb. 1st when the net profit for the last half year in 1904 was declared to have been yen 291,398.

LIEUT. GENERAL Miyoshi, Commander-in-Chief of the Second Division (Sendai) has been removed to a new position and Major-General Yamanouchi succeeds him.

PRINCE KARL ANTON HOHENZOLLERN, who is now with the Japanese on the Shaho, paid a visit on January 20th to Port Arthur in company with Prince Kan-in.

ON the morning of January 26th, a gale was experienced at Yensui-kow near Taijeh, Formosa. Considerable damage was caused to buildings and cultivated land.

THE goods exhibited in the St. Louis Fair by the Nippon Red Cross Society have been presented to the Washington Museum, and were delivered on Dec. 19th.

IT is reported by telegram that Mr. Uchida, Japanese Minister at Peking, who recently left Tokyo for his post, has paid a visit to the headquarters of Marshal Oyama.

PRINCESSES TSUNE and KANE (daughters of the Emperor) will proceed on Feb. 4th to Odawara, leaving Shimbashi at 10.20 a.m. They will stay there during the cold season.

JAPANESE prisoners in Russia, according to official investigations made on Jan. 31st, number 464, including 4 foreigners employed on board the *Sado Maru* captured by the Vladivostok squadron.

TRAINS collided at 10.20 a.m. on January 29th at Nagoya with the result that two locomotives were severely damaged, and an engineer and a

fireman were injured. The cause seems to have been the negligence of pointsman. One of these trains was from Shimbashi which it left at 6 p.m., and the other from Kobe.

SIXTEEN Russians from Port Arthur released at Nagasaki and sent to Shanghai arrived on the night of January 29th at Nagasaki by the *Siberia* on their way to America.

MAJOR-GENERAL FUKUNAGA left Ujina on January 29th for China and Major-General Fujimoto, who recently returned from the front, left Hiroshima on the same day for Nagoya.

A SASEHO correspondent of the *Nichi Nichi* reports that seven captured foreign steamers are under examination by the Prize Court. Three are valued at over a million yen each.

MR. K. ANDO, former representative for Kanagawa prefecture, committed suicide on Feb. 1st by hanging himself with a cord in his residence, at the village of Okamoto near Hakone.

MR. TANABE, Japanese consul at Bangkok, telegraphed on Jan. 22nd that the town is infected again with plague and three patients have died. Many suspicious cases are reported there.

THE funeral of sixteen naval officers who died in the battle on August 10th in the Yellow Sea and eight bluejackets killed on the occasion of the third blocking operation at Port Arthur took place on January 30th at Yokosuka.

PRINCE HIGASHI-FUSHIMI arrived at noon on January 30th at Nagasaki on his way to the front. He embarked on a warship. The Governor, the Commander of the Nagasaki defences and other military and naval officers saw him off.

POSTHUMOUS honour was granted on Jan. 28th to Lieut.-Colonel N. Hattori and 505 other officers and 433 men who were killed at the battles of Motien-ling and other places. They received the Golden Kite of the Fourth and Seventh classes.

ADMIRAL TOGO presented on Feb. 1st a silver watch each to the warrant-officers Manda and Takarabe who were released on the occasion of the surrender of Port Arthur, as an appreciation of their services at the third blocking operation.

TWENTY-TWO Russian invalids and 216 Japanese sick and wounded arrived on January 30th at Ujina by the *Dayo Maru* from the front. Six hundred Russians from Port Arthur left Nino-shima on the same day for Tengajaya, near Osaka.

MR. H. B. COLLINS, who recently lodged an appeal in the Tokyo Appeal Court against the sentence of eleven years' confinement with hard labour given in the Yokohama District Court, was removed on Jan. 31st to Tokyo. The date of his new trial is not yet fixed.

INVESTIGATIONS made Jan. 28th, as to the issue of convertible notes by the Bank of Japan showed that they amounted to yen 262,000,000; reserve of specie, yen 120,000,000; advanced to individuals, yen 49,000,000; and temporary advances to the Finance Department, yen 47,500,000.

GENERAL BARON OKAZAWA, Chief Aide-de-Camp to the Emperor, arrived on Jan. 27th at Dalny and subsequently paid a visit to the naval base and distributed presents from His Majesty among the crews of the squadron. He will proceed to Port Arthur and the Shaho region. He is expected to return about the end of March.

on the north. It retired hastily in a north-westerly direction, namely, towards Changtan. Turning now to the southern part of the field we find the Japanese strategy developing in a very intelligible manner. The weak spot in the Russian plan was the great separation of their two columns, and the Japanese, apprehending this, struck between the two. A strong force moved towards Heikautai and its neighbouring positions, while another strong force, advancing towards Hsiurhpau and Harhpau during the night of the 28th, seized those places and forced back the Russian columns which had made the southerly detour. The Russians now finding that their northern column had failed and that their communications were threatened by a strong Japanese attack upon Heikautai, seem to

have abandoned their enterprise as hopeless. They began to retreat. Their forces at Heikautai, apprehending the vital necessity of holding the Japanese in check, made valiant efforts to do so, and during the early morning of the 29th several short engagements took place in this part of the field. But the Japanese finally dislodged the enemy from Heikautai, and thereafter nothing remained for the Russians except to save themselves as best they could. The Hun being frozen over and thus passable at nearly every point, probably proved their salvation; otherwise the troops which found themselves on the south of Heikautai at the time of that place's capture must have been completely cut off. It is not quite clear how the retreat was effected or what casualties attended it,

but we are told that the main body of the enemy's southern column retired across the river to Tutaitz, and thence continued their retreat towards Sufangtai. The Japanese thereafter crossed the Hun and occupied Tutaitz, whence, on the 30th, the Russians made vehement attempts to dislodge them. From this latter fact and from the official intelligence that on the same day (30th) some cannonading took place and some offensive activity was shown by the Russians in the Chenchiehpau quarter, it must be assumed that the Russians rallied, and that their defeat was not signal. They are said to have had some 6,000 casualties in addition to losing 500 prisoners, but these figures remain to be verified. With regard to the 1,500 prisoners reported to have been captured by one of the Japanese divisions,

MAP SHOWING POSITIONS IN BATTLE OF HEIKAUTAI.

it is now explained that a mistake of a cypher took place in transmitting the message, and that the true number was 150. Among the officers killed in the Awomori Division was Captain Kuraishi, one of the sole survivors of the tragedy of 1902, when a company of Japanese soldiers perished in the snow at Hakkoda near Awomori. At Heikautai there is reported to have been a fierce cavalry engagement—that is to say, cavalry on one side against dismounted cavalry on the other. The Japanese troopers, outnumbered by 4 to 1, had not time to mount their horses when the Russians were upon them. They fought on foot, and kept the enemy at bay for several hours, when infantry reinforcements arriving, the tables were turned. It was here that Mischenko received his wound. It is thought in some quarters that the Russians may renew their attack, but the balance of opinion is that they will find their defeat an effectual check for the present. What the affair has shown, however, is that even in the depth of winter large operations are possible.

A long official report was published last night in Tokyo describing the main features of the battle of Heikautai. The report was too long to translate in time for this issue. The gist is that terrible fighting took place, and the Japanese attack on Heikautai continued for three days and three nights. Marshal Oyama estimates that the Japanese killed and wounded were 7,000, and that the Russian casualties numbered 10,000 at least.

#### KUROPATKIN'S REPORT.

General Kuropatkin never sent such a report as that given out in St. Petersburg and forwarded by Reuter to Tokyo. Never indeed, we may confidently affirm, was such an account of a battle dished up for the delectation of a deluded nation. Kuropatkin may be credited with having told a part at least of the truth, but the Russian Government have so manipulated his account as to render it at once the most confusing and the most farcical statement conceivable. It does not even begin at the beginning. At 7 p.m. on the 27th of January it introduces us to a Japanese detachment assuming the offensive along both sides of the railway and allowing itself to be repulsed after an hour's fighting and after inflicting only 35 casualties on the enemy. That is like the Japanese, is it not? Then the report, after cursorily alluding to another innocuous and vacillating advance by the Japanese along the Mukden road, suddenly slips off to a part of the field 25 miles distant, and, at the same time, going back two hours, shows an offensive movement by the Russians, who having achieved their objective, the occupation of two places, then incontinently retreat in the face of nothing but a sense of having done their duty, and Kuropatkin proudly declares that they were not pursued. Is it then such a great feat in Kuropatkin's eyes that his troops should find themselves enjoying the luxury of an unpursued retreat in some part of a field of action? There is, in connexion with this part of Kuropatkin's story, another point to which attention should be drawn. Santaitz, the whole of which he claims to have captured before this eminently happy retirement, is on the west of the Hun River. It lies beyond Changtan on the road from the latter to Hsinmintun. Now, according to Marshal Oyama's clear and truthful reports, the Russian Army

corps which began the offensive movement on the 25th, marched from Changtan southward and eastward. If then Russian troops found themselves retreating from Santaitz on the 27th of January, they must have been driven across the Hun by the Japanese and driven through Changtan. That, according to Oyama, is exactly what happened, and therefore the St. Petersburg manipulators who undertook to cook Kuropatkin's report, committed the unhappy blunder of not consulting the map, the result being, not only that they make the General tell a farcical story, but also that they inadvertently furnish collateral evidence of his signal defeat. There never were any Japanese troops in Santaitz, unless they followed the flying Russians thither.

Then Kuropatkin skips off to Heikautai, 8 miles distant from Santaitz, and presents to us a picture of Japanese infantry firing at the Russians and retreating, whereafter the Russians push on as far as Lantungkau, which, be it observed, is only 10 miles from Liaoyang. Then something mysterious and wonderful happens. The Japanese attack a Russian artillery position and the Russians, "having been reinforced, began to retire." Could anything be more comical? Kuropatkin's report, as published in St. Petersburg, bears "falsehood" scrawled over it in big letters. But Russian readers have no accurate maps nor any means of making an analysis. The tale will pass muster like the blasphemous libels of Pobiedonosteff and the fabrication of the chiefs of police in Moscow and Odessa.

#### HERR VON HESSE-WARTEGG.

We find the following paragraph in a London journal:—

We pointed out in a recent issue that Germany's interests in China were far more important than was generally recognised, and that that fact gave us the clue to her policy in the Far East. A German traveller, Herr von Hesse-Wartegg, who has recently been lecturing to the merchants of Berlin, has clearly demonstrated this point. Chinese competition from a commercial standpoint he regards as unimportant, but Japanese competition he regards in quite a different light. Moreover, he points out that Russia is a very good customer of Germany, while Japan buys but little. The "open door" in Manchuria really signifies monopoly for Japan, according to this authority, for he shows that the advantage of proximity to the market is worth a great deal. Russia, no doubt, would, if she could, keep out foreign industry by her tariff policy, but of the two dangers, Herr Wartegg considers Japanese competition the more serious, hence he argues that it is not in Germany's commercial interests for Japan to emerge victorious from the present war.

It is worth while to examine this theory of the German traveller's with a little attention. We must assume that as a practical man speaking to practical men he did not talk in the air but that his words conveyed a distinct meaning to himself and to his audience. First we have the plainly stated opinion that Japan's defeat would inure to German advantage. Then we have the reason, which, though not so explicit, is clear enough; namely, that Japan's success would signify the open door in Manchuria whereas with the open door and free competition German trade must be beaten by Japanese. Russia's success would involve the closed door, but Herr von Hesse-Wartegg actually thinks that German commercial interests would fare better with the closed door and a Russian janitor than with the open door and a Japanese competitor. Underlying that theory is the obvious hypothesis that Russia, were she in a position to do so, would discriminate in Germany's favour against Japan; would close the Manchurian door in Japan's face but would keep it con-

veniently ajar when Germany sought admittance. That is quite a striking notion. Herr von Hesse-Wartegg must necessarily believe, then, that if Russia defeats her present foe, she will close Manchuria to Japan's trade by way of punishment and to the trades of all other countries which can not pay for admittance. England is the only country falling under that category; the only country which, being a free trade State, has nothing to give in exchange for favoured treatment. Thus we reach the conclusion that, should Russia emerge victorious from this war, Germany, or rather the Germany of Hesse-Wartegg, expects to be able to arrange with Russia a treaty which will admit German goods to Manchuria while excluding the goods of Great Britain and Japan. If that be really the German forecast, it becomes more and more evident that Mr. Chamberlain's scheme is essential to save England's commerce from being driven out of important markets by political combinations.

#### COLONEL EMERSON.

With reference to Colonel Emerson's letter published in our correspondence columns we have again to say that our inability to make the retraction he desired was wholly due to the fact that the statements in question were not our own. We founded them explicitly on allegations made by the *Kokumin Shimbun*, a journal in which we had the fullest confidence, and of course it was for the *Kokumin* to retract, not for us. Colonel Emerson has now demonstrated the baselessness of the whole story and under the circumstances we frankly regret that it ever obtained admittance to our columns. But our correspondent is mistaken in describing our note as "editorial comment." It was not in the nature of comment or confirmation: it was simply an epitomized reproduction. Hence we deemed that our journalistic duty was fully discharged when we gave to Colonel Emerson's denial the same prominence that we had given to the *Kokumin's* assertion. What he now observes with reference to the greater accessibility of the *Japan Mail* so far as English-speaking people are concerned, is quite true, and having regard to our responsibility from that point of view, we may add that we are entirely convinced of the untruth of the original tale.

#### GENERAL TERAUCHI AND STOESSEL.

General Terauchi sent a letter with several dozens of champagne to General Stoessel when the latter was in Nagasaki en route for Russia. The two officers met at Tientsin in 1900, and General Terauchi recalls the fact in his letter, adding that Russian and Japanese troops then fought side by side, and that he himself never dreamed of their taking up arms against each other, nor, he is sure, did General Stoessel. He speaks in the highest terms of the gallant defence made by Stoessel and the troops garrisoning Port Arthur, and he expresses much admiration of the exertions made by Madame Stoessel in behalf of the wounded. Finally he writes that it gives him pleasure to seize this opportunity of renewing his acquaintance with the Russian General and of asking him to exchange a parting cup as they did 4 years ago at Tientsin. It need scarcely be added that General Terauchi writes not as Minister of War but as a private individual.

## THE NAGOYA OFFICERS.

The Russian officers in Nagoya continue to allow themselves to be interviewed by Japanese representatives, and statements are consequently attributed to them which, if they really made them, redound little to their credit, and if they did not make them, suggest that they would do better to avoid interviews altogether. The *fiji Shimpō's* representative, who must be assumed to speak with a due sense of responsibility, makes Rear-Admiral Wiren say that the decision to surrender was taken by Stoessel and Reis contrary to the views of the other senior officers, and that the fortress could have held out for another month had the twenty-three thousand men remaining fit for duty shown some resolution. With the advantage of standing behind fortifications the strongest ever designed, the Russians must have put four Japanese soldiers *hors de combat* for every one of their own killed and wounded. The garrison had some 15,000 casualties and therefore the Japanese should have had 60,000. If another month's assaults had been imposed on them, they would have suffered a further loss of fully 20,000, and the whole of the Third Army would also have been held in the Liaotung Peninsula, instead of being freed for service in the north. Rear-Admiral Wiren thinks that with such gains in sight the surrender was one of the most contemptible things on record. As for Madame Stoessel being a heroine, he scuts the idea. He also endeavours to discredit the Anglo-Japanese alliance. It has, he affirms, benefited England only, whereas a Russo-Japanese alliance might dictate to the world.

It is not to be supposed that while publishing these various interviews Japanese newspapers approve of the making of such revelations. The *Shogyō Shimpō* rightly condemns them as an unpardonable washing of dirty linen in public. That Rear-Admiral Wiren, carried away by inter-service jealousy, should forget discretion, is not perhaps so remarkable, but the statements that General Smirnov has allowed himself to make astonish the *Shogyō*.

There is an old and much respected saying of Confucius that a gentleman never speaks ill of those whose society he has left. That is the Chinese sage's method of enunciating the doctrine that fault should be found only to a man's face. The Russian officers, with the one exception of General Fock, do not seem to appreciate the virtue or obligation of reticence. They talk in such a manner as to suggest that union certainly did not constitute a source of strength in their defence of Port Arthur. Nothing could possibly be less soldier-like from the Japanese point of view. All the Tokyo journals agree in censuring such recriminations, and one of them asks whether the morality of the West is really so different from that of the East in matters of this kind.

The number of prisoners arriving from Port Arthur increases constantly. According to the *Kokumin Shimbun* the total of Russians now held prisoners in Japan is 29,826, including 597 officers. This statement extends to the 25th instant.

It appears that the number of privates released at Port Arthur for the purpose of accompanying paroled Russian officers has been 514.

According to the *Kokumin Shimbun* the number of Russian prisoners now in Japan

is 595 officers and 29,660 rank and file, or 30,255 of all ranks. They are distributed as follows:—

	Officers.	Rank and File.
Matsuyama.....	523	2,440
Daiji .....	—	1,964
Ninoshima .....	—	2,747
Nagoya .....	12	1,010
Osaka .....	—	16,999
Fukuchiyama.....	—	901
Fukuoka .....	—	999
Himeji .....	—	2,190
Shizuoka.....	60	60
Marugami.....	—	350
	595	29,660

We presume that convalescents from the hospitals at Port Arthur are now beginning to arrive in Japan.

On the other side of the account there appear to be only 464 Japanese prisoners in Russian hands. The number that have returned, including those rescued at Port Arthur, is 118.

## CAPTURED STEAMERS.

The seizure of the Austrian steamer *Burmah* took place on the night of the 25th ultimo at 9 o'clock. She had essayed to pass the Soya Straits, but finding the navigation too difficult at this time of year, she turned back and tried to run through the Tsugaru Straits under cover of darkness. When sighted by torpedo-boat No. 35 she was off Shiokubi promontory at the entrance of the straits. Two discharges of blank cartridge failed to bring her to, and a shot had to be fired across her bows. She was taken into Hakodate in the first place and there examined on the following morning with the results already reported.

The *Wyefield* was bound from San Francisco to Vladivostok. She had a cargo of 4,300 tons of wheat and horse fodder. The hour of her seizure was 7 p.m. and the place the Tsugaru Straits. The *Wyefield* makes the eighth steamer seized *en route* for Vladivostok since the Japanese turned their attention to blockading the Tsugaru and Tsushima Straits and now the *Siam* has to be added to the list,—9 steamers in 20 days, for the first was seized on the 11th of January. From these figures some idea may be formed of the great import trade that has been carried on with Vladivostok since the war commenced. Of course at this time of year the place must be largely dependent on over-sea supplies, but it is nevertheless very plain that Vladivostok has served as a basis for provisioning the Manchurian armies on a very considerable scale. If the Japanese now exercise due vigilance, not an ounce of food-stuffs or a pound of provisions should find its way to the northern fortress; a result which will not conduce to the potentialities of Kuropatkin's armies.

On the 27th ultimo a Japanese war-vessel in the northern sea stopped and visited an American steamer, the *Dollar*. She was found to have a full cargo of horse-provender and provisions for Vladivostok, and she was therefore seized and sent to Saseho. She is a vessel of 4,216 tons (gross).

On the 30th ultimo a Japanese war-ship discovered the English steamer *Wyefield* (3,235 tons) *en route* for Vladivostok carrying contraband of war. She was seized.

On the 31st ultimo a Japanese war-ship seized the Austrian S.S. *Siam* in the northern seas. The *Siam* is a vessel of 3,160 tons (gross). She was bound for Vladivostok with a cargo of Cardiff coal.

## VLADIVOSTOCK.

It seems to be agreed that Vladivostok is now subjected to an indirect blockade. The situation is interesting. Vladivostok is naturally difficult to blockade by ordinary methods, and the difficulty would be particularly great at this time of year, when the sea is frozen to a distance of miles from the shore, and when the climatic hardships suffered by the blockaders would be intense. But Vladivostok is virtually situated on an inland water, since the three entrances to the Sea of Japan,—the Tsushima Straits, the Tsugaru Straits and the Soya Straits—can be completely closed to the passage of ships. International law does not require anything except that a blockade should be effective, and Vladivostok can be effectively blockaded without sending a ship to its immediate vicinity. Still the Japanese refrain from declaring any blockade and they are doubtless wise. Vladivostok is one of the feeders of Kuropatkin's army. So long as stores can flow in there over-sea, and be transported thence by railway to Harbin, a considerable degree of pressure is removed from the Harbin-Baikal line. It is not likely that many ships carrying stores will henceforth reach the northern port. At the same time we may suggest that the blockade of Port Arthur was not conspicuous for vigilance or thoroughness. Many vessels made their way to the beleaguered fortress, and the comment of foreign naval officers was that greater efficiency might easily have been obtained had a number of small craft been armed to assist the navy. War-ships are not necessary for such a purpose. A merchant steamer with one or two guns on board is sufficient. That kind of craft might not be of great use in a wide expanse of water like the straits of Tsushima, but they certainly would serve well at the Tsugaru or Soya avenues.

## DEATH OF DR. MACDONALD.

With profound regret we announce the death of Dr. D. Macdonald, which took place on the 3rd of January in Canada. Dr. Macdonald left Japan last summer for a brief spell of rest, and he was on the eve of setting out again for Tokyo when the end came. Though very sudden it was not altogether unexpected, since he had been suffering for some years from heart-trouble, and his strength had been undermined at the close of last year by an attack of influenza. It is stated that he was in the act of reading the news of Port Arthur's capitulation when he fell from his chair, and the conjecture is that the emotion caused by intelligence so welcome to a man of his sympathies, may have been the immediate cause of heart failure. During twenty-seven years of life in Japan Dr. Macdonald won for himself in the affection and esteem of all classes and all nationals a place of the very highest. He was a Christian gentleman in all the best senses of the term. The practice of benevolence constituted his daily, his hourly, business from year's end to year's end, and in the memories of those that knew him he will always live as the peer of Dr. Hepburn and Dr. Verbeck. Originally a missionary physician, he ultimately devoted himself solely to private practice, and it was characteristic of him that he persistently abstained from turning to his own account the reward which his high professional reputation would certainly have brought him. *Integer vitæ sceleris que purus* may truly be inscribed on his tomb.

## THE RUSSIAN DISTURBANCE AND FRANCE.

The butchery at St. Petersburg on the 22nd instant has caused great astonishment in Paris. All the newspapers fill their columns with telegrams and articles on the subject. A sharp effect has been produced on the Paris bourse. Russian bonds which had been slowly declining for some weeks, fell suddenly on the 23rd from 89 francs to 87.10, being the lowest quotation that has been seen for several months.

All the papers regard the affair as of no trifling nature. Many of them condemn the barbarity of the Russian Government, towards peaceful and unarmed petitioners. Several of them also suspect that the Tsar has not received full reports of the state of the situation, and that a very heavy responsibility thus devolves on the Government officials concerned. Not a few of the journals regard this matter as the beginning of a great revolution in Russia. That is the view of the Socialist organs especially.

*Le Temps* in its issue of the 24th says:—"The measures of repression adopted on this occasion by the Russian Government are inexcusably violent. It is a crime on the part of that Government not to understand the impossibility of keeping the Russian people permanently outside the pale of Western Europe's civilization. The Russian Emperor's hesitation to carry out essential reforms has now lasted for 20 years, and to-day we see him having recourse rather to useless tyranny. The action taken by the workmen yesterday struck the public greatly and it will be so with to-day's agitation also. The only way to deal with the affair is to adopt at once the most resolute and liberal measures. Some one must heal the national hurt that Russia has received, but where shall a surgeon be found to treat it?"

*Le Journal* writes:—"We can not choose but greatly condemn the want of coolness shown by Russian officials in dealing with this matter and their lawless methods. Superficially the tumult may perhaps be partly quelled, but will not its roots be strengthened more than ever? By the aid of military force order may possibly be restored, but will not the memory of this cruel drama set up a great though impalpable division between the Tsar and the people? That is what we lament."

Clemenceau, in the *Aurore* of the 24th instant writes in the following tone of veiled condemnation:—"The Tsar, Pobiedontcheff's puppet, thinks 'there must not be the slightest impairment of my autocratic authority. To preserve it intact is the duty entrusted to me by heaven;' and it is thus that he felt himself obliged to order measures of assassination for the purpose of quelling the people's movements."

The *Humanité* again severely condemns the barbarity of the Russian Government. It considers that this affair points to the end of bureaucratic government in Russia. It has also started a subscription for the victims of the butchery.

## CHINA.

Monday, January 30.

The *Fiji Shimpō* says that the Japanese Government has not addressed any remonstrances to Peking with regard to the taking of the West-Liao route by Mischenko's cavalry. At all events it will have been observed that China, in her recent reply, did not cite this act among the violations of neutrality which she charged against Russia. Japanese statesmen doubtless perceive that to protest would be quite useless. From the

first they distinctly declared that they would respect China's neutrality in so far as Russia respected it. Russia has now openly included the West-Liao region in the belligerent area, and Japan's comment probably is *tu Pa voulu George Dandin*.

Tuesday, January 31.

It appears that the murder of two Japanese workmen at Chiao-chow in Kwangtung was due to agitation fomented by certain Chinese against the principle of railway construction in China by foreign concessionaires. These agitators had travelled abroad and had learned to hold political views which can not surprise anyone. One Japanese workman escaped by crossing the river, and the remainder, with the exception of the two killed, escaped into a house where, after a siege lasting until 10 p.m., they were at length rescued. The Japanese are said to have refrained throughout from using weapons, and consequently no Chinese subjects were injured.

Thursday, February 2.

It is reported that some trouble has arisen in connexion with the Hangyang iron works. Their products are freely sold to French citizens and the story is that the latter sell them to Russians. The matter has been officially noticed, but the French Representative in Peking is understood to have denied the allegation altogether.

## RUSSIA.

It is difficult for Anglo-Saxons, who breathe the air of freedom, to credit the news sent from St. Petersburg by the correspondent of the *Daily Chronicle* that 5,000 persons were arrested in the Russian capital on Wednesday evening, including 100 barristers, who are now on their way to Siberia. The plain announcement is too shocking to call for elaboration. Of course such methods of administration can not have permanent success. They may avail for a moment, but savage and wholesale tyranny never fails to work its own ruin in the end. The sympathy of every civilized person must go out in abundance to these most unhappy victims of a corrupt despotism, torn from their houses and condemned to an awful fate simply because they ask that they and their fellows shall no longer be treated as animals to be driven and coerced. England, as usual, has been insulted by the creatures of the Russian bureaucracy. In Odessa and Moscow the police are reported to have published notices informing the agitators that they were being incited by Anglo-Japanese agents and that the strikers were paid with English gold. The British Ambassador protested against this villainous libel and was assured that measures would be taken to obviate its recurrence. Apparently with that answer the King's Government has been content. It suggests the picture of a highway-robber who, in answer to the complaints of his plundered victims, urbanely informs the latter that it shall not occur again. One imagines that the dismissal of these lying and unscrupulous officials would have been peremptorily demanded by England. But no. British wrath, however justly aroused, can always be turned away now-a-days by a soft answer. In Moscow and Odessa nothing will be publicly known of the Ambassador's remonstrance and the Russian Government's assurance. The citizens of these two towns know only that they have been officially informed of the presence of Japanese and English agitators in their midst. It

is a repetition of the North-Sea outrage. And what a state of unprincipled recklessness it implies on the part of these Russian officials; these myrmidons of a despotism which is sending thousands of men and women into exile in order to support a tyrannical bureaucracy! Retribution will come. Nothing can be more certain.

## DEATH OF COUNT SOYEJIMA.

Count Soyejima expired at midnight on the 30th ultimo. He was struck down by apoplexy on the forenoon of that day and gradually passed away. The late statesman, a native of Bizen, was born in October 1828, and was therefore in his 77th year at the time of his death. He distinguished himself in his student days by familiarity with Chinese literature. At the beginning of the Meiji era he, in company with Okuma Hachitaro, left his clan and travelled about, associating with men of public spirit. He had much to do with the creation of the Meiji civilization. In 1867 he already held the post of councillor, though only 29 years of age, and in 1868 he rose to a higher rank in the same office. In 1871 he was sent as envoy to Russia to settle the question of the Saghalien boundaries, and on his return he became Minister of Foreign Affairs (*Gaimu-kyo* as it was then called). Two years later (1873) he went to China as special ambassador. That was the time when the ruler of China, acting under the advice of Li Hung-chang, refused to give audience to foreign envoys; Soyejima, however, proved himself a match for Li. He obtained his audience, and established a record which merited public recognition. On his return he again became a Councillor of State. It was then that the question of Korea pressed for solution by the sword or by peaceful methods. Saigo (the elder), Itagaki, Goto and Soyejima all seceded from the Government, and the agitation for constitutional institutions commenced. In 1876 Soyejima went to China where he won esteem by his classical lore. The year 1884 saw him raised to the rank of Count, and in 1885 he became a Court Councillor, receiving at the same time a first-class order and the official rank of Second of the Second. The public next heard of him as founder and president of the Oriental Association (*Toha Kyokai*), now a flourishing institution. Thereafter he joined Count Okuma in compiling the *Kaikoku Gojunen-shi* (History of 50 years of national progress), and hardly had the manuscript been completed when death overtook him. His countrymen accord to him the title of one of Japan's great scholars.

## HOUSES TO LET.

In the *Shogyo Shimpō* we find a table indicating the number of unoccupied houses in the eleven most populous districts of Tokyo each month since last July. The gist of the matter is that while the number averaged 62 monthly in the second half of 1904, it rose suddenly to 78 in January of 1905. Our contemporary regards this as a striking evidence of the bad times. People who barely succeeded in keeping their heads above water last year have been carried under this year by the pressure of adversity. The inference seems to be exaggerated. An addition of 16 to the number of unoccupied houses from Shimbashi to the fifth ward of Hongo can scarcely be counted a very signal change.

## PROSPECTS OF PEACE.

At a meeting of the Oriental Society (*Tokoku-kai*) Mr. Takahashi, Vice-President of the Bank of Japan, who recently returned from Europe, delivered an address on the subject of peace prospects as viewed by Americans and Englishmen. He did not find that any of those with whom he conversed when abroad attached much value to the probable results of intervention. Russia's discomfiture has been too conspicuous and too signal to reconcile her to the idea of any third party stepping in. She went to war because she underrated Japan's military and naval capacities. England forming a juster estimate of those capacities, concluded an alliance with Japan, but in Russia the false calculation influenced leading politicians and thus the sword was drawn. That mistake has been corrected now, however. Russian statesmen know what is involved in fighting Japan. They may still, perhaps, entertain the idea of financially exhausting her. But it can scarcely be possible that they can overlook what such a process would mean for their own country also; namely, suffering and impoverishment of a serious character. Their present mood, therefore, is probably not unfavourable to peace, and a discussion of the matter between the two empires, without the intervention of any third party, might discover a way to the sheathing of the sword at a much earlier date than is now generally anticipated. As for England and America, the sum of their desires is permanent tranquillity throughout the East.

The publicists whose views Mr. Takahashi epitomized in the above address spoke prior to the troubles with which Russia is seething. Whatever be the immediate outcome of these troubles, whether the revolutionists get the upper hand or the bureaucracy, it is not to be supposed that the effect upon the ruling classes will be in favour of prosecuting the war. The Tsar and his *entourage* must recognise that there exist at their doors elements of disturbance which greatly enhance the difficulties of carrying on an over-sea campaign. Possibly they may decide to make one more supreme effort, since even at this eleventh hour, a signal success might greatly strengthen their position at home. But they must be conscious, too, that another conspicuous failure would weaken them correspondingly, and if they obeyed the dictates of wisdom they would refrain from further tempting fortune. For our own part, we estimate the limits of the war as one big battle on the Shaho and one general engagement with the Baltic Fleet, unless, indeed, both of these events prove unfavourable to Japan, in which case all predictions must be suspended.

## NOTES ON CURRENT EVENTS.

H. I. H. Prince Higashi Fushimi left Tokyo on the 27th January for the front. The Prince now has the rank of Captain in the Navy and has been appointed to the command of the *Chioda*.

General Kawamura, who for a time commanded the Takushan Army, returned to Tokyo on the 27th January at half past 9. It is understood that this distinguished officer will proceed to the front again at a very early date.

Major-General Nakamura has been obliged to have an operation performed on his leg. Some of the bone has been removed. It is understood, however, that his

condition is satisfactory, although complete recovery will take some time.

The *Fiji Shimpō* has telegrams from London dated 7.20 p.m. on the 26th January, which relate two strange items of news. One is that owing to scarcity of provisions and of winter clothing a mutiny has broken out in Kuropatin's army and the St. Petersburg Government is concealing the fact; the other, that Gripenburg's army has been defeated. As for the latter rumour, it is difficult to credit in view of the fact that the organization of Gripenburg's army is not yet fully completed.

The Japanese Government has just received in New York the last installment of the second foreign loan, a sum of 22¾ million of dollars (gold). This money has been mainly devoted to paying off a part of the Treasury's debt (91½ million yen) to the Bank of Japan. Apparently one million yen has been used for other purposes and 44½ millions have been transferred to the Bank, thus reducing the debt to 47 millions and, at the same time, raising the specie reserve to 128 million yen. The Bank's issue of notes over and above the legal limit is now 3½ million yen.

Japanese securities continue to rise in the London market. The following were the quotations on the 26th:—

Four per cent.....	£80 (£1 10s. rise.)
Six .....	£100 5s. (17s. 6d. rise.)
War-bonds .....	£93 8s. 2d.

Curiously enough, Russian securities also have risen in London, the 4 per-cents. being now quoted at £88 5s., which shows a rise of 17/6. They remain firm in Paris. The inference is that London anticipates peace as the outcome of the Russian disturbances, or that English financiers believe the end of those disturbances to be in sight.

A notification has been issued by the Naval Department repeating the warning that great quantities of Russian mines are strewn along the shore of the Liaotung Peninsula and at the entrance to Port Arthur, and that much danger menaces any ship navigating these waters.

The *Official Gazette* announces that on the 22nd instant 7 men were killed and 6 wounded by a Russian mine outside Port Arthur. But it is understood that methods of clearing have been adopted which will obviate any recurrence of such disasters.

According to a telegram from Europe the railway between Zlatoust and Samara was buried in snow on the 21st instant in consequence of a heavy fall that had lasted several days. Workmen are endeavouring to clear away the snow but the traffic is much interrupted. From 3 to 5 trains are stopped at each of the stations, and each train has to wait some 8 hours for its turn to proceed. The Communications Department, after consultation with the War Department, is employing the soldiers, where transport is interrupted, to remove the snow from the line, paying them reasonable wages. Four locomotives also are used as snow-ploughs. In consequence of this delay in the service of military trains, the carriage of grain is now forbidden at stations where it was formerly permitted.

There has been some discussion among the political parties as to the propriety of renewing Law No. 63. This is the celebrated law of 1896 which gives legislative power to the Governor-General of Formosa. Its first period of operation was 5 years, then it was renewed for 3 years, and now,

its second period having lapsed, the Diet is about to be asked to renew it. There is decided reluctance, indeed there always was reluctance, on the part of the Diet to delegate any of its powers to an individual. Moreover on the second occasion of renewal the Government was understood to have promised that no further step of the kind would be necessary. But the war has occupied official attention to the exclusion of many other matters and a measure to meet the case of Formosa still awaits preparation. The *Seiyu-kai* seem disposed to support the Cabinet in this matter but the Progressists are on the fence.

The extraordinary stone reported to have been found in South Africa throws all other diamonds completely into the shade so far as size is concerned. The Kohinoor weighed originally 793½ carats, an unskilled Indian cutter reduced it to 280 carats, and since then it has undergone two further cuttings so that its present weight is only 106 ⅞ carats. The Orloff, which is set in the sceptre of the Tsar, enjoys the distinction of being the largest cut stone in existence. It weighs 194¾ carats, and next to it comes the Regent which weighs 136¾ carats, having been cut down from 410 carats. The value of a diamond is as the square of the weight in carats. We may take the value of a Cape diamond at £4 per carat. Then, assuming that the new gem is reduced by two-thirds in cutting, its value would be four millions sterling. Of course no such price can be obtained. The probability is that the stone will be cut up into a number of smaller but still unrivalled brilliants.

Mr. Harold G. Parsons, in a recent number of *Blackwood's*, traces the history of the ancient English pretension that the narrow seas were a British possession. When Philip of Spain, he says, came to England to marry Mary, his hundred and sixty ships were met in the Channel by Lord High Admiral Effingham with his twenty-eight. Effingham fired a shot at the Spaniard, and the Spaniard dutifully struck his topsails and the English returned the salute. Selden took the extreme form of arguing that "Great Britain stands confined by the shores of other lands." But it would seem that there were difficulties in carrying out the Admiralty order of 1731, by which all commanders were to compel foreign ships to "strike their topsails and take in their flag within His Majesties seas, which extend to Cape Finisterre." In 1769 a zealous commander acted on this order with regard to a French frigate, and diplomatic complications ensued. Precedents were looked into, but were found to be few and doubtful. On the advice of Sir Henry Hawke, the zealous captain was sent to the West Indies. The French Government were told that he would be abroad for three years, and that it would not be possible to inquire into the case till his return home. The French did not want a war at the time and so the incident was closed. Apparently the theoretical dominion of the sea in its extremest form was dropped after this incident.

The Tokyo English Speaking Society held its annual dinner at the Peers' Club on Saturday the 28th ultimo. After dinner Baron Kanda expressed in a few appropriate words the welcome of the society to the guests present. The guests of the evening were Baron Kikuchi, Baron Kikkawa, Prof. Lloyd, Prof. Dr. Mitsukuri, Mr. Yone Naguchi, Prof. Purvis and Prof. Vickers, who

all made highly entertaining and instructive post-prandial speeches. Captain Brinkley, who had also been invited, was prevented from attending at the last moment. After a very pleasant and successful meeting the party broke up at 10 o'clock p.m.

General Nicholson left Tokyo on the 30th ultimo by the 3.30 train. Field-Marshal Marquis Yamagata and General Terauchi proceeded to the station to bid him farewell, and the British, American and German Representatives were also present, as were a number of other distinguished persons. He travels to Europe by the P. and O. steamer *Java*, which left Yokohama on Tuesday morning. General Nicholson leaves behind him innumerable friends in Japan. He won all hearts both in Tokyo and at the front by his kindly tact.

The *Asahi* states that arrangements have nearly matured for the conclusion of an arbitration treaty between the United States of America and Japan. Negotiations are being conducted in Washington, as it is understood to be Mr. Hay's desire to sign all arbitration treaties himself. The Anglo-French Treaty has been taken as a model, and it is expected that the signature of this convention will give a fresh impetus to the civilized campaign now in progress for replacing the sword by reason in international complications.

General Kawamura left Tokyo by the 6 p.m. train on the 31st ultimo. He will stay one night at Himeji, and then proceed to the scene of his new duties.

Admiral Togo has quite recovered from his indisposition. He was present at the Naval Department on the 1st instant, and it is expected that he will leave Tokyo for the front about the 6th.

#### IN MEMORIAM, DAVIDSON MACDONALD.

A saint there was who walked with us on earth;  
And we, who look on men with thoughtless eyes,  
Too self-absorbed to pierce through God's disguise,  
Beheld the man, nor rightly knew his worth.  
And God, who sadly smiles to see that birth,  
And wealth, and earthly power, are what men prize  
More than a life of true self-sacrifice,  
Called—and His servant joyfully went forth.  
And he has left a place which none can fill.  
That manly voice we loved is silent now,  
And we who feel his loss and seek to bow  
Beneath the unknown workings of God's will  
Know he is happy who deserved it most,  
And Heaven is richer by what earth has lost.

M. K.

#### THE DIEL.

##### HOUSE OF PEERS.

The House met on the 31st ultimo at 10 a.m. The principal business was a Government Bill for postponing indefinitely the census which is due to be held this year, owing to the confusion caused by the war. An amendment was moved in the sense of fixing 1910 as the year, but the House, by 130 votes to 84, adopted the Government's proposal. The Post Office Savings Bank Bill was also passed as sent up from the Lower House. Some minor measures also were passed and the House rose at 12.20 p.m.

##### HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m.

Mr. Motoda Hajime presented a question the

gist of which was that owing to Administrative interference the judiciary does not enjoy complete independence. He adduced certain incidents in Chiba Prefecture which had led to the resignation of a Judge.

Mr. Buto Kinkichi introduced a question relating to the small credit enjoyed by Japanese paper money in Manchuria.

The new Mining Law was then taken. There was no discussion. It was agreed at once to postpone the final discussion of the Bill.

The remaining business on the Order of the Day was of no special importance, and the House rose at 4 p.m.

##### HOUSE OF PEERS.

The House met at 10.10 a.m., and after hearing various reports, read for the first time the Government Bill relating to the Mortgaging of Railways. Baron Oura, Minister of State for Communications, explained that hitherto it had not been possible for a foundation to mortgage a railway with all its plant and property. This had been a defect in the facilities for freeing fixed capital, and thus the Bill now before the House was necessary.

The Bill was handed to a special committee of 15.

Another Bill relating to the property mortgageable to syndicates was also read and having been briefly explained by Baron Hadano, Minister of Justice, was handed to a committee of 9.

Two Bills relating to banking business were also entrusted to committees, and the House then passed some parts of the Government's financial measures which had remained over from 1904. Some minor measures, including a Bill for shortening to one year the probationary period of expectant judges, were then dealt with, and the House rose at 10.45 a.m.

#### YOKOHAMA LITERARY SOCIETY.

The Van Schaick Hall was crowded again on Friday evening on the occasion of the fortnightly meeting of the Yokohama Literary Society. Proceedings began with the singing of the Canadian National Song, "The Maple Leaf for ever," by Mr. S. H. Somerton and a chorus. The lecturer, the Rev. C. J. L. Bates, was then introduced. He dealt in a most interesting fashion with the Canadian Indians, gave a description of their tribes and location, tribal customs, organization and belief; the position of women among the Indian nations, etc. He then passed on to a brief resume of the present position of Canadian Indians and spoke of the bright outlook which lies before them, especially for the Iroquois, who have definitely set their faces towards the light of a higher civilization and higher ideals. The lecturer then introduced to his hearers several distinguished Chiefs, such as Brandt, Tecumseh, Ticomogodera; the sweet singer of the Indians, Miss E. Pauline Hall, etc., as well as several Pioneers of the West whose names will live in Canadian history for their work among the Indians. The lecture was illustrated, and many of the slides possessed unique interest, particularly the first, which, being "a prehistoric peep," contained, as the lecturer explained, something beside Indians.

A vote of thanks having been accorded the lecturer, an extraordinary general meeting of the Society was held to vote upon the proposed inauguration of an essay competition. Mr. C. H. Thorn moved and Mr. F. S. Booth seconded that an essay competition be started on the lines laid down in the prospectus which had been printed and handed to every one present. The President called for remarks, amendment, or contrary motion, and no one stirring he put the proposition to the meeting and it was carried unanimously. He then nominated as members of a committee to take charge of the competition:—Rev. J. L. Dearing, D.D., Miss Hall, Mr. W. Karl E. Vincent, Mr. F. S. Booth, Mr. W. S. Argent, and Mr. C. H. Thorn.

The following programme of music was then discussed, Mrs. Irwine, in particular meeting with a warm reception, and in response to an insistent encore she sang "Annie Laurie."

SONG....."Into thy Deepest Dream" Karl Vincent.  
Miss E. BURDETT LEACH.

PIANOFORTE SOLO "Nocturne Liebestraum" ...Liszt.  
Mrs. O. A. POOLE.

SONG....."For all Eternity".....Mascheroni.  
Mrs. E. C. IRWINE.

PART-SONG "The splendour falls on the Castle walls"  
Noverari.

Mrs. W. KIRKLAND WILSON, Mr. B. C. FOSTER,  
Mr. A. E. COOPER, Mr. S. H. SOMERTON and  
Mr. W. KIRKLAND WILSON.

#### FOOTBALL.

There were two games of football on the Y. C. & A. C. ground on Saturday, the first under Association rules being between a Japanese team and the Y. C. & A. C. "A" team. The visitors showed a decided improvement on their previous form, but were eventually defeated by six goals to one. The teams were:—

Tokyo Higher Normal School.	Goal	Y. C. & A. C. "A" Team.
Hori		H. W. Kilby
Nimome	Backs	A. W. Read
Eujii		K. Dodds
Awano		R. J. Bell
de Havilland	3/4 backs	J. M. Mollison
Esaka		T. Abbey
Sakurai		J. F. Drummond
Nakagawa		J. E. Drummond
Watanabe	Forwards	V. Hearne
Seguchi		S. R. Ford
Ueda		C. Thwaites

For the winners the goals were scored by J. Abbey (2), J. E. Drummond (2), V. A. Hearne, and J. M. Mollison. Ford also scored but the goal was given off-side. Hori made the point for the visitors.

The Rugby game was between Born in Japan versus The World. The World were playing a stronger team than when they met the Born in Japan the week before and as a result the score against them was kept down very considerably, the game ending in one goal (3 points) to nothing in favour of the ever-victorious Born in Japan. The game was one of the best we have seen in Yokohama. The teams were:—

BORN IN JAP N. (Colours.)	Back	THE WORLD, (Whites.)
W. B. Mason		W. Goddard
E. W. Kilby		Lloyd Thomas
H. W. Kilby	3/4	J. S. Cartwright
K. van R. Smith	Backs	B. C. Foster
J. Drummond		C. E. Libeaud
T. W. Kilby	3/4	H. E. Hayward
D. Weed	Backs	L. D. Tebb
W. S. Moss (Capt.)		W. B. White (Capt.)
O. D. Strome		F. W. R. Ward
W. J. White		C. A. S. Palmer
A. Kingdon		A. Hills
A. W. S. Austen	Forwards	A. E. Cooper
E. J. Moss, Jr.		W. M. Squire
J. Abbey		R. C. Bowden
H. J. Hearne		G. N. Fairhurst

In an association game of football played on Monday, the White team under H. W. Kilby made three goals to one scored by Colours under J. M. Mollison.

#### SPIRITS OF THE DEAD.

(LINES SUGGESTED BY THE INVOCATION OF GENERAL NOGI FOR THE SLAIN AT PORT ARTHUR.)

Ye spirits of the dead, whose mortal clay  
Here on the stricken field, there in the deep  
And hollow breast of ocean night and day,  
Dear to its country, sleeps its endless sleep,  
We give you reverence. Two hundred days  
Ye fought, and fighting for your country fell—  
The clash of steel, the storm's wild song of praise  
Rising o'er battle's din, your passing bell.  
But not in vain: from radiant Eastern hills  
Your stirring deeds e'en to the sunny West  
Have spread eternal fame—these rocks and rills  
We gaze on, with your blood for ever blest.  
Immortal race, extolled yet not unwept!  
Draw near us, and our reverence accept.

C. E. BRUCE-MITFORD.

## THE SHAHO DEVELOPMENT.

Tuesday, January 31.

NO details yet to hand serve to solve the perplexity of KUROPATKIN's last move. Changtan, the point whence the offensive movement was commenced, is 35 miles from Mukden on the south-east. Consulting the map it will be seen that the Liao River, after passing Mukden, trends southwards and at Changtan it approaches within 18 miles of Liaoyang. Crossing the frozen Liao immediately south of Changtan, the Russians divided into two bodies, one of which struck east, the other south. They mustered a whole army, not an army corps but an army, consisting of four army corps and a division of cavalry. In fact this force represented one of the three armies into which the Russian troops under KUROPATKIN have been divided for the future conduct of the campaign. A *corps d'armee*, when its ranks are full, musters about 30,000 of all arms. It may be assumed, then, without fear of exaggeration that the force engaged in this last attempt totalled fully a hundred thousand infantry and artillery with about seven thousand cavalry. Of course it is out of the question that an army of such magnitude can have been intended for a reconnaissance in force. What seems to have been contemplated was a great battle, and, so far as we can perceive, the object of the movement was to strike direct at Liaoyang. Had the Russians succeeded in breaking down Japanese resistance, there would have been nothing to prevent them from marching direct on Liaoyang, and a great, if not an overwhelming, disaster would have befallen the Japanese Army. But such an effort, to be really successful, ought to have been accompanied by at least some strong demonstrations against the Japanese centre and right so as to hold these forces in position. Field-Marshal OYAMA would seem to have had that view before him when he forwarded his budget of news on the 29th, for he commenced by describing the conditions existing on the centre and right, and from his description we gather that nothing beyond skirmishes occurred there. Thus it would follow that the movement from Changtan was an isolated essay, and that upon its success or failure depended the development of a general attack by the Russians along their whole front. It was, in fact, an experimental stroke. That interpretation derives probability from the nature of the fighting. The flanking essay made by the Russians on the east of Liaoyang by way of prelude to the Battle of the Shaho was a very different affair. On that occasion the Russians stuck to their work with dogged resolution, and altogether the character of the fighting was most obstinate. But now we find an action commencing on the 26th and virtually terminated on the evening of the 28th. The only place where the Russians appear to have fought with their traditional persistence was Heikautai. They held that

position throughout the 28th, and during the night of the latter day they made fierce attempts to drive back the Japanese who, as is their usual custom, had assumed the offensive. But these attempts were foiled, and on the morning of the 29th the Japanese occupied Heikautai. Altogether, then, the nature of the fighting offers a contrast to previous records, a contrast which compels consideration. Two explanations suggest themselves. The first is that the weather made obstinate fighting impossible. Very probably, when detailed accounts of this engagement reach us, we shall find that the sufferings of the troops on both sides were terrible. So far as can be perceived, the Russians must have bivouacked on four consecutive nights, the 25th, the 26th, the 27th, and the 28th, and the Japanese lay in the open only one night less. It is stated that a violent storm of snow and wind commenced on the 25th, but presumably it ceased partially on the 26th, for otherwise fighting would have been wholly impossible. Even supposing, however, that the skies were clear,—and we observe from a telegram published by the *Chuo Shimbun* that light snow was falling all the time—the cold must have been intense (the thermometer is said to have registered 25° below zero), and the state of the ground must have opposed almost insuperable obstacles to the marching of troops and the handling of artillery. In such conditions the Russians could scarcely have been expected to put up a great fight. Who will blame them? Indeed, the fact that they moved out to the attack at all speaks highly for their courage and endurance. They are not equal to the Japanese as fighters, and the disaster that has fallen on them might have been anticipated, but still they have done a stout thing. The other explanation is one which appears to obtain some credence in Japanese newspaper circles: it is that in this instance KUROPATKIN yielded to solicitation from St. Petersburg and sent out an army with little hope of conquering but at all events with the idea of diverting public attention in Russia from an inconveniently close scrutiny of domestic politics. If the Russian General was compelled to yield to such a cruel necessity, then we can readily conceive that he might have planned an adventure which, had it succeeded, would have been a brilliant and most effective *coup*, whereas, did it fail, the result would not be crushing. It is conceivable that the raid made by MISCHENKO's cavalry a few days previously partook of the nature of a reconnaissance as well as of a railway-wrecking expedition, and that the southward march of this big army was then in course of preparation. Whatever be the truth, however, KUROPATKIN, so far as can now be judged, has done either too much or too little. The defeat of an army of a hundred thousand men is an event which can not contribute to calm the tumult now raging in Russia.

## THE BATTLE OF HEIKAUTAI.

Wednesday, February 1.

EXPERT opinion continues to be perplexed about the object of KUROPATKIN's last move. The tendency seems to be in the direction of concluding that the Russian General drew a bow at a venture. This, it may be remembered, was one of the explanations offered in our own analysis of the enterprise. KUROPATKIN ordered it on the off chance of success. Had there been evidence of a probably favourable result, we may assume that he was prepared to throw himself vehemently on the Japanese centre and right while the turning movement on the left was pressed home. But if the turning movement failed, then there was to be an end of the business. We say "turning movement," but we believe that the more accurate description would be to call the essay an attack upon Liaoyang. What happened was that the Russians crossed the Hun at Changtan and to the southward of the latter, and then divided into two columns, one of which moved westward against Chenchieh-pau and the other southward against Heikautai. The advance guard of the former body succeeded in pushing on as far as Litajentun, which name may be remembered in connexion with the battle of the Shaho. Litajentun is only 7½ miles from the Liaoyan-Mukden Railway, so that, on this side, the Russians struck very nearly home. The other column, namely, that which marched on Heikautai, was able to push its van as far as Harhpau, which is about midway between the Hun and Liaoyang. In view of these facts, the movement may properly be described as an attack upon the Japanese communications and upon their base, Liaoyang. In short, it was a repetition, on a very large scale, of the essay made two weeks earlier by MISCHENKO's cavalry. Of course all this is intelligible enough. But the perplexing feature is the isolated character of the coup. Did KUROPATKIN really imagine that with a hundred thousand men, acting independently of the rest of his forces, he could strike a vital blow at the Japanese by driving a permanent wedge between their armies and their base? Has there been anything in the strategy or tactics of the Japanese, so far as this war is concerned, which could justify such a hope, still less such an expectation? If so, that something is apparent to KUROPATKIN alone, and now probably he is wishing sincerely that he had not been so ready to jump to conclusions. Europe has been very complacent towards him hitherto. The critics have agreed to think him a greater general than the captains to whom he is opposed, because, although he never succeeded in beating the latter, he did avoid being overwhelmed by them. A reputation founded on such negative accomplishments is quite unique in history, and we need scarcely say that it could never have been seriously credited had not the European estimate been informed by intense

reluctance to admit that Japanese strategy could ever be equal to Occidental. It will be curious therefore, to see how this last incident is condoned. The result is sufficiently disastrous. KUROPATKIN has deliberately wasted a fine advantage of position. At Changtan he distinctly menaced the Japanese left and greatly hampered their forward movement. In fact, the tenure of the west bank of the Hun by the Russians enabled them to partially encircle the Japanese. They no longer possess that advantage, for they have been driven far to the westward of the river, and it is the Japanese who now threaten to envelop the Russian right. So far as we can gather, the Japanese forced their way between the two columns of the Russian Army, the Chenchieh-pau column and the Heikautai column, and not only prevented their ultimate junction, but drove them back independently in confusion. That is evidently what Marshal OYAMA means when he speaks of having assumed the offensive. The Japanese seem to be always ready. No sooner does the enemy move, than they strike immediately at the weak spot his strategy reveals. The list of casualties remains to be received, but we shall not be surprised to learn that the Russians have lost from eight to ten thousand men. Thus on the whole this essay does not present one redeeming feature. KUROPATKIN ought to know his enemy by this time. Had he made such an attempt nine months ago, we should have no difficulty in interpreting his project. We should say at once that he wholly underestimated the Japanese; that he expected to find them neglecting the first principles of tactical and strategical efficiency, and that he conceived the possibility of routing them by a coup lacking in every quality save reckless daring. But since he ought long ago to have been able to gauge the qualities of the men opposed to him, the battle of Changtan seems to convict him of inexplicable blundering.

#### JAPAN AND KOREA.

IT is impossible to detect the least shadow of dishonesty or justice in some of the criticisms now published with regard to Japan's action in Korea. Consider, for example, the NAGAMORI scheme, which continues to be the object of unmeasured vituperation by some English journalists. NAGAMORI asked for permission to undertake the work of reclaiming land now lying uncultivated in Korea. The land is at present absolutely useless. It produces nothing and the labour and expense of making it productive seem to be effectually deterrent, so far as the Koreans themselves are concerned. MR. NAGAMORI is willing to provide the necessary capital, find the requisite labour and take the inevitable risks. He does not even ask for the privileges that would belong to a Korean subject engaging in such an enterprise, for a Korean subject would become absolute

owner of land thus reclaimed, whereas NAGAMORI seeks only the right of occupation for a fixed term of years, at the end of which the land would revert to the Crown on payment of reasonable compensation for improvements effected. Nothing could be simpler or less extraordinary. Yet the project is denounced as though it were an iniquitous attempt on the part of the Japanese to dispossess the unfortunate Koreans. How very silly and how plainly prejudiced such criticism is! Why not denounce Great Britain for reclaiming vast tracts of land in Egypt by constructing Nile dams, and why not abuse as political pirates the clever engineers who advocate huge works of reclamation in the valley of the Euphrates. Lands thus rendered arable, alike in Egypt and in Asiatic Turkey, come under the control of foreign capitalists who are applauded as benefactors of humanity, whereas a Japanese project of land reclamation in Korea is called international robbery. And what is the difference, pray, between a mining concession and a waste-land concession? Why should it be perfectly proper that all Western projectors should have their Governments' support in seeking to obtain possession of large tracts of Korean territory for mining purposes, whereas it is little short of a crime for a Japanese projector to seek possession of a tract for reclamation purposes? It seems unaccountable that Japan's critics do not appreciate these glaring inconsistencies. Another opportunity has now been seized by them; we observe. The well known Mr. YOKOI furnishes it. He advocates Japanese emigration to Korea. In the peninsular empire there are, he believes, wide expanses of land now lying fallow which the Korean owners would be only too pleased to sell to Japanese agriculturists. From an economical point of view that would be eminently advantageous, for the impending prospect of having to send annually over-sea large sums of specie to buy rice for her rapidly increasing population is one of Japan's serious troubles, and as Korea has a big unemployed margin of productive capacity, its utilization by Japanese emigrants would tend to save the situation. Mr. YOKOI advises official encouragement of such a programme. And in collateral support of his idea he urges that Korea might thus be furnished with a population which would serve effectually to guard her integrity and independence. Whether such a scheme is feasible or not, we do not stop here to consider. What strikes us rather is the reception awarded to it by the critics alluded to above. They condemn it as they condemned the NAGAMORI project. Both appear to them equally unrighteous, equally aggressive, equally disingenuous. The plain truth is that nothing done by Japan or contemplated by her can possibly be right in the eyes of these critics. Even emigration, an instrument of economical and imperial expansion approved and practised by all Western States, becomes a heinous device when the Japanese undertake it. So too the efforts

of Japanese priests to propagate their faith in China are regarded by the same critics as a sinister political device. The propagandism of Christianity, in whatever form, seems to them a good and praiseworthy act, but the propagandism of the creed of Buddha is to be regarded with disapproval and suspicion. It is all a pitiable exhibition of blind prejudice. These men, if they are observed, will be found to be the prophets of the Yellow Peril, and in their eyes the spectre may well assume a tangible form. For they have persistently done what they could in the past and they are persistently doing what they can in the present to stir up the hatred and racial antipathy out of which the Yellow Peril is supposed to grow. They know in their hearts that there ought to be a Yellow Peril if their own treatment of Orientals produced its natural results, and thus instinctively their conscience conjures up the phantom.

#### COAL AND THE DUTIES OF NEUTRALITY.

THE *Independence Bidge* having asked M. ERNEST NYS, the eminent professor of international law to furnish a statement of neutral duties in the matter of supplying coal to belligerent ships, M. NYS prepared the following memorandum which we translate from the columns of the *Independence* :—

Among the questions of international law which the present war raises, there is one which seems to place itself in the first rank; it is the question of knowing to what point neutrals can furnish coal to the warships of a belligerent.

Up to now coal had been always examined from a special point of view: that of contraband. Discussions related generally to the juridical character that should be attributed to it. People asked whether it must be classed among objects that neutrals could not furnish to belligerents. This led to distinctions. Some jurists classed coal among articles of absolute contraband. Others classed it among objects of conditional contraband, and prohibited delivery of it if it was destined for warlike uses. Others, finally, proclaimed it innocuous and authorized its transport to the enemy.

Since the war between the United States and Spain the problem presented itself under a new aspect. In the present war it is equally under that aspect that it presents itself. Only its import is greater than it was in 1898.

Coal has acquired in contemporary maritime war considerable strategical importance. It has become an aliment indispensable in every over-sea expedition. Doubtless assisted by excellence of technique, powerful cruisers are able to traverse distances of from 5,000 to 6,000 miles without fresh supplies of coal. But the necessity of providing it for return voyages presents itself none the less.

When along the route followed by its squadrons a belligerent State possesses neither ports nor coal-depots, can its war-ships take in supplies of fuel in the ports and coal-depots of neutral Powers?

In principle the answer must be negative. Every State has the right to take part in a war or to observe neutrality. It decides for itself in virtue of its liberty. But if it decides for neutrality, it is subject to the rules which international law imposes on neutrality. It is not permitted to give to one of the adversaries assistance which augments the latter's military strength and which thus procures for it an advantage over the other.

One of the consequences is that a neutral State can not give aid to a squadron or a war-ship of the belligerents.

Nevertheless there exists an important exception to this rule which imposes abstention. It is the case of distress. In this case the neutral State can receive the squadron or war-ship into its port; can accord refuge, and can even give temporary asylum.

By the case of distress is understood tempest, disaster or defeat; there is understood the need of repairs, shortness of provisions and even shortness of coal. But the assistance which it is lawful to lend is by no means unlimited assistance. So far as repairs are concerned, no addition must be made to

the original military force. So far as concerns provisions and coal, it is necessary that "need" should exist and only what is strictly required may be furnished. In other words, it is not possible that a fleet should stop at all ports, completing at each stop its provisions and filling up without cessation its coal-bunkers.

"Relaxation," says one author, "is not accorded over and above the object of deliverance. Water, coal and provisions are not furnished except in the quantity necessary for reaching the nearest port." This consideration indicates the solution. The object is to assist, but not to violate the right of the other belligerent Power which can exact from the neutral State loyalty and impartiality. Doubtless there is a divergence concerning the port that a war-ship should be placed in a position to reach. For some this port is the nearest of the ship's nationality. For others, it is the nearest port of another State. But two points are incontestable, namely, there must be distress and there can be no question of giving coal in unlimited quantity.

Besides, a warlike squadron and a war-ship will not be deprived of all resource: they can have themselves accompanied by coal transports. They can buy coal from the subjects of neutral states who will act at their own risk and peril, and who will supply the coal in the open sea where no State exercises jurisdiction. What is contrary to all law is that neutral States should open their ports to the ships-of-war of belligerents or tolerate their revictualling in their territorial waters.

At the commencement of the present war, almost all the States published declarations in which they affirmed their wish to observe the rules of strict neutrality. They can not take refuge behind the fact that these documents do not mention coal among contraband articles. The question is not one of contraband but of neutrality itself. The question is one of acts which are illicit precisely because they conflict with the elementary obligation which the law of nations imposes on States that proclaim themselves friends of the two belligerent Powers.

This is eminently lucid as all French statements are, but it does not add anything to the knowledge which every thoughtful person already possesses in virtue of his gift of common sense. The matter reduces itself to the simple principle that a neutral must not render any assistance to a belligerent ship to reach the scene of conflict. It follows manifestly that the war-ships of a belligerent when *en route* for the battle-field may not put into the port of any neutral Power except in case of distress. When Spain allowed RODJESTVENSKY'S vessels to enter her harbours and coal there, whether from transports or from the shore; when France granted similar facilities, and when, as seems to have been the case in Western Africa, Germany showed herself equally complaisant, every one of these States distinctly violated the fundamental principle of neutrality, namely, that a neutral must not assist to augment the fighting capacity of a belligerent. It is not of the slightest avail to plead the special practice of particular countries. The duty of a country is to bring its practice into conformity with the fundamental principles of international law, and to seek exculpation on the ground of municipal system is as though a house-breaker should set up burglarious idiosyncracies in bar of punishment. The broad highways of the ocean are open to all ships. They are common territory, and whatever place is accessible by following them, to that place a State has the right to send its war-ships. But when vessels *en route* for the scene of combat are allowed to call at the ports of neutral Powers to obtain coal and water or for any purpose which facilitates their voyage, such Powers are erring against neutrality just as flagrantly as though they

permitted the troops of a belligerent to march through their territory. Doubtless this and other questions suggested by the present war will be discussed and regulated at the conference which the Powers have pledged themselves to hold after peace is restored. The supply of coal will be among such questions. Coal is admittedly contraband of war when furnished for the use of a belligerent. But inasmuch as every obligation is limited by the power of discharging it, no State consents to be held responsible for all the acts of its subjects in their individual capacity, since to superintend and control them would be impossible. Hence the doctrine that private persons are free to sell contraband of war to a belligerent if they do so at their own risk. But the basis of that doctrine disappears altogether when the act of sale is notorious, conspicuous, continuous and controllable. An obvious case is the shipment of coal in large quantities throughout a long interval from a clearly distinguished port of a neutral State for the undisguised use of a belligerent's war-ships. That could easily be prevented, and if to prevent it is not a neutral's duty, then we fail to see why he should be required to prevent the despatch of war-ships from his dock-yards to strengthen a belligerent's navy. Vigilance, if duly exercised, should be equally efficacious in both instances, and therefore the obligation is identical.

#### STUDENT WAITERS AT AMERICAN SUMMER HOTELS.

(COMMUNICATED.)

Of the unusually large number of strangers who visited the United States last summer,—and there were an exceptional number of Japanese among them—many probably went to the New England States, and if so they very likely spent a day or two, perhaps longer, at one or another of the many summer hotels in the charming mountain regions of New Hampshire, the deer-forests of Maine, or on the seacoast, from Bar Harbour, Maine, to New London, Connecticut. To such visitors the appearance of the waiters at most of those hotels must have been somewhat surprising; but probably few took the trouble to ascertain just what it was that made the attendants, from bell-boy up to head-waiter or office clerk, different from the young men who perform similar functions in other parts of the country. Perhaps it may be interesting to the readers of the *Japan Mail* to hear something of a certain genus of the American people that finds an exact counterpart in no other section of the world. It is hardly possible that the "Student Waiter" will find any imitators in this land, because conditions are so different here, but it will not be because the Japanese student is too foolishly proud to enter such a life. In New England, and as yet only in that part of the United States, it is no longer an indication, as it once was, that an unusual degree of moral courage and bravery, or an utter depletion of the pocketbook, is to be assumed as a demonstrated fact, when we see a college student, during the long vacation—which, now, as a rule, includes the three months of July, August, and September—don a bell-boy's uniform and convey lemonades, ice-

water, or something more stimulating if not so harmless to perspiring visitors, or in white apron and heat-defying smile do his best to satisfy the same visitors at the dinner-table with mulligatawny soup, lobster à la Newburg, or succulent roast-beef. Some years ago a young man who was determined to get a college education, but who had not the ready money to pay all his expenses, took a position as waiter in the "Commons" hall of the college, where meals are served to those students who do not care to live in private boarding-houses. Finding the work not burdensome and yet reasonably remunerative, he conceived the idea of continuing the occupation during the summer vacation and applied for a position in one of the summer hotels, where the service is of a temporary kind that suited his leisure. His offer was promptly accepted, because at that particular time it is always somewhat difficult to get waiters of any kind. At first the hard, humiliating work at the mountain or seashore resort, where he placed himself on the same plane of work with Irish and other foreign professionals, who had as much scorn for his amateurish attempts as an able-bodied seaman has for a landlubber, was anything but congenial. It was an unusual occurrence, but when the spirit in which it was done was known, it commanded the respect and commendation of the world in general. From this small beginning, like many another good thing, the student waiters rapidly grew in number until now there is scarcely a college in the Union, especially in the Northern States, that does not send its quota of self-helping students, young men or young women, to those summer hotels each year to work as bellboys, waiters, chambermaids, or housekeepers, and in a wholesome way these students have changed employees' conditions in virtually all such hotels. Many a hotel proprietor was quite used to hearing complaints from his waiters about the stale, monotonous food supplied in the dingy, dirty, dining-room especially assigned to the "help!" But one of them reckoned without his host when, out of forty or fifty waiters he had hired, there were some ten college students who demanded to be treated like human beings, and when he gave them his customary reply, that he could fill their places in a day if they chose to leave, he was quickly disillusioned. The business-like manager was promptly served with a business-like document, signed by those ten students, demanding that decent food be served to all the employees, else every visitor would be apprised of the indecency of the proprietor. This notice was accompanied by a hint that unless a satisfactory improvement was immediately made, one of the student-waiters would write an interesting (?) account of how stale meat and skimmed milk were served to the "helps" in Hotel X., managed by Mr. Y., and have it printed in a local paper as a gratuitous advertisement. Moreover, the document contained the information, couched in language that showed an accurate knowledge of law, that the proprietor was not at liberty to discharge the signers, because of their just and reasonable complaint, for each one had a legal contract, to which he was prepared to hold him. Fresh meat, good milk, sweet bread, and decent coffee resulted and, strange to say, the proprietor promptly engaged those same students, at the expiration of their contracts, for another season: not alone because they had demanded fair treatment, but because their treatment of him had been honourable. Their work had been performed in a clean, thorough, competent manner, and his visitors had expressed hearty satisfaction in

their behalf. It was in this way that other proprietors of summer hotels learned that it was profitable financially to employ students.

To-day most of the summer hotels depend more or less upon students for assistance in running the establishment, but it is certainly an odd thing to European and Asiatic visitors to such a hotel to find it entirely equipped in the matter of domestics with candidates for A.B.'s, A.M.'s, M.D.'s, etc. Yet this is quite true of at least one of the largest hotels on the New England coast. The experience of this establishment is decidedly unique and may be given in some detail. Several years ago, the owner and proprietor hired as head-waiter a bright young collegian, and made him responsible for all of his immediate assistants, that is the ordinary waiters. This head-waiter, naturally being interested in other self-helping students, advertised extensively in college towns for students to act as waiters during the summer vacation. The result was that a majority of the waiters for that season were students. When the first head-waiter gave up his place, on completing his college course and entering upon the practice of his profession, his office was passed on to another, who enlarged the scope of his influence, and so on until, in a very few years, the entire staff of employees, from office clerks to subordinate porter, were students, either male or female.

The life is by no means the drudgery that the professionals too often make of it. Otherwise it would be impossible to get eighty or ninety students of both sexes together. It is a *sine qua non* that they shall be self-respecting as well as self-supporting, and totally eliminate all fun and larking; although engagements leading to matrimonial alliances are not absolutely without precedent. Of course there are all manner of tricks played upon the green horns; what would such a life be without practical jokes? Harmless, as a rule, they are, for the *esprit de corps*, whether the student come from Harvard, or Yale, or Brown, and is a young man, or from Wellesley, or Smith, or Tufts, or any other of the women's colleges, forbids all coarseness. The initiation for the young men is trying, for whoever knew a young man who was not more or less self-conscious and awkward? But the time soon comes when he can handle his tray with the best, carry in his head the complex orders of ten or a dozen people, no two of whom wish the same thing served in the same way, and withal keep a protecting eye out for the dainty waitress, a college undergraduate like himself—possibly his own "co-ed," who shares his sideboard and gets hopelessly confused when her "ten people" all come in together and demand attention in a hurry. While the initiation of the inexperienced college girl is no less real than that of her collaborator of the opposite sex, and in its way as trying, it is always of shorter duration and less painful; for the girls do not find it such fun to tease one of their own number, and the college man is too careful of his reputation for gallantry to be otherwise than helpful. Besides, young women are more deft and skillful at such work and usually have less personal awkwardness to overcome than their masculine co-workers. From 7 in the morning, when preparations for breakfast begin, and this meal is served from 7:30 to 9:30, until the dining-room is closed as the last dawdler goes away: from 11:30, when the room must be got ready for the 12:30 to 1:30 lunch, and all who take that meal have been served: and from 5:30, when they prepare for the 6 to 8 dinner, until 9 o'clock, or

perhaps later, these waiters are kept busy. Yet there are, it will be seen, a good many intervening moments, and hours even, when they are free, and into these are crowded study and fun in generous measure.

If a student, at the end of the summer, comes away with seventy dollars in his pocket, he is perfectly happy; for he has had all the pleasures of an expensive summer without the expense, and some jolly experiences that the "guests," paying five to eight dollars a day for their privileges, could not possibly get; and there are probably hundreds of men and women in the United States who look back upon their college long vacations, when they were waiters or employed in some other capacity at a hotel, with the keenest pleasure, aye, and with regret, too, that in the hurly-burly of the business or professional life for which that service helped to fit them, there is no prospect of repeating the hard work and the unlimited fun that were jumbled together so promiscuously; so pleasing is that life which must seem anomalous to all but the native-born American.

#### YOKOHAMA AMATEUR ROWING CLUB.

The 33rd annual general meeting of members of the Yokohama Amateur Rowing Club was held at No. 78, (the Masonic Hall) on Tuesday evening. Mr. H. C. Litchfield, President, was in the chair and there were about twenty members present.

The CHAIRMAN attributed the smallness of the attendance to general satisfaction on the part of the members with reference to the working of the Club. He then read the report and accounts (which have already been published in our columns) and having commented upon them moved that they be adopted.

This was duly seconded and carried.

The next business was the election of officers. While the balloting papers were being distributed Mr. Cartwright proposed that the President, Mr. Litchfield, should be re-elected by acclamation.

It was pointed out, however, that the President, like the other office-bearers, must be elected by ballot.

A ballot being taken the result was announced as follows: President, H. C. Litchfield; Captain F. J. Hall; Hon. Secretary, O. T. Gillon; Hon. Treasurer, F. H. Abbey.

The ballot for a Committee resulted as follows: W. Goddard; F. Pollard; O. Strome; A. L. Mottu.

This closed the proceedings.

#### KOBE NEWS.

At the second annual ordinary general meeting of C. Nickel & Co. held at the offices of the Hyogo and Osaka Chamber of Commerce on Jan. 24th, the Chairman, Mr. Th. de Berigny, said it was the opinion of the directors that the company should not pay higher dividends than 12 per cent., any profits beyond that to take the form of a bonus. The interim dividend at yen 1 per share was distributed on August 5th last, absorbing yen 5,000, which left a balance of profit available on the year's working of yen 50,000. From this a further payment of yen 2 per share was recommended, which, with a bonus of yen 1 per share, made the dividend for the year 16 per cent. It would be palpable to the shareholders, from a perusal of the report, that the company was in a flourishing condition. Endorsing what he said at the previous meeting, he had only to reiterate that the flotation of the company had proved a sound enterprise. Valuable property had been acquired at Shinzaikai, the second mortgage debentures having been profitably invested in this direction.

Mr. A. W. Curtis, editor and proprietor of the *Kobe Herald* has been again prosecuted and fined

yen 30 for disclosing military secrets. In this instance the offence consisted in the publication of a paragraph contained in a Tokio message to the *Mainichi* regarding the Japanese submarine torpedo boat flotilla.

The trial of C. F. Reimers charged with fraud in obtaining money from certain Japanese under pretence of assisting them to emigrate, commenced at Kobe on Thursday. With him were also charged I. Kotaro, a dealer in *cloisonné*; Nishiyama Nobu, housekeeper to Reimers and K. Aisuke, all of Kobe. After taking evidence the case was adjourned by the Court.

The annual meeting of the K.R. and A.C. was held on Thursday. The financial report shows a steady improvement, the overdraft at the bank being reduced in the past year by yen 3,300. Mr. C. H. Lightfoot was re-elected President by acclamation; and the following were elected on the Committee:—Messrs. E. J. Marshall, P. L. Spence, F. J. Bardens, R. H. Clark, E. H. Moss, E. Oldenburg, W. W. Campbell, and R. Ross-Reid.

The *Kobe Herald* announces with regret the death of Mr. Francis H. Loring, for several years a well known resident of Kobe. He died at his residence in West 120th St., New York, on Dec. 23. The deceased gentleman, who was the son of Mr. David Loring, was a member of a family of Boston origin, which has been established in San Francisco for a number of years, and he was for some time engaged in life insurance work in the latter city. Mr. F. H. Loring came to Japan in the early nineties and for several years was with the firm of Messrs. C. P. Low & Co. in Kobe. In 1897 he joined the firm of Averil, Olmsted & Co. as matting expert, and remained with them until 1902, in November of which year he returned to San Francisco on account of ill health. He then proceeded to New York for the purpose of consulting physicians. Friends of Mr. Loring have heard little from him since he left this country, but it is generally understood that he has been in a very precarious state of health since leaving San Francisco. It was reported that his life was despaired of nearly two years ago, and a general nervous break-down, which affected the brain, seems to have been the cause of his death at a comparatively early age. He leaves a wife and one child. Both Mr. and Mrs. Loring were well-known in Kobe, Mr. Loring having been a performer of more than usual ability on the violin.

#### OLD JIM CROW.

(TUNE: FRIAR OF ORDERS GREY.)

O I am a Friar of Orders Black,  
Up street and down alley I make my track;  
For wallet and scrip I've a fathomless crop,  
My crow's like an Old Curiosity Shop;  
I'm Bohemian by nature, by calling a Hun,  
A mendicant monk and a gipsy in one;  
Who strives to live well hath no need to be slim,  
"Self-help" is the rule of Dominican Jim.  
What fireside cat,  
What granary rat  
Lives half so well as Jim Crow the Fat,  
Lives half so well, etc., as Jim Crow the Fat?  
I loathe your liverish Grey-friar Kite,  
Who mopes on the house-top and funks fair fight?  
My eyes and my beak show the glint of cold steel,  
I've a Methodist's back but the front of the Deil;  
And I'm not much addicted to chaunting o' hymns,  
Like my hypocrite cousin the Jackdaw of Rheims;  
I'm a practising Christian with claw and with beak,  
If my enemy smite me I give him more "check."  
What rat o' the slum,  
What roof-and-tile Tom  
Lives half so free as Jim Crow the Dom,  
Lives half so free, etc., as Jim Crow the Dom?  
S. W.

## THE BOOKSHELF.

*Things Japanese.* By Professor BASIL HALL CHAMBERLAIN. Fifth Edition revised; Kelly & Walsh, Limited.

THIS book has reached its fifth edition. The public have marked their approval of it in that very unequivocal manner, and they are right, for the conception of the work is excellent and its execution merits the same adjective. There is, nevertheless, one very disappointing feature. It might have been supposed that since the favour of many readers has furnished these numerous opportunities for revision, Professor Chamberlain would have utilized them to obliterate blemishes which, though some excuse might be pleaded in the case of a first edition, certainly ought not to survive several years of examination, comment and criticism. We do not find, however, that Professor Chamberlain has been sufficiently diligent in obeying the golden advice of Horace to authors, *sæpe stultum veritas*. In his introductory chapter, for example, he preserves that old phrase:—"Whatever you do, don't expatiate, in the presence of Japanese of the new school, on those old, quaint and beautiful things Japanese which rouse your most genuine admiration. Antiquated persons do doubtless exist here and there to whom Buddhist piety is precious; others may still secretly cherish the swords bequeathed to them by their knightly forefathers; quite a little coterie has taken up with art, and there are those who practise the tea ceremonies, arrange flowers according to the traditional esthetic rules, and even perform the mediæval lyric dramas. But all this is merely a backwater; speaking generally the educated Japanese have done with their past. They want to be somebody else and something else than what they have been and still partly are." Now is this true of Japan in this year 1905? Was it ever true? Well, perhaps it had a modicum of veracity during the brief interval when Japan was so much occupied examining and sitting on the wonderful new wardrobe of the Occident that she had no leisure to air her own old garments. But even then Mr. Chamberlain's dictum was an exaggeration. To-day it is a misrepresentation. Yet he gives it to the world just as he gave it a dozen years ago—if we remember aright the date of the first appearance of "Things Japanese." Not a great matter that, however. It is different when we look further and find standing in their original places, uncorrected and unmodified, blemishes of a grave nature. Thus in a foot-note to his article on "Foreign Employees in Japan," Professor Chamberlain re-affirms the mistake that "the abolition of torture was entirely due to the personal initiative of Monsieur Boissonade de Fontarabie," and proceeds to repeat the story on which he originally based this curious error. Yet in 1898, when the theory was first propounded, conclusive proofs of its fallacy were publicly adduced. Why does Mr. Chamberlain republish the canard in 1905? Apparently because it is a striking story. All through his work the same tendency is observable, the tendency to sacrifice the true to the picturesque. The whole chapter of which this foot-note forms a part wants radical alteration. It were better omitted than left to stand as it is. Undoubtedly the foreign employee has done much for the country, but to call him "the creator of New Japan" and "the physician to whom belongs the credit of working the marvellous cure which we all see," is foolish hyperbole. Observe to what extravagances the author is committed in attempting to work out this problem. "Another foreigner took the mint," he says, "with the result that Oriental confusion made way for a uniform coinage equal to any in the world." Does Professor Chamberlain really imagine that the mere mechanical feat of casting coins in certain dies of a certain fineness was the main instrument in placing the monetary system of Japan on a sound and firm basis? We do not know what he means by "Oriental confusion," but assuredly this dictum of his is a very conspicuous example of Occidental confusion of thought. He means well by the foreign employees doubtless; means to blow their trumpet very agreeably. But nothing conduces less to

the true interests of the foreign employee or of Japan herself than these extravagant panegyrics which make the former ridiculous and prejudice the latter against continuing to avail herself of his services. With quite curious consonance Professor Chamberlain, lecturing Mr. Henry Norman in the apodosis of this very chapter, observes that "many good people enjoy nothing so much as unlimited sugar and superlatives." Among these good people he evidently classes the foreign employees.

Out of "English as she is Japped" Professor Chamberlain makes a highly entertaining chapter. We can sympathise with the impulse that betrayed him into so greatly elaborating this funny subject. But is it fair on his part to set before his readers all these quaint deformities of language as specimens of the English spoken and written by Japanese students? True he apologises at the close and frankly observes that the Japanese could doubtless make as comical an article on the subject of "Japanese as she is Englished." But he none the less creates the impression and leaves it unobliterated that these monstrosities of diction are typical examples of the Japanese students' English acquirements. And so defective is his sense of proportion that he actually devotes more space to these copies of comical sign-boards, burlesqued letters and laughable labels than he does to Japan's art in general and nearly five times as much as he does to her glyptic art.

Another article which needs to be completely re-written is that entitled "Treaties with Foreign Powers." In its present form it has only one pre-eminent feature, namely, that of being essentially one of the most misleading essays that this weary subject has hitherto inspired. A reader would suppose from Professor Chamberlain's account that Japan had no shadow of reason on her side in seeking treaty revision and that her success reduced the foreign merchant to a pitiable and aggrieved position. There is nothing radically objectionable in thorough-paced partizanship. It is often very persuasive. But surely this treaty problem is old enough to be handled dispassionately, nor is it in an eminent scholar's work, published to-day, that we look for an analysis disfigured by all the prejudices prevailing a dozen years ago when the revision struggle was at its zenith. Professor Chamberlain has supreme contempt for English diplomacy, which he classes with "war, pestilence and American journalism." Well, after all, English diplomacy has managed to build up the greatest empire the world has ever seen, and that is a practical monument which will survive any academic denunciations. For the rest, the most meticulous diplomacy never conceived a treaty so minutely comprehensive as that which Professor Chamberlain seems to have expected, and moreover if he really believes that when Japan first brought forward the question of revision she was "but just emerging from Asiatic semi-barbarism," then we suggest to him that even the diplomats he most admires, whoever they may be, could not have made a satisfactory job of the business.

Speaking of Japanese politeness Professor Chamberlain says:—"Personal intercourse with this people for more than thirty years has convinced the present writer that it is *la politesse qui vient du cœur*—something deeper than mere bows and smiles,—it is rooted in genuine kindness, especially among the lower classes." That is a dictum which we can heartily endorse with the personal experience of 38 years. There are some saving clauses, however, which we quote:—

The politeness of the Japanese being thus a fact disputed by none,—least of all by the writer of these miniature essays,—there may be some interest in noting a few items on the negative side; for in some exceptional particulars this most courteous nation does offend glaringly against the canons of courtesy, as understood in the West. Japanese will dog your footsteps in the streets. They will contradict you flat. They will answer in English when you have addressed them in their own language. They will catechise you about your plans: "Whither are you going? Whence do you come? What is your business? Are you married? If not, how extremely odd of you!" If you turn them off, they will interrogate your servant, and that to your very face. At other times, seeing that you speak Japanese, they will wag their heads and smile condescendingly, and admit to each

other that you are really quite intelligent,—much as we might do in presence of the learned pig or an ape of somewhat unusual attainments. But the most fundamental and all-pervading breach of courtesy (from the European standpoint) is displayed in the way servants and other inferiors behave towards their superiors. You tell a *jinrikisha*-man to set you down, that you may walk up a hill. You probably have to do so four times before he obeys:—he assumes that you surely cannot mean it. You order your cook to buy mutton. He goes straightway and invests in beef:—he knows beef to be cheaper, and thinks to spare your pocket. Disobedience, in fact, is the rule,—not disobedience from malice or pique, but from an ineradicable assumption on the subordinate's part that he can do better for his master than his master can do for himself. Sometimes this is true; for the native servant knows native ways better than his foreign master can ever hope to do. Sometimes it is true, because the native retainer has sharper wits than his native lord. "Dull as a Dainyo," was almost a proverb in old feudal days. But in any case, what a novel state of things does this open out to the minds of us Europeans, in whom obedience is the first rule of courtesy, abstention from inquisitiveness the second!

Surely these are very strange views! As to statements of fact, we would observe that to have one's footsteps dogged may be a not uncommon occurrence where school boys and street gamins are concerned, but to be contradicted flat is, in our opinion, just one of the things that happen least frequently in Japan. However, experiences differ, and we offer our own merely for what they may be worth. But we can not agree that a Japanese will answer in English when addressed in his own language, though, so far from feeling offended if he did, we should welcome his capacity; and concerning the learned author's assertion that "at other times, seeing that you speak Japanese, they will wag their heads and smile condescendingly and admit to each other that you are really quite intelligent"—much as we might do in the presence of the learned pig or an ape of somewhat unusual attainments, well we can only attribute such an outburst to professional petulance. For our own part, were we asked to indicate special evidences of Japanese innate courtesy, we should refer to the unflinching polite toleration they display towards the foreign assassin of their language. We have some doubts, too, whether Professor Chamberlain, after devoting 9 pages of his book to ridiculing Japanese attempts to speak English, has an immaculate right to denounce the Japanese for their too open admiration of his own linguistic powers. An uneasy feeling begins also to torment us as we read "Things Japanese" least we ourselves have habitually indulged in discourtesy towards our Anglo-Saxon acquaintances and lest we have constantly suffered similar rudenesses at their hands. For certainly, meeting a friend in the street, it has been our common custom to inquire "where are you bound for," or "where have you come from," and if the first word fell to him, we (on our side) have been wont to be thus questioned; whereas we now learn from Professor Chamberlain that such queries are "a glaring offence against the canons of courtesy as understood in the West." And the *jinrikisha* coolie who has to be ordered repeatedly before he consents to set you down that you may walk up a hill. We have most stupidly misinterpreted this person hitherto. We have actually imagined, in our shallow silliness, that his hesitation was inspired by reluctance to give us the trouble of walking up the hill, and now we learn that the fellow was in reality "offending glaringly against the canons of courtesy." Sometimes, too, though rarely, it has happened to us to find that an order given to a servant evoked in its execution some display of independent judgment on his part. But as he always had a good reason to give, a reason dictated by solicitude for our interests, we were disposed to applaud rather than to censure. Yet it appears that we should have regarded him as "a glaring offender against the canons of courtesy." Now, speaking frankly, ought the fits of pique responsible for the statements quoted above, ought they to have survived four editions of a book and to continue their vigorous existence in the fifth?

Here, by way of conclusion, we emphatically repeat the admiration frequently expressed by us

in the past for the work Professor Chamberlain has done. We like "Things Japanese" least among his books, because it is the slightest of them, and because in its pages he so often prostitutes his judgment to his jest. But we acknowledge it to be a classic, and if we venture to indicate some blemishes—blemishes in our opinion—it is because a classic ought to be thoroughly classical. It remains only to note that many valuable and interesting additions have been made in this new edition, and that no book on Japan can compete with "Things Japanese" for variety and accuracy of information within a small compass.

*Baccarat*, by FRANK DANBY; London, William Heinemann.

THE only other work by Frank Danby which has come under our notice is "Pigs in Clover," which displayed a daring, not to say amazing, audacity in its description of actual men and things of present-day London. By comparison "Baccarat" falls greatly short of its predecessor. Indeed it is a book that having read, one wonders why it was written. The subject is unpleasant and there is little distinction of style to redeem the unpleasantness. An English country solicitor out of sheer pity marries a French orphan whose father had wasted his life and substance at the gaming tables of continental resorts. Julie had no knowledge of her father's life, being brought up in a convent, and passing on the old *roué's* death direct from the convent to a quiet English home. But the blood of the reckless old gamester ran strong within her, and when, after nearly 9 years of married life, her husband leaves her and her two children for three weeks alone at a French watering-place in Brittany—business calling John Courtney back to England—the hereditary instincts of her race lead her to the gaming tables and despite the influences of her years of seclusion in an English country town, she develops into a reckless gamester, and, letting prudence go by the board, succumbs to the wiles of a professional hunter of the baccarat room. She allows this man to advance her money to pay her debts, and then losing all control of herself consents to fly with him to Paris, leaving behind her innocent children, and the usual incoherent letter to her husband. John Courtney arrives at the watering-place the day after the flight, follows his wife to Paris and finds her in a hotel seriously ill. He manages to get rid of the professional gambler, and then helps to nurse his wife back to life and strength. Husband and wife return to England, and in due course of time a child appears upon the scene. The rest of the book is taken up with an analysis of John Courtney's feelings at this unexpected *dénouement*. It is an unpleasant subject, but in justice to the author—or is it authoress, for we find London reviewers are divided as to the sex of the writer—John Courtney's varying emotions are dealt with in a sympathetic manner. In the end, a providential fire, which breaks out in the Courtney's house, removes the unwelcome stranger, and we are led to believe that with its removal husband and wife resume the even tenor of their way; for we find the following lines occupying a page all to themselves as if to illustrate and clinch the argument of the story:—

"So do the winds and thunder cleanse the air;  
So working bees settle and purge the wind;  
So lopped and pruned trees do flourish;  
So doth the fire the drossy gold refine.

The book is illustrated by six pictures in colours by Parys and in the copy which has reached us, the alignment of colours is so faulty as to greatly detract from their clearness.

#### CHRIST CHURCH.

The annual meeting of seatholders in Christ Church, Yokohama, was held in the vestibule of the Public Hall on Wednesday evening. Mr. James Walter was in the chair and there was a fairly large attendance.

On the motion of Mr. J. de Becker seconded by Dr. Tripler the minutes of last meeting were taken as read.

On the motion of Rev. W. P. G. Field the report and accounts were taken as read.

The CHAIRMAN remarked in reference to the accounts that the Hon. Treasurer, Mr. Unite, (to whom by the way all seatholders were greatly indebted for the assiduity and the unselfish way in which he had devoted much of his leisure time in looking after the Church work) on his own intuition and very wisely had the church accounts audited by a chartered accountant, Mr. A. E. Pearson who most kindly consented to do so. Now Mr. Pearson being a duly qualified Chartered Accountant must naturally know more about such matters than him (the speaker) or even of most of them. He was not proposing to shirk his duties and intended directly to enter into this matter of accounts, more particularly because an article was allowed to appear in the *Japan Daily Mail* of the previous day under the signature of Mr. W. K. Wilson, which would have been utterly ignored had it not crept into the columns of the leading foreign journal of Yokohama and Tokyo, and he only deferred his explanations because they would lead up to something of far greater importance. Those being the facts would somebody facilitate matters by proposing that the Report be adopted and the accounts passed, and if that motion was proposed and seconded they would then proceed to vote upon it.

Mr. DE BECKER proposed that the report and accounts be adopted and passed.

Mr. FIELD seconded and in doing so was proceeding to refer to a letter over the signature of Mr. W. K. Wilson, when the Chairman interrupting, asked Mr. Field to defer his remarks to a later stage.

The motion was then carried.

The CHAIRMAN said:—There is one more matter that had better be taken up at once before we go any further, that is the election of a new Committee, which has to be done at this meeting. Your Committee is composed of nine, viz., the four Trustees and five others. Of these Mr. P. E. F. Stone has been transferred to Hongkong and Mr. W. F. Harley is also about to leave (both these gentlemen will have to be replaced). The Committee feel that we ought to have an American representing the Episcopal Church of the United States on our Committee and Mr. Varnum, if elected, will be willing to serve. Mr. Monague Beart, who takes a keen interest in Church matters will also serve, I am glad to say, if elected. I think in this crisis of Church matters that your old Committee if re-elected will stand by you.

The CHAIRMAN then proposed that the old members of Committee, Messrs. P. S. Bent, C. V. Sale, S. E. Unite, with M. Beart and R. M. Varnum be asked to serve.

On the motion of Mr. F. S. James seconded by Dr. Tripler the motion was agreed to.

The CHAIRMAN then said:—Now for a word about the accounts. Anybody who read Mr. W. K. Wilson's letter could see that it was a malicious attempt to prove that the Rev. W. Field's Incumbency was driving seatholders away from the Church. Apart from that it was a deliberate insult to your Committee, but both the Incumbent and the Committee are accustomed to contumely and neither will descend to personalities when they can possibly be avoided. The facts are these: the pew rents, as compared with 1903 have fallen off by *yen* 640, but how? I will read you a list, making a sum of *yen* 350, not in any single instance due to disagreement with Mr. Field's Incumbency; this therefore leaves a loss in Pew Rents of *yen* 290. Now a Congregation that can put up over *yen* 5,000 in hard times like the present, practically wiping off the Church debt and giving out of this sum *yen* 1,384.88 towards other charitable objects, preferring to make their offering through the Church rather than have their names before the public, such a Congregation need not worry themselves one iota about a falling off of *yen* 290 in pew rents.—(Applause). Besides, the Hon. Treasurer informs me that since these accounts were published, applications are coming in freely for sittings in the Church and I myself have been asked by others wishing to take seats if only the pew rents could be made a little

lower. To these I have had to answer that the Committee are reluctant to lower the rates at present, but all vacant seats after the opening of the Service are at their disposal, and I asked them to just give what they can afford through the offertory. Ladies and gentlemen, there is a merciful providence watching over Christ Church and you need fear no evil. I wish now, and I hope for the last time, to dwell upon the Constitution of your Church. In the early sixties there was a mere handful of Englishmen here and a British Regiment to guard them. In our Church you will find brass tablets to the memory of a large number of British soldiers and sailors who died for their country in the first attempts to open up this country to Foreign trade and who were killed in battle by the nation we are now so proud to have as our staunch and powerful ally. The British Government provided us with the land upon which to build our first Christ Church and paid the stipend of the clergyman who officiated, hence he was called Chaplain. When the troops were withdrawn the Government grant was also withdrawn and the Church was handed over to Trustees for this Community and a deed of Trust drawn up having the proviso that a pew should be set aside for the British Consulate in perpetuity free of charge, and further that the Rites and Ceremonies of the Church of England and none other can be followed. That Trust has been faithfully guarded ever since and will be in the future. Who have you got for Trustees? You cannot get rid of them until they die or leave this place, but out of the 4 there are 3 who have spent some 38 years each in this country and have known every clergyman that ever held office in this Church. Surely, ladies and gentlemen, if they can do you no good you may trust them to do you no harm. None of them are High Churchmen and they all agree that the Rev. W. Field has fulfilled the duties for which he was sent out by the conduct of the English Church service, and they can find no fault in him. For some time past they have noticed an ugly growth on the outside of your Church, and fortunately, finding it to be of a most malignant and cancerous nature and after carefully diagnosing it, they decided to use the knife and cut it out. Before commencing the operation they consulted the seatholders, wishing to know only if they considered the Rev. Walter Field had better assist or not. A fair and just expression of opinion was taken, with the result that 83 were for and 31 were against, to which one has since been added who declined to express an opinion. The sealed ballot was opened in the presence of the 4 trustees and the Hon. Treasurer. Well, we have offered Mr. Field to continue his Incumbency for 3 more years, with the option of terminating the agreement by 6 months' notice from either side, and he accepted. You seatholders may now go home with the assurance that you can have 3 years of peace and quietude. In personally taking up their expression of opinion I have met nothing but courtesy. I refused to discuss the question at issue, except in two cases where it could not be avoided, and where, expecting to meet with trouble, was told simply, "Mr. Walter, I will not vote at all, in our home we refuse to discuss Church matters, it brings up discussion between wife and husband, husband and wife and between children and parents and brother against sister." To you people who have attempted to stir up all this strife in God's Church I would say we forgive you, we bear you no malice or hatred, but go away, go away.

Mr. F. S. JAMES said:—I wish to claim your attention for a few minutes in reference to various remarks and criticisms which have been freely expressed in this community in connection with our Clergyman the Rev. Mr. Field. A great deal of harm and unpleasantness has been caused by some members of the congregation spreading reports, without in the first place finding out whether they were true or not, and in most cases when the rumour was investigated, it was found that no shadow of truth existed. Several instances have been brought to my notice, but I will deal with one only, just to show you what injustice can be done by scandal-loving people spreading reports without being sure of their facts. A few days since, I was stopped by a seatholder and asked

whether I had heard the latest cause of complaint against Mr. Field. On replying in the negative, I was informed that a foreign gentleman, not of British nationality, who was shortly to be married, had called on Mr. Field and had asked him to perform the marriage ceremony in the Church, whereupon Mr. Field had refused, giving as his reason, that the gentleman in question was not a member of his congregation. My informant then finished up by saying, "Did you ever hear of such a piece of narrow mindedness?" I replied, that I had heard such a number of untruths spoken of Mr. Field, that I never believed a report until I had proved it, and that I would make enquiries. This I did, with the result, that I found Mr. Field had never been approached by the gentleman in question. It was true, that he had expressed to one of the Trustees a wish to be married in Christ Church, but as the ritual which would have to have been used was different from that of the Church of England, he was informed by the Trustee, it was impossible that the marriage ceremony could take place in the Church, for the reason that the Church was held under Deed of Trust, and one of the clauses enjoined that all services should be performed according to the rites of the Church of England. If Mr. Field had been approached, he would have had no option, but would have been obliged to have refused the request. Again, there have been numerous reports in reference to Mr. Field's ritualistic tendencies, without any foundation in fact. Several of these good people who are so horrified at thinking they have found a tendency to Romish practices have been perfectly willing to go and lend their vocal aid at the Roman Catholic Church. There may be no harm in doing this, but where the inconsistency comes in is that they should vilify Mr. Field for apparently showing a tendency for what they had been joining in themselves. Further, a short time since a bazaar was held at the Public Hall for the benefit of the Convent. I was present and helped to the best of my ability, because I consider the Convent is an institution that should be supported by everyone. I noticed that a very active part in the arrangements was taken by several of Mr. Field's congregation, and I thought it very kind and considerate of them in doing so. I was therefore surprised to hear that some of their number were amongst the malcontents. If any of those who took part in the bazaar objected to Mr. Field on account of his supposed Romish tendencies, they should either have kept quiet or refrained from giving their services to help an institution whose principal purpose is to bring up children in the Roman Catholic faith. I quote you these examples, merely to show how inconsistent some people are in this settlement. All these various reports have been a source of great discomfort and unhappiness to both Mr. and Mrs. Field, who only hear part, and are hardly in a position to refute them properly, and my great reason in now speaking on their behalf, is to show how unkind and inconsiderate a small minority of the congregation appear to be. If they would only consider a little before making statements or bringing accusations on hearsay only, there would be more harmony in the Church, and instead of having constant frictions, the congregation would be more disposed to work together in such a way that our clergyman and his wife would find their work pleasant and profitable, and more, they would be better understood. It is perfectly true that the income from pew rents has fallen off somewhat, but this has been caused chiefly through departures from Yokohama, and when taking into consideration the net result of the collections, it must be remembered that the calls on individual purses have been very heavy, to say nothing of the balance of Church Building Fund which has been paid off. The result is that the Church has never been in a better position financially than it is to-day, and this result is almost entirely due to Mr. Field's exertions. I have been a Trustee of this Church for 30 years, and have taken part in all the various changes of clergymen since the Rev. Buckwith Bailey's time, and I can assure you, ladies and gentlemen, that we have never yet had any one clergyman who was unanimously approved of. In order to arrive at that happy

state, the Committee would have to build a church for each subscriber and import a separate parson. The only thing the Trustees can do, is, to be guided by the wishes of the majority. We know that Mr. Field is not perfect, but we believe him to be a sincere and good man. A man who lives up to his belief and professions, and one who deserves to be supported for these, if for no other reasons. I am glad to say that the Trustees and Committee are perfectly satisfied with the way in which the services are conducted, and as the great majority of seatholders have expressed themselves in favour of retaining Mr. Field, the Trustees, as you have already heard from the Chairman, have asked him to remain.

Rev. W. P. G. FIELD then addressed the meeting disproving the allegation that he had endeavoured to Romanize the Service in the Church and other statements that had been put in circulation about him. One of these statements, which he described as a down-right lie, was to the effect that he had refused to bury the child of a friend of his own which had died unbaptized. This was so far untrue that he did bury the child. Mr. de Becker spoke in advocacy of support being given to the chaplain, after which the meeting closed.

#### THE LAW COURTS.

##### THE RUSSIAN SPY CASE.

Mr. H. B. Collins who was sentenced on Jan. 24th in the Yokohama District Court to eleven years' confinement with hard labour, on a charge of having infringed the Military Secrets Regulations, has lodged an appeal in the Tokyo Appeal Court against the decision.

##### CLAIM AGAINST THE O. & O. COMPANY.

The hearing of a case lodged by a Chinaman named Lee Huan Tang, No. 146, against Mr. B. C. Howard, Yokohama agent of the O. & O. Steamship Co., claiming yen 108.90 was resumed on January 31st in the Yokohama District Court before Judge Nakanishi.

Plaintiff's counsel, having produced a letter to the Court, stated that it was an alteration as to his complaint in which he had insisted that Plaintiff's representative in Honolulu shipped on Oct. 8th by O. & O. S. S. Co., 30 bundles of bananas, and that these were not landed at Yokohama so that the cargo was still missing.

Defendant's Counsel presented a protest to the court against the alteration made by Plaintiff in the complaint, and said that such an amendment as to the cause of claim could not be admitted in the Court in accordance with the Law of Civil Procedure. Counsel asked the Court to reject it.

After consultation, the Court sustained the alteration of the complaint by Plaintiff and ordered the resumption of the hearing, when Defendant's Counsel asked the Court to adjourn the case in order that he might make further preparations.

The Court decided to resume on February 14th.

##### CLAIM FOR LIFE INSURANCE.

In the Yokohama District Court, the hearing of a case in which the National Bank claims yen 15,000 against Mr. J. T. Hamilton, representative of the Equitable Life Assurance Society of the United States, was resumed on Jan. 31st before Judge Nakanishi.

As there was an alteration in the organization of the Court, the presiding Judge ordered the parties to reproduce their evidence, after which they entered into brief discussion. Mr. Sawada, Plaintiff's representative, said that the deceased Chinaman named Chang Yunsh had insured himself with the defendant company, and that before his death he transferred the policy to the bank in which he was employed as compradore. The reason of the assignation of the policy was that he owed money to the bank which he was unable to pay off. The policy was issued in New York so that the insurance contract could not be treated in accordance with Japanese law. Further, the policy did not give the name of the person

who should receive the benefit of the insurance. Dr. Masujima, Defendant's Counsel, contended that the policy was issued by the head office in New York but the contract was made in Yokohama between the deceased and the representative of the company so that it could be administered under Japanese law. According to that law, a policy of life insurance could not be assigned to a third person. Even if any agreement between the deceased and the bank had been made, the insurance firm had no obligation to pay the money claim, except to the heirs of the plaintiff.

The Court declaring the hearing closed decided to deliver judgment on February 4th.

#### CHINA NOTES.

One of the oldest foreign residents in China, and almost certainly the oldest in Shanghai, has passed away in the person of Mrs. Clifton, whose death at the age of 87 was announced by the *North China Daily News* on January 23rd. Mrs. Clifton came to Amoy in 1840, and went to Canton in 1842, and was one of the British residents there who were driven out by the Chinese. She came to Shanghai in 1854, just after the battle of Muddyflat; her husband having been the first Superintendent of Police in Shanghai. She had been a widow for a great many years, but had her daughters and grandchildren to cheer her up, having been tenderly cared for by her daughter Mrs. Limby. During her 64 years' residence in China, she had only been home twice, in 1859 and 1867.

Mr. W. N. Morehouse, Commissioner of Customs, late of Iappa, died at Florence on the 15th ult, in his 57th year.

Translating from a native paper, the *N.-C. Daily News* under the heading "One Way of Stopping Leakage," prints the following note:—

Owing to its having come to the knowledge of the Empress Dowager that many of her indigent and badly paid officials at Court have been getting large and in some cases regular revenues from the secret service funds of many of the foreign Powers represented in Peking by the sale of copies of important State documents and the like, which are supposed to be "secret" until published in the *Peking Gazette*; their Imperial Majesties the Emperor and Empress Dowager have commanded that all State documents intended for the sole eyes of their Majesties are to be hereafter handed up in the Manchu language enclosed in specially made sealed envelopes and put in locked dispatch boxes. Should the business contained in these State papers be required to be made public, they will be translated into Chinese and published, but not otherwise. As few persons, even Manchus themselves, are able now-a-days to read the Manchu written language, it is thought by their Majesties' advisers that this procedure will be a reliable means of stopping the leakage of important State documents the knowledge of which would otherwise be transmitted to those who have no right to know them but which they have hitherto obtained by the assistance of the Almighty Dollar.

A Peking newspaper declares that Prince Pu Lun, who since his return from the United States has shown great interest in all modern inventions, especially admiring wireless telegraphy besides many of Edison's electrical inventions, has obtained Imperial approval to establish stations for connecting Peking with Shanghai and other important points by wireless telegraphy. Instructions have been sent by the Prince to H.E. Viceroy Yuan Shih-kai, in his capacity of Comptroller-General of Telegraphs, to purchase without delay necessary instruments, etc., and to select a number of the best telegraphists in the Service to study the subject of wireless telegraphy so that they may be able to manage things when the time comes.

Our senior Shanghai contemporary says that the numerous steamers captured by the Japanese in the Tushima Straits took that route under the impression that the La Perouse Strait would be icebound; but news has been received that the *Taipei*, formerly the *Laertes*, has reached Vladivostok by the latter route, having fine weather and finding the Straits quite free from ice.

### THE TOKYO AMAIEUR DRAMATIC SOCIETY.

A well filled house—unusually well filled for a second performance—assembled on the evening of the 27th to witness the Blind Beggars, "Dearest Mamma" and their accompaniments, again put upon the boards at the Shoreikai hall by the Tokyo Amateur Dramatic Society. The "Beggars" provoked unlimited laughter as well as much applause for the excellent singing, and "Dearest Mamma" went with a swing and a sparkle that bore eloquent witness to the talent of performers who could make so much out of so little. The old sense of regret is suggested that Tokyo does not possess larger audience-furnishing capacities. It is really too uneconomical that so much trouble should be incurred for the sake of only two performances. After the curtain fell the ladies and gentlemen who had taken part in the theatricals repaired to the British Legation where a most hospitable entertainment awaited them.

### GRAND HOTEL, LIMITED.

The thirty-first semi-annual ordinary general meeting of the shareholders of the Grand Hotel Ltd. was held at the Hotel on Friday afternoon. The chair was occupied by Mr. M. Kaufmann and there were also present Dr. C. H. H. Hall, Messrs. L. Mottet, A. Coye, R. Howie and G. C. Booth (Secretary). The report and balance sheet, (which we have already published) showing a dividend of yen 6 per share for the half year, were adopted.

Dr. HALL and Mr. B. C. Howard were re-elected to the Board of Directors.

Mr. E. B. S. EDWARDS was re-appointed auditor to the company on the motion of Mr. Mottet.

The CHAIRMAN announced that the dividend would be payable on January 28th.

The remuneration for the directors for the current year was on the motion of Mr. Howie fixed at yen 500 each.

The CHAIRMAN pointed out that two old dynamos had been replaced by new ones. The sale of old materials for the half year brought in yen 4,456.48.

The proceedings closed with a vote of thanks to the Chairman.

### RUSSIA AND CHINESE NEUTRALITY.

RESUME OF THE RUSSIAN NOTE PRESENTED TO THE POWERS RELATIVE TO THE ALLEGED VIOLATION OF THE NEUTRALITY OF CHINA.

At the beginning of the war, the Imperial Russian Government agreed to the proposition having in view the localization of military operations and neutralization of China, and in so doing they laid down as indispensable conditions the strict observance on the part of China of the duties imposed upon her by neutrality as well as loyal adhesion by Japan to the principles above set forth. But from the actual facts that have transpired since the outbreak of hostilities, it is beyond all doubt that China is neither capable nor desirous of proving herself true to her pledges. Without mentioning the case of the *Reshetni*, which was captured at Chefoo, it would be very easy to cite instances in which China has acted contrary to her neutral obligations, to the benefit of Japan. Thus it has been ascertained time and again that several bands of the Chunchuses are engaged in hostile operations against the Russian army in the Chinese territories within the limit of the neutral zone under command of Japanese officers; that such Chunchuses are all enrolled in the Japanese army and paid by the Japanese Government; that Japanese officers are constantly admitted among the Chinese troops on the northern frontier of Chihli, in the capacity of military instructors. It has also been established that the Japanese made use of the Miaotao group as their naval base; that the Japanese army is importing without hindrance great quantities of contraband goods from Chefoo and other places on the Chinese coast; and that the Hanyang Foundry is supplying the Japanese army with cast iron. Moreover, the Chinese far from being content with such acts as aforementioned all in violation of their neutrality, are making serious preparations apparently with the intention of participating in war operations. Then, on the other hand, a violent anti-foreign excitement dangerous alike to all Europeans is being constantly fomented in the interior of China.

Such being the case there is no room for doubt that the efforts of the Imperial Russian Government

towards assuring the neutrality of China have been unsuccessful owing to the conduct of Japan and her intimidating pressure brought to bear upon the Government of China. The Russian Government have therefore to bring these facts to the notice of the Powers, declaring at the same time that should the situation continue as heretofore, they would be compelled to deal with the neutrality of China from the standpoint of their own interests.

### COMMUNICATION OF THE JAPANESE GOVERNMENT ADDRESSED TO THE POWERS RELATIVE TO THE RUSSIAN NOTE.

The attention of the Imperial Government has been drawn to the communication recently addressed by Russia to the Powers on the subject of the neutrality of China. The duty of defending China against the accusations of Russia does not devolve on the Imperial Government, but so far as those accusations call in question the good faith and loyalty of Japan to her engagements, they feel bound to repel them.

1.—Russia indirectly suggests that the capture of the *Richtelni* involved a violation of Chinese neutrality on the part of Japan. The capture in question was, on the contrary, nothing more than a natural and inevitable measure of self-defence made necessary by the prior disregard of China's neutrality by Russia. The facts of the case were fully explained by the Imperial Government at the time and it is consequently unnecessary to repeat them in the present context.

2.—It is next asserted in the Russian communication that it has been ascertained many times, (a) that bands of Chunchuses operating in neutral territory were commanded by Japanese officers, (b) that whole detachments of these Chunchuses have been enrolled in the Japanese army and are in the pay of the Japanese Government and (c) that Japanese military instructors are constantly admitted among the Chinese soldiers stationed along the northern boundaries of Chihli. These allegations which it is asserted have been repeatedly ascertained, are one and all wholly and absolutely without the slightest foundation in fact and the Imperial Government consequently categorically and without qualification or reservation deny them and declare that Russia cannot produce any evidence worthy of credence to support their so-called ascertained charges.

3.—It is next stated that it has been established that the Japanese have been using the Miaotao islands as a naval base of operations. Nothing of the kind has been established; nothing of the kind can be established for the sufficient reason that the accusation is destitute of truth. As a matter of fact, however, those islands were used by Russia as a naval base until the blockade of the Liaotung Peninsula was proclaimed and thereafter until the fall of Port Arthur they were made use of as a place of call for military junks employed by Russia in smuggling military stores through the blockade into Port Arthur from the Shantung Province. During this latter period Japanese war-vessels, it is true, cruised in the neighbourhood of these islands as it was deemed necessary to keep a watch on the movements of the junks in question. But that a naval base in any sense of the word was ever created there by Japan is absolutely denied. It may be added that it was within the territorial waters of the Miaotao group that in March last, the privately owned Japanese steamer *Hanyo Maru* was fired upon and sunk by a Russian man-of-war.

4.—It is further charged that the Japanese are importing into Dalny from Chefoo and other Chinese ports without hindrance large quantities of contraband of war. The Imperial Government do not deny that they have obtained from Chefoo and elsewhere through private persons supplies for their forces in the field; neither do they deny that those articles, having in view their destination, were contraband of war. But they do deny that their action constituted a breach of China's neutrality on the part either of Japan or China. Trade in contraband is not interdicted by International Law. It is carried on subject to the right of hostile capture. The fact that Russia is not now in a position to exercise that right is not sufficient to make illicit a traffic which would otherwise be entirely illicit. That Russia did not regard trade with China in contraband as violative of China's neutrality so long as she was in possession of Port Arthur and was able to benefit by it, is shown by the fact that during the siege she drew a large portion of her military supplies for the fortress from China. Some idea of the extent of the traffic may be gathered from the fact that no less than half a dozen steamers and many tens of junks were captured in the attempt to pierce the blockade. Besides we have several instances in which Russia unlike the Japanese army which obtained supplies from private individuals, herself fitted out vessels at several Chinese ports and transported contraband goods in them in flagrant violation of China's neutrality.

5.—The complaint that the Government shops at Hanyang are furnishing cast iron to the Japanese army stands practically on the same footing as the

charge last above referred to. The facts of the case are as follows: About four years ago a private firm in Japan entered into a contract with Hanyang foundry for the supply of a certain quantity of pig iron. The Imperial Government were not a party to the contract, neither had they anything to do with the transaction. The due fulfilment of the contract in question furnishes the only foundation for the accusation under this head.

6.—It is finally alleged in the Russian communication that the Chinese, no longer satisfied with a violation of neutrality in the direction indicated, are making serious preparations with the apparent intention of taking an active part in military operations and that a feverish excitement dangerous alike to all Europeans prevails among the Chinese people and is being constantly fomented. This condition of things, it is insinuated, is due to the action of the Japanese and to their intimidating pressure on the Government at Peking. It is difficult to imagine how it would be possible to frame charges more mischievous or more remote from actual facts than these. That the Chinese are making preparations with the intention of taking part with the Japanese in the hostilities is entirely destitute of truth. That there is at the present time in China any anti-foreign movement or in peace in the anti-foreign feeling is equally unfounded. That Japan has attempted to draw China into the conflict or to cause a recrudescence of anti-foreign sentiment in China is precisely contrary to the facts which are Imperial Government believe, within the knowledge of all the Powers. At the beginning of the war the Imperial Government agreed to the localization of warlike operations and engaged to respect the neutrality of China outside the belligerent zone provided Russia making a similar engagement should in good faith fulfill conditions of such engagement. The Imperial Government loyally and in good faith kept their engagement and they have no other intention than to continue to do so. They have at all times since the outbreak of hostilities watched with the utmost vigilance the course of events in China and they have repeatedly, whenever occasions arose advised the Chinese Government in the strongest manner possible to maintain an attitude of strict neutrality and take all necessary steps to protect the lives and property of foreigners. They will feel bound to pursue the same course in future if the situation in China at any time becomes such as to make similar action necessary or desirable.

The conclusion of the Russian communication makes it abundantly clear that the motive of the Russian Government in formulating the baseless accusations which it contains, was to relieve themselves of an engagement the terms of which with the progress of war no longer inured mainly to their advantage.

### STATEMENT PRESENTED TO THE POWERS TOGETHER WITH THE FOREGOING COMMUNICATION.

Statement of some of the more conspicuous instances in which Russia has violated the neutrality of China:—

1.—It is a notorious fact that Russia frequently despatches her troops into Mongolia for the purpose of imposing military requisitions and that she appropriated to military use horses, provisions, etc., thus collected from that province.

2.—In October last, Russia chartered at Tientsin a German merchant steamer, *Foeping* and loaded her there with arms, ammunition, provisions, etc. The vessel was placed under the control and direction of a Russian military officer, Captain Wasuly. Urieuich Essekalt, and was to run the blockade at Port Arthur. On her way to Port Arthur, however, she was captured by one of the Imperial warships off Pehuangcheng-tao, and taken to the Saseho Iyze Court, where the foregoing facts were disclosed upon examination.

3.—In December last, Russia attempted to forward from Kalgan to Port Arthur 3,600,000 rounds of small arm cartridges concealed in 2,330 sheep-skin packages, which were seized by the Chinese authorities at Fengtai. The latter also seized at Kalgan and other places about 4,000 packages of the same description and 3,200 sets of saddles at Hsuanhuafu, all of which had been clandestinely forwarded by Russia. Judging from the manner of packing as well as from the enormous quantity it is evident that these articles were intended for military purposes to be used at the theatre of war.

4.—In June last, wireless telegraphic apparatus were installed within the compound of the Russian Consulate at Chefoo and at some other places where direct communication was established with the Port Arthur Fortress and in utter defiance of the repeated protests from the Chinese authorities, the apparatus were maintained and communication continued.

5.—It is a well-known fact that the *Manjur*, a Russian gunboat, which was lying in the Port of Shanghai at the outbreak of hostilities, unwarrantably refused to leave the port for several weeks after the demand for immediate departure had been made by the Chinese authorities, and it was only after pro-

longed negotiations that the Commander of the vessel finally agreed to disarm her.

In consequence of the naval engagement of the 10th of August last, the *Askold* and *Grasovoi* took refuge at Shanghai, and their commanders refused under various pretexts either to leave the port or disarm the warships and it was after several weeks' negotiations that they eventually affected disarmament.

6.—When in November last the members of the crew of the *Rashlebi* were on their way from Chefoo to Shanghai to be interned there, the commander of the vessel illicitly left the transport at Woosung on a pretence to pay a visit to the Russian Consulate, and escaped to Europe on board a steamer which was to leave the port for Europe on the same day, in total disregard of the internment enforced on him by the Chinese Government, and as if in approval of his action he has since been decorated by the Emperor of Russia. Later, on the crew of the *Rastoropy* were also to be interned at Shanghai. The commander of the said warship, Pawel Mikhailowich Plen and Sub-Lieutenant Klawdy Balentinowich Selow, secretly found their way to a merchantman the *Negretia*, and attempted to escape to Vladivostok in the disguise of freight agents. They were captured by the Imperial Navy and confessed the above facts at the Saseho Prize Court.

7.—In December last, Lieut.-Commander Mitsenroff (?) second in command of the *Poltava* and seven others including a naval officer, reached Chefoo in a small sailing boat from Port Arthur. Whereupon the Chinese local authorities opened negotiations with the Russian Consul at Chefoo, demanding that these Russians be interned in China; but the Russian Consul falsely pretending that they were merchants allowed them to escape to Tientsin and other localities.

8.—With a view to limit the area of hostile operations in the present war to as small a zone as possible, the Imperial Government have invariably respected China's neutrality in the region west of the Liaohe. But Russia has repeatedly violated it and is at this moment stationing a large force of her army in that region.

## CORRESPONDENCE.

### AMATEUR THEATRICALS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Faint praise is a well-known method of damnation. By this method, your theatrical critic has done all that well might be done to damn the efforts of those who assisted in the production of "Dearest Mama." His meagre remarks certainly, call for the apology he offers.

Where amateurs are concerned, and when the performance is for charity, I concede that criticism has license to be kindly, and to impose on itself reticence only in regard to short-comings. When, then, the readers of your influential organ peruse, first, the condemnation by faint praise, and, at the end, further learn that the writer has found himself compelled to violate his sense of justice by observing reticence, lest he should cause offence, they are justified in apprehending that the performance must have reached a very high point of incompetence.

Whether this was, in fact, so, I must leave to the spectators, of whom I was glad, myself, to be one, to judge.

But there is one thing of which I am certain. In securing the publication of so complete a condemnation on the very morning of the day when the second performance is to take place, your critic has quite certainly reached the very highest point of unkindness both towards the charity and towards the play.

After this, the actors should commence this evening, with Quince's prologue:

"If we offend, it is with our good will.

That you should think, we come not to offend,

But with good will. To show our simple skill,

That is the true beginning of our end.

Consider, then, we come but in despite.

We do not come, as minding to content you,

Our true intent is all for your delight,

We are not here. That you should here repent

you,

The actors are at hand; and, by their show,

You shall know all that you are like to know."

I enclose my card and remain,

Your faithfully

A PLEASSED SPECTATOR.

Tokyo, January 29, 1905.

[This correspondent has misinterpreted our concluding paragraph. The "justice" of which we spoke was that which would have impelled much more detailed applause of certain among the actors and actresses. The "offence" referred to those who would then have been annoyed by the comparative brevity of the notice given to them.—Ed. J.M.]

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—I have read with interest the Critique in your paper of this morning regarding the theatrical Performance in did of Local Charities which took place at the Toro-no-mon in Wednesday night.

Your reporter observes with great truth that where a performance is for a charitable purpose the "convenances of criticism impose a reticence, which though it can not be observed with justice, may not be broken without offence."

As you are aware there is to be a second performance this evening. I venture therefore to think that the reticence you speak of might with great justice have been imposed until after this second performance.

A criticism such as yours is not calculated to increase the receipts of the second night, and the charities concerned will consequently suffer.

I enclose my card and remain.

Yours, faithfully,

X.Y.Z.

Tokyo, January 27th, 1905.

### AMERICAN INSURANCE METHODS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—A letter from Mr. Rennie Tipple headed "American Insurance Methods" in your issue of 25th. instant, should be considered by all "lovers of fair play" with due regard to the other side. I am the holder of policies for a large aggregate sum, eighty-five per cent of which is covered by the Equitable of the United States. This Society conducts its business on the mutual plan which apportions to policyholders all the profits accruing from the business. The executive officers are, therefore, the guardians of the property and interests of the whole body of policyholders. The policyholders rely on the executive officers; their experience and skill as experts in this particular business; and their impartial administration of the Company's affairs on the mutual plan. Policyholders also reserve the right, which has been exercised on several occasions, to criticise the management's action; and an obligation rests upon them to endorse and support the management when its acts are unfairly, unnecessarily, or ignorantly assailed. These conditions are recognized by the Society and by the policyholders.

Mr. Tipple's complaint is this. He accepted a policy which contained certain restrictions on travel and residence; when the policy had been in force four years he announced his intention of deviating from this restriction; the Society, in pursuance of its duty to all the policyholders, having actual experience of the increased risk of the intended deviation, required compensation in the form of an extra premium, which Mr. Tipple declined to pay; and now, eight years later, he cites these simple facts as constituting a grievance. To strengthen his position he adds that an English life office "noted the fact that I had gone to Klondike and there was no extra premium"; but he does not say if the English policy's terms permitted an extra premium or conferred freedom of travel and residence, an important omission.

As a policyholder reviewing the action of the Society, I arrive at this conclusion. If a free permit had been issued to Mr. Tipple the latter's co-policyholders would have been robbed of sixty-five pounds. If this is not so the experience of the Society, which caused the assessment of the extra premium, was worthless.

Mr. Tipple knows perfectly well that all policies of insurance, life, fire, marine, contain conditions which can only be qualified by consent and compensation; and if he does not know it he must be informed that the policyholders of the Equitable have no inclination to imperil their own interests because one of their number chooses to incur extra risk which was specially guarded against by the Society when issuing the policy.

If the Equitable was right in its action it follows that the English company was wrong, unless it appears that the terms of the policy precluded the Company from demanding an extra premium for a rank and most material deviation from the risk as originally proposed.

A calm review of the whole circumstances disposes of Mr. Rennie Tipple's innuendoes.

Yours faithfully, AN OLD POLICYHOLDER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read to-day's letter signed "An Old Policy Holder." The Equitable Society is to be complimented on having such a vigorous Old Policy Holder and I presume they include him as one of their valuable assets. The second paragraph of his letter seems familiar and reads like one of the Society's Officers holding forth on the virtues of his most estimable Society.

Yes, mine is a complaint inasmuch that it is a keen remembrance of a distinct lack of equity on the part of the Equitable Society to myself, and this remembrance will never leave me. I did not, and

do not, question the Equitable's right to enforce an extra premium, but I do question their right, from a point of equity, to have charged so extortionately. Where is the risk that should demand 17 per cent. premium, in all, for one year? The Policy was of 3½ years standing. At that time I was going to a healthy but cold country where thousands of others went. We were all engaged in good healthy work and my health was vigorous. As far as my knowledge goes it would be difficult to quote a parallel case, in a good sound English Company.

Now, Sir, I have finished, I am happier for having placed on record my opinion and experience of Life Insurance Methods. I have done it without malice but it was brought about by the impersonal advertising that some Societies adopt.

Yours faithfully,

RENNIE TIPPLE,

Yokohama, January 31st, 1905.

### THE HOSPITAL DRAMATIC PERFORMANCE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The committee of the Yokohama General Hospital have now received the final statement of accounts of the Benefit Performance given at the Public Hall on January 20th as follows:—

	Yen.	Yen.
To Hire of Hall .....	102.50	
To Hire of Piano .....	15.00	
To Commission on Booking .....	41.40	
To Author's Royalty .....	31.05	
To Costumes (making only) .....	61.05	
To Scenery, Carpenter, &c., &c. ....	44.33	
To Advertising Programmes, &c., ...	67.35	
To Gratuity to Momban .....	10.00	
To Refreshments .....	8.98	
To Messenger, rickshas, &c., &c. ....	19.06	
To Balance, being net proceeds .....	\$19.93	
By Tickets sold .....		916.00
By Donation Mr. Brady .....		5.00
		921.00 921.00

The committee considered the result as being highly satisfactory and desire to again thank Mr. and Mrs. McWilliams, the members of the caste and of the Bijou and Midget Orchestras for their very kind assistance.

Special mention is also due to Mr. E. J. Moss for loan of furniture; to Miss Schwabe for painting a picture; to the local papers for inserting advertisements at reduced rates, and to the donors of refreshments.

Since making up the above statement Mr. Thwaites has handed in as a contribution the sum of yen 41.40 charged as a commission on booking, for which the committee tenders him their best thanks. The actual proceeds therefore stand at yen 561.33 and will prove a most substantial help to the Hospital funds.

Yours respectfully,

E. W. FRAZAR, Chairman.

Yokohama General Hospital Committee.

### CHRIST CHURCH ACCOUNTS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—In the above report for 1904, the Committee state:—"If we compare the past four years since the new Church was opened, it may be pointed out that the amount received from Pew Rents and Church Collections during the year ending 31st December, 1901, amounted to yen 7443, and after remaining practically stationary in 1902, has since steadily increased to yen 9365, during the year under review."

This disingenuous Report implies that since 1902 the regular income of the Church has increased from yen 7443 to yen 9365, thus proving? that the present incumbent's doctrine and preaching have been entirely acceptable to the congregation at large; whereas as a matter of fact and figures, the regular income has decreased, as will be seen from the following extracts from the Reports of the last three years.

	REGULAR INCOME.		
	1904. Yen.	1903. Yen.	1902. Yen.
Gross amount of Offer- tories .....	5,405.41	3,101.32	2,617.95½
Less Special Collec- tions paid .....	1,520.53	370.44	126.56
	3,884.88	2,530.88	2,491.32½
Less special Collec- tions on Oct. 2nd and 9th, to wipe out the Debt, but which are not shown "per con- tra" .....	1,791.13		
Nett Offer-tories available for Work- ing Expenses .....	2,093.75	2,530.88	2,491.39½
Pew Rents .....	3,960.00	4,040.00	4,730.83
Regular Income ...	6,053.75	7,170.88	7,222.22½

## WORKING EXPENSES.

	1904. Yen.	1903. Yen.	1902. Yen.
Incumbent's Stipend & Income Tax, .....	3,782.70	3,437.45	3,064.46
Organist's Honorarium .....		500.00	500.00
Choristers .....	44.50	16.35	25.54
Sacramental Wine .....		22.20	20.00
Ground Rent .....	73.20	73.20	73.20
Fire Insurance .....	445.25	396.00	402.43
Fuel, Light & Cleaning .....	281.98	224.13	296.68
Printing, Advertising &c .....	44.30	95.85	58.90
Flowers and Decorations .....	47.29	85.38	37.81
Monban's Wages and Labour .....	390.00	325.70	230.70
Repairs to Church, Parsonage, &c. ....	352.22	778.30	887.72
Organ Tuning .....	75.00	75.00	—
Sundries .....	138.56	55.34	45.31

	1904. Yen.	1903. Yen.	1902. Yen.
Regular Income ...	6,053.75	7,170.88	7,222.22½
Working Expenses..	5,695.00	6,084.90	5,642.93
Surplus of Regular Income over Working Expenses.....	358.75	1,085.98	1,579.27½

In 1902 the Pew Rents were yen 4,730.83; these it must be noted, are generally payable in January-February, so that the greater part of this sum was probably received before the present incumbent's arrival. For 1903, after nine months of the present ministrations, the Pew Rents were only yen 4,640.00, and in 1904 they only amounted to yen 3,960.00, or yen 770.83 less than 1902.

The Offertories for 1904 reached the sum of..... yen 5,405.41 from which has to be deducted for special charities as per contra..... 1,523.53

and further the sum of..... 1,791.13 ostensibly collected in the Church on Oct. 2nd-5th, to wipe out the Debt, which amount, however, is not shown "per contra" leaving available for Working Expenses 2,092.7300 as compared with 1902.....2491.39½

The nett result, after two years and nine months of the present incumbency, is that the Working Expenses for 1904 are yen 520.05 more than 1902, notwithstanding the saving of yen 500. in Organist's Honorarium, while the Regular Income for 1904 is yen 1,168.47½ less than 1902.

Those figures cannot be considered satisfactory, even from a monetary point of view, and might be discussed with advantage at the coming Annual General meeting of seatholders.

As the Trustees are at present taking a vote as to the advisability of renewing or terminating the agreement with the present incumbent, those seatholders who object to the teaching now imparted to them and their children, have the matter entirely in their own hands, whether the present unsatisfactory state of church affairs shall be continued or not; they have only to write "Yes" or "No" on the ballot papers which are perfectly secret.

If the Trustees and Committee are afraid that the termination of the existing agreement might involve them in personal pecuniary loss, they might safely leave this matter to the community; for there can be very little doubt that with pure and wholesome Gospel teaching, the Church Services will be ably supported and many who have withdrawn themselves and their families from the Services, will gladly return to the Church they love and helped to build.

I am, Sir, Your obedient servant,

W. K. WILSON.

Yokohama, January 30th, 1905.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Having read your account of the Christ Church meeting held yesterday, I beg to protest against the Trustees' ungentlemanly attack on those benevolent ladies of Yokohama who assisted for charity's sake at the recent convent bazaar and also in the music of the Roman Catholic Church. If the objection which prompted the attack was a dislike of Romanism why then this determined support of a chaplain whose name figures in the latest list of the English Church Union—a Ritualistic Society which avows itself as ardently longing for re-union with Rome; and every member of which is bound by solemn vows to introduce into our Church six Romish practices. I think before the Trustees lay charges of "Malice" against one who is bravely and openly striving for Protestant teaching in Christ Church they should prove his plain and straightforward remarks on the Church accounts incorrect. It is noteworthy that the Trustees at the meeting were discreetly silent as to the year when the pew rents dropped,

owing to causes far different from departures from Yokohama; also, if there are 31 seat-holders still at Christ Church who voted against the re-election of the present Incumbent, how many more would there have been had the ballot been taken of those who have been driven from the Church?

Yours, etc.

## A DISGUSTED SEATHOLDER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In reading your report of seatholders in Christ Church, Yokohama, I was much struck by some of the remarks made on that occasion.

With your permission I should like to make a few comments on them.

In the first place, the tone of Mr. W. K. Wilson's letter was surely quite moderate and free from opprobrious epithets. If the statements he makes are true, how can they be objected to as insulting? It appears from the Chairman's statement at the meeting that a certain number of pew-renters have given up their sittings on account of the present incumbent—a regrettable fact, especially in view of the small proportion of the community who attend Church services.

As one who assisted at the Church Bazaar let me explain that the Sisters asked people of all creeds for contributions for the express and limited purpose of providing a warm *kimono* and a Christmas dinner for each of their orphan charges. We trust to their honour that they applied the money so raised to that purpose. This being the case I do not consider that assisting at the Convent Bazaar involved any disloyalty to our own principles. Even supposing that this action indicated an uncertain attitude towards sound Protestant (Church of England) doctrine, would this justify the clergyman in imitating the short-comings of members of his congregation? I also went to the Midnight Mass for the sake of those parts of the attractively rendered choral service in which I, as a Protestant Christian, could join. I went prepared to overlook the differences which I expect to exist in a strange Church. When I attend the Church of England, however, I am not prepared for any departure from Protestant doctrine. My attitude towards the Church of which I am a member is naturally very different to my attitude towards a Church which I merely attend as a visitor.

As for the charge against the minority of having caused a dissention, it is the present incumbent who makes innovations, and it takes two parties to make a difference of opinion. The majority is decidedly exceeding its legitimate privileges in saying to the minority, "Go away, go away," the minority being equally members of the Church of England.

Your's truly,

"AN UGLY GROWTH."  
(See Chairman's Speech.)

February 2nd.

## THE HABUTAYE PROBLEM.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Your commendatory reference to the Government's recent legislation respecting the mal-practices of the *Habutaye* weavers and others engaged in the industry, would probably have been expressed with greater emphasis had you shared the experiences of most of the foreign exporters of Japanese Manufactured Silk Goods. The evils in question have recently reached such flagrant proportions, and have so seriously impaired the development of the trade, that it is surprising to find such enlightened journals as the *Keisai Zasshi* referring to the present move of the Government as a "needless interference,"—and in case such views should gain ground for lack of correction, it might be well to briefly state a few of the more serious cases which have called for this measure.

Take two or three points which have recently arisen.

The light grade of *Habutaye* currently known as *Kawamata* was for some years very popular in the American and European trade, and would have continued so, had not those engaged in its production adopted the short-sighted policy of adding to the weight of the material by various forms of "filling"—rice-starch, for example. This adulteration was practised increasingly, until in some instances the starch amounted to 30 per cent of the entire weight of the material. One of the natural results of these tactics, was the entire cessation of the European demand for *Kawamata*, while the American market reduced its consumption to the lowest possible figures,—and then only accepting material which could be guaranteed free from all "filling." Various efforts have recently been made by the native *Kawamata* dealers to re-establish that lost confidence of the European buyers, and a few of the "guaranteed pure" brands now current on the local market appear to be fairly reliable,—but the European market is unresponsive. "Once bitten twice shy." That, in brief, is the record of one item of the

Silk *Habutaye* industry, which has been ruined by adulteration.

Turning to the more important field of Echizen and Kaga *Habutaye*, we find that during 1903, serious complaints were lodged respecting a practice of increasing the weight of Silk Piece Goods by water which was gaining ground in the districts referred to. The native seller, before delivering his goods to the foreign buyer, would by the skillful insertion of moistened cardboard between the folds, permit the material to absorb 5 and even 10 per cent of moisture. This trick, when played by the more accomplished hands, baffled even the expert inspectors employed by the exporting firms. At length the abuse assumed such serious dimensions that the various exporters individually and collectively, exercised what influence they could exert towards arresting the evil, but with only partial and temporary success. Some of the more enlightened Japanese dealers endorsed the attitude taken by the foreigners,—realising that a continuance of the abuse in question would result disastrously to the *Habutaye* trade. A petition to the Japanese Governmental Department of Agriculture and Commerce, jointly framed and supported by foreign exporters and native dealers, resulted in official attention being brought to the matter, and some measures were taken to stop this "watering" practice. Meanwhile however, one culprit had been arrested on the charge of having increased the weight of silk-goods by the fraudulent addition of moisture. He was arraigned on this account, and dismissed,—there being no law under which such a practice was punishable. Official inspectors from the Department of Agriculture and Commerce having been sent from Tokyo to Fukui and Kaga to investigate and report upon these matters, a wholesome fear possessed many of the culprits, and for a time the abuse was partially checked. It has again developed recently, however, and unless promptly stopped will result in the ruin of the *Habutaye* industry.

Other abuses relating to the "doctoring" of manufactured silks with various chemicals might be dwelt upon, but these would only interest those engaged in the industry, who are already no strangers to their existence, owing to the constant claims and difficulties which arise on this account.

It is only natural that those unprincipled dealers who profit from such tactics should oppose any measures adopted to suppress the evils of adulteration, etc, but there can be no two opinions regarding the view to be taken by those who desire to see the *Habutaye* industry develop and prosper.

An eloquent example of the benefits resulting from governmental "interference" is furnished by the Yokohama Raw Silk Conditioning House, which was established to detect and prevent various defects and adulteration in Raw Silk. The establishing of this check was opposed by those who found it to their interest to follow various mal-practices, but no one can question the benefit to the Raw Silk trade of Japan, which has resulted from this institution. Were a similar system adaptable to Manufactured Silk, it should certainly be instituted without delay, but many technical difficulties arise which have perplexed even the more astute specialists of Europe and America, who agree that no system of "conditioning" has yet been devised, whereby *Habutaye* can be dealt with in the manner now used for Raw Silk. However, any restrictions which the Government can impose, should certainly be commended, seeing that such measures properly conducted should lead to the development of an important industry, and its establishment upon a firm commercial basis.

I remain, yours faithfully.

EXPORTER.

COLONEL EMERSON.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Some time ago you commented editorially on a pretended repudiation by the *Kokumin Shinbun* of an interview obtained by me from General Sioessei, which was published in the *Japan Chronicle*, *Yorodzu-Choho* and *Japan Times*, as well as in London, Paris and New York.

Commencing your remarks with the sentence: "We now read in the *Kokumin Shinbun* that the whole thing is a figment of Mr. Emerson's imagination," you apparently endorsed this view by a series of alleged statements of fact which did not pretend even to be accurate quotations from the *Kokumin*. Thus you said:—

"During the General's stay in Nagasaki Mr. Emerson managed to make his way into a garden where the Russian officer was walking. He accosted the General, saying that he understood the Russians to be in some want of money, and that if the General would endorse a bill, he (Emerson) would get it negotiated. General Sioessei briefly declined the proposal and had no further communication with the unwelcome visitor. Out of this fragment of material the journalist manufactured a long interview." So soon as this item in your newspaper was

brought to my attention by the American Consul at Nagasaki I called on the Governor of Nagasaki, with whom I had stood in most friendly personal relations, and asked whether there were any truth in the story that the Governor had taken it upon himself to repudiate my interview, as alleged in your newspaper. The Governor being away, his secretary, who had been attached to General Stoessel's personal staff throughout the General's stay at Inasa, told me he knew nothing of such a repudiation. He did know, he said, that General Stoessel's aide-de-camp had paid a farewell call to the Governor on the day of the General's departure from Nagasaki. This was no news to me since my friend, the aide-de-camp, had told me of this himself when I came aboard the French steamer to say goodbye to him and to his General.

After my visit to the Governor's mansion I telegraphed you a general denial of the statement I had read in the *Japan Mail* and demanded a retraction of your reproduction of the *Kokumin's* libel.

On my return to Tokyo I was surprised to read in your newspaper this statement from you: "We of course, have nothing to retract, as Col. Emerson must be well aware."

So far from being well aware of such a conclusion on your part I hold that you certainly have something to retract, even though you did publish seven lines in fine print of a denial which was not your own, as against your own misleading editorial comment in thirty-six lines of leaded type.

Since you feel that you have nothing to retract allow me to deny serially your various statements concerning me as published in your newspaper, to wit:

General Stoessel's relations with me were not limited to meeting me at luncheon in Port Arthur. This I am prepared to prove to you by official Russian statements endorsed on my passport at Port Arthur. I do not believe General Stoessel expressed "considerable" annoyance at my alleged exaggeration in print of my visit to Port Arthur. In the first place I am not conscious of the exaggerations charged; in the second place General Stoessel told me himself at Inasa that he had wondered if my French companion and I ever got away from Port Arthur alive, he having heard nothing of us since that time.

It is quite true that at Inasa I managed to make my way into a garden where the Russian officer was walking. The garden was General Stoessel's own garden for the time being. I was conducted there by one of General Stoessel's own officers, having previously made an appointment to come there.

It is likewise true that I "accosted" the General. I also accosted Madame Stoessel and others I had the pleasure to know before, who were there at the time. It did not occur to me, though, to tell the General I understood the Russians to be in want of money, nor did I offer to negotiate a bill if the General would endorse it. General Stoessel, therefore, had no occasion "briefly to decline the proposal," nor is it true that he "had no further communication with the unwelcome visitor." As it happened, I went to his quarters again on the following day in the company of my friend, the aide-de-camp and with an English gentleman, and we remained talking with the General for over an hour. Afterward two of General Stoessel's aids accompanied me across the bay to Nagasaki, General Stoessel having given them permission to be my guests.

On these grounds, which I stand prepared to prove by credible witnesses, I hold emphatically that you owe me a retraction.

We do not all read the *Kokumin Shinbun*, some of us because we do not know Japanese, but those who care may find in the columns of the *Kokumin* that this newspaper has retracted its libellous remarks concerning me, and has stated that the Governor of Nagasaki did not utter his pretended repudiation of my interview to the *Kokumin's* correspondent, as alleged. The *Kokumin Shinbun's* editor, accordingly, has had the grace publicly to apologize to me, and I have accepted the apology in the spirit in which it was given.

I am Sir, yours respectfully,

EDWIN EMERSON, Jr.

Tokyo, January 29th, 1904.

## LAW OF SUCCESSION TAX.

(Law No. 10.)

Art. 1.—When succession occurs, no matter whether the place is in the Empire or not, or whether the ancestor or heir is an imperial subject or not, the property which remains in the place where this law takes effect shall be subject to the inheritance tax by this law.

Art. 2.—When an ancestor had a domicile in the country where this law takes effect the following shall be considered as property subject to this law:—

1.—Movable or immovable property in the country where this law takes effect;

2.—The right to or on immovable property in the country where this law takes effect;

3.—Any other property-right beside those mentioned in the foregoing two paragraphs.

When an ancestor had no domicile in the country where this law takes effect, the property mentioned in the foregoing paragraphs 1 and 2 shall be deemed to be such a property as is subject to the above tax.

A ship's domicile shall be deemed to be the place where it has been registered. Even if a domicile of a person, or of a ship has been removed from the place where this law takes effect to any place where it has no effect, if such change has been made within one year before the succession occurs, it shall be considered as if it had remained in a place where this law takes effect.

Art. 3.—When an ancestor had his domicile in a country where this law takes effect the value of property which remains in the place where this law takes effect, adding thereto the value of property which remained in the place where this law takes effect, and which was assigned to the other party by the ancestor as a gift within one year before the succession occurs, and after deducting the following sums shall be subject to the inheritance tax:—

- 1.—Public imposition.
- 2.—Funeral expenses of ancestor.
- 3.—Obligation.

When an ancestor had not his domicile in a place where this law takes effect, the value of property which remains in the place where this law takes effect, adding thereto the value of property which remained in the place where this law takes effect, and which was assigned to another party by the ancestor as a gift within one year before the succession occurs, and after deducting the following sums, shall be subject to the inheritance tax:

- 1.—Public imposition on the property.
- 2.—An obligation of security on the property such as the right of lien, special preferential right, pledge or mortgage;
- 3.—An obligation of the gift regarding the property.

The right of perpetual lease is not calculated in the value of the property subject to inheritance tax.

A gift or legacy which was made to a public corporation or alms-deed shall not be calculated in the value of property subject to succession tax.

Art. 4.—The value of the estate is estimated by the value when the succession occurs. The Government shall estimate the value in the following way for vessels, superficies, emphyteusis or annuity:

1.—The value of the vessel is estimated by subtracting 1/25 per year from the amount of construction expense after the date in which it was built, but a vessel after 20 years from her construction shall be estimated by the value of 1/5 of her construction expense.

Days less than one year shall be calculated as one year;

2.—The following sum shall be determined for the superficies as the value for the subject of tax:

Twice the value of its rent as the value of remaining superficies not more than 10 years;

3 times the value of its rent as the value of remaining superficies not more than 30 years;

5 times the value of its rent as the value of remaining superficies not more than 50 years or unlimited period;

7 times the value of its rent as the value of remaining superficies not more than 100 years;

12 times the value of its rent as the value of remaining superficies more than 100 years;

3.—The following sum shall be determined for the emphyteusis as the value for the subject of tax:

Twice the value of its rent as the value of the remaining year of emphyteusis not being more than 10 years;

3 times the value of its rent as the value of the remaining year of emphyteusis not more than 30 years or an unlimited period;

5 times the value of its rent as the value of the remaining year of emphyteusis not being more than 50 years.

4.—All the sum of the remaining term for the annuity of limited period shall be deemed to be a value of the subject of tax, but the sum shall not exceed more than 20 times one year's annuity.

5.—20 times of the annuity of one year is estimated as the value of the annuity of an unlimited period.

6.—The value of an annuity for life shall be determined by the total sum of fixed annuity of following years, according to the age of the person concerned:

Not more than 20 years of age 10 years

" 30 " 8 "

" 40 " 6 "

" 50 " 4 "

" 60 " 2 "

More than 60 " 1 "

The rental value of the ground in the foregoing paragraphs is an income received by the lender who has rented it with the condition of having liability of public imposition repairment, or premium for insur-

ance and other necessary expenses for the preservation of the ground.

Art. 5.—The value of conditional right, right for an unfixed period, or the right in question on a law-suit is determined by the Government. The sum of the obligation which is to be reduced according to the provisions of Art. 3, is the only sum which is acknowledged by the Government.

Art. 6.—The value of property which does not amount to the sum of yen 1,000 for succession to headship of a house, or of yen 500, for succession to property is not subject to the inheritance tax.

Art. 7.—When the succession occurs through death in battle, or wounds or sickness in battle causing death among the military class or officers, the property of deceased is not to be subject to the inheritance tax, unless death takes place after one year from the date of the wounds or sickness.

Art. 8.—Succession tax shall, after the value of assessment has been classified, be imposed applying the rate of tax according to the kind of successor by the following classification:—

### SUCCESSION TO HEADSHIP OF A HOUSE. RATE OF INHERITANCE TAX.

Value to be assessed.	When the successor is in line of descent as a member of house.	Successor who is appointed by an ancestor. One who is chosen according to the provisions of Art. 9, is a civil Code. Per-son who has been chosen as a head of a house.	Successor who has been chosen according to the provisions of Art. 9, is a civil Code.
Not more than 5,000.	12 mils.	15 mils.	20 mils.
More than 5,000.	15 mils.	17 mils.	25 mils.
" 10,000.	17 mils.	20 mils.	30 mils.
" 20,000.	20 mils.	25 mils.	35 mils.
" 30,000.	25 mils.	30 mils.	40 mils.
" 40,000.	30 mils.	35 mils.	45 mils.
" 50,000.	35 mils.	40 mils.	50 mils.
" 70,000.	40 mils.	45 mils.	55 mils.
If the amount exceeds Y. 100,000, per each adding	adding	adding	adding
Y. 50,000 of increase.	5 mils.	5 mils.	5 mils.
(Until Y. 1,000,000)			

### SUCCESSION TO PROPERTY. RATE OF TAX.

Value to be assessed.	When the successor is descendant of ancestor.	When the successor is a husband or wife or descendant.	When the successor is somebody else.
Not more than 1,000.	15 mils.	17 mils.	25 mils.
More than 1,000.	15 mils.	20 mils.	30 mils.
" 5,000.	20 mils.	25 mils.	35 mils.
" 10,000.	25 mils.	30 mils.	40 mils.
" 20,000.	30 mils.	35 mils.	45 mils.
" 30,000.	35 mils.	40 mils.	50 mils.
" 40,000.	40 mils.	45 mils.	55 mils.
" 50,000.	45 mils.	50 mils.	60 mils.
" 70,000.	50 mils.	55 mils.	65 mils.
If the amount exceeds Y. 100,000 per in-creased Y. 50,000	adding	adding	adding
(Until 1,000,000)	5 mils.	5 mils.	5 mils.

When the succession occurs under the law of a foreign country, the rate of succession to property shall be applied.

Art. 9.—Even though before the decree of a court relating to deprivation or cancellation of a right of succession, or before acceptance or refusal of a succession, the Government by necessity may impose the inheritance tax on the property, according to the foregoing rate upon the succession of an expectant heir of a house or an expectant heir to property. When the successor is not known, the Government shall impose an inheritance tax upon the property according to the highest rate of succession.

After collecting the tax according to the foregoing two paragraphs, when a successor is determined, the rate of tax may be corrected and the difference shall be collected or returned.

Art. 10.—When a succession occurs again within three years to property upon which the tax has been imposed, an amount of the inheritance tax corresponding to the tax before collected shall be exempted.

When a succession occurs again within five years to property upon which the tax has been imposed, half the amount of inheritance tax corresponding to the tax before collected shall be exempted.

Art. 11.—When a successor knows that the succession occurs or when an executor of a will, or a manager of property has entered upon his duty he shall make a declaration to the Government, within three months, giving a list of the property and particulars of the amount to be reduced from the value of the property.

When a succession occurs outside the Empire or the person who shall make the declaration according

Amount of price under 100,000 yen, 85 yen.  
Amount of price under 100,000 yen, 100 yen.

12. Stamp Tax.—Documents and books under Art. 4 of the Stamp Tax Law, but promissory notes and *hanterichō* (a kind of pass-book) excepted, Stamp tax 1 sen, *hanterichō* stamp tax 5 sen.

	Yen.	Stamp Tax.
Under 1,000.....	1 sen.	
5,000.....	4 sen.	
10,000.....	13 sen.	
20,000.....	28 sen.	
30,000.....	58 sen.

Umbrella sticks and handles, except those made of gold or silver	5
Vessels of steam or sail's and boat	5
Wares of santalum or ebony wood	10
All articles raw or unmanufactured, not herein enumerated, excluding materials of hat leather and braid or wire (for the use of manufacturing watches spring wire and umbrella ribs)	5

All articles, manufactured wholly or in part, not herein enumerated..... 10

The number of shareholders or shareholders and partners mentioned in No. 3 of the previous paragraph is decided by the largest number during the business year.

The amount of the prices mentioned in No. 11 of the first paragraph is decided by the whole amount during the previous year.

Art. 3.—Stamp tax on cheques, tax on the area of gold dust collection and gold dust collectors, travelling tax on passengers on trains, electric cars and steamers, consumption tax on textiles and import duty on cocoons, and rice and paddy shall be imposed at the following rates:—

- 1.—Cheque stamp tax ..... 1 sen for each cheque.
- 2.—Tax of area of gold dust collection—  
Alluvial ..... 30 sen annually per  
one cho of the area of  
collection.  
Other ..... 30 sen annually per  
1,000 *tsubo* of the area  
of collection.

3.—Travelling tax—  
200 miles or nautical miles and more. Sen.

- 1st class ..... 50
- 2nd class ..... 35
- 3rd class ..... 4

Less than 200 miles or nautical miles.

- 1st class ..... 40
- 2nd class ..... 30
- 3rd class ..... 3

Less than 100 miles or nautical miles—

- 1st class ..... 20
- 2nd class ..... 10
- 3rd class ..... 2

Less than 50 miles or nautical miles—

- 1st class ..... 5
- 2nd class ..... 3
- 3rd class ..... 1

4.—Consumption tax of textiles—  
Woolen textiles..... 15 per cent of the value.  
Textiles except woolen  
textiles..... 15 " "

5.—Import duty on cocoons  
(all kinds) ..... 10 per cent ad. val.

6.—Import duty of rice and  
paddy ..... 15 " "

In case the travelling tax is to be imposed on passengers by trains, electric cars and steamers which have no distinction of classes, 3rd class tax shall be applied, and if there are two distinctions of classes 2nd and 3rd class tax shall be applied, but if there are 4 or more distinctions of classes the first two classes shall be of the 1st class and 2nd class and for the others the tax of the 3rd class shall be applied.

In case an agreement has been made for the trains, electric cars and steamers to be hired for a limited period or for excursions the travelling tax shall be five times the amount mentioned in No. 3 of the 1st paragraph.

Art. 5, shall be considered as 1 of Art. 5 and 6. Provisions shall be added as follows:

No. 2 of Art. 5.—Documents of administrative complaint shall have the following amount of stamps to be used on their originals but in case an inquiry document has been prepared by making an oral statement to the clerk of a court the stamp tax shall be applied to that document.

- 1.—Writ of complaint ..... 7 yen.
- 2.—Statement for objection ..... 1 yen.
- 3.—Statement for evidence to be examined ..... 1 yen.
- 4.—Statement for demanding a judgement to be sent ..... 1 yen.
- 5.—Statement for change of date, postponement of discussion or appointment of date at discussion ..... 45 sen.
- 6.—Application as a secondary party ..... 45 sen.
- 7.—Application for rejection ..... 45 sen.
- 8.—Application for deciding amount of costs ..... 45 sen.
- 9.—Writ of defence and other statements or applications not specially mentioned in previous paragraphs ..... 45 sen.

Except in case court expenses have been temporarily released from payment, documents of administrative complaint which have no stamp according to the previous paragraph is void, but when a stamp has not been used or if there is still a deficit though stamp have been used, the court may make that document effective after affixing the proper stamps.

No. 3 of Art. 5.—With regard to the stamp tax on cheques the provisions of Arts. 6, 8, 9, 11, 13 and 14 of the Stamp Tax Law shall be applied.

No. 4 of Art. 5.—In case of collecting the tax on an area of gold dust collection a fraction of one *cho* or 2,000 *tsubo* shall be counted as one *cho* or 1,000 *tsubo*.

No. 5 of Art. 5.—The tax on the area of gold dust collection for each year must be paid during December of the preceding year.

Regarding the tax on the area of gold dust collection imposed newly or deficient by the license of the business of gold dust collection or by the change of the area of gold dust collection it must be paid at once if the case concern to the first year.

Tax of the area of gold dust collection to be paid according to the foregoing paragraph shall be calculated by monthly ratio and the accounts shall be made at the time of discontinuing the business.

No. 6 of Art. 5.—Travelling tax shall be collected from business persons on trains, electric cars or steamers and what is collected during a month shall be paid into the Treasury before the 10th of the month following.

When trains, electric cars or steamers companies do not pay the tax which is collected according to paragraph, the tax shall be collected from them according to the national tax collection Law.

Travelling tax shall not be imposed on any person who is going from the country by steamers which are bound abroad. Authorized officials may examine all documents and books which are in possession of business persons.

No. 7 of Art. 5.—Regarding the import duty on cocoons, rice and paddy the provisions of durable articles of Customs Laws and tariff laws shall be applied correspondingly.

Art. 6.—With regard to the following articles consumption tax shall be exempted according to the ordinance:

1. Textiles to be exported or those to be exported as manufactured articles.
2. Textiles for manufacturer's household use.

When textiles on which have been imposed consumption tax have been exported, cash or the proper amount of stamps shall be given according to the ordinance.

Art. 7.—When woollen textiles are to be taken from a factory, Custom or bonded warehouse, the consumption tax shall be paid by the person who is taking delivery.

Regarding the consumption tax of textiles except woollen textiles, the proper amount of stamps shall be affixed instead of the payment of tax before they are taken from manufactory, Customs or bonded warehouse, but when the certified seals of payment of the tax have been made on the textiles with the payment of tax corresponding to the price of textiles before taken out, stamps need not be affixed.

In case stamps are to be affixed a fraction of a *sen* of tax shall be counted as a *sen*.

The way of treating stamps to be affixed or to be defaced and the certified seals as to payment of tax according to paragraph 2 shall be determined by ordinance.

Art. 8 shall be revised as follows:—  
No. 1 of Art. 8.—When the security corresponding to the amount of consumption tax has been deposited, the Government shall postpone the collecting of the consumption tax on woollen textiles within the term of three months.

No. 2 of Art. 8.—In the following cases textiles may be taken out without the payment of consumption tax according to the ordinance.

- 1.—When textiles are taken out for transportation to another manufactory or storing place with the permission of the Government.
- 2.—When textiles are taken from the manufactory, or storing place for dyeing, printing, embroidering and others.
- 3.—When textiles are to be delivered from the house of a weaver who is getting wages to the person who has ordered it to be woven.

4.—When textiles are taken out according to the condition fixed by the Government for the payment of consumption tax at a fixed place.

5.—When the certified seals of exemption of tax have been affixed by the Government to the textiles at the manufactory which are manufactured specially for the purpose of export.

In case of the foregoing paragraph the place where the business is transferred to shall be considered as a manufactory and the business person of the place shall be considered as a manufacturer.

3 of Art. 8.—In case the woollen textiles with the recognition of the Government regarding their kinds and quantities carried back to the manufactory where they were taken out after the payment of the consumption tax, should the textiles to be taken out again from the manufactory consumption tax shall not be collected.

The word "Manufactory" in the 1st paragraph of Art. 9 shall be revised to the words "Manufactory except in case of 2 of Art. 8."

Next to the paragraph 5 of Art. 9 following two paragraphs shall be added.

Any person who wishes to take out textiles except woollen textiles from any manufactory, customs or bonded warehouse except in case of 2 of Art. 8 shall mention its value and affix the stamps corresponding to the amount of consumption tax but exempted in case of applying the provisional clause Art. 7.

The manner of applying foregoing paragraph shall be determined by ordinance.

The words "or Art. 8" in Arts. 10 and 11 shall

be revised to the words "or 1, 2, 3, of Art" and the words "woollen textile and kerosene oil" in the same Articles shall be revised to the word "textiles."

Art. 12.—Persons wishing to manufacture or sell textiles shall send in an application to the Government but persons wishing to manufacture only for household use shall be exempted.

Art. 13 shall be revised as follows:—

No. 1 of Art. 13.—Manufacturers of textiles are not allowed to carry on the business of paying and selling textiles at the place of their respective manufactories, but in case the place of manufactory and selling place have been separated by permission of the Government it is exempted.

No. 2 of Art. 13.—When sellers of textiles wish to sell textiles to which the stamps are affixed the price mentioned there on shall correct the price and the proper amount of stamps shall be official.

The words "Woollen textiles or kerosene oil" in Arts. 14, 15, 16, 20 and 21 shall be revised in the sense of the word "textiles."

Art. 17 shall be revised as follows:—

No. 1 of Art. 17.—Persons offending against one of the following items shall be liable to a fine corresponding to five times the amount of consumption tax and the tax shall be collected at once but in no case shall the amount of fine be below 10 *yen*.

1.—When textiles are manufactured without presenting a report to the Government except those to be made for manufacturers' household use.

2.—When textiles which are exempted from the consumption tax as exports or articles made from them have been consumed within the country or when they are proposed to be consumed within the country.

3.—When the textiles which were taken out according to 2 of Art. 8 are not transported to the place of destination or have been consumed.

4.—When the injunctions of Arts. 10 and 11 are contravened.

No. 2 of Art. 17.—Persons offending against one of the following items shall be liable to a fine corresponding to five times the amount of tax evaded and the tax shall be collected at once. The amount of fine shall not be below 5 *yen*.

1.—When textiles on which stamps are to be affixed have been sold without the proper amount of stamps affixed.

2.—When textiles to which stamps are affixed have been sold over the price mentioned or without according to 2 of Art. 13.

No. 3 of Art. 17.—When a seller of textiles has possessed textiles to which stamps are to be affixed without the proper amount of stamps being affixed he shall be liable to a fine of from 5 *yen* to 500 *yen*.

When a revenue officer has discovered the offence he may affix the proper amount of stamps to the textiles at the expense of the seller.

Regarding the collection of expenses according to the foregoing paragraph the provisions of the National Tax Collection Law shall be applied.

The words "Woollen textiles or kerosene oil" in paragraph 1 of Art. 18 shall be changed to the word "textiles" and next to it the following two paragraphs shall be added and paragraph 2nd shall be revised.

2.—When a person does not affix or deface stamps according to the manner determined by ordinance.

When a person does not mention the price according to the manner determined by the ordinance.

The words "Business tax and Income tax" in the 3rd paragraph of Art. 22 shall be changed to the words "Business tax, Income tax and Mining area tax."

Art.—24 repealed.

Art.—25 repealed.

#### ADDITIONAL RULES.

This law shall be enforced on the date promulgated, but with regard to the registration tax on immovable properties and vessels, from the date of 1st April in the 38th year of Meiji, and regarding the registration tax of mining business and the tax of trial mining area, from the date of the enforcement of the mining law, and regarding the consumption tax on textiles except woollen textiles, from the 1st of February in the 38th year of Meiji, this tax shall be enforced, and regarding the import duties this law shall not come into force until six months after the promulgation of this law.

With regard to land tax, business tax, income tax and patent medicine business tax, this law shall be applied from the 38th year of Meiji.

Provided that the increased amount to be collected for the first half year on patent medicine business tax of the 38th year of Meiji must be paid within a month after the promulgation of this law. Increased amount on tax of mining areas and tax of gold dust collection area for the 38th year of Meiji must be paid calculating the monthly ratio from the month of enforcement of this law within 60 days from the date of operation of this law.

When a person, who has sent in prior to the enforce-

ment of this law an application regarding the mining business according to the regulation of mining business and had paid already an increased amount of registration tax according to the law of extraordinary special tax, wishes to get registration in the principal books of mining business in accordance with the Mining Law, he ought to pay the increased amount of tax according to this Law.

When a person manufacturing or selling textiles from the time prior to the enforcement of this law wishes to continue to manufacture or sell he shall send in an application to the Government within 30 days after the enforcement of this law, but a person who is manufacturing woollen textiles or who is manufacturing only textiles except woollen textiles for the purpose of his own consumption is exempted.

During the term of the foregoing paragraph the business of manufacturing or selling may be continued.

Textiles, except woollen textiles, possessed by any seller of textiles at the time of enforcement of this law must have stamps affixed corresponding to 10 per cent. of its price.

Provided that a seller of textiles may make a request to be exempt from affixing stamps on the condition that he pays money to the Government within one year from the following month corresponding to 10 per cent. of the amount of sales every month from the month of enforcement of this law.

Persons wishing to make a request for such exemption must make a report to the Government (within 20 days after the coming into operation of this law,) mentioning the amount and value of textiles, except woollen textiles, possessed at the time of enforcement of this law.

To any person who is selling textiles at the time of enforcement of this law the provision of 3 of Art. 17 shall not be applied except within 30 days after the operation of this law.

In case of the affixing stamps according to paragraph 7 of additional rule, the provisions of paragraphs from 2 to 4 of Art. 7 shall be applied.

In case of exemption according to paragraph 8th of the Additional Rule textiles are required to have certified seals of payment of tax affixed, previously taken out, but those for retail are exempted.

Persons who have received permission for exemption according to paragraph 8th of Additional Rule shall make a report to the Government every month about the amount of sales of textiles.

Regarding the amount to be paid by the person who has received the exemption of affixing stamps according to paragraph 8th of Additional Rule the provisions of the National Tax Collection Law shall be applied correspondingly.

#### THE JAPAN BREWERY COMPANY LIMITED.

The following are the Report and Accounts for the year ended 31st December, 1904, for presentation at the Seventh Ordinary General Meeting of Shareholders to be held at the Company's Office at the Brewery, Yamate-cho, Yokohama, at 4 p.m. on Monday, 6th February, 1905:—

Your Directors now beg to present herewith the audited Accounts for the Year ended 31st December, 1904.

The prosperity of the Company has been materially affected through the war between Japan and Russia which broke out in February and which has continued up till the present without any signs of peace being arranged.

The Net Profit for the Year has consequently been reduced to yen 60,111.14, which with yen 4,670.73 brought forward from 1903, makes the amount at credit of Profit and Loss Account yen 64,781.87.

Deliveries up till the middle of August compared favorably with last year, but since then the falling off has been considerable, so that the total deliveries for the 12 months are below those of 1903.

From the 1st January, 1905, the Government has raised the Excise Tax on Beer, and the Income and Business Taxes; the Import Duty on Malt and Hops is doubled, and the Duties on other brewing materials are largely increased.

Competition has become keener than before, probably caused by over-production and the decrease in consumption.

All these factors have had the careful consideration of your Directors, and as the outlook at present is not encouraging, they cannot recommend a Dividend. They think it will be for the best interest of Shareholders to place the sum of yen 60,000 to Reserve Fund, and carry forward the balance of yen 4,781.87. If this is done, the Reserve Fund will amount to yen 170,000.

The Buildings, Brewing Plant and Machinery are in first class condition, and Stocks of Beer, Stores and Sundries are entered at actual cost.

DIRECTORS.—Mr. Jas. Dodds left for England in April, and your Directors wish to place on record the

great loss they have sustained through his departure. He was Chairman of the Company for many years, and took an active part in its affairs since its inception.

Mr. F. S. James has been elected Chairman. Mr. Haynemann resigned on his departure for home in September and Mr. R. Fachtmann was elected in his stead. Mr. C. B. Bernard was granted leave of absence and Mr. L. J. Healing was asked to join the Board.

The present Directors of the Company are as follows:—Messrs. F. S. James (Chairman and Managing Director), T. B. Glover, W. R. Bennett, C. B. Bernard, R. Fachtmann and L. J. Healing.

Under the Articles of Association two of these gentlemen, viz: Messrs. W. R. Bennett and C. B. Bernard retire, but, being eligible, offer themselves for re-election.

The Meeting will be asked to confirm the appointment of Messrs. R. Fachtmann and L. J. Healing.

The Auditors of the Company are Messrs. F. J. Hall and J. F. Cox-Edwards, who resign in accordance with the Articles of Association, but offer themselves for re-election at the recommendation of the Directors.

F. S. JAMES, Chairman and Managing Director.  
W. R. BENNETT, Director.  
J. H. DINSDALE, Secretary.

Yokohama, 23rd January, 1905.

F. J. HALL, }

#### AMERICAN ELECTRICAL COMPANY INVESTING IN A JAPANESE LAMP FACTORY.

The General Electric Company of New York has entered into a manufacturing agreement with a Japanese lamp manufacturing concern, the Tokyo Electric Co., Limited, whereby the American Company invests a considerable amount in the manufacturing business here. Incandescent electric lamps are now to be made in Japan under the important Edison patents owned by the General Electric Company and by the same process as established in the American incandescent lamp factories by years of experience.

The General Electric Company employ approximately 20,000 men in America in its several electrical factories, and has a large trade in Japan, China and the Philippines. This new enterprise in Tokyo in which the American Company has now become interested, will not only bring capital into the country but will probably employ a number of workmen. It is to be under Japanese management.

#### TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

#### THE SITUATION IN RUSSIA.

London, January 26.

The Cossacks on Tuesday fired on a body of 3,000 demonstrators at Moscow, wounding many of the latter.

General Trepoff, the new Minister of the Interior, has had notices posted at the various works, ordering the workmen to return to work within 24 hours, otherwise they will be deported to the villages. Two of the factories have resumed work. Meanwhile the movement is apparently spreading in the provinces.

By order of the Tsar, General Trepoff and the Minister of Finance have issued a proclamation, explaining to the workers that they are being exploited by self-seeking and evil-disposed persons, who have misled them, thus rendering intervention by armed force inevitable. The Government, the proclamation adds, is now as ever ready to listen to the just desires of the people.

London, January 27.

Moscow is quiet. A proclamation issued by the Governor of that town promises that the fullest protection will be given to the men remaining at work.

The police at Moscow have posted notices in the streets, alleging that the strike movement is due to Anglo-Japanese intrigues and that the strikers are supported by British money. Sir Charles Hardinge, the British Ambassador, has protested against this calumny, and has received assurances that measures will be taken to prevent a repetition of the publication of the notices. The British Embassy at St. Petersburg is guarded by sentries. A similar notice to the above was also posted at Odessa.

St. Petersburg is returning to its normal aspect. The Government is confident that the movement has been checked.

**DISAFFECTION AMONG KUROPATKIN'S TROOPS.**

London, January 27.

The London *Daily Telegraph's* correspondent at St. Petersburg states that Kuropatkin has telegraphed to the Tsar that his offensive power is seriously hampered by the reluctance of the European regiments to march against the enemy, the troops arguing that now that Port Arthur has fallen, the war is objectless.

**WHOLESALE ARRESTS AT ST. PETERSBURG.**

The London *Daily Chronicle's* correspondent at St. Petersburg states that 5,000 persons were arrested in the capital on Wednesday evening. This number included one hundred lawyers, who are now en route to Siberia.

**AMERICA AND CHINA'S NEUTRALITY.**

A Washington dispatch states that Mr. Hay, the U.S. Secretary of State, has suggested to Russia the submission of the questions concerning the violation of Chinese neutrality to a conference of the Powers.

**PROTEST AGAINST THE RUSSIAN MASSACRES.**

The councils of the Civil Engineering, Polytechnic and Mining Institutes at St. Petersburg have sent to the Ministries to which they are subordinate, resolutions denouncing the butchery on the 22nd inst., and refusing to continue their courses at the University. The Senate has therefore suspended the reopening of the University till the 28th February next.

**KUROPATKIN RESUMES THE OFFENSIVE.**

London, January 28.

Kuropatkin has resumed the offensive against the Japanese left wing.

**POLICY OF THE NEW FRENCH MINISTRY.**

M. Rouvier, the new French Premier, speaking in the Chamber, announced his adherence to M. Combes' anti-clerical programme and to the Russian alliance.

**THE FRANCO-RUSSIAN ALLIANCE.**

SCENE IN THE FRENCH CHAMBER.

London, January 29.

M. Rouvier's reference to the French alliance with Russia was greeted with uproar.

M. Jaurès and others protested against a continuance of an alliance with a government composed of murderers, etc., etc.

M. Declasse repeatedly intervened imploring the Deputies to refrain from making such remarks for the sake of France's good name and interest. It must never be forgotten, he said, that the alliance had given France security.

A vote of confidence in the new Ministry was passed by 410 to 107.

**THE RUSSIAN LYING PLACARDS.**

It is stated that Sir Charles Hardinge, the British Ambassador to St. Petersburg, has made a fresh and stronger protest in the matter of the placards posted by the Moscow police saying that the strikes were the result of Anglo-Japanese intrigues and that the strikers were being supplied with English gold. The Chief of Police at Moscow, it seems, has informed the British Consul that he was leaving the posters for two days longer on his own responsibility as an assistance towards tiding over the present troubles and to prevent further difficulties. Thereupon the consul telegraphed to Sir Charles Hardinge.

**THE BALTIC ARMADA.**

Later.

Reuter's agent at Port Said telegraphs

that there is reason to believe that at least some of the Baltic Squadron will shortly return by the Suez Canal. Of those that remain some will visit the Persian Gulf.

**THE NORTH SEA COMMISSION.**

London, January 31.

The North Sea Commission at Paris has been sitting for a week with open doors. The Commission has examined the Hull fishermen and elicited from them flat denials of the presence of Japanese torpedo-boats among the fishing fleets.

**THE HOLY SYNOD ON THE SITUATION.**

A circular has been issued by the Holy Synod of Russia inviting the people to return to their obedience to the Emperor and to obey God's commands, at the same time warning them against advisers who are in the pay of Russia's enemies. This circular to the Orthodox Church further says that the strikers are instigated by enemies at home and abroad, and are led by a criminal priest. The movement has broken out at a moment when all should co-operate to protect the fatherland. The object of Russia's enemies was to produce civil war and to prevent reinforcements being sent to the Manchurian army. The circular concludes by an appeal to the people to return to work.

**SERIOUS RIOTS AT WARSAW.**

Serious riots occurred at Warsaw on Saturday. Many of the finest shops were sacked and burned. The cavalry charged and the troops fired on the mob at several points.

**BRITISH OFFICIALS ATTACKED IN RUSSIA.**

The British Consul-General at Warsaw (Mr. Alex. Murray), and the Vice-Consul (Mr. E. B. St. Clair) have been separately attacked by the patrols. The latter received terrible sword cuts on the face.

Later.

Sir Charles Hardinge, the British Ambassador to Russia, has sent the British military attaché to investigate the reported attack upon the British Consul-General and the Pro-Consul, made by soldiers at Warsaw.

**FURTHER BRITISH PROTESTS.**

Sir Charles Hardinge has protested again against the republication at Libau of the notices saying that British gold is being supplied to the strikers. He points out that it will seriously affect the friendly relations between the two countries.

**THE WARSAW DISTURBANCES.**

The disturbances at Warsaw were renewed yesterday, 160 were killed or wounded.

**MATTERS WORSE AT LIBAU.**

The troops at Libau have been reinforced. The situation is worse.

**THE LAST BATTLE.**

The Japanese estimate their losses in the recent fighting at 5,000, and the Russian losses at 10,000.

**ANGLO-RUSSIAN RELATIONS.**

London, February 1.

Count Lamsdorff has informed Sir Charles Hardinge, the British Ambassador at St. Petersburg, that he has ordered a searching enquiry at Warsaw into the attacks on the British Consul-General and the Vice-Consul. He has further ordered the complete effacement of the anti-British placards at Moscow and Libau. Count Lamsdorff has expressed unqualified disapproval of the Moscow prefect's conduct in the matter.

**PARIS AND THE RUSSIAN ALLIANCE.**

Six thousand men in Paris yesterday

evening denounced in mass meeting recent events in Russia. Extraordinary police precautions were taken. As the meeting was leaving the hall, a bomb was thrown and two Republican Guards were wounded. Several arrests followed.

Another bomb has been found outside the residence of Prince Troubetski, the Russian military attaché.

**DEATH OF MR. LAURENCE JACKSON.**

London, February 1.

The death is announced of Mr. Laurence Jackson, lately Judicial Commissioner of the Federated Malay States.

**CAPTAIN KLADO'S STORY.**

Captain Klado, in his evidence before the North Sea Enquiry Commission at Paris, emphatically and circumstantially reiterated the story of an encounter with torpedo-boats in the North Sea.

[Note.—In the course of a lecture Captain Klado has made the following statement with regard to the alleged attack by torpedo-boats on Admiral Rojestvensky's squadron in the North Sea:

Towards the evening of the second day we began receiving such strange questions by wireless telegraphy regarding the longitude and latitude of the position of the *Kniaz Suvoroff* that we felt sure that suspicious vessels were near us. Shortly afterwards I and several other persons who were on the *Kniaz Suvoroff's* bridge distinctly saw two torpedo-boats which seemed to attack us. One was on the port beam of the squadron, the other on the starboard. As soon as we had persuaded ourselves by the aid of searchlights that the craft were really torpedo-boats we opened fire on them. Our searchlights, in revealing the torpedo-boats, also discovered some steam fishing-boats, one of which crossed our bows so close that we had to pull aside to avoid her. This ship, too, was the cause of some suspicion. Having been repulsed, the torpedo-boats steamed rapidly in the opposite direction—namely, to the north-east. Some shots were fired on them from the transport *Anaplyr*, which was the last ship in the line of our squadron. As regards the question which is often put to one regarding the present whereabouts of these torpedo boats, I must say that I believe them to be at the bottom of the sea. After they had approached the collier, which must have been serving as their base, they must have transhipped their crews and been scuttled. It is possible that one of them, the one which was seen on the starboard of the squadron, was seriously damaged by our shells and sank at once. Naturally the steam fishing-boats which were so near the torpedo-boats found themselves in the line of fire, although measures were taken to train the guns only on the torpedo-boats. Some shells struck the cruiser *Aurora* by ricochet, she being in front of the port line of ships.]

**ILLNESS OF PRINCE VICTORIA.**

Princess Victoria, second daughter of King Edward, has been operated on for appendicitis. She is progressing favourably.

**JAPANESE PRISONERS.**

London, February 2.

General Sakharoff estimates that the Japanese prisoners total over three hundred.

**POLICE FIRE ON STRIKERS.**

The St. Petersburg police yesterday surprised a meeting of strikers in a tavern. They fired on the meeting, wounding four and killing a girl.

(RECEIVED AT THE FOREIGN OFFICE.)

**A RUSSIAN UKASE.**

The ukase just issued by the Tsar recognises the necessity of taking extraordinary measures to preserve general peace and good order in consequence of recent events in St. Petersburg. For that purpose the decree announces the appointment of a new Governor-general of St. Petersburg and states in detail the military and police powers conferred on him. The nature of these powers is very great. They amount to the administration of a military dictator. General Torepoff, former chief of police in Moscow, is appointed to the post.

## LATEST FROM RUSSIA.

Several more Liberals were arrested on the 25th January in St. Petersburg, and it is expected many others would follow. The streets of St. Petersburg were quiet on the 26th; the shops were reopened; work was resumed at some factories.

In Riga all the factories are closed. On the 26th a collision occurred between the troops and the strikers and about 30 were killed and wounded. The demonstration is growing rapidly.

In Moscow on the 25th 30 factories were closed representing 30,000 workmen, and the strikes were extending. The owners of these Moscow factories held a meeting on the 25th January and decided to petition the Government that so long as the strikers did not resort to violence the troops should not use their arms.

At Libau some workmen incited by Terrorists went on strike and injured telegraphs and telephones. In Reval the strikers and others held a meeting on the 25th January at which the local officials were present.

The strike is spreading at Saratoff.

In Helsingfors, 5,000 workmen made a demonstration on the 25th and were attacked by the police, many being killed and wounded.

A telegram having been officially posted in the streets of Moscow to the effect that the disturbances at the dockyards of St. Petersburg, Libau and Sevastopol, and the coalmines of Westphalia had been planned to prevent the despatch of the Baltic and Black Sea fleets, and that large sums of English money had been given to assist the strikers, the British Ambassador at St. Petersburg protested.

## RUSSIAN AFFAIRS.

The number of strikers who returned to their work in St. Petersburg on the 27th instant increased. A Laffin's telegram says that during the disturbance on the 22nd, three-fourths of the troops in St. Petersburg were despatched to the provinces, mainly to the ports along the Baltic Sea.

At Moscow on the 27th the printers, whose demands had been granted, returned to work, but among other workmen, the strike is spreading.

In Kiev a strike commenced on the 26th. In Vladimir and in other districts on the north-east of Moscow it commenced on the 26th and in Mitou on the 27th. In all these places there were disturbances.

In Warsaw the strike spread on the 27th. A collision occurred between the strikers and the military and there were some killed and wounded.

In Lotz also all the workmen are on strike.

## SPANISH POLITICS.

There has been a change of Cabinet in Spain.

## NEWS FROM RUSSIA.

The *Daily Telegraph's* St. Petersburg correspondent says that the arrest of literary men and others who hold their views continues. If any of the workmen show obstinacy they are banished. Secret police detectives are watching the rest.

Reuter telegraphs that the chief of the Holy Synod on the 29th January issued a circular condemning the strikers and their leader. The circular says that the disturbances are fomented by men in the pay of Russia's enemies, and that their object is to prevent the dispatch of stores and munitions of war to the Army and the Navy at the front, with which object Russia's enemies continue to distribute large sums among the strikers.

The strikes are spreading. At Warsaw there has been some disturbance. At Moscow there is a tendency to take stronger measures with the strikers.

On the 28th January the British Consul-General at Warsaw is said to have been attacked by the cavalry.

## KUROPATKIN'S REPORT.

Reuter.—Kuropatkin's report dated the 29th January, says:—"At 7 p.m. on the 28th the Japanese assumed the offensive on both sides of the railway, but after a fight lasting one hour our infantry and artillery repulsed them. Our casualties were 2 men killed, and 35 wounded, including 3 officers. The enemy advanced along the Mukden road also towards Sanjoza, but did not press his attack. On the same day at 5 p.m. our forces, after a cannonade by the reserve artillery, attacked Santaitz and Lapatai. We captured the whole of Santaitz and a part of Lapatai. Our casualties were insignificant. Our detachment, having accomplished its contemplated duty, withdrew at night-fall to Chusanji but the Japanese did not pursue.

On the 27th of January our column was fired on at Heikautai by the Japanese infantry. This infantry retreated to the south-west. Our column pursued the Japanese troops which had abandoned the villages along the road. The column reached the neighbourhood of Langtangkau which was occupied by a Japanese detachment with guns. The Japanese again assumed the offensive and attacked one of our artillery positions. Our cavalry regiment, for the purpose of a diversion, attacked the enemy's infantry and artillery. Our troops, being re-inforced, began to retire.

With regard to the fight at Santiehpu (called Chenchiehpau in the Japanese reports) General Klipenburg reports that Generals Mischenko and Kondradowitch were slightly wounded.

## RUSSIAN NEWS.

A Reuter's telegram of the 30th ultimo says that the Governor of Warsaw has promulgated a peace-preservation law in two districts under his jurisdiction.

On the 29th the strike commenced in Gomel and on the 30th in Kiev.

The *Times* publishes a statement of the movements of the Baltic Fleet from the 26th of November to the 30th of December:—

On the 26th of January 5 battle-ships, 3 cruisers, 2 steamers flying mercantile flags, 2 flying the naval flag, a water vessel, a hospital ship, a scouting-ship (flying a mercantile flag) and a French provision ship (*l'Esperance*) arrived outside the harbour of Gaboon in French Western Africa.

Of the above the *Roland* (scouting vessel) entered the harbour and conveyed instructions to two coaling steamers—one British and one German—which had been waiting there that they should move out to the squadron, which, with several other German coaling steamers, was anchored 4 miles outside. Thereafter the work of coaling continued until the 30th, when the colliers, with the exception of those which had discharged their cargo, were ordered to move on to Great Fish Bay (Portuguese West Africa) where they arrived on December 5th. The Squadron followed, reaching Great Fish Bay on the 5th and coaling there until the 7th. Then the colliers were directed to steam for Angra Pequena (German South-West Africa). There on the 10th of December 3 of the coaling steamers (2 English and 1 German) arrived; while two others, the *Kaschira* and the *Orel*, proceeded

to Capetown, the *Orel* being ordered to take off any coal remaining in the *Kaschira*. On the 12th of December the squadron reached Sheer Water Bay and ordered the colliers to approach, but this was prevented by the state of the sea. Five German colliers from Dakar had already been for a week in Angra Pequena. The work of coaling commenced on December 14th at night and continued till the 15th, when the colliers were ordered to proceed to St. Mary's Island in Madagascar, where 2 English ships and 2 German arrived on the 29th of December. The squadron left Sheer Water on the 17th of December and (including the *Orel* which had joined it) arrived at St. Mary's Island on the 30th of that month. The place for the squadron to assemble for coaling purposes is Diego Suarez, whither the remaining colliers and destroyers are to come, it is said.

The work of coaling has resulted in injuring several of the colliers.

## AUSTRIA AND RUSSIA.

A question having been asked in the Austrian Parliament as to whether an agreement existed between Austro-Hungary and Russia, providing for the preservation of order by Austro-Hungarian troops in Russian territory adjacent to the Austrian empire's frontiers, the Prime Minister replied that there was no foundation whatever for such an idea.

## THE TROUBLES IN RUSSIA.

The strike extended to Grodno and Narva on the 30th January, and to Elizabethgrad and Ekaterinoslav on the 31st.

In Kovno and Warsaw things are quieter. Since the 27th January the killed in Warsaw are said to have reached 300, and there are many hundreds of wounded.

## THE RECENT BATTLE.

A private telegram which has reached St. Petersburg from the front says that in the battle of Jan. 25th-28th the Russian casualties were 10,000.

(Received at the Imperial Military Head Quarters, from Field Marshal Marquis Oyama.)

## FIGHTING AT THE HUN.

Since the 25th instant the enemy on the right bank of the Hun River has begun to move. His forces, amounting to not less than a *corps d'armée* advanced from the district on the south of Changtan towards Heikautai and Chenchiehpau. Therefore on the 26th our troops immediately assumed the offensive, and a body of our men drove back a force of the enemy numbering about one division in the direction of Liutiakau. Another body of our troops has been fighting since the 26th against more than a division of the enemy in the vicinity of Heikautai.

On the right and centre of our army the enemy's artillery occasionally bombarded our positions on the 28th instant, and small forces attacked us in various quarters, but these were all repulsed at once.

As to our left, our force which on the 26th instant had driven back the Chenchiehpau enemy, occupied Liutiakau and Likawopeng (about 2½ miles west of Chenchiehpau) on the 28th instant. The enemy who had confronted this force retired partly to the north and partly to the west. Also our troops fronting Heikautai succeeded in taking possession of the infantry position on the south-east of that place, and are now endeavouring to take Heikautai. Another body of our troops drove back a force of the enemy consisting of a regiment of infantry, a brigade of cavalry and 12 guns and oc-

cupied Harhpau (about 5 miles south of Heikautai).

The enemy's forces which have been engaged in the attack on our left wing up to to-day seem to have consisted in the main of the following:—

The Eighth Army Corps (Divisions X V. and XV.)  
The Russo-European Rifles, two Brigades.  
The Tenth Army Corps (Division IX.)  
Part of the Sixty-first Division of Reserve Infantry.  
Part of the First Siberia Army Corps (the East Siberia Rifles Infantry, Divisions I and IX.)

Our force which yesterday occupied Liupiaokau was twice attacked during the night by a strong body of the enemy, but he was repulsed. Another force of ours at dawn on the 27th attacked the enemy's rear at Feitsaihotsz, which is about 2½ miles north of Heikautai, and captured the position. Our troops which attacked Heikautai were subjected during the night of the 28th to several severe counter attacks, but these were eventually all repulsed and this morning we occupied the position. The enemy from Liupiaokau and Heikautai all retired to the right bank of the Hun and our troops are pursuing them.

The enemy made several attacks last night in the direction of Litajentun and Chenchiehpu, but they were all repulsed. The enemy who attacked these last two places consisted of the 8th and 10th Army Corps; those that attacked at Heikautai consisted of the 1st Army Corps, and another consisted of companies of infantry of the Rifles, with a division of Mischenko's cavalry. We took about 500 prisoners, including officers. The casualties on both sides are now being investigated.

(Received at the Imperial Military Head Quarters on the night of the 29th January from the Commander-in-Chief in Manchuria.)

#### FIGHTING AT CHANGTAN.

Last night there were continuous collisions between scouting parties of ours and the enemy's on our centre and left, but no great change took place.

On our left the enemy carried on an unceasing but ineffectual cannonade.

The main body of the enemy's forces which had moved against Chenchiehpu and Heikautai seem to have retreated in the direction of Sufangtai (which is about 10 miles north-west of Changtan) from Nienyupau (about 2½ miles west of Changtan).

A great number of the enemy's dead are lying in the Chenchiehpu and Heikautai districts but no accurate report has yet been received.

(Received at the Imperial Military Head Quarters on the night of the 30th ultimo from the Commander-in-Chief in Manchuria.)

#### NEWS FROM THE FRONT.

Yesterday night on our right flank the enemy's scouts approached several points of our positions but were driven back by our outposts. There was no other change.

On our centre from 10 p.m. last night until 11 the enemy's artillery posted on the highland westward of Wanpaoshan fired on the neighbourhood of Tensantaukongsz and Yaotun. To-day (30th) about 2 guns of the enemy's on the north-west of Liuchangtun and his mortars posted on a hill west of Wanpaoshan cannonaded the height north of Changlingtsz and the vicinity of Yaotun.

On our left at 11 p.m. on the 29th about two companies of the enemy's infantry in the neighbourhood of Linshingpau fired wildly in our direction. Also last night at a place about 200 metres south of Pehtaitz he dug two trenches, and issuing from them constructed small entrenchments at several places. From 8.30 this morning his heavy

guns posted near Hsiaohantaitz and about 12 field-pieces fired continuously on Chenchiehpu. Again at 3.30 p.m. some six companies of his infantry charged into Hwangchi from Rhtaitz.

On the right bank of the Hun at about 2 p.m. some two battalions of his infantry attacked Tutaitz. Our force there engaged these battalions but the result is not yet clear.

Since the 25th the enemy's dead found on the field at Litajentun, Chenchiehpu and Heikautai are not less than 1,200.

#### FIGHTING AT CHANGWAN.

(Received at the Imperial Military Head Quarters from the Commander-in-Chief of the Manchurian Armies, on the 31st January.)

On the 30th instant the enemy's artillery cannonaded our positions on the centre and right. Small forces of his approached at various points but were all driven back by our outposts.

On our left, the same day, the enemy's heavy guns vigorously bombarded North Yentai (about 2½ miles south-east of Wan-kiayuantz) and Chenchiehpu. Again on the 31st in the forenoon he cannonaded Chenchiehpu, Yapatai (about 2½ miles east of Chenchiehpu) and Litajentun. About 2 companies of his infantry moved against Chenchiehpu from the south of Pehtaitz, but were repulsed.

On the afternoon of the 30th instant 2 companies of the enemy's infantry, advancing from Changtan attacked Pautszya (2½ miles north-west of Chenchiehpu), and about 2 battalions with a regiment of cavalry, coming from the same place, attacked Tutaitz, but all were repulsed.

According to the statements of prisoners, General Mischenko, the officer commanding the enemy's cavalry in its bold movement some days ago against our left, was wounded in the leg near Harhpau on the 27th instant.

[Published by the "Asahi."]

A telegram from the front, dated 10 a.m. 29th ultimo and received at the depot of a certain Division, says that the losses sustained by General Tachimi's command since the 26th ultimo were 32 officers wounded and 2,500 rank and file killed or wounded. The prisoners reach 1,500, including officers: There are many spoils. The attack (Japanese) is progressing rapidly. The enemy's losses are twice ours.

(Received at the Imperial Military Head Quarters.)

#### THE BATTLE OF HEIKAUTAI.

The battle which lasted from the 25th to the 29th of January is to be called the "Battle of Heikautai."

(RECEIVED IN TOKYO.)

In Kuropatkin's telegraphic report of the battle of Heikautai there is said to be a statement that the Japanese casualties were not less than 10,000, and that they lost about 300 prisoners, who have been sent to Mukden.

#### A DARK FUTURE.

(RECEIVED BY THE "JIJI SHIMBUN.")

London, January 25.

The future is darker than ever. The strike spreads daily. In Kovno district there were 21 factories closed yesterday. The Governor threatens to resort to strong measures of suppression. In St. Petersburg Torepoff has been appointed governor. He is in truth invested with the powers of a dictator. The council held at Tsarkoe Selo decided to continue the work of suppression. The Emperor must be still staying there.

He is reported to be ill. There is a very great commotion in Odessa, Sevastopol, Karkoff, Vilna and Kishinief. The people seem likely to rise. At Lodz there is a general strike. The garrison is shut up in its barracks. Radom also is surrounded. The troops, in order to disperse the people, are constantly firing volleys. In St. Petersburg a number of eminent men have been arrested, including Maxim Gorky.

#### VISCOUNT HAYASHI.

Viscount Hayashi has been specially invited to Windsor by the King and the Queen. He is to remain there 3 days. He will arrive in London next Saturday.

#### RUSSIAN TROUBLES.

(RECEIVED BY THE "ASAHI SHIMBUN.")

London, January 26.

The law of siege is virtually in operation in St. Petersburg under the Governor's direction. His policy is to employ the severest measures for checking the demonstrations now being organized. According to present appearances the outbreak of a revolutionary movement will not, it is thought, be seen quickly, but the people throughout the whole country are in a dangerous and unquiet state. The strike is spreading to all districts. The Moscow police are making out that the Japanese and English have fostered this disturbance in order to prevent the eastward voyage of the Baltic and Black-Sea Fleets. At Libau the preparations for the departure of the Third Squadron are interrupted by the disturbance. People fear that a spirit of discontent and dissatisfaction is stirring among the troops about to start for the seat of war in the Far East, and that danger will result. Free looting of the military stores destined for Kuropatkin's army is taking place here and there. In the various districts of southern Russia also demonstrations to oppose the war are being planned.

#### THE ANGLO-JAPANESE ALLIANCE.

London, January 30.

The Times, expecting that a general election is imminent, asks what attitude the Opposition will adopt with respect to Japanese relations. It argues that the alliance with Japan is the pivot of England's world-policy, and that this alliance has had a great effect in limiting the arena of the war. It concludes by insisting that the Anglo-Japanese alliance must be firmly maintained.

#### STRIKERS RESUMING WORK.

With the exception of Poland, the strikes are quieting down in the various districts of Russia. In Poland many of the reservists have taken advantage of the confusion to effect their escape.

#### LATEST SHIPPING.

##### ARRIVALS.

*Benlarig*, British steamer, 2,510, A. Wallace, 27th Jan.,—London via ports, and Kobe, 25th Jan., General.—Corney & Co.

# ITCHING HUMOURS

## SPEEDY CURE TREATMENT FOR EVERY HUMOUR.

Bathe the affected parts with hot water and CUTICURA SOAP, to cleanse the skin and scalp of crusts and scales, and soften the thickened cuticle. Dry, without hard rubbing, and apply CUTICURA OINTMENT freely to allay itching, irritation, and inflammation, and soothe and heal, and lastly take CUTICURA RESOLVENT PILLS, to cool and cleanse the blood. This pure, sweet, and wholesome treatment affords instant relief, permits rest and sleep, and points to a speedy, permanent, and economical cure in the most torturing, disfiguring, itching, burning, and scaly skin, scalp, and blood humours, eczemas, rashes, and irritations, from infancy to age, with loss of hair, when all else fails.

# MILLIONS USE CUTICURA SOAP

Assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itchings, and chafings, and for all the purposes of the toilet, bath, and nursery. Millions of Women use CUTICURA SOAP in the form of baths for annoying irritations, inflammations, and exoriations, for too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sanative, antiseptic purposes which readily suggest themselves to women, especially mothers.

## CUTICURA RESOLVENT PILLS, CHOCOLATE COATED.

Are a new, tasteless, odourless, economical substitute for the celebrated liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humour cures. Put up in screw-cap pocket vials containing 60 doses. CUTICURA PILLS are alterative, antiseptic, tonic, and digestive, and beyond question the purest, sweetest, most successful and economical blood and skin purifiers, humour cures, and tonic-digestives, yet compounded.

CUTICURA REMEDIES are sold throughout the world. Australian Depot: R. Towns & Co., Sydney. British Depot: 27-28, Chancery Lane, London. French Depot: 6, Rue de la Paix, Paris. German Depot: 1, Friedrichstrasse, Berlin. U. S. A. Depot: 1, N. 2nd St., Boston.

## LEA & PERRINS' SAUCE

The Original and Genuine Worcestershire.

## HOLLOWAY'S OINTMENT

IS A HOUSEHOLD NECESSITY

It cures Rheumatism, Sciatica,  
Stiff Joints,  
Glandular Swellings,  
Sore Throat, Quinsy, Mumps,  
Burns, Piles, Fistulas, &c.

AND EVERY  
FORM OF SKIN DISEASE.

Manufactured only at 78, New Oxford St. (late 558, Oxford St.),  
London. Sold by all Chemists and Medicine Vendors.

## Concentrated strength,

sustenance and energy—that's what Bovril is. Bovril represents a perfectly scientific combination of the stimulative and flavouring features of meat extract with the nutritive properties of beef. Bovril is readily taken and easily digested and assimilated by even the most feeble constitution.

### VESSELS ON THE BERTH.

For KEELUNG, via Moji (from Kobe), 3rd, and 18th every month, at Noon, the "SATSUMA MARU."—Nippon Yusen Kaisha.

For CANADA, United States, and Europe, via Vancouver, B.C., February 4th, the "TARTAR."—Canadian Pacific Railway Co.

For SAN FRANCISCO, via Honolulu, Feb. 4th, at 3 p.m., the "SIBERIA."—P. M. S.S. Co.

For NEW YORK, via ports and Suez Canal, about Feb. 4th, the "RICHMOND CASEL."—Dodwell & Co., Ltd.

For BREMEN and HAMBURG, via ports, Feb. 4th, at 9 a.m., the "ZIETEN."—H. Ahrens & Co., Nachf.

For BONIN ISLANDS via ports, Feb. 5th, the "HIOGO MARU."—Nippon Yusen Kaisha.

For TAKAO, via Ujina, Moji, Nagasaki, Keelung, Pescadores and Anping (from Kobe), Feb. 5th, the "KOTSU MARU."—Osaka Shosen Kaisha.

For HONGKONG, via Kobe, Inland Sea, Nagasaki, and Shanghai, about Feb. 6th, the "EMPEROR OF JAPAN."—Canadian Pacific Railway Co.

For VICTORIA, Seattle, Tacoma, Wash., Feb. 6th, the "TYDEUS."—Butterfield & Swire.

For PORTLAND, Ore., Feb. 6th, the "NUMANTIA."—P. & A. S.S. Co.

For TRIESTE, via Kobe, Hongkong, Singapore, Penang, Colombo, Bombay, Karachi, Aden, Suez, Port Said, and Fiume, about February 7th, the "PERSIA."—Pollak Bros.

For SHANGHAI, via Kobe, Moji, and Nagasaki, Feb. 8th, at 11 p.m., the "BENGLOE."—Nippon Yusen Kaisha.

For HONGKONG, via Kobe, (Inland Sea), Nagasaki, and Manila, about Feb. 9th, the "MANCHURIA."—P. M. S.S. Co.

For SEATTLE, Wash., via Victoria, B.C., Feb. 10th, at 2 p.m., the "IYO MARU."—Nippon Yusen Kaisha.

For NEW YORK, via ports and Suez Canal, about Feb. 10th, the "JESSERIC."—American Trading Co.

For MARSHALLS, via ports, and Shanghai, Feb. 11th, at 9 a.m., the "POLYNESIAN."—M. M. S.S. Co.

For HONGKONG, via Kobe, Moji, Nagasaki and Shanghai, Feb. 13th, the "ARAGONIA."—P. & A. S.S. & Co.

For HONGKONG, via Kobe, Nagasaki, Shanghai, and Manila, Feb. 13th, the "MINNESOTA."—Nippon Yusen Kaisha.

For LONDON, Amsterdam and Antwerp, Feb. 14th, at Daylight, the "IDOMENEUS."—Butterfield & Swire.

For MARSHALLS, London, and Antwerp, via Kobe, Shanghai, Hongkong, Straits, Colombo, and Port Said, Feb. 14th, at Daylight, the "FORMOSA."—P. & O. S.N. Co.

For VICTORIA, B.C., and Tacoma, Wash., Feb. 14th, the "HYADES."—Dodwell & Co., Ltd.

For HONGKONG, via Kobe, Moji, and Manila, about Feb. 15th, the "PLEIADES."—Dodwell & Co., Ltd.

For CANADA, United States, and Europe, via Vancouver, B.C., Feb. 17th, at Noon, the "EMPEROR OF INDIA."—C. P. R. S.S. Co.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 11TH, 1905.

## SUMMARY OF NEWS.

FIGHTING still continues near the Hun.

PEACE RUMOURS have been prevalent during the week, but they have been generally discredited.

TELEGRAMS from Kure, Matsue and Shimomoseki report heavy snow on the night of February 6th.

DURING January, the transport tax received at Shimbashi Railway Station amounted to yen 2,887.56.

It is reported by a telegram from Sapporo that five cases of small-pox appeared on Feb. 6th at Muroran.

THE steamer *Kissho Maru* has been converted into an hospital ship, and left Ujina on Feb. 6th for the front.

THE production of "The Sleeping Beauty" by Yokohama amateurs last Wednesday was a pronounced success.

H. I. H. PRINCE EUI-CHIN, who has been studying in America, returned to the East by the last Canadian Mail steamer.

MR. S. TSUKAMOTO, Councillor of Fukui prefecture, has been appointed to the same post in Kanagawa prefecture.

A MATSUYAMA telegram says that the Buddhist temple, Raikwoji has been prepared for the accommodation of the Russian prisoners. As the building is situated in the village of Miyaki, near

the well-known hot springs, the sick and wounded it appears, will be removed there.

It is reported that the Korean Post and Telegraph office at Chemulpo has been destroyed by fire. Incendiarism is suspected.

ABOUT 3.30 a.m. on Feb. 5th, a severe shock of earthquake was felt at Hamamatsu, Gifu, Kyoto, Otsu, Maidzuru and other western cities.

It is reported by telegram from Shanghai that about three hundred Russian officers from Port Arthur intend to proceed to America via Japan.

DURING a gale, some fishing boats capsized on Feb. 1st off the district of Yuri, Akita prefecture, with the result that thirty fishermen are missing.

REAR-ADMIRAL SHIMASAKI, who had been ill, passed away on Feb. 2nd in Tokyo. Previous to his death, the Emperor promoted him to the Junior Fourth Rank.

It is reported by Tokyo papers that £900,000 of the second war loan bonds issued in London will shortly be delivered to the Japanese Government through a syndicate.

MR. ITO, Grand Master of the Board of Ceremonies, and Lieut. Colonel Nagayama have been decorated by the Kaiser with the First Class of the Hohenzollern order.

Six hundred Russians arrived on Feb. 4th at Ujina from the front and have been removed to Hamadera. The families of two prisoners at Matsuyama have arrived there.

THE Minister of Communications has notified that the lights and buoys and beacons in Tsugaru Strait and neighbouring places may often be extinguished to suit military necessities.

LOCOMOTIVES imported from Germany were tried on Feb. 4th between Shimbashi and Omori. Count von Arco Valley, German Minister, was present. The trials all proved successful.

ON February 6th, Major-Generals Fujii, Iida, Arai, Yamauchi, and Manabe were promoted to be Lieut.-Generals, and Colonels Ishida, Ishibashi, Amada and Ishihara to be Major-Generals.

VISCOUNT YOSHIKAWA, Minister for Home Affairs, on February 3rd, granted a permit to Dr. Neil Gordon Munro, No. 91, Bluff, Yokohama, who had applied for papers of Japanese naturalization.

A PASSENGER train and a freight train on the Nippon Railway collided on Feb. 3rd at Omiya station, the result being that one passenger was injured. The cause was the negligence of a pointsman.

EARLY on the morning of Feb. 4th fire broke out at Utsunomiya, destroying 22 houses. The cause arose from sparks left in a bath-room belonging to a tailor named K. Tetsuka, residing at Kiyosumi-cho.

A TELEGRAM from Shimomoseki reports that the steamer *Kyoto Maru* went ashore on the morning of Feb. 4th in the neighbourhood of Ainosima, Chikuzen province. Measures for floating her are being carried out.

T. OKADA, a farmer, residing at the village of Kano, Tottori prefecture, who was sentenced on February 15th 1904 in the Matsue District Court to death on a charge of robbery and murder, has been executed.

THE War Department has received a telegram from the commander of the garrison at Dalny that the place has been renamed Dairen and that the

new appellation will be enforced after February 11th. It may be added that the new name is pronounced by the Chinese Talien and that the 11th of February is a Japanese National Holiday, *Kigenetsu*, celebrating the coronation of Jimmu Tenno.

It is unofficially reported that England will retain Wei-hai-wei, holding that the fact of the Russians maintaining a claim to Port Arthur constitutes a theoretical occupation sufficient to satisfy the terms of the British lease.

MR. S. H. KUHN has been formally entered in the law records of the Tokyo Appeal Court and the Yokohama Local Court as a *tasosha*, or person who, in absconding, is eluding the ends of justice. His bail of 3,000 yen has been estreated.

I. KIRAGUCHI (51), a rice merchant, residing at Aioicho, Honjo, Tokyo, on the night of Feb. 3rd, murdered his wife named Hisa (24) by inflicting fatal injuries on her with a sword, and then committed suicide by cutting his throat with the same weapon. The cause was jealousy.

MR. KOREIYO TAKAHASHI, Vice-Governor of the Bank of Japan, who lately returned home from London on temporary leave, is again to start abroad on the 17th inst. During his short stay in Tokio, he received, among other honours, the appointment of life member of the House of Peers.

It is reported by a passenger from Port Arthur that some two thousand Russian invalids have been landed from three hospital ships in the harbour. They were removed to the Japanese field hospitals. At Port Arthur dysentery and small-pox are very prevalent among Russians and Chinese.

N. KUSANAGI (23) employee of a merchant named Y. Takada, residing at No. 27, Ishikawa, Rokuchome, Yokohama, attempted to commit suicide at 8 a.m. on Friday (Feb. 3rd) by injuring himself in the throat with a revolver in the godown of his employer. He was removed to the Yokohama Hospital. The cause was insanity.

T. KAMIYA (39) and Y. Kibota, residing at Asakusa in Tokyo, were sentenced on Feb. 2nd in the Tokyo District Court to fines of yen 795 and yen 500 respectively on a charge of having clandestinely manufactured saké. The same day Mr. K. Makino, a graduate of the College of Science, was prosecuted on a similar charge.

MASA, the wife of a merchant named Yamada, residing at Noge, Yokohama, who was suffering from slight brain disorder, on the morning of Feb. 7th killed her infant by inflicting fatal injury in the throat with a knife. She also injured her husband who tried to prevent the crime. The woman was temporarily detained in the Tobe police station.

VICE-ADMIRAL MISU and Rear-Admiral Takekuni who are now in Tokyo will shortly leave for the front. The *Fiji* reports that the former has been transferred from the Second Squadron to the First Squadron as Commander-in-Chief and the latter, who had been Commander of the cruiser *Iwate*, is now promoted Commander-in-Chief of the Third Squadron.

THE *Hochi* has a telegram from Hiroshima that Lieutenant T. Nogami, of Navy, attempted to commit suicide by cutting his throat with a sword while on a train which left Onomichi at 3.27 a.m. on February 7th. He was on his way to Tokyo and the affair was discovered when the train arrived at Fukuyama. The officer was removed to hospital. His condition is very serious.

## AD CLERUM.

"No class in the community is more exposed to the faithful dealing of candid friends than the clergy of the English Church," says a *Times* critic dealing with the recently published "Diary of a Church-goer." "Men criticize statesmen, it is true, especially those of their own party and especially when the party has been long in office; but they do so with a tolerance born of the comfortable certainty that the 'ins' will in due course be the 'outs.' The clergy, on the other hand, form a ministry that never resigns, and never runs the risk of 'heckling' on the platform. The individual withers, but the Church is more and more. So, though the clergy are not the Church, their perpetuity as a body tends to make criticism more desperate than edifying, more concerned with the particular parson's idiosyncracies than with the relation of his teaching to the needs of the taught. And the end of these things is a death to all confidence between pulpit and pew. The pew will not tell the pulpit what it craves to hear, and the pulpit with dogged tenacity either keeps the pew to the old lines when it desires new, or bids it alter its fashioning before it is ready for the change."

The present unfortunate condition of affairs in the Anglican community of Yokohama, as revealed by the recent public meeting of seaholders and the flood of letters which has since inundated our columns, lends additional weight to the opinions enunciated above. There are no sadder or more unedifying spectacles in modern life than the thrashing out of family quarrels and the airing of religious squabbles in the columns of the daily or weekly press. Both are unseemly, both can serve no good purpose by seeking such a channel of publicity. There can be little doubt that the disputants in a religious controversy are actuated by the highest motives according to their lights, though unfortunately, neither will allow this to the other, and consequently we see charges of baseness and low morality laid which make the judicious grieve and the unbelieving scoff. When we remember that the Anglican church of the present day is the outcome of one long series of compromises, surely it is not too much to ask its adherents to abide in the counsels of their forefathers and agree to the wholesome principle of "give-and-take." The writer of the "Diary of a Church-goer" is one of those, if we mistake not, who follows this golden rule. He belongs to that increasingly large class of Church-goers who are conscious that they are not Churchmen in the sense that Liddon, Pusey, or Wilberforce were Churchmen. As *The Times* reviewer says:—"He does 'not accept every article of the Apostles' Creed or of the Creed of Nicaea.' It is long since he partook of the Holy Communion, though there was an Easter Day, of which he writes, when 'he might have remained quietly in his corner during the office,' if his sense of the indescribable beauty of the Easter Psalm had not been dissipated by the *Quincunx* cult, which made it seem that 'the rest of the morning service was covered for him with a pall'; so that he escaped at the customary break to get out again into the clear spring sunshine." There are other details that trouble him, such as 'the cursing Psalms,' though he admits that some Psalms 'climb to heights that have never been exceeded.' Yet this man finds peace for his soul in attending the services of the Church of Eng-

land and does not go about to stir up discussion because all that is done within the four corners of the Prayer book, as interpreted by the latter-day clergy, is not according to the way in which he would have it done. The trivialities and unessential of ritual he passes by as things of little moment as compared with the glorious truths of the Gospel message which it is the great privilege of the clergy to convey to their people day in day out through the whole period of their ministry. In one beautiful passage the diarist makes this clear:—

"The story is quite familiar to us. We supply the sentences beforehand as the reader proceeds. Yet it has happened—one knows not how—it will doubtless happen again—one cannot tell when—that, as the verses follow one another, suddenly out of the well-known story there comes a strange, thrilling sense of heights and depths never before scaled or plumbed. Something in ourselves, something, it may be, in the voice of the reader, on sunny mornings, in country churches, when the scents and sounds of summer come through open windows, in the equable atmosphere of some vast minister, when the words spoken at the lectern are encompassed with stillness—under all varying circumstances, defying calculation and explanation—the new comes out of the old, the passion out of the commonplace, and we say within ourselves, 'This thing is of God.'"

Cannot something of the same broad clarifying spirit be imported into our midst so that an end may be set to the present distressful era of unedifying bickering? Concessions surely can be made by either side, for both profess to serve a Master who above all things was meek and lowly, and who won his disciples by gentleness in word as well as in deed.

## VLADIVOSTOCK.

A British steamer, the *St. Anthony*, entered Moji on the 5th instant having left Vladivostock on the 2nd. She had cleared from Cardiff on the 15th of November and she reached Vladivostock on the 18th of January, having escaped Japanese observation by passing through the Soya Strait. Her people say that at the time of her departure there were 2 British and 4 German vessels in Vladivostock. The ice outside the port was 18 feet thick, and the ice-crushers were constantly at work. Owing to the ice, however, some of the mines placed by the garrison had changed their position, and access to the harbour was consequently very dangerous. Two German ships had been injured owing to this cause, and three men among their crews had been killed. There were 35,000 troops in garrison when the steamer left. They were much dispirited by the news of the fall of Port Arthur, followed as it was by intelligence of the disturbances in Russia and the repulse of Gripenberg on the Hun. All hope of restoring the situation seemed to have been abandoned. A number of the non-combatants had taken passage by a German steamer to Possiet Bay, and the heavy guns at the latter place had been dismounted and shipped by the same vessel to Vladivostock where the main defence will be made. It is conceivable that this strategy may be responsible for the withdrawal of the troops hitherto engaged in raiding north-eastern Korea. These troops are reported to be destroying the telegraphs and burning their stores. They are concentrating at Kyongsong. Rumour alleges that they were much delighted at being withdrawn, which is very probable, for service in this part of the field must be arduous work in the depth of winter. Kyongsong is very far north. The next stage for these Cossacks will be to cross the Tumen.

## THE "HONGKONG MARU" AND THE "NIPPON MARU."

We do not hear anything now-a-days of the doings of these auxiliary cruisers. They furnished at first a striking illustration of rumour's magnifying glasses, for they became a whole squadron of fighting ships, and while Admiral Kanimura was listening to the cheers of crowds in the streets of Tokyo, he was represented by European and American journals as leading a fleet of battleships and cruisers towards the Red Sea. It is really wonderful that such statements could have found credence among intelligent men, but they certainly did find it. As for the *Hongkong Maru* and the *Nippon Maru*, they are doubtless in constant communication with the Naval Department in Tokyo. Shanghai represents them as having steamed as far as the entrance of the Red Sea and as having approached within sighting distance of one of the Baltic Squadrons, but we do not see what Shanghai can know about the matter. At all events what is plain is that a fleet moving at the snail's pace adopted by the Baltic invites espionage even by ordinary mercantile steamers, and that the movements of Rojestvensky will be regularly wired to Tokyo as soon as he really begins to approach the field of active operations. When that "as soon" will materialize there is now no means of conjecturing, but we recall that the end of January was the date originally assigned even by leisurely calculators for his appearance in Far-Eastern waters, and he seems to be still at Madagascarc on the 8th of February.

## SUPERFICIES.

It must be fresh in the minds of many residents that when the privilege of acquiring the title called "superficies" was first granted to foreigners in Japan, the greatest discredit was thrown upon it, and certain publicists made strenuous efforts to prove that such a kind of land-tenure would be practically valueless. They would not admit for a moment that it could be compared to what are known as "building leases" in England, and they wrote as though the whole institution was a make-shift if not an actual deception. A very complete answer to these scoffers is furnished by statistics which the Government has just placed in the hands of the Lower House. A special committee of the House asked for information about the holders of superficies—not foreigners alone but all nationalities—and the Government delegate handed in a list revised up to March 31st, 1903. From it we take the following facts relating to foreigners only:—

## HOLDERS OF SUPERFICIES FOR PERIODS OF

100 YEAR AND UPWARDS.

	Unlimit- ed.	1000 yrs.	500 yrs.	200 yrs.	100 yrs.	50 yrs.	20 yrs.	10 yrs.
Tokyo.....	2	4	2	1	—	6	—	—
Yokohama...	—	11	7	—	1	14	—	3
Odawara.....	—	1	2	—	—	—	—	—
Osaka.....	14	1	—	—	—	—	—	—
Kobe.....	1	28	9	—	—	—	—	1
Akashi.....	—	4	3	—	—	—	1	1
Nagasaki.....	1	—	3	—	—	—	6	—
Hakodate.....	—	—	4	1	—	—	—	1
Totals....	18	49	30	2	1	20	8	5

From this it appears that 133 foreigners are superficiesaries. It is curious to note their conservatism. Forty-nine have selected the rational period of 1,000 years, but no less than 30 cling to the old-fashioned English term of 999 years.

## GERMANY AND CONTRABAND.

If Reuter be correctly informed, which in this case there is no reason to doubt, certain German publicists are disposed to protest against Japan's reading of international law, though they acquiesced in the incomparably less justifiable reading of Russia. Without having their arguments before us it is impossible to form any definite opinion, but we presume that their contention is the familiar one, namely, articles of commerce are not necessarily contraband because they are consigned to a port of a belligerent. That is true. Even Russia recognises that. For although the Vladivostok Prize Court decided that 5,000 sacks of flour carried by the *Arabia* to a Kobe firm were contraband, the Naval Prosecutor did not attempt to uphold the decision before the higher tribunal in St. Petersburg. But the question of coal and provisions bound for Vladivostok belongs to a wholly different category. Vladivostok is a Russian fortress with a large garrison. All supplies carried thither are obviously for the use of the garrison and for transport thence to Kuropatkin's army. There could not be any clearer case of contraband character determined by destination. We must say, too, that although our disposition is to refrain from ruffling the tender susceptibilities of the Germans, their conduct in this war does not qualify them to make protests on the subject of contraband. The German Government is evidently disposed to obey the letter of its neutral obligations, but the German people are rendering to the Baltic Squadron assistance of the most flagrantly friendly character. Quite a flotilla of German merchantmen are engaged carrying coal for the use of the squadron, and, what is more, they accompany the Squadron and behave just as though they formed an integral part of it. British subjects are not guiltless. By no means. But if any question of degree be admissible in unlawful acts, then the chief responsibility rests with Germany. There can be no hesitation in saying that Germany, France and Spain have been guilty of flagrant breaches of neutrality in connexion with the eastward progress of this Baltic Squadron. The Russian war-ships may not have been allowed to rendezvous at German, French or Spanish ports, though even that point is exceeding obscure, to say the least, at Madagascar. But the colliers accompanying the fleet are permitted to enjoy the shelter of these Powers' ports for any length of time, though their notorious business is to supply to the squadron the one article without which it could never reach the seat of war. It would not be one whit a greater abuse of neutrality to permit Russia to establish stores of gunpowder and ammunition at German and French ports, provided that she used non-combatant vessels to transport the materials from these depots to her war-ships. It is beyond all doubt that Europe's manner of observing its national obligations is not informed by any sense of justice, and that such doings would never for an instant be tolerated were not an Oriental Power their victim.

## GENERAL GRIPENBERG.

It is not easy to share the German view that General Gripenberg's resignation is due to his failure at the battle of Heikautai. He is subordinate to Kuropatkin. The advance of the Russians against Liaoyang from the west bank of the Hun must have had the

Commander-in-Chief's full approval; must have been planned with Kuropatkin's knowledge and carried out with his connivance. If the attempt made by Kuropatkin to turn the Japanese flank from Penhsihu was warrantable, then this attempt made by Gripenberg's army was at least equally warrantable. Indeed, as between the two, although Gripenberg took the greater risk, it seems probable that success in his case would have been proportionately signal. At all events no one can imagine that fully one third of the forces at Kuropatkin's disposal were sent out upon a great expedition of the kind without his full consent. The only perplexing feature of the affair is that no effort was made to second Gripenberg's essay by active blows in other parts of the field. The interpretation of that, however, seems to be, not that Kuropatkin disapproved of the adventure and was indisposed to promote it, but that the head-quarter's programme was to make the operations against Oyama's front and right dependent on the issue of the turning movement against his left. Most assuredly if Kuropatkin allowed a hundred thousand men to be marched out and thrown against the Japanese left contrary to his own judgment, then his unfitness to be Commander-in-chief is incomparably more conspicuous than Gripenberg's unfitness to be his subordinate. The truth is probably on the surface. General Gripenberg had an attack of apoplexy before he left for the front and much surprise was expressed that under the circumstances he should have proceeded to his post. The probability is that he has had another stroke and is quite unfit for work.

## THE MINING LAW.

It is now explained that the opposition to changing the Mining Law in the sense of extending its privileges to individual foreigners as well as to foreigners organized as a juridical person, is due not to any conservatism or any objection to placing aliens on the same footing as natives in these matters, but to the fact that a conflict of law will result if land-ownership be permitted to foreigners in the matter of mines only and denied to them in other directions. The Peers, who are supposed to be averse to any alteration of the present regulations and who would therefore leave the Government Bill unamended, are understood to argue in that manner. They are quite willing to vote for abolishing all restrictions upon the acquisition of real estate but they object to abolition in one respect and retention in others. The result is that the amendment proposed by the Progressists is not likely to be carried this session. It must be admitted that the explanation is plausible, but in the meanwhile we are reminded of the old Oriental saying that while doctors differ the patient dies. The upshot of all this academical care for uniformity is that the impasse remains, and now just at the time when Japan needs all the foreign capital she can get to recoup the unproductive outlays she is making, the avenues to its inflow are closed because to amend one law would require the amendment of another also. That is not practical. Public opinion, if we may judge from the newspapers, is universally in favour of extending to foreigners the privilege of land-ownership. We can not find one leading journal that adopts an illiberal attitude towards the question. It is hard, therefore, to understand why there should be any further delay.

The *Shogyo Shimpo's* opinion is that if

foreigners were granted full mining privileges, it is to Hokkaido they would chiefly turn. As a matter of fact, says that journal, immense areas of mineral-bearing land are already in the hands of Japanese capitalists, though no active steps are taken to exploit them. Throughout the whole empire the area of such lands, if coal alone be considered, is 2,150,000,000 *tsubo*, out of which total a pretence of working is made in the case of 2,100,000,000. In Kyushu it is probable that all the really paying coal mines are already in operation, but such is by no means the case in Hokkaido. There there is an area of 350,000,000 *tsubo* where trial borings are supposed to be in progress, and another area of 45,000,000 *tsubo* over which permits have been granted though nothing is being done. It is to the coal industry of Hokkaido that foreign capitalists are most likely to turn in the *Shogyo's* opinion. At present the development of coal-mining in that part of the empire is greatly impeded by want of transport facilities. The only available railway is that belonging to the Tanko Company, and since the Tanko Company owns mines as well as the railway, it will not carry mineral for competing mine-owners. The *Shogyo* urges that the railway should be nationalized so as to remove this obstacle at all events.

## ADMIRAL TOGO.

Admiral Togo left Tokyo on the 6th by the 4.30 p.m. train from Shimbashi. His immediate destination is Kure, but of course there is no statement as to his ultimate bourn. It is noticed by Tokyo journals as somewhat remarkable that the Admiral set out from Sasebo in 1904 on the 6th of February, and he now leaves Tokyo on the 6th of February, 1905. We need scarcely say that the leading journals of the capital assure him that he carries with him the nation's good wishes.

Admiral Togo's train called at Hiranuma Station, Yokohama, when Governor Sufu, Mayor Ichihara, and representatives of various bodies attended to say farewell to the Commander-in-Chief of the Combined Squadron. The station was filled with a crowd of citizens who tendered emphatic *bansais* while bands played selections. The Governor and Mayor on proceeding to the Admiral's carriage congratulated him and wished him *bon voyage*. The great sailor briefly returned thanks for the profuse sympathy of the citizens. The president of the Shohai-Gikwai presented the admiral and his staff officers with some articles, including cigars, etc., and the Ladies Patriotic Society gave a basket of beautiful flowers. After a stay of about four minutes the train left for Kobe.

## THE NEXT LOAN.

Steps are now being taken by way of preliminary to the floating of a fourth domestic loan. On the 13th instant consultations are to be held with leading bankers of the three principal cities. It is said that there are two views in business circles. One is that the bonds should carry 6 per cent, that their issue-price should be 90 *yen*, and that their period should be 7 years (or 5). The second is that the interest should be 7, the period 7 years and the issue-price par. It is expected that a compromise will be effected at 5 per cent. interest and an issue price of 92 with a five-years' period. The large commissions of one per cent. paid to the bank on previous occasions will probably be greatly reduced.

## THE "NOVOYE VREMYA."

The following appears in the *Novoye Vremya* of December 7th:—

## THE PROVISIONING OF PORT ARTHUR.

Mr. Ginsburg, the agent of the Marine Department for the supply of all necessities to the fleet in the Far East is at present in St. Petersburg. Mariners have told me marvels of Mr. Ginsburg's activity; Gromof on shore and Ginsburg at sea is what they say. Ginsburg's role is, however, a considerably wider one than Gromof's, and the carrying of it out is far more difficult, as to his lot falls the supplying of all necessities to Port Arthur cut off on shore and blocked at sea. I had heard so much of the daring running of the blockade by Mr. Ginsburg's vessels that I betook myself to him in the hope of hearing something of interest. The interest was doubled by the fact that Mr. Ginsburg spent some twenty years in Japan and left Yokohama a few days before the declaration of war.

In conversation with me, Mr. Ginsburg showed some reserve in regard to his methods of provisioning Port Arthur.

Yes; my steamers have run the blockade several times and they may do it again, so I should prefer to postpone our conversation under that head till the arrival of the second Pacific squadron in the Far East. When we have command of the sea, I will tell you a lot of interesting things about the blockade and the running of it; to speak about it at present might entail disagreeable consequences for me.

Mr. Ginsburg then spoke willingly about Japan and the Japanese and their relations with us before the war.

Did you really expect that there would be war?

Did I? Why the Japanese began to get ready for war immediately after the China war; they could not forgive us for taking Port Arthur from them. All we Russians living in Japan clearly perceived these preparations but only did not know what proportions they had assumed, but our military agents undoubtedly did. Our naval attaché, I know, wrote to St. Petersburg about these preparations. Two or three months before the beginning of the war the Japanese did not conceal their preparations, a fact I had, many a time, the opportunity of convincing myself of. I had to despatch to Port Arthur some large supplies of coal, canvas and other goods, which are generally purchased in Japan. Up to October 1903, I bought everything without the slightest hindrance, but in November, all the Japanese firms refused to do business with me. Why? I asked—Because we are going to war with you. My position and also that of Port Arthur was a terrible one. To get all that was required from Europe would demand months, and war was expected from day to day. I was saved however and by a Japanese, Mr. — With what object?

He is the owner of vast coal-mines and he sold me about 120,000 tons (7 million poods, more or less). Of course the transaction was unofficial. Mr. — sent his agent to me expressing his consent to sell the coal, but he declared that it was imperative that it should not be sold through the medium of a Russian. He suggested that I should furnish funds to the captains of my steamers and entrust the purchase to them.

I must tell you that I had chartered 15 Norwegian steamers sailing under the Norwegian flag; it was no secret to anyone that the steamers were entirely under my management, but Mr. — apparently thought it would not be so dishonourable to do business with Norwegians.

For me the form had no importance whatever, so long as the squadron got its supply of coal in time, and so it did, although the last portion of the coal from the mines only reached Port Arthur after the first bombardment by the Japanese. Thanks to Mr. — other Japanese merchants began to do business with me through the medium of my Norwegian captains. In this way, I was able to furnish Port Arthur with all necessities, in the requisite quantity and in good time. Openly the Japanese merchants did not sell to Russians, in accordance with the orders of the Government. Mr. Ginsburg left Port Arthur at the time of its investment on the land side, but continues to receive letters from his agents and employees. All the news received by him testifies to the insignificance of the decrease in the number of officers. Typhus it appears is more dreaded than explosive shells.

I asked my companion to what extent the garrison was provided with warlike stores, provisions and warm clothing.

With regard to the supplies in the fortress of defensive material, I am not competent to give an opinion; of provisions, there is ample for a very long time. There is no scarcity of clothing as in my godowns and in those of the Volunteer fleet, there is plenty of all kinds. The godowns of the Volunteer fleet are rich and their contents are of all descriptions. There is in fact nothing which they have not got: clothing and materials for making it, tea, sugar, tobacco, matches, even vodka. Smyrnoff sent 10,000

cases of vodka for sale, which arrived in Port Arthur at the beginning of the siege and are still in the godowns.

Of General Stossel, Mr. Ginsburg spoke enthusiastically.

The conversation then turned on Japan and the Japanese. The financial condition interested me greatly.

I fear the expectations of the exhaustion of the finances of Japan will not be realized so soon. It is true that the Japanese treasury is having recourse to foreign loans, but at the critical moment, it would apply to the inhabitants, and get no amount from them. Every Japanese will give all that he possesses. A German calculating what the population can give, put it at two milliards of roubles, (40 roubles per capita). This sum is exaggerated, but we shall not be far from the truth in estimating that every Japanese on an average would give 20 roubles, which would produce a milliard of roubles. And rest assured that the inhabitants will give this sum, as they are convinced of the necessity of the war. For Japan, the acquirement of further territory is indispensable and she is at war with Russia. If she should be unsuccessful, she will begin afresh to make preparations for war, in order to attack the Indian possessions of the French or the English. Mark my words! The English will have some bitter moments to live through and some surprises to receive at the hands of their present Allies.

(sd.) E. V.—EFF.

It will be observed that Mr. Ginsburg speaks under the impulse of an unquiet conscience. He assumes that the post-bellum scheme of increased armaments undertaken by Japan in 1896 was directed solely against Russia, and he assigns as a reason that the Japanese "could not forgive us for taking Port Arthur from them." Why then should these preparations have been against Russia only? Why not against France, or against Germany, which had been Russia's partners in the business of the Liaoting retrocession? But in truth it is like flogging a dead horse to discuss the origin of this war. The whole civilized world is agreed in placing the responsibility on Russia's shoulders. Never in all history has there been such a complete consensus of opinion as to the guilt of a belligerent. Concerning Japan's preparations, the only comment is that had she not made them Russia's aggressions would now be assuming overwhelming dimensions. To blame her for getting ready her defensive weapons is like condemning a householder for locking his door when burglars are on the prowl.

## DEATH OF LIEUT.-GENERAL MATSUMURA.

Tuesday, February 7.

Lieut.-General Matsumura's malady has nothing to do with wounds. He had a stroke of apoplexy when travelling to take up his duties at a new post. We gather that the end came speedily but it is not yet announced. Lieut.-General Matsumura was educated in the Kyodo-dan, a military school for the training of non-commissioned officers of the Osaka Division, and in 1872 was promoted sergeant, and the following year, sub-lieutenant. During the Satsuma rebellion, he was commander of the Third Company belonging to the Second Brigade of Infantry, and fought at Tawarazaka, Kumamoto, and other places. In 1887 he was promoted Major and appointed staff officer of the Sendai Division. In the Japan-China war he was chief staff officer of the Sixth (Kumamoto) Division which formed part of the Second Corps, and he fought at Hushan (near Talien bay) and Wei-hai-wei. After the fall of Port Arthur he was promoted Major-General and appointed commander of the Second Mixed Brigade of the Formosan garrison. When the present war began he was Commander of the First Brigade of Infantry and participated in the battle of Nanshan under General Oku, and later he commanded a detachment of the besieging

army under General Nogi. On July 10th he was promoted Lieut.-General and appointed Commander-in-Chief of a division. On Feb. 5th, appreciating his meritorious services, the Emperor decorated him with the Third Class of the Golden Kite and the First Class of the Rising Sun with the grand cordon, and promoted him to the Junior Third Rank.

Wednesday, February 8.

Lt.-General Matsumura's death is now announced. He died at Port Arthur, having been struck down by apoplexy just at the time when he was about to start for the north. He was only 54 years of age, but he had led a most strenuous life, having begun his fighting in the Fushimi battle when his years were only 16, and continued it in the Satsuma rebellion, the China-Japan War, the Formosan campaign and the present war. But rumour says that he had undermined his constitution by too free indulgence in that most insidious beverage, Japanese sake.

## THE NEW GERMAN ORGAN.

It is stated that the *Japan Herald* has become a German organ, having been purchased by a syndicate of German residents. That is a wise measure if the Germans desire to make their views known in British circles where a newspaper published in the German language necessarily finds few readers. Presumably its new character informs an article appearing in our contemporary's issue of the 7th. The article is based on Reuter's telegram relating to uneasiness in German shipping circles regarding the seizure of Hamburg vessels bound with contraband to Vladivostok, a telegram which our contemporary condemns as a compound of news and comment, and describes it as "unreliable and one-sided." It is noticeable, however, that the *Japan Herald* wholly ignores the most important clause in the telegram, namely that German shippers are now protesting against the Japanese interpretation of contraband. Upon that clause we made some remarks and they have elicited from the *Japan Herald* its familiar charge that we are anti-German, that we are "merely actuated by race prejudice," and that we "welcome any statement, however vague and unreliable, which gives us an opportunity of venting it" (i.e. the prejudice). Such charges, coming from the *Japan Herald* in the original character would not have attracted any attention, but if they indicate the spirit in which the new German organ is to be conducted, neither the cause of Germany nor the cause of good fellowship will be promoted.

## NAVAL CASUALTIES.

The total number of deaths in the Navy from the outbreak of the war until the 31st of December was 1,758, of whom 1,472 were drowned at the sinking of vessels by mines or collisions, &c.,—the *Hatsuse*, the *Yoshino*, the *Saiyū*, the *Heiyei*, &c.,—so that the number actually killed in action was only 286. The wounded aggregated 1,154. Among these 88 died of their hurts; 899 recovered and are again serving; 23 have been released from duty; 130 are in hospital, and 14 are receiving treatment on board. These 88 deaths are said to have occurred mostly in cases which were hopeless from the first. Only 12 deaths occurred among patients duly admitted to hospital under all favourable circumstances. This result is regarded as very remarkable considering the generally serious character of gun-shot wounds.

## KOREA.

Monday, February 6.

There was a large conflagration in Seoul opposite the Palace on the night of the 1st.

The Korean Government has agreed to grant a mining concession to an Italian syndicate. The place has not yet been selected, but the conditions are said to have been very carefully drawn up with the advice of Mr. Stevens.

The Russians continue to retreat northwards in Korea. It is stated that they are burning their stores in Songchin, which of course means that they intend to abandon that place. There is a conjecture that the news of the fall of Port Arthur is responsible for this retrograde movement.

The particulars of the First Bank's loan to the Korean Government are published. The amount is three million yen; the rate of interest 6 per cent., payable semi-annually; the period, 6 years for half the money, 10 years for the remaining half, with the stipulation, however, that payment may be made at any earlier date which suits the convenience of the borrower. The customs revenue is hypothecated, the Bank acquiring a prior claim on it.

The agreement to engage Mr. Maruyama as police adviser to the Korean Government has been concluded.

Friday, February 10.

From the terms of the First Bank's agreement with the Korean Government it is evident that the Bank is to be, in effect, the State's banking institution. It is to receive and pay out the proceeds of all taxation, no interest being allowed on money thus deposited. On the other hand, the Government is to be free to over-draw its account by 300,000 yen, without interest. On any excess over and above that sum 6 per cent. interest must be paid, and such excess must never be more than one million yen. With regard to the 3 millions lent by the Bank to the State, this money is to form a fund for purposes of currency adjustment, and will consequently remain in the keeping of the Bank, since all financial arrangements are to be entrusted to the latter.

Subsequently to the China-Japan War many outrages were committed against the persons and property of Japanese subjects in Korea. On each occasion due claims for compensation were presented, but the Seoul Authorities postponed their settlement on one pretext or another. Now, at length, satisfaction has been given. The Emperor of Korea has "donated" a sum of 183,750 yen in full settlement. There seems to have been some "face-saving" idea in the formula used to describe this transaction but that is a point of small moment.

Little is heard now from the Hanchang region, that is to say from the extreme right of the Japanese position on the Shaho, though the Russians recently showed considerable activity there. An officer who has just returned is quoted as saying that from the indications observable the enemy seems to be apprehensive of a wide turning movement on the east, and that his apparently strenuous and even offensive tactics in front of Fushun are prompted by that fear. He is said to have chosen his advanced positions skillfully, but this officer alleges that the Russians suffer much at the hands of the Ichun (righteous army); that is, Chinese who have been driven by Muscovite excesses and depredations to form themselves into a band of guerilla braves.

## KUROPATKIN.

The *Hochi Shinbun's* London service of telegrams—a new institution upon which we congratulate our contemporary—says that there is a movement in St. Petersburg to secure the recall of Kuropatkin. If that be true it will be a blow to "Calchas" and others of his creed, who hold that the whole of the strategical laurels of the war rest on the brows of Kuropatkin and his generals, not one solitary spray being the duly earned property of the Japanese. "Calchas" is generally a lucid writer, but he has wholly failed to explain the grounds of this appreciation, and inasmuch as it is a novelty to be told that a general who has never won a single victory throughout a year's fighting and who has suffered numerous defeats, is an illustrious strategist, we want to hear some reasons before endorsing the strange doctrine. Moreover, if the *Hochi's* news be correct, St. Petersburg is not deceived by fabulous accounts like that recently published by General Dessino in Shanghai with reference to the battle of Heikautai. We gather from another telegraphic summary of Dessino's tale that he seeks to invest the combat with the character of a reconnaissance in force, and as troops generally retire when they have completed a reconnaissance, the story thus acquires at least the redeeming feature of coherency. But what a story it still remains! However, no intelligent man in Russia is deceived. We should be sorry to see Kuropatkin recalled; sorry for Japan's sake since we doubt whether she can hope to find a better General from her point of view. But we certainly should not be surprised.

## PRISONERS.

The *Asahi's* correspondent sends an interesting statement made by some 30 Russian prisoners whom the Japanese captured on the 27th of January at Liutiaokau and Likiaowopeng in the Battle of Heikautai. These men said that they belonged to the Fifth Brigade of the Rifles, and that they had left Warsaw about 2 months previously, arriving at Mukden on the 9th and 10th of January. After 2 or 3 days' rest in Mukden they were despatched to the front by Kuropatkin's orders. Thereafter, until the time of their capture, they had never once been under the cover of a roof. All day and every night had been passed in the open. (It should be noticed here that these prisoners are said to have been well supplied with warm clothing). Three regiments of the Brigade, the 17th, the 19th and the 20th, had originally been in the fighting line, the 18th Regiment being held in reserve. But when the battle became fierce on the 27th and when the Japanese had been re-inforced, this reserve regiment also was moved up. The Russian troops engaged in the Battle of Heikautai consisted of 4 brigades from each corps d'armee, and this force cooperated with Mischenko's Cavalry Division. The 18th Regiment, to which, apparently these prisoners belonged, had been carried from Mukden in three trains. (From this it would seem that the new line said to have been built by the Russians from a point south of Mukden westward to the Hun was utilized, as was subsequently conjectured, for the purposes of this flanking movement.) At the time of the regiment's leaving Mukden 5 or 6 trains were arriving there daily from the north. The Russians had found the rifle and gunfire of the Japanese to be terribly accurate. One of their com-

panies had lost its two officers and been reduced to 30 effectives. The bursting force of the Japanese shells was much feared by the Russians and caused cruel havoc in their ranks. It was the habit of Russian officers to send their men forward into the zone of danger, but to remain themselves at some distance behind, under the shelter of the trenches or in some more or less covered position. Thence they issued their orders, which necessarily did not reach their troops effectively. These prisoners claimed that they had endeavoured to do their duty faithfully, but that they were wholly dispirited whenever they looked back and saw themselves unaccompanied by "friends or officers." Therefore they had surrendered. They said that their daily food consisted of some black bread, one quarter of a pound of meat—half a pound was requisitioned but the men only got a quarter—and a modicum of vegetables.

The *Asahi's* correspondent adds that most of the prisoners made identical statements. They abused their superiors and praised the Japanese, but it was hard to tell whether they spoke the truth or jested.

The *Jiji Shimpō*, speaking presumably on official authority, says that the number of Japanese made prisoners at the Battle of the Shaho—not the recent Battle of Heikautai—was 48. Of these 11 were unwounded and 37 wounded. Among the latter one died at Harbin and 36 are in hospital there. Our contemporary prints the names of these prisoners.

## THE TALK OF PEACE.

Little credit appears to be attached in Tokyo to the rumour of peace sent across the wires by the *Jiji Shimpō's* London correspondent. The *Jiji* itself dismisses the story as unworthy of serious notice. It admits that the interior condition of Russia must inspire a wish for peace in the breasts of many Russians. Above all, if there be truth in the last news received telegraphically that the police and reservists in Siberia have raised a rebellion. For the distribution of the population in Siberia is such that any disturbance there, especially a disturbance fomented by policemen and reservists, would immediately touch the railway and thus tell directly on the supply of troops and provisions to the Army on the Shaho. It is very plain that all the steamers now endeavouring to make their way to Vladivostok must have some purpose over and above the supply of munitions to the garrison, and if in addition to this last sea-route being closed to him, Kuropatkin finds the Siberian Railway also breaking down, his situation will be indeed embarrassing. But as for peace, the *Jiji* does not anticipate it in the near future. Russia has a big army on the Shaho; she has a big squadron on the sea; she has Vladivostok still in her possession, and she has in her own country elements of disturbance which an inglorious peace might make terribly formidable. The time has not come for her to speak with her enemies in the gate, and those enemies would be most unwise if they allowed any talk of peace to influence their manner of prosecuting the war. The *Nichi Nichi Shimbun's* view is that Russia is halting between two stools. It is not to be believed for a moment that she seriously contemplates peace at this moment; least of all that a proposal for peace should have come from the war party, whose leaders are the Grand Dukes. Were the Tsar a man of great moral strength, he might put down his

foot and insist upon the vigorous pursuit of some definite policy. But it would seem that his invertebrate mind constitutes one of the drifting factors of the hour. Appearances are kept up. Big sums are borrowed in Paris; there is loud talk of a third Squadron, and Europe hears much about the despatch of troops to the front. But through it all a thread of indecision can be seen running. Nevertheless, peace is not in sight. There is much fighting to be done still. That is the *Nichi Nichi's* view, and the *Nichi Nichi* is now directed by a statesman whose opinion on any subject of foreign policy must command high respect.

#### NOTES ON CURRENT EVENTS.

It will be remembered that some time ago the Japanese authorities released 29 Russian prisoners, some of them on account of age, some because they were maimed and unfit for further service. Apparently these prisoners, whose feeling ought to have been one of unalloyed gratitude, consented to be the sereet conveyors of letters greatly libelling the Japanese and preferring very false charges against them in connexion with their treatment of prisoners. All the leading Tokyo journals refer to this matter, and publish a detailed refutation furnished by Japanese officers. There does not seem to be any reason for entering into the particulars. The Japanese are evidently surprised that Russian officers should have been guilty of such conduct as this abuse of Japanese leniency displays, and they take pains to combat the accusations seriatim. But the broad fact is sufficiently eloquent; the fact that the prisoners are accessible to all the world and that their actual condition and treatment are not matters of conjecture but have been accurately ascertained by many eye-witnesses. Doubtless there are among the officers some who, being accustomed to such a life of luxurious self-indulgence as rumour has again and again depicted, find existence as prisoners of war in a foreign country somewhat monotonous and difficult to endure. But all the most trustworthy testimony goes to prove that the Japanese are behaving in this matter with the utmost kindness, and as between the two combatants the credit of having been strictly guided by civilized principles in conducting the war, undoubtedly belongs to the Japanese. Among about thirty thousand Russian prisoners it is inevitable that there should be some malcontents, and even some unscrupulous men who, having shown themselves comparatively worthless as soldiers, are now seeking to fight with weapons of falsehood and slander. That can not be helped. Happily the world's judgment has already been formed.

Very severe sentences have been passed on Lieut. Milsky, a naval cadet and four privates who have made repeated attempts to effect their escape from their place of detention at Matsuyama. They were given the option, finally, of being tried by court martial or of taking an oath not to make any further attempts. They chose the former, and the result is that Milsky is condemned to 15 years' imprisonment, the naval cadet to 11 years, and the other four to 1 year each. This means that the two officers, at all events, will remain in prison until the end of the war, when, of course, their release will follow in the ordinary routine. They appear to have behaved with much violence, and evidently the only way to preserve order among such a crowd of prisoners as

the Japanese have now to look after is to adopt stern measures for repressing insubordination.

The Emperor of Russia has caused profound astonishment in Japan by his statement to the deputation of workmen whom he received at his palace. He told them that they had been deceived by their country's enemies. It was indeed quite sufficiently astounding that the police authorities of Moscow and Odessa should resort to such a device for quelling a disturbance with which they found themselves incompetent to deal by legitimate methods. Few Governments have been obliged to resort to a manoeuvre so flagrantly false, and the Russian Government is to be pitied as much as condemned. But what total indifference to the dictates of dignity the Tsar displayed when he too used this falsehood towards the workmen's deputies! Either His Majesty believed what he said, in which case he must be singularly shallow; or else he did not believe it, in which case he must be singularly unscrupulous. Leading Japanese journals arrive at the conclusion that no device is too humiliating for Russians to employ in moments of extremity.

The officers and crew of the *Bawtry* have been released. They consist of 6 Englishmen, 1 German, 1 Swede and 24 Chinese. The fate of the vessel and her cargo is still under consideration by the prize court at Saseho.

The *Fiji Shimpō* reports that Viceroy Chang has ordered to be built at the Kawasaki Docks in Kobe 6 shallow-draught gunboats for service in the Yangtze and 4 second-class torpedo-boats. The gunboats are to cost 455,000 yen each, and the torpedo-craft 300,000 yen. It is added that the agreement was recently signed at Wuchang.

The Bijo S.S. Company's steamer *Musashino Maru* was lost on the 3rd instant at the Haiyang Islands. This vessel was originally the British steamer *Hindustan*. Her displacement was 2,978 tons.

The death has just occurred at Sheerness, England, of Warrant Officer Hoskins, R.N., retired, who came to Japan in 1867 as a naval instructor to the Japanese Navy, being among the first to be lent to Japan by the British Government. Mr. Hoskins had reached an advanced age.

Among nine captured steamers now lying at Saseho, one has in her hold the materials for building a destroyer. It is stated that a member of the crew of this vessel recently conceived the idea of sinking her as she lay at her moorings. He opened her sea-cocks, and his design would certainly have succeeded when some Japanese naval men discovered it in the nick of time.

We read in Japanese journals that the number of officers to whom the military order of the Golden Kite has been granted during the present war is 2,853, thus far, among which total 2,267 belong to the Army and 586 to the Navy. Stated by classes the figures are:—Third Class 10; fourth 121; fifth 885; sixth 119, and seventh 1718. During the China-Japan War the total was 2,172. Naturally a very much larger number will be conferred on the present occasion.

These being the days of February just a year ago when the first operations of the war took place, there is a natural disposition in Japanese newspaper circles to make a retrospect. The *Asahi* epitomizes the

situation by saying, "during these twelve months we have spent six hundred millions on the war, we have paid a hundred millions in the form of increased taxes, we have increased our debt by three hundred millions, and we have sent out half a million of soldiers. Yet we are not at all distressed. In Russian eyes the process of evolution has probably transformed us from the monkeys we were in February 1904 to quite a respectable beast in February 1905."

Soya Strait is said to be now practically closed by floating ice. Details are given by Tokyo journals, but the broad fact is that this avenue of access is closed to vessels steering for Vladivostok, and there now remain only the two gates, Tsushima and Tsugaru. A German steamer recently made her way successfully through the strait, but she apparently had the good fortune to seize the final moment on the eve of the ice blockade.

The following promotions are gazetted:—To be Lieut.-Generals—Major-Generals Fujii, Iida, Arai, Yamanouchi and Manabe.

To be Inspector-General of Hospitals—Inspector-General Baron Hashimoto.

To be Major-Generals—Colonels Ishida, Ishibashi, Kamada and Ishiwara.

A stirring tale of the sea, now more than half a century old, is revived by the news of the death in England of Captain John Castle, who has just passed away at the age of 82. He was the brave master of the transport, *Sarah Sands*, bound from Portsmouth to Calcutta, with 300 rank and file of the 54th Regiment, under Lieutenant-Colonel Moffatt, and a number of women and children. It was on November 11, 1857, that the ship caught fire, and gallant hands volunteered to clear away the barrels of powder from the magazine. Two barrels could not be removed, and as an explosion seemed inevitable, Captain Castle had the boats lowered, and the women and children safely transhipped. The explosion which followed fortunately did not do irreparable damage, and the soldiers and crew, who obeyed the word of command with as much order as if on parade, were mustered forward to escape the fire raging in the stern. Fortunately the ship was of iron, and after superhuman exertions for 24 hours, the flames were got under, and the *Sarah Sands* was a mere shell drifting on the water. Resource and seamanship prevailed in spite of a heavy gale, the women and children were taken on board again, and sail being set, the vessel reached Mauritius without the loss of a single life. It should be added that both Captain Castle and Colonel Moffatt were awarded a special resolution of thanks engrossed on vellum by the Royal Humane Society.

The Japanese press of course comments on the fact that Japan is now entering the second year of the war. It may be said that the general tone is one of strong resolution and entire confidence. Thus the *Kokumin Shimbun* observes that signal as have been the triumphs of the past twelve-month, the half-way house can not yet be said to be in sight, and the Japanese nation must remember the old aphorism that a journey of a hundred miles is not by any means accomplished when ninety have been covered. The *Fiji Shimpō*, after recounting briefly the various successes won since the night of February 8th, 1904, when the torpedo attack against the Russian squadron in Port Arthur was delivered, notes that the

enemy's armies are still in Manchuria, that Vladivostock is still in Russia's hands and that Saghalien has not yet been recovered. The *Chuo Shinbun* considers that from a belligerent point of view, from a financial point of view, and from the point of view of the nation's moral fibre, Japan has to congratulate herself sincerely on the results of the year's doings. Her confidence in her own capacities is now very different from what it was twelve months ago, and her responsibility is correspondingly greater. There will be no flinching; no turning back. The *Asahi's* epigrammatic comment we have already published. It now quotes the *London Times*, which, in an article published on the 6th instant, said that Japan had splendidly emerged from a trial of the severest nature, that she had exceeded the expectations of even her greatest admirers, and that the future has not one source of fear in store for her.

The sudden access of sharp cold experienced in Japan during the past week, has been felt at Dalny also, where ice three inches thick has formed in the harbour, offering no small impediment to shipping operations. We have remarked for many years that the weather in Japan is generally a replica—within limits—of the weather in the Liaotung Peninsula. As for this recent bitter snap, something of the kind invariably accompanies the passing of the great cold. The 3rd of February was the *kan-aki*, that is to say, the end of the maximum cold and the opening of spring. But the days immediately preceding and immediately following the *kan-aki* are always the coldest in the year.

In the *Kokumin Shinbun* we find a statement which reads very like a warning to speculators in coal. Our contemporary says in effect, that the Japanese navy has now all the coal it requires, and even more than it requires. Abundant supplies had been laid in prior to the recent captures of coal laden steamers bound for Vladivostock, and from these an addition of some fifty thousand tons has been made to the stock in hand. Incidentally our contemporary observes that some of the captured steamers have had the fine assurance to claim that they were bound for Japanese ports.

The wolf which recently escaped from a menagerie and created such devastations among the flocks on the Cumberland fells came by a dramatic end. After eluding many hunting parties and packs of hounds he finally tried conclusions with a railway train, and came off worst, being cut in two.

The sun's disc shows at present a spot of unusual dimensions. Its position is near the right-hand rim of the orb in the lower quadrisphere, and it is travelling towards the edge with tremendous velocity. Persons desiring to view the phenomenon should lose no time in bringing their smoked glass into requisition.

Messrs. Nabholz & Co. of Yokohama have called the attention of the Department of Agriculture and Commerce to the fact that the *habutaye* of Kanazawa is noted for shortness of length. Sometimes there is a deficiency of 3 yards in one piece of 50 yards, and much complaint is made by buyers in Europe. Messrs. Nabholz & Co. are said to have expressed strong approval of the recently issued regulation for correcting abuses in the manufacture of this staple, and they suggest that attention be paid to the matter of length. A small margin of

difference is allowable but 6 per cent. passes all reasonable limits. They add that this shortage is actually found in *habutaye* bearing the mark of the Kanazawa examining guild.

The Emperor and Empress have donated a sum of a hundred thousand yen to the non-combatants of the Army and Navy in connexion with the *Kigen-setsu* on the 11th instant.

### SOME FUTURE RUSSIAN PROBLEMS.

(TRANSLATED FOR THE "JAPAN MAIL.")

The following letter signed K. (obviously the initial of the now well-known Captain Klado, *Trans.*) appears in the *Novoe Vremya* of the 8th December under the heading of "The Third Squadron and the Straits."

The mere suggestion that a portion of the Black Sea fleet should be sent to the theatre of warlike operations has called forth a perfect storm of dissatisfaction both at home and abroad. That the passage of the fleet should be displeasing to England is perfectly natural. Nothing that we can do for the good of the State meets with sympathy in England, but a note of harsh and dissonant mistrust in this measure has also been sounded here in Russia. But nevertheless it is absolutely indispensable to send ships from the Black Sea; whatever squadron we may have formed from the remaining ships of the Baltic Fleet, it will not be as strong or as dangerous to the Japanese as a Black Sea one. In the latter fleet there are new ships splendidly armed and well protected, and most important of all, of the same type; these can constitute a homogeneous squadron, an enormous advantage in fleet manoeuvres.

A little while ago, in my article "Is it necessary to send a third squadron?" I mentioned that three battleships, the *Rostislav*, *Kniaz Potemkin* and *Tsarevich*, and the *Tri Svistilna*, and two cruisers, the *Otkhodoff* and the *Kugul*, might be sent from the Black Sea. It appears to me now, however, that once the exit of these ships is decided on, the *Dvenadtsi Apostolov* and the *Gheorgi Pobedonosets* might with advantage be added to the squadron. These ships, carrying a large stock of fuel, more than enough for 2,000 miles, could proceed after some repairs and alterations to their 6 inch guns, repairs which would not demand much time if they were entrusted to some man interested in their quick despatch. The *Gheorgi Pobedonosets* has, moreover, six 12 inch guns, which would be a great advantage in firing at long distances.

If, however, it is unnecessary to send such large reinforcements, the *Dvenadtsi Apostolov* could at least be added to the three above-mentioned battleships, as it would be possible to employ her as a cruiser.

Many objections have been raised to this scheme; the most weighty in the opinion of those opposed to it, being that with the exodus of the Black Sea fleet, the Sea would be in the hands of the Turks, who would immediately become more exacting in their relations with us.

To me this objection has never appeared either a weighty one or even a serious one, for the reason that even the whole of the Black Sea fleet cannot be a menace to the British Mediterranean squadron, which consists of battleships of the latest type. The same may be said in regard to the other suggested enemy, the Americans. Be there eight or four battleships in the Black Sea, it is all the same, as they would have to take refuge in Nikolaief if the English or Americans should decide to take their fleet into the sea. Even if our Black Sea fleet should succeed in taking the Dardanelles or the Bosphorus, it would not be strong enough to engage the monsters of the Mediterranean Squadron, more especially when we take into consideration the fact that on five of the ships of the Black Sea fleet the guns are not quick-firers and to our shame, use non-smokeless powder.

The fleet consequently only constitutes a menace to Turkey, but for that purpose, it is unnecessary to have the whole of it. In the course of twenty-five years, the Turkish fleet has only succeeded in renovating three small battleships of 6,000 tons and in building one of 8,500 tons. These vessels, thanks to the fact that they never go to sea, but lie majestically in the Golden Horn for decades, have no fighting value whatever. They would never risk a fight with the battleships still remaining in the Black Sea of the "Sinop" type.

But enough of this. Nothing hinders us from equipping these vessels with better artillery and armour. If our gun factories are so full up with work just now that they could not do it in four to six months, then the German firm of Krupp, or one of

the French firms would willingly undertake the business. Even better than this, I am firmly convinced that the English firm of Armstrong would undertake the work with the greatest pleasure and we should soon have in the Black Sea a splendid fleet of modernized ships.

The fleet at present in the Black Sea is not needed. As an independent fleet for independent naval operations, it is weak. It could not engage fortifications on shore armed with quick-firing and long-range guns: all the more reason therefore, to modernize it and build new ships.

With regard to England's protests, one may say that they are short-sighted. At present we are fighting on the open sea, on the eastern coasts of Asia and so far away from the English colonies that the distance itself is the best ally for England against us. The picture will, however, be none the pleasanter for her, if we should meet with un-success in the East. We will give up Manchuria, Korea, possibly Vladivostock, but then we shall begin to look for free access to the sea nearer home. We must have it and we shall get it. But where? Either in the Mediterranean or in the Persian Gulf. Will it be pleasant for England if 300 or 400 miles from Bombay, a Russian port should arise with a large harbour and a strong fleet? To this people will say, that this is such a great problem that it will demand a strong policy. Is then our political programme to be marked by such weakness in the future, and more especially after the lesson we have received from Japan, as not to understand that serious problems spread over decades, and that to carry them out, not only must money be sacrificed but also the blood of the people for the good of the country, a good that will be appreciated by posterity.

Japan, as has been said over and over again, began to prepare for war with us in 1895. The programme was marked out, the means were marked out, but nine years passed before they were put into systematic execution. A fleet was built, an army, was created. It is strange that during these nine years, our expenditure on the navy was four times greater than that of the Japanese, but the Japanese fleet nevertheless their's proved itself stronger and better-trained than ours.

It is to be hoped that on the conclusion of the present war, the political problems, and together with them, the creation of the naval power necessary to carry them out, will be treated in a more satisfactory manner and that we shall have no surprises.

One word more in regard to the unprotectedness of the Black Sea in the event of its being entered by an English or American squadron. The solution of this problem rests in the fortifying, or rather the completion of the fortifications of Sebastopol and the construction of a submarine fleet. The Black Sea would appear to have been specially created for such a fleet, as it is enclosed, has a splendid climate for eight months in the year, and would permit, in consequence, of our carrying out as many experiments as we want to, which would remain as great a secret for the rest of the world as the present condition of the Japanese fleet is for us.

### THE SUPREME PRIZE COURT.

Viscount Tanaka, President of the Supreme Prize Court, has rejected an appeal lodged by M. Wentzel, Vice-President of the East-China Railway Co., St. Petersburg, against the decision given in the *Sascho Prize* Court confiscating the steamer *Manchuria* and her cargo.

The *Manchuria* was captured on Feb. 17th, 1904, by the Japanese warship *Katsuragi* while in the Mitsui Bishi Shipbuilding Dock-yard at Nagasaki. Mr. M. Nagashima, representative of the appellant, contended that the ship was undergoing repairs in the yard when she was captured, so that it might be taken that she was in the possession of a Japanese subject. Further, she was destitute of means of moving when the Imperial ordinance No. 20 was proclaimed in 1904, which stated the time in which vessels belonging to belligerent countries must leave the ports or seas of the Empire of Japan. Therefore she and her cargo should be released.

The appeal was not sustained on the ground that the fact that the steamer was undergoing repairs in a Japanese dock was no hindrance to her capture, since she belonged to a belligerent country. The Imperial Edict also did not set a term with regard to vessels unable to proceed on a voyage.

Several hundred workmen employed at the Uruga Shipbuilding Yard struck work on Feb. 7th, asking for an increase in wages by *sen* 15 per day. The employers refused their request.

## THE BATTLE OF HEIKAUTAI.

Saturday, February 4.

IT is now evident that the conception already formed as to the general strategy of the Russians in the recent engagement was correct. Their plan was to pour a force of over 100,000 men across the Hun, and thereafter to divide it into two bodies, one directing its march nearly due east against the railway which runs from Liaoyang to Mukden; the other circling round to the south and striking direct at Liaoyang by marching up the valley of the Taitsz River. By the 25th of January the crossing of the Hun was accomplished, and this strategy began to develop. General GRIPENBURG, who commanded the Russians, saw clearly that such a manœuvre would expose his army to one serious danger; namely, the danger of being cut in two, for when the two columns reached the lines of their ultimate advance their heads would be separated by an interval of 10 miles, and if the Japanese drove a wedge into this interval disaster might overtake the Russians. Therefore GRIPENBURG detailed a powerful force to avert any such danger by holding Heikautai, the point on the west of the Hun whence his two columns may be said to have commenced their divergent march. As long as this place remained in his possession, a safe line of retreat offered for his troops in the event of defeat. The Japanese, on their side, fully appreciating the situation, directed their main attack against Heikautai. They saw that if they could succeed in capturing that place and pushing westward across the Hun to Yentaitz and Tutaitz, not only would the connexion between the two Russian columns be completely severed, but also the column operating in the southern section of the field, namely, against Liaoyang, would find its communications severed and would be threatened with annihilation. This was the gist of the Japanese plan of action, and it was thus that Heikautai became the scene of the fiercest fighting and the pivot of the whole situation. Pending the development of the Russian plan, the Japanese massed their forces at Tatai and Kuchingtsz, that is to say, in the rear of the centre of the field. Their scouts had detected, since the 20th, indications of abnormal activity on the Russian right. It was plainly seen that large forces were moving down the right bank of the Hun, and General Oku and his staff rightly conjectured that the enemy intended to cross the river somewhere near Changtan. But of course there could be no certainty as to his subsequent route. Everything, however, seemed to indicate that he would march direct upon Liaoyang, which is only 18 miles distant from Changtan. Therefore, pending some instructive development, the Japanese assumed a defensive attitude. Their dash against Heikautai was a later conception. On the 25th the Russians crossed the Hun, and rapidly began to carry out their plan of operations. One powerful column headed

southward along the left bank of the river, with orders to bear eastward from Niuku and advance thence parallel to the Taitsz *via* Hungkiawapeng and Harhpau. Another column headed eastward, its ultimate objective being the railway and its proximate point of attack, Chenchichpau. A third force of great strength, well supplied with artillery, directed its march against Heikautai, and found at Taupau, on the immediate south of that place, an excellent position where the troops immediately proceeded to entrench themselves as best they could, and to mass a big park of artillery, field-guns and quick-firers. In Heikautai a Japanese outpost was stationed. Completely outnumbered, it nevertheless held its ground until nightfall, and then under cover of darkness retired—in a decimated condition we may presume—towards the Division to which it belonged. It was now the night of the 25th. Snow had commenced to fall that morning and was continuously falling. By this time General Oku had formed a tolerably clear idea of the situation and had determined that the wisest strategy was to seize the opportunity offered by the diverging columns of the enemy. He ordered an attack upon Heikautai. To that end dispositions began to be made on the morning of the 26th. The Japanese troops massed at Tatai and Kuchingtsz deployed in a westerly direction so as to advance against Heikautai from the south and east. Snow continuing to fall heavily rendered all movements very difficult, and it was noon before the battle could be joined. It is very doubtful whether General Oku had yet recognised the great force of the Russians. He seems to have hoped to check them effectually by striking at their centre, not estimating that they had strength sufficient to hold him there while simultaneously moving round on the north and the south. If he fell into any such miscalculation, however, he was quickly undeceived by the receipt of news, on the afternoon of the 26th, that the Russian northern column was attacking Chenchichpau, and had detached a force to operate against the right of the Japanese position at Tatai. It must be remembered that in this part of the field the Japanese movement against Heikautai and the Russian movement against the railway were taking place in close proximity, Chenchichpau being only  $2\frac{1}{2}$  miles from Tatai. Oku at once detached a force to operate against the Chenchichpau column. But, it may here be noted, Chenchichpau had already been garrisoned by the Japanese, and the Russians never succeeded in dislodging this garrison. Returning now to the attack against Heikautai, we find the Japanese deployed along a line stretched from Laokiao *via* Sumapau to Wukiatsz, whence they had to advance over open ground against the Russians, who held the Heikautai-Taupau line. The Russians had pushed forward as far as Laokiao, but here they received their first check, being driven back by the Japanese right. Reserve

troops were now (27th) moved up by Oku from Lantungkau and deployed on the east of Heikautai (on the Likiaowopeng-Liutiaokau line) so as to protect the right flank of the forces assailing Heikautai. These troops succeeded in driving back the Russians in that quarter of the field, and thereafter the eastward progress of the enemy's northern column may be said to have ceased. But the assault upon Heikautai met with little success. The Japanese in their advance were subjected to a terrible cross-fire of field guns and quick-firers from Taupau and Heikautai, and their casualties were very heavy. At the same time this delay in carrying out the cardinal plan of the Japanese—the driving of a wedge through the Russian centre—exposed them to great danger, for the march of the southern Russian column had now (afternoon of the 27th) carried it as far as Niuku and Pahwangchi, whence it threatened the left rear of the troops engaged in the assault of Heikautai and Taupau. Coming under gun-fire and rifle-fire from this column, the Japanese left had to fall back to Sanchienpau. The position would now have been critical for the Japanese had not Oku already despatched a force in the direction of Hsiurhpau for the purpose of checking the Russian southern column. This force, however, had not yet made its presence felt, and the night of the 27th saw the offensive entirely in the hands of the Russians, who attacked the Japanese left on the Sumapau-Sanchienpau line from front and rear simultaneously. Here evidently was the turning point of the battle. The fight reached the bayonet stage, in which the Japanese have always showed themselves superior to the Russians, and the latter were driven back, sustaining a defeat which probably dispirited them fatally. On the morning of the 28th the attack was renewed against Heikautai and Taupau. Nothing could daunt the Japanese. They had now been fighting almost continuously since noon on the 26th, yet they continued their assaults with unabated vigour. Nevertheless Heikautai and Taupau still held out. A small force of the enemy which had remained in Sumapau after the repulse of the Russian attacks during the night, was annihilated, but this did not advance matters appreciably so far as the main position was concerned. An important success was gained, however, in the northern part of the field, where the reserves sent from Lantungkau captured Likiaowopeng and Liutiaokau, thus menacing the right rear of the enemy's northern column and partially effecting the separation which the capture of Heikautai would complete. Further on the afternoon of this day (28th) the southern column received a conclusive check on the Harhpau-Hsiurhpau line and began to fall back, thus abandoning the attempt to reach Liaoyang. Heikautai, however still defied all attacks. Throughout the 28th the assault continued, entailing heavy losses on

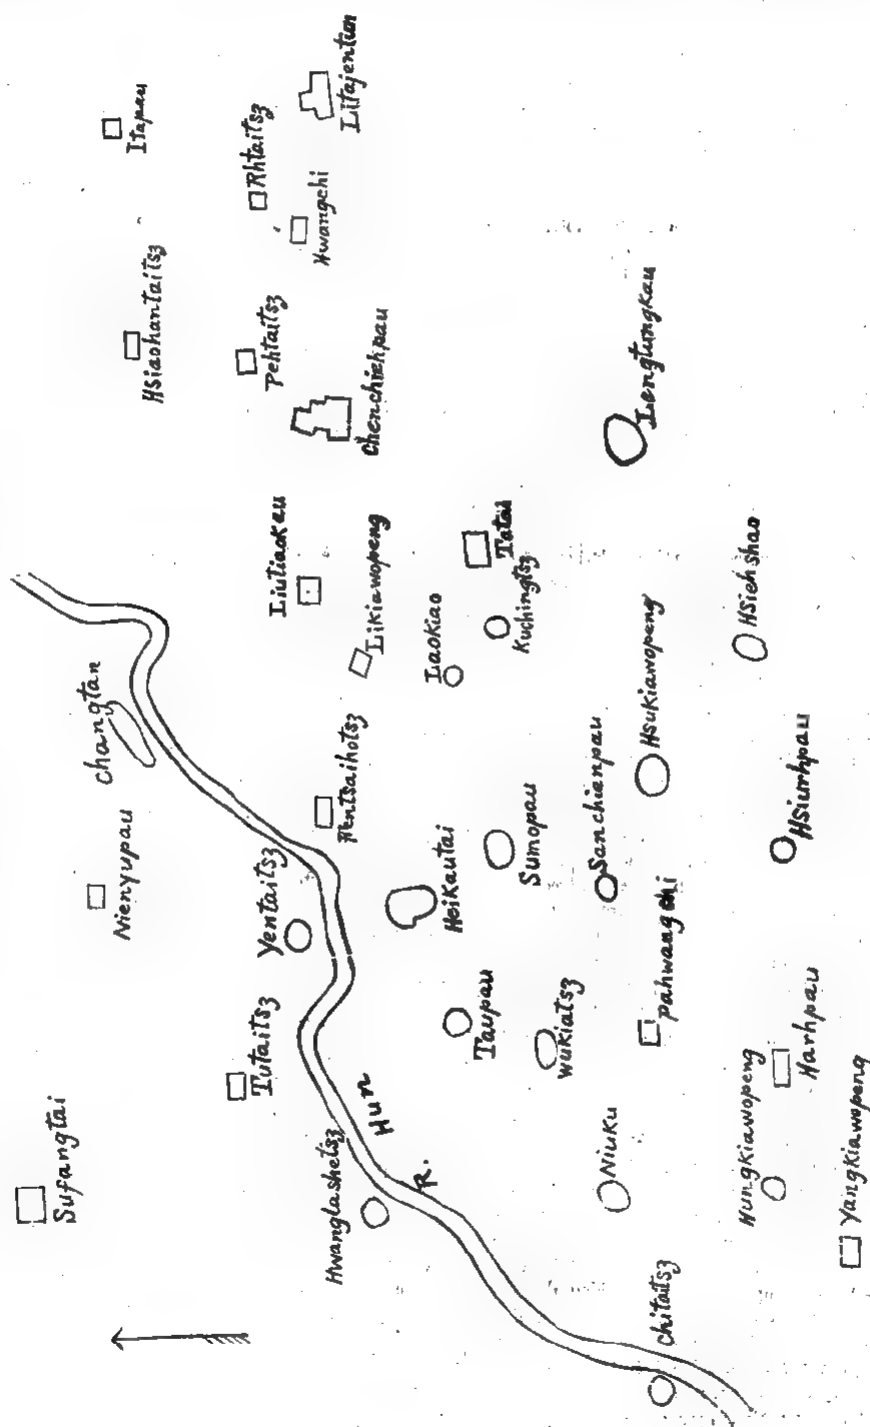

the Japanese, who, owing to the state of the ground, could not entrench effectively as they advanced. During the night of the 28th final success was achieved after a long fight ending at 5.30 a.m. on the 29th. The battle was now won. At every point the Japanese line pressed forward. They forced the enemy across the Hun from a point 1,000 metres below Changtan as far south as Chitaitz and they occupied Hwanglachetsz and Tutaitz.

#### CHRISTIANITY IN JAPAN.

THERE is evidently an impression among propagandists of Christianity in Japan that their efforts are materially assisted by the war. We gather this from the *Japan Evangelist* and other publications. The origin of the impression is that access to the sick and wounded opens an exceptionally wide field to the missionary. The invalid soldiers are said to be glad to read the Bible, and many are touched by the evidences of sympathetic charity that Christian agents

display. We confess that these things belie our own expectation, and we even venture to think that they are not an altogether trustworthy index of the nation's mind. No one can doubt that the extremely friendly attitude of the United States and Great Britain, which are eminently Christian countries, has imparted some element of attractiveness to the foreign faith. But can this comparatively negative attraction outweigh the positive repulsion exercised by the methods of Christian Russia? Diplomatic guile is perhaps not specially important.

MAP SHOWING POSITIONS IN BATTLE OF HEIKAUTAI.

Japanese statesmen have learned that in dealing with the diplomats of some Western countries the qualities most condemned by Christian canons must be expected to display themselves in all crises. But diplomacy, after all, is a thing apart. The manner of its conduct does not appeal to the sense of the masses. What we are thinking of when we speak of the repulsive effects of Russia's procedure is rather the behaviour of her soldiers, the writings of her newspapers, the methods of her administrators and the acts of her Christian teachers themselves. There may have been exaggeration as to the cruelty practised by Russian soldiers. We do not forget that in many instances they seem to have shown themselves kindly, merciful fellows, ready and pleased to help a hurt enemy. But the balance swings heavily to the other side. Even if we credit only a fraction of the evidence offered, the conclusion is forced that they have displayed much inhumanity and have disgraced not only the civilization they represent but also the Christianity they profess. Ignorance, absolute want of education, may be pleaded on behalf of many of them, but of that excuse little note can be taken by the Japanese, who see only that these men who butcher the wounded and mutilate the dead follow the cross into the combat and are blessed by priests on the eve of battle. Besides, the ferocity thus displayed in the field is in consonance with the writings of Russian journals, which are supposed to reflect the sentiment of the upper classes. Recall, for example, the journal which urged, and re-urged, that every Japanese should be exterminated as noxious vermin are exterminated. And recall the chorus—a chorus in such absolute unison of tone and time as to have been plainly pre-arranged—the chorus of the religious press of Russia crying for Japan's destruction as the adherent of a strange creed. Is it conceivable that any thoughtful Japanese could retain his respect for a faith productive of such savage intolerance? Nor is it by the utterances of religious organs alone that Christianity is thus disgraced. The Procurator-General of the Holy Synod, M. POBEDONTSHEFF himself, publicly attributed Port Arthur's powers of endurance to the intercession of the Holy Virgin. Thus Russian Christianity has openly allied itself with the war, and is doing everything within its competence to hound Russia on to the strife. What can the Japanese think, too, of the Russian administrators and the Russian religionists who by means of deliberate lies recently attempted to check the people's aspirations for reform? The men who, with full knowledge of its falsity, trumped up a tale about millions of British and Japanese gold having been scattered among the labouring classes for the purpose of crippling the empire's belligerent capacities? An empire governed by oppression, administered by falsehood, inspired by aggression, represented by cruelty and honeycombed by sedition

—what a product of Christianity? Which is the more likely—that Japan should respect the ideals of Christianity or credit the practical types it presents for her observation? That is why we do not feel altogether satisfied that the influence of this war is working quite so wholesomely as some missionaries seem to think. It will certainly tend to elevate so-called "pagan" nations in the esteem of the Occident, but that it will perform a similar office for Christianity in the eyes of the Orient, we doubt.

#### GENERAL DESSINO.

GENERAL DESSINO has published in Shanghai an account of the battle of Heikautai which, when compared with the Japanese account, reads like a wild romance. Briefly speaking the gallant officer announces that in continuous fighting from the 25th to the 31st of January—the 27th excepted, about which day he says nothing—the Russian right was engaged winning repeated victories and seizing numerous positions of vital importance from the Japanese. There was not a single Russian reverse. The Japanese were driven from their entrenchments, their attempts to recover them were repulsed, and their independent essays in other directions were all defeated. Never was a battle more completely won, and as General DESSINO copied the report for circulation—copied it absolutely faithfully as we have no manner of doubt—he must have felt a thrill of exaltation that now at last the sun of York had begun to shine upon Russia's winter of discontent. But unhappily at the end there comes the wonderful finale so familiar to all readers of Russian triumphs. It is this surprise which imparts such piquancy to the tales of the Muscovites, for in their preliminary descriptions of their victories there is a certain monotony of success. Having won all along the line, having driven out the Japanese and seized every one of their important positions, concerning which latter fact General DESSINO is specially explicit, the Russian army did—what does the reader think? Why, it retired! Was there ever such an anti-climax! What with manufacturing falsehoods to account for lunatic acts in the North Sea, manufacturing falsehoods to account for domestic disturbances in Russia, and manufacturing falsehoods to account for defeats at the front, the amount of grey brain-tissue wasted in St. Petersburg and Mukden is quite shocking from an economic point of view. General DESSINO being himself a soldier, presumably of some experience and discernment, must be well aware that armies do not retreat after winning great victories, and that battles are not fought without any object. GRIPENBERG'S army did not move out into the wilderness of snow and ice in the valley of the Hun at the end of January merely to see "a reed shaken by the wind." DESSINO knows that well. It moved out for the purpose of turning the Japanese left and striking at Liao-

yang. It failed completely in that purpose, and the 30th of January saw it streaming in full retreat across the Hun to the region whence it had come, a thoroughly beaten force, with a list of casualties which DESSINO himself puts at ten thousand. That is what he calls a victory and describes as a series of signal successes. This reliance upon the credulity of the masses has become too comical. There are still publicists in France who, retaining some measure of faith in Russian assurances, profess to think that if ever there was a drawn battle it was the battle of the Shaho. Neither side, they say, gained a foot of ground. Now even supposing that such was the case—and as a matter of fact the Japanese gained 15 miles and inflicted from sixty to seventy thousand casualties while suffering only sixteen or seventeen thousand themselves—but even supposing there was no gain of ground on either side, can not the French critics perceive that such an admission amounts to an unequivocal confession of Russian defeat? Do they suppose that KUROPATKIN put his whole army in motion, assumed the offensive with an unparalleled flourish of trumpets and fought one of the most sanguinary battles on record, merely for the sake of not gaining an inch of ground? If we expect anything from any nationals we expect logical reasoning from Frenchmen, but in this instance the glamour of Russian falsehood seems to have clouded their judgment. As for General DESSINO, he has the profound sympathy of all thinking men. For what position could be more painful or more humiliating than to be the knowing and unwilling mouthpiece of tales which his military training no less than his human intelligence show to be fictions? The Russians marched out of their lines on the 20th of January to turn the Japanese left and to strike at Liaoyang. The 30th of January saw them driven back effectually to the west bank of the Hun without having either turned the Japanese left or even placed Liaoyang in jeopardy. And that is a Russian victory; a long series of victories, indeed, for DESSINO's account details day after day of unvaried triumph! There is of course a dire necessity which forms the foundation of the whole factory of falsehood—the Russian people must be kept ignorant of the truth. But the question is, how long can this game of fabrication continue. How long can a war last where victories are won in imagination only and how long can the Russian nation be deceived by these impositions? Is it not certain that every thoughtful man in Russia must at once appreciate the inherent absurdity of romances such as the unfortunate DESSINO is compelled to circulate? And if they do appreciate it, will their respect be increased for the bureaucracy which thus deceives them, or will they tamely consent to be thus continually befooled?

## THE DIET.

## HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m. on Saturday. On the motion of Mr. Eto Shinsaku it was agreed that the House should express its condolences on the death of Count Soyejima.

Four Government Bills were then entrusted to special committees.

Mr. Hotta Rentaro, Chairman of the Special Committee, reported on the Mining Bill. He explained its provisions in detail and said that the Committee recommended its adoption as drafted by the Government with the exception of the 5th Article which restricted the grant of mining privileges in the case of foreigners. The majority of the committee disapproved of this Article and considered that foreign individuals as well as juridical persons consisting of foreigners should be eligible for the privileges in question. In short, the Committee advised that foreigners and Japanese should be placed on exactly the same footing.

Dr. Hatoyama supported the Committee's amendment. He contended that the restriction contained in the 5th Article as drafted by the Government indicated a spirit such as prevailed in the anti-foreign days, and was unworthy of the Japan of the present time, where public sentiment had changed so greatly that even the men who, a few years ago, advocated the *joyaku-reiko* (strict treaty enforcement) policy, were now prominent supporters of exactly the opposite view. (Dr. Hatoyama here alluded evidently to the *Hodo Kaiho Kisei-kai*, an association having for avowed object, as its name indicates, the extension of freedom of the soil to all nationalities, though its chief promoters are Mr. Abe Hankon and his associates in the strict-treaty-enforcement doctrine of 1892). Some people professed to think that the Government was influenced in this matter by apprehension that a liberal measure could not be passed through the House of Peers. But he ventured to think that when the House of Peers perused the proceedings of the Lower Chamber, any conservatives included in its ranks would change their minds. The war Japan was now waging against Russia was not merely a war of country against country. It was a war of enlightenment against barbarism; a war of intelligence against stupidity; a war of constitutional institutions against despotism. That a country actually engaged in conducting such a campaign abroad should enact at home laws convicting itself of a barbaric spirit of exclusiveness was ridiculously inconsistent. The time had come to do away with all such restrictions and limitations.

Mr. Ooku Ikuzo (*Seiyu-kai*) said that in opposing the Committee's amendment he and his Party were not influenced by any desire to withhold from foreigners the privilege of owning real estate or to set up any distinctions between aliens and natives. Neither did they vote in one way because they apprehended that the Upper Chamber might overturn their decision if they voted in another. Such considerations he emphatically disavowed. They had a good reason for their attitude, namely, that the Government had not yet completed its preparations for the proposed change. When the necessary preparations were completed, the *Seiyu-kai* would not hesitate to give its consent.

Mr. Hadano Zenaburo (Progressist) supported the Committee's amendment. He argued that the proposed change would be useful from the point of view of the introduction of foreign capital, and the point of view of the abolition of the Conventional Tariff.

Mr. Sakamoto Kinya (Independent) enunciated the old conservative opinion that the country was not ripe for such a change and that if the mining industry were thrown open completely to foreigners, they would monopolise it.

The closure having been applied, the House rejected the Committee's amendment, its only supporters being the Progressist members, whereas the whole of the remainder of the House ranged themselves on the other side.

Bills for extending to Riukiu the operation of the pawnbrokers regulations were then passed, as was also a bill relating to the collection of taxes in Hokkaido.

The House then proceeded to the Second reading of a Bill concerning the Land Tax. This Bill provides for certain exemptions and certain inclusions. The exemptions are that Land Tax need not be paid upon grave-yards, upon lands held by public associations formed under certain conditions, on temple lands, on railway lands, on forests conserved for hygienic purposes and on public roads. The inclusions are that Land Tax shall be levied on lands pledged (not mortgaged), the tax being paid by the pledgee; and on lands held under a superficies longer than 100 years. This Bill was passed.

A Bill was also passed providing that customs duties shall not be returned in the case of molasses resulting from the manufacture of refined sugar from imported materials.

Some minor measures having been dealt with the House rose at 5 p.m.

## HOUSE OF PEERS.

MONDAY, FEBRUARY 6.

The House met at 10.15 a.m. and having entrusted to Special Committees three Bills of minor importance, heard the Special Committee's favourable report on a Government measure for amending the charter of the Hokkaido Colonization Bank, the object of the amendment being to extend the Bank's sphere of operations. This Bill was carried to its second reading but the reading was not taken. A similar measure with regard to the Kwangyo Ginko was similarly treated, and after some other business the House rose at 11.23 a.m.

## HOUSE OF REPRESENTATIVES.

TUESDAY, FEBRUARY 7.

The House met at the usual hour, and after entrusting two Government bills to a special committee, gave *post-facto* approval to two ordinances issued last year, one providing for the punishment of forgers and utterers of false money in foreign countries, and the other for the punishment of prisoners of war. Two private bills dealing with the same subjects on the same lines, were subsequently introduced and passed through all their readings. Six bills introduced by members of the House were then entrusted to special committees, as were also five representations.

The House rose at 3.30 p.m.

THURSDAY, FEBRUARY 9.

The House met at the usual time and having entrusted a Bill relating to the payment of travelling expenses to men of the Army and Navy, proceeded to take the second reading of a Bill for amending the Law of Drugs Taxation. The amendments related to a few changes of rates and also to the remission of taxes in the case of drugs for export. The Bill was passed as recommended by the Committee.

Two Bills were then passed. They related to changes in the Law for assisting the victims of calamities, natural or otherwise, in the sense of granting greater discretion to dispensing officials.

The next business was a Bill for amending the Income Tax Law. One of the amendments proposed by the Government was a provision that tax-payers who objected to have their incomes investigated by the Examining Committee, might submit their objection and thus avoid investigation. It was understood that this amendment pointed to the convenience of foreign residents who found such scrutiny unwelcome, but the House held that to admit the proposed change would be to deprive the Examining Committee of any *raison d'être*. This amendment was therefore rejected, but for the rest the Bill was passed.

Four private Bills were then taken. Three of them were passed with or without amendments, and one—for amending the Game Law—was rejected. One private Bill relating to lung distemper in cattle was handed to a special committee.

Three Representations were next considered. One of them advocated the publication of diplomatic correspondence in the same open manner as that adopted in England. The presenter of this Representation was Mr. Kubota, and it was opposed by Mr. Hanai Takuzo, who insisted that all the necessary information could be

elicited by means of questions in the House. This Representation, like the other two, was handed to a committee.

The House rose at 2.30 p.m.

## THE NAVAL ENGINEERS OF JAPAN.

A Naval Officer writing in the *Fiji Shimpō* says:—

We have read with feelings of pride the official reports of how, during the siege of Port Arthur, our gallant seamen made successive attempts, under a galling fire from the enemy's guns, to block the harbour, while others, on the torpedo boats and destroyers, attacked his ships. In all these operations our sailors showed distinguished merit. We must not, however, overlook the equally meritorious services of another class of men, whose unremitting attention, continued endurance, and great ability contributed largely to the success of our naval operations. We refer to the engineers and engine room staff of our fleet, whose distinguished services are not so well known to the public. In many instances their invaluable co-operation was not mentioned in the official reports. They have had many difficulties to surmount and have been found equal to the task. Many of our ships are fitted with Belleville boilers, with regard to the superiority of which the question is still unsettled even in England, by which the system had been adopted but since replaced in part by another class of boilers. Thus in Japan, some anxiety had been felt at the beginning of the war as to the efficiency of this system in our ships, but on many occasions during the fighting it has been shown that the Belleville proved more serviceable than was expected. Notably, on Aug. 10th, when the Port Arthur squadron attempted a sortie, and on the 14th Aug. when the Vladivostok squadron attempted to pass through the Tsushima Straits—presumably to join the former—the enemy appears, from the official reports, to have miscalculated the steaming capacity of the Japanese vessels. He seems to have supposed that the speed of our ships would have been much reduced after their long spell of duty off Port Arthur or in the Tsushima Straits without docking, whereas they worked up to their proper capacity of speed under the able management of our engineers, with the result that Russia's first Pacific fleet was virtually crippled. The new system of boilers differs from the old in being more complex in character, so that the engineers require special training and ability. Our engineers, however, as the result showed, proved themselves fully equal to the task and thus enhanced the fame of our navy.

## COMMERCIAL REPORTS.

Japanese Consular officers abroad have telegraphed the following business reports.

Rome, February 4.

According to the Japanese Honorary Consul at Genoa, the estimated crop of cocoons this year in Italy is 42,743,000 kilos. These figures show an increase of 8,576,000 kilos over last year.

New York, February 3.

There is no change in the raw silk market and generally the business is quiet. Quotation for Japanese filature No. 1 is \$3.97 to \$4.

The cotton market is steady but the general condition seems changeable. Closing price to-day was cents 7.26 for delivery in May and cents 7.60 for present delivery. Stock throughout the country was 1,390,754 bales.

Lyons, February 4.

Owing to scarcity of demand from factories, transactions in raw silk are still dull and prices show a lower tendency. Japanese filature No. 1 1/2, 9-11 deniers is quoted at francs 46.

The *Habutae* silk market is still inactive and there has been no large demand. The price of Echizen, 23 inches, 6 *momme*, about francs 40.

Chemulpo, February 3.

Having been influenced by the fall in prices in Japan, business in beans and hides, which had hitherto been very active, has fallen off since the new year, and accordingly the delivery of goods from the interior is scarce. Consequently the import of general goods from Japan has fallen off very greatly and business in the settlements is at its worst.

## MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

A new Christian magazine made its appearance on January 1st. It is called *Kirisutokyo Kōdan* (The Christian Pulpit or Platform). It has been started by Christian students in Tōkyō and by certain members of the Young Men's Christian Association. Its object is to publish the sermons of noted preachers, to give an account of Christian work abroad, and to indicate what is the tendency of thought in the Church and the world. It is edited by a Committee of 5 young men. The first number contains a sermon by the Rev. Y. Honda on "Self-denial," a Sermon by the Rev. T. Miyagawa on "St. Paul," a sermon by the Rev. D. Ebina on "A Sound Religion"; a sermon by the Rev. M. Uemura on "I am the Way;" a Sermon by the Rev. Henry Vandye on "The Significance of Human Life," and a short résumé of the questions discussed by the press last year. Mr. Ebina refers to Dr. Inoue Tetsujirō's views on religion, observing that there is no life in the religion which Dr. Inoue is attempting to found. Religion of this kind resolves itself into mere opinion and has no power over men's lives. Mr. Ebina then goes on to trace the characteristics of real religion according to his conception of it. It must, he says, be a living religion. It must have its seat in a sound heart, it must develop itself by means of a superior type of character. One of the things this religion does is to make people discontented with this world, is to make them feel the evanescence of all things earthly. Such persons live in an invisible world of their own, where they hold fellowship with God. Among the subjects alluded to in the summary of the discussions of 1904 given at the end of the magazine are the contest between the anti-war socialists and the general literary public; the attitude of Count Tolstoi to the war; the controversy between Major-General Satō and Mr. K. Ukita, and a University Ethical Society discussion on the relation of religion to morality. There is also mention of Dr. Anezaki's new book on Buddhism entitled *Genshin Butsu to Hōshin Butsu*,\* which is said to be one of the great religious works of the Meiji era. Dr. Anezaki is rightly regarded as one of the most interesting figures in the modern religious world. A mystic by nature, he has made a special study of religions ancient and modern, Christian and Buddhist, and seems to have decided that there is nothing superior to what is to be found in the deeper teaching of great Buddhist writers. But he is of opinion that the higher truths of Christianity are capable of amalgamation with the higher truths of Buddhism. A man of gentle manners, refined feelings, connected by birth with the aristocracy, yet living a simple, unworldly life, an ardent worshipper of ideals, he commands universal respect from all serious-minded young men. He is a man of quite a new type, one of those rare cases in which religious devotion and simple faith survive all the disturbing and distracting influences of modern learning. His career will be watched with great interest by religious people of all schools. The *Kirisutokyo Kōdan* is published by the Hidaka Yūindō, No. 2 Moto-fuji-chō, Hongo, Tōkyō, and sells at 10 sen a copy.

The recently compiled Mombushō moral text-books have formed the subject of lengthy discussion during the past 5 or 6 weeks. The ethical attitude of the Department of Education to-day is naturally keenly scrutinized by religious teachers, philosophers and educationists of all schools and, it would seem, by certain prominent politicians too. We regret that we have not yet been able to thoroughly examine the series of text-books known as the *Kokutei* (國定) *Shūshin Kyōkasho*, which appeared last fall, but we find an interesting article in the January *Taiyō* written by Dr. Katō Hiroyuki, which explains the general line adopted by the compilers of these works.

\* This first term *Genshin Butsu* refers to the concrete form of the Buddhist faith as taught by Shaka and embodied in his life. The *Hōshin Butsu* includes the more abstract and reconducive truths which are only comprehended by the initiated, that is, esoteric Buddhism.—(WRITER OF SUMMARY.)

Dr. Katō was a member of the Committee appointed to examine and report on these books. Since he approves of the views to which they have given expression, he now comes forward in their defence against the attacks of certain elder statesmen. In the introduction to his article Dr. Katō says that the compilers of the text-books and the Committee appointed to pronounce an opinion on their suitability for school use welcome criticism. They do not claim infallibility nor even freedom from the defects incident to work of this kind. Dr. Katō claims to have read all the most important comments of the press. He says that the best review of the books he has seen was written by an Englishman residing in Saga Prefecture. This gentleman has evidently examined the books with great care and his criticism is characterized by thorough impartiality, says Dr. Katō. These text-books have, we are told Dr. Katō, not given satisfaction to certain elder statesmen, and they, considering the subject very important, have addressed a letter to Mr. Kubota, the Minister of Education, stating that in their opinion the compilers of the text-books have not given sufficient weight to the culture of loyalty and patriotism. They do not deny that these subjects are treated, here and there, but they are put on a level with the development of independence of spirit, self-reliance, and the like; whereas in the opinion of these old statesmen they should occupy a higher rank. Dr. Katō informs us that the correspondence on this subject will shortly be published, but in the meanwhile he can assure the public that traditional Japanese ethical teaching is embodied in the text-books in a most unmistakable manner. But at the same time he and the compilers of the books are strongly of opinion that the altered circumstances of the country demand that Japan should add some new elements to the moral training she gives her young people, and the most important of these elements is the cultivation of self-reliance, self-respect and independence of spirit. In Japan these qualities are not so highly developed as they are in the west, observes Dr. Katō, and this fact militates considerably against Japan's success when competing with foreigners. That the culture of these virtues need not interfere with loyalty and devotion may be demonstrated, says Dr. Katō, by the history of moral development in England. In that country great loyalty and patriotism are joined to independence and self-defence, *firmitas fidei*. There is great public spirit alongside of high development of individual character. It is undoubtedly this combination that has enabled the Anglo-Saxon race to wield the power they now possess in every part of the world. And Japan cannot do better than follow in their footsteps. She need lose none of her loyalty or patriotism by paying increased attention to the development of individual character.

\* \* \*

Mr. K. Hirayama, Bachelor of Law, writing on the "Indifference of Educated Laymen to the Church" in the *Gokyo* (Methodist) says the following reasons account for the state of mind complained of. (1) The weakness and shallowness of the theology current in the churches. (2) The impossibility of defending and teaching earnestly all the doctrines embodied in the articles of the creed. This feeling is probably shared by foreigners as well as Japanese (*Kyōkai jōrei wa konnichi no thonjin ni usorakunwa gaijin ni mo kotogetoku reikō-sōnu itashigataki no kan aru koto*). (3) Even pastors and teachers, while entertaining doubts as indicated above, go out of their way to make it appear as though this were not so (*Bokushi, Kyōshi shoshi saye, zenki* (前記) *no gotoku gūwaaku to fuman wo idaki tsutsu, shiite shikarazaru ugatoku yosou no yō aru to koto*). (4) When doubts that are working in the innermost recesses of the heart are stated to pastors, no sympathy with the doubter is shown. On the contrary he is regarded with suspicion. (5) When as a result of investigation unorthodox views are defended, this expression of views is at once condemned as heresy and the person who is guilty of it is regarded with estrangement by his fellow-Christians. (6) Dissatisfaction is felt with Church organization and with certain prevailing practices.

(7) The want of independence and the spirit of self-support, the helpless reliance on foreign aid unfavourably impress educated men. (8) In the annual conferences and synods the power of the laity generally is too limited. (9) Worship is lacking in solemnity. (10) There is too much of the sectarian spirit and the desire to obtain converts from other sects. There are many other charges of the same sort for which we have no space. There are also other letters expressing discontent of various kinds. We rather expected to find an editorial summing up the results of the inquiry originated by Dr. Takagi last year, but so far nothing of this kind has appeared in the paper. The correspondence is anyhow too bulky to be treated thoroughly in these Summaries, but it is well worthy of the attention of missionaries. Judging from the general tone of his editorials, we should say that Dr. Takagi shares the views of those who are dissatisfied with the progress the Church of Christ is making in Japan to-day. Here are a few quotations from his New Year's editorial:

Stagnancy in the Church has now prevailed for a long time. Year after year we have lived in the hopes of things mending, but year after year we have been doomed to disappointment. (*Kuwaoku sūnen kan waaga hai wa nannen kibō wo motte shinnen wo umakete-taredomo, mata nannen shitubō wo motte kyūnen wo okuritari*). Dr. Takagi proceeds to compliment his fellow-countrymen on the great military achievements of the past 11 months and then goes on to ask, what great things have been accomplished by Christianity during the year? The answer is practically none at all. He pronounces the efforts made by the Fukoin Dōmeikai and those made by his own Church as puny compared to the requirements of the existing situation. We are not pessimists from choice, says Dr. Takagi, but only because hard facts force us to this state of mind. Looking back over the past year we see no advance to record and to our great sorrow stagnation seems at present to be irremovable among us. He ends his article with an earnest call to arms. He advocates war with everybody. "We must fight the defenders of old ideas, the transmitters of false learning, the corrupt society in the midst of which we live; we must fight the nation; fight religion; fight political parties, fight the Mombushō, fight the newspapers and magazines of the country. If we make peace with those we ought to fight, it is because our religious salt has lost its savour. Fight, we say, fight with all your might."

There is a good deal in the *Gokyo* about the various receptions given to Bishop M. C. Harris, for many years Methodist missionary at Hakodate and recently appointed Bishop of the Methodist Church in Japan. It is stated that Mrs. Harris, whose beautiful poems are known to many readers of this journal, is now undergoing medical treatment for weakness of the nerves in a Californian hospital, but that she hopes to be able to join her husband in Japan in the spring.

\* \* \*

The *Kōye* (*Revue Catholique*) has a leading article on Dr. Anezaki's *Taiyō* essay on European Churches. The *Kōye* says that there is no religious person who can feel anything but profound respect for Dr. Anezaki as a thoroughly devoted, sincere and truth-seeking man. He has the credit, says the *Kōye*, of having drawn the attention of the Japanese public to the position held by the Roman Catholic Church in Europe as well as of pointing out the connection of Protestantism with politics and its dependence in some instances on state support. He might have told his readers, continues the *Kōye*, that Protestantism owed its origin to a considerable extent to politics. The *Kōye* proceeds to fill in the picture of the Roman Catholic religion in Europe the outlines of which were given by Dr. Anezaki.

The *Kōye* has, we observe, commenced to publish Latin proverbs with Japanese translations and explanations. Considerable taste is shown in the constantly-changing get-up of the *Kōye*. The covers and the frontispieces of the January numbers are most attractive. The New Year's articles are written in a hopeful tone. Month by month the *Kōye* follows the practice of other religious journals in giving a short account of contemporary

religious thought; usually in the form of short extracts from the organs of other sects, Buddhist and Christian. It is a carefully edited magazine.

The *Setkyō Shimpō* in Nos. 578 and 579 publishes articles by Mr. K. Yamada entitled "The Outlook of the Greek Church (promising or the reverse?)" of which we give the substance below. It is quite impossible for us to enter on the new year with the same jubilation we have felt in former years. The dark war clouds still cover the sky, bringing gloom to many a home. We are men of peace and can not take delight in war, even though it be successful. We see the evils that it causes everywhere. Though the thoughts of most people are absorbed by the war and hence it is not easy to awaken interest in sacred things, yet we intend to make the attempt. Since to us the future of the Church is second to no subject in importance, we propose to inquire what are the prospects of our missionary work? Does the situation compel us to adopt a pessimistic tone, or does it allow of rational optimism? A Moscow newspaper, commenting a few months ago on evangelistic work in Japan, quoted some remarks said to have been made by Marquis Itō, among which were the following words:—"Nihon wa sekai ni oite mottomo mushin shugi no kokumin nari." "The Japanese are the most atheistic people in the world." Whether Marquis Itō did actually make this remark we think to be doubtful. But even if he did make it, we do not believe it to be correct as stated. Yet nobody can deny that there is a certain amount of truth in his comment. The outlook in this country for Christian Missions has been considered by some Americans to be so unpromising that we heard a few years ago of a society that had decided to withdraw its missionaries from Japan and send them to India or Africa. In the interior of Japan to-day there are not wanting men who despair of effecting any good by teaching religion. We as a mission by no means share this feeling and we purpose going on with our work as earnestly as ever. When we peruse Christian journals published by other sects, we find that some of them are highly optimistic in tone and others quite pessimistic; and the pessimism prevailing in the minds of some Japanese evangelists seems to be shared by certain foreign missionaries as well. These things do not disconcert us in the least. We are, on the contrary, pleased to find that foreigners take such a keen interest in our spiritual welfare as to be depressed when Christian work is not prospering as much as they wish it to do. And even the somewhat adverse comments of the Moscow paper we consider to be well-meant and therefore we welcome them.

We do not deny for a moment that there are many discouraging features connected with Christian work in this country. When we consider that the work has been going on nearly 40 years, that there are a very large number of foreign missionaries here, that vast sums of money have been expended on the work, the net results seem to be poor. The Kingdom of God appears to be coming very slowly. The total number of converts compared to the population is very small. Among these a large proportion are no credit to the Christian Church. Even many pastors on whom dependence has been placed have forsaken their calling and taken to business or joined the Unitarians. There are all kinds of worldly and otherwise objectionable practices in the church. Looking at the actual situation of affairs to-day, who is there that can avoid the conviction that considering the greatness of the efforts, considering the nobleness of the aims, considering the variety of the means employed, the results cannot be regarded as satisfactory?

Though we have in the above remarks been treating the Christian work carried on by the three great sections of Christendom represented in this country as one, in the methods adopted for teaching religion, those of the Protestants are essentially at variance with those followed by the Roman Catholics and the Greek Church Christians. We not only differ from the Protestants in doctrine, we radically differ from them as to the

proper way of carrying on missionary work. The many devices (*hōben*) used by the Protestants as a means of attracting notice and bringing themselves into contact with the people, such as the erection of big churches before there are any converts to fill them, the establishment of schools for teaching English, and social functions of diverse kinds, we object to on principle. The message that we bring is delivered without any intermediary agencies. In our work it is a case of soul dealing with soul. Our work is all spiritual and there are no worldly elements mixed up with it. The progress we make is slow, but it is sure, when compared to that made by the Protestants with their unreliable methods. To us nothing seems more foolish than to expect that the teaching of English is going to make converts. The resort to secular methods of this kind is a mere hiding of the light under a bushel. Here it is pertinent to remark that, though in doctrine we differ from the Roman Catholics, our and their methods of propagandism are one and the same. They like ourselves eschew all display, ornamentation, and worldly devices for attracting people. All their work is on the very face of it *pro Deo et ecclesia*. They have their schools and their charitable institutions, but they are not conducted in the same way as those run by Protestants.

We have frequently dwelt on the enormous difficulties attending evangelistic work. To worldly persons the occupation of an evangelist may seem to be the easiest imaginable; but those who know how obstinately men cling to their old beliefs and ways will realize how hard it is to make real converts. Yet admitting all this, we are still full of hope for the future of our mission and we think that anybody who is thoroughly well acquainted with what we have already accomplished in the way of real spiritual work cannot but take an optimistic view of the prospects of the mission. It is said to be one of our weaknesses as a nation that we easily get discouraged when results are slow in making their appearance. Infinite patience is needed for evangelistic work. There is no such thing as preaching to-day and getting a convert to-morrow. The impatient clamour for greater speed, but this is the result of entire misconception of the nature and objects of the work in hand. To argue, as some do, in a worldly, utilitarian fashion that for so many *yen* there ought to be so many converts is to debase Christian work and put it on a level with ordinary secular business—so much outlay, so much return—this is a rule only applicable to commercial transactions. The souls of men are not to be reduced to terms of *yen* and *sen*. Taking all the spiritual results of our 40 years of labour in the cause of Christ in this country, we find them to be worth more than the money laid out for their attainment.

The work of the Greek Church was divided by Bishop Nicolai into three distinct departments from very early days. (1) The evangelistic department. (2) The educational department. (3) The publishing department. The education carried on consists of the training of mission agents. Now when we look closely into the work accomplished by our various agencies in the past 4 decades and remember that we are better equipped for work to-day than ever we were, we see every cause for encouragement. Our progress only seems to be slow when our work is compared to the material progress this country has made in the Meiji era. But this is an unfair comparison.\*

The *Kirisutokyō Sekai* publishes an article from the pen of Mr. N. Tamura entitled "My Impressions in America," which contains the following observations: The sympathy of the American people with Japan in the war is certainly very remarkable. It may perhaps be said that out of every 10 Americans 9 side with Japan. In the Transvaal war the nation was about equally divided and even in the war against Spain there was a large amount of sympathy felt for Spain. Some say that though America sympathizes with

\* *Gojin wa somozomo waga kyōkai ni zento wo hikawan suru no riaru wo mitaru nari. Tada kyōkai jigyō wa kore wo seaku no bushitsuteki jigyō no hattatsu ni hisoriba, sono shimpō no chichi taru kwan naki ni arazu. Shikaredo kaku no gotoku wa jigyō no seishitsu jō yamu wo yezaru nari.*

us, she would not lend us money if asked to do so, but this is not my opinion. The reasons for America's present sentiments towards us are too numerous to be discussed here. To come to religion, public opinion in America is in favour of mission work in this country being carried on exclusively by Japanese. On this subject there has been great progress of thought made during the past five or six years. As a nation we are no longer classed by thoughtful Americans with Indians and Chinese, and the general feeling is that we are thoroughly competent to manage and support our own churches. The age has passed for Japanese to be travelling through the United States collecting money for mission work here. (*Dare demo waga kuni kara Beikoku no kyōkai ni kane wo boshū ni yuku kotō wa mohaya danner* (断念) *shinakereba narimasen, dare ga itemo dame de arimasu.*) The money annually subscribed for missionary work and for various charitable purposes in America amounts to an enormous sum. This mostly comes out of the pockets of the middle classes, that is, of people who have comparatively small incomes. The Church is beginning to feel that its burdens are somewhat too heavy, and it is not at all easy to increase the amount of money collected annually, because the capitalists as a class are not liberal subscribers and the people in receipt of moderate incomes are giving as much as they can afford. Hence the desire to withdraw from fields like Japan where the work ought to go on without foreign aid. . . . There are 9 Japanese students studying at the New York Union Divinity School. Taking all the Divinity Schools in America, there are at least 40 Japanese students in them; more than are studying at the Dōhisha, the Meijigakuin, and the Awoyama Divinity Schools. When these 40 students return to Japan Mission work ought to receive a great impetus; but whether they will all devote themselves to the work of the Church is doubtful. . . . The Americans are very curious to see what will be the effects of the war on us as a nation. Many of them fear that we shall suffer from a swollen head when it is all over. If they perceive that we are not at all puffed up on account of our victories, but that in all humility we persevere in the path of enlightened progress, they will regard this state of mind as a greater honour than any that the war has brought us. History records that great wars have often been followed by great religious revivals. It was so in America after the civil war, and not a few expect to see the same thing in this country.

We read in the *Kirisutokyō Sekai* that Professor Harnack attended a large meeting of educationists and others held at St. Louis at the time of the Exhibition. This was the Professor's first visit to America. He is said to be held in great respect there on account of his consistency and great devotion.

According to the same paper the anniversary of Dr. Niijima's death fell on the 23rd of January, it being 15 years since his decease. The *Kirisutokyō Sekai* comments on the permanency of much of his work.

The *Kirisutokyō Sekai* writes thus about the Bushidō: The Bushidō has three main features (1) Devotion to a lord and master, and willingness to die on his behalf. (2) A high regard for reputation, amounting to preference for death rather than disgrace. (3) A desire to right the wrongs of the world, to crush strong oppressors of the weak, to fight for what is right and just. Christianity not only approves of these three principles, but she has embodied them in her teaching. 1) St. Paul says:—"None of us liveth to himself, and no man dieth to himself. For whether we live, we live unto the Lord; and whether we die, we die unto the Lord." (2) The same Apostle says, "Whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report, if there be any virtue, and if there be any praise, think on these things." This passage embodies the teaching of the Bushidō on the subject of reputation; and as for the third characteristic, fighting for justice and fair play, it is repeatedly insisted on in the Bible. The writer then goes on to point out that the reputation sought for by

a Christian is not mere earthly fame and glory, but the approval of Christ.

The *Kirisutokyo Sekai* has undergone a slight enlargement and the price has been raised.

\* \* \*

The *Nichiyō Sōshi* (Episcopalian) contains a notice of a new religious magazine that has been started called the *Dai Nihon*. Its objects as stated in the opening number are (1) To ward off the moral deterioration which is likely to follow the conclusion of peace with Russia by proclaiming the truths of Christianity. (2) To blend in the world of thought the old with the new, Oriental and Occidental ideas. (3) To help the development of Christian literature. (4) To provide sound Christian teaching whereby to strengthen faith and spread the gospel. The *Nichiyō Sōshi* reviewer is of opinion that there is room for this magazine and that it will become the organ of a line of thought which finds no adequate expression either in the *Shinjin*, the *Seisho no Kenkyū* or the *Jidai Shichō*.

\* \* \*

The *Rikugō Zasshi* commands the services of a great many learned writers and having no "specialism" or "shibboleth" to defend, it welcomes the expression of widely divergent views. For many years the liberal section of the German Protestants who have missions in this country published an excellent magazine called the *Shinri*, from which we freely quoted at the time. But this organ has long since been discontinued, and the Rev. R. Minami, an extremely well versed and enlightened Christian writer who did much of the writing for the *Shinri*, now supports the *Rikugō Zasshi*. In the November and December numbers of this Christian free-thought organ he writes on "The New Methods of Studying Christianity," giving a concise account of advanced thought on the interpretation of the Bible and especially on the origin of the traditions preserved in the Old Testament. The time is past, says Mr. Minami, for regarding Christianity and the Hebrew religion on which it is based as isolated phenomena in the world's history. The study of comparative religions has exploded that theory most effectually. It is plain to all well-read scholars that Christianity is part of a great whole, that it is a special development of lines of thought whose source it is no longer difficult to trace. In order to determine what is the actual historical origin of the Christian faith, learned investigations have been steadily carried on during the past 70 years. The publication of Strauss's *Leben Jesu Kritisches bearbeitet* in 1835 and the writings of Baur\* during the five years that followed this date may be said, observes Mr. Minami, to have created a "new heaven and new earth" for Christianity. The Tübingen School methods have been conscientiously followed by a number of English and German writers, resulting in discoveries of an undreamt of kind. To attempt to explain the Bible to-day without a knowledge of what has been established by historical criticism is not a course to be recommended to anybody. Mr. Minami speaks highly of the great English authority on Old Testament historical criticism, Professor Robertson Smith. Mr. Minami gives a very lucid account of the result of comparatively recent investigations on the connection of Jewish and Babylonian traditions, specially with regard to the flood and the part Noah played in it.

In the December number of the *Rikugō Zasshi* there is an editorial on "The Authority of Morality," arguing that all important moral obligations may be logically deduced from thoroughly reliable premises in the same way as

\* The great founder of the Modern Tübingen School of Theology. His "History of the Doctrine of the Atonement" was published in 1838 and his History of the Doctrine of the Trinity and the Incarnation in 3 volumes in 1841-3. Both Strauss and Baur were the subjects of bitter persecution, being expelled from their professorial chairs in consequence of their views. The same was the case with Robertson Smith at Aberdeen, who subsequently became editor of the *Encyclopædia Britannica*, and later on Professor of Arabic at Cambridge.—(WRITER OF SUMMARY).

scientific facts are deduced and that hence the observance or non-observance of these is not a matter of choice, but compulsory on all members of the community. To base morality on religious teaching and sanction is one way of weakening it in an age when not a few question the claim of religious teachers to possess any authority to fix on what shall be accepted as true. The great virtues—sincerity, a regard for truth, forbearance, self-control, self-denial, love, regard for health (*Eisei*) are independent of time, place and nationality, commanding themselves to all the world alike as essential to the welfare of all communities. The article then goes on to show how superior in many ways in morality to law, how effectually without reliance on physical strength it can enforce its canons on the various members of society. The question of how to teach morality to the young so as to make them acknowledge and bow to its authority is one which, as the *Rikugō Zasshi* points out, should engage the serious attention of all educationists.

It is announced that a book of some 200 pages is shortly to be published by the Rev. K. Ishikawa, the Greek Church pastor and the editor of the *Seikyō Shimpō*, entitled *Komakyō Bembōron*, being an answer to certain criticisms of I. Abbe E. Ligneul on Greek Church teaching in one of his recently published works.

### SILVER WEDDING BELLS.

Mr. and Mrs. James Pender Mollison celebrated the 25th anniversary of their marriage—their silver wedding—on Saturday, February 4th, with an "At Home" at their handsome residence No. 118-a Bluff, at which something like 300 guests were present. Amateur theatricals were the principal feature of the delightful entertainment provided by the thoughtful host and hostess, and, needless to say, they were carried through with great éclat. To accommodate the players and dancers, the music-room and hall were turned into a miniature theatre, tastefully set out with all the proper accompaniments of stage, flies, footlights, proscenium and scenery, the audience overflowing from "the pit" into the library and dining-room. Over the proscenium arch hung an illuminated device in coloured lanterns bearing the letters "S.M."—1880-1905—"J.P.M." together with the heraldic shield of the Scottish clan to which Mrs. Mollison owes allegiance. Proceedings began about 9.30 p.m., when, after an overture by the Bijou Orchestra, Master John Mollison appeared upon the boards and spoke the following Prologue:—

To all our friends we offer kindly greeting  
As warm and hearty as at our last meeting.  
When "Doctor Mondshein" occupied our stage  
And Mrs. Hubbard helped, in spite of age;  
When Brady, as the jealous husband, posed,  
And N. G. his fair patient's symptoms diagnosed.  
Just take "Zee's little pill," the doctor said—  
Like many doctor's pills 'twas made of bread,—  
And so all ended happily, you could plainly see,  
Husband and wife united as they ought to be.  
And, now, let me once more recall "San Toy,"  
That sweet presentment of both girl and boy.  
I hardly know in which I liked her best,  
For both were lovely, it must be confessed.  
To-night "San Toy" appears in different guise  
And takes you with her'neath Italian skies,  
Helped by "Yen How" and "Rhoda," as in days  
gone past,  
Whilst Cooper's tenor voice completes the caste.  
For each and all our faults we crave your pardon,  
Remember, you are not at Covent Garden.  
True! we've had Beart to coach us as a friend in  
need,

And when Beart's with us he's a friend, indeed.  
Mr. Williams too, as "props," has staged our play;  
His wife's advice has cheered us on our way.  
With Vincent at the helm to guide our song,  
In his safe hands the score could not go wrong.  
To supplement the music of the Southern Land  
We've commandeered friend Berrick and his Bijou  
Band.  
Of Berrick's work we all feel justly proud,  
He's got together such a clever crowd.  
I thought I heard a whisper, "Don't ignore us,"  
I'm sure it comes from one amongst the Chorus.  
And true it is, without their kind assistance.  
Our play had lacked its *pièce de résistance*.  
Though last not least the dance now claims my  
rhy-me.

A rhythmic melody of tune and time  
Of bright young faces and of twinkling feet,

I'll wager never yet was seen as sweet

A sextet in this place before.

As that which quickly now will take the floor;

The prettiest dance you've seen for many a day

A worthy opening to our little play.

Once more, I bid you welcome: Welcome all!

And may *Banzais* resound throughout the hall.

The speaker was cheered to the echo, as he deserved to be, and then a Venetian dance, arranged by Miss Anna Carst, was danced by the following young ladies:—Miss Rosie Cameron, Miss Reah Kenderdine, Miss May Cameron, Miss Georgie Kenderdine, Miss Leslie McWilliams and Miss Madeline Mollison. The dancers were clad in accordeon pleated dresses of white silk, with trimmings of pink ribbon, they carried plumed wands of pink, and wore picturesque Venetian hats of pink and white. Altogether the *tout ensemble* was most charming, and at the close of their dance they were asked to repeat it, which they kindly did.

Another selection by the Bijou Orchestra, and then the curtain went up on "A Venetian Singer," a comedy opera in one act by B. C. Stephenson (author of "Dorothy"), and music by Edward Jakobowski (composer of "Erminie"), which was cast as follows:—

Bianca, engaged to be married to Matteo.....  
.....Mrs. Mollison.  
Paolina, Matteo's Sister.....Mrs. E. W. Maitland.  
Matteo, a Gondolier.....Mrs. E. W. Maitland.  
Gregorio, a Sergeant in the Doge's Guard.....  
.....Mr. A. E. Cooper.

The action, which takes place in the fourteenth century, is based on this Argument:

Bianca, the daughter of an old lute-player of Venice, has been left by her father at his death in charge of Paolina, whose brother Matteo has fallen in love with the orphan. They are engaged to be married, but Paolina's prudence forbids the ceremony until the young couple are provided with sufficient money. Matteo works hard as a gondolier, and adds his earnings to the little store, to which Bianca contributes the wages she is supposed to receive as a beadmaker. But they are still far off the sum which is to be made up before they marry, when Bianca hits upon the idea that more money is to be made by singing as an improvisatore in the streets and on the canals of Venice than as a bead-maker in the factory. The laws of the State make it impossible for her to appear as a woman, and therefore, masked and disguised as a boy, she delights the crowds on the piazzas with her melodies, and rouses their patriotism with her songs. Her earnings, which she conceals from Matteo and his sister, are rapidly swelling the little store, when the Doge sends Gregorio, a sergeant of his guard, to find the masked singer and reward him for his patriotism. Unfortunately for Matteo's peace of mind, Gregorio has succeeded in tracing him to Paolina's home and Bianca's subsequent appearance in her disguise gives rise to suspicions, which are only removed when she claims the Doge's gift, which enables her to marry Matteo, and proves by her singing that she is the improvisatore.

"A Venetian Singer" is full of melody and pretty songs and each and all received full justice at the hands of the players. Mrs. Mollison was in splendid voice and had to repeat some of her lyrics before the house would allow the play to proceed; while Mrs. E. W. Maitland proved as delightful as ever as actress and singer. Both the male parts were good. At the close the ladies received floral tributes across the footlights, and all engaged in the production were "called."

Mr. Brady having recited "Our Bazaar," in his own inimitable style, was recalled and in response sang a song to which were appended several local allusions, concluding with two verses in which the happy event of the day was referred to. This brought forth hearty applause. One further selection by the Bijou Orchestra and then Mr. Murray Mollison brought the stage-play to an end with the following Epilogue—the work, we believe, of the gifted pen to which the Prologue was due:

Stay, just a moment, I would like to say  
A few short words on this eventful day.  
A day of memories, of sweetness and of sadness  
But let your dominant note be gladness:  
A note of harmony and congratulation  
On this most joyous celebration,  
A symphony of love in tuneless keeping  
With an auspicious day that knows no weeping;  
But rather speaks of happiness galore,  
With heartfelt thanks for what has gone before.  
For this day, five-and-twenty years ago,  
Began an era, I would have you know,  
Of happy wedded love so pure and bright—

We thought it worthy to recall to-night  
The great event that happened long ago  
By getting up a little mimic show,  
And calling in our friends and neighbours to rejoice  
And join with us, in heart as well as voice.  
The Show is over. We have done our best  
With you, our friends, we safely leave the rest.  
If we have pleased you with our efforts small,  
Once more let Banzais ring throughout the hall.

Supper was served soon afterwards, and in the course of the proceedings, Dr. Wheeler rose and said:—

LADIES AND GENTLEMEN,—We are met together to celebrate a very joyful occasion, the 25th anniversary of the marriage of Mr. and Mrs. Mollison.

Those of you who have come to Yokohama in more recent years, and who, therefore, judge from appearance, will certainly think I have made a mistake, that it cannot be possible that our fair hostess, has really worn the fetters of Hymen for 25 years—but, hard as it is to believe, we, who can look back to her arrival as a bonnie bride, know that it is true. Twenty-five years have come into light and glided into shadow since then,—each year in passing but touching her with a new grace. All who have come within our good friend Mollison's "sphere of influence," will there find the most generous qualities display themselves; love, sympathy, consideration for others, and a liberal spirit; prompt not only in private but in public service.

Need I speak to you, who know her, of Mrs. Mollison? Of the charm of her manner and the witchery of her voice, her loving heart, kind hand, warm and generous feeling? In her, we find all the sweet charities of life, affection, benevolence, sympathy to those in sorrow, sickness, or adversity. In short, ladies and gentlemen, old friends and new, I am sure we all agree, in considering it a privilege to enjoy the friendship of Mr. and Mrs. Mollison. They lose no opportunity of conferring pleasure, of contributing to the happiness of all with whom they come in contact. Their kindness, loyalty to their friends, and delightful hospitality, render them a combination of all that wins and retains affection. I ask you to join with me heartily in drinking to the health, happiness and continued prosperity of Mr. and Mrs. Mollison on this their silver wedding day. (Loud cheering, followed by "They are jolly good fellows.")

Mr. J. P. Mollison, on rising to reply, was met with a volley of cheering. He said—Our dear Doctor, and you our kind friends all, have placed me in the most difficult position I have been in in my life, and given me a task that I feel wholly unequal to. For my shortcomings I must trust to your kind forbearance and if I fail to say all I ought to say, or would like to say, I must ask you to put it down to the nervousness inevitable to such a highly momentous occasion. Let me, in the first place, express my own and my wife's warm appreciation of your coming in such numbers to-night to help us to celebrate our Silver Wedding. In the second place, we thank you from the bottom of our hearts for the very cordial manner in which you have endorsed the all too flattering remarks that have fallen from the lips of our dear friend—and more than friend—Dr. Wheeler. I fear the doctor has said more nice things about us than we deserve; that he has been to our virtues wondrous kind and to our faults not a little, but far more than a little, blind. But be that as it may, I am free to confess to a feeling that we have both endeavoured to be good citizens throughout the long period of our residence in Yokohama, and have done our best at all times to promote the welfare and best interests of the community. We have been before the public, so to speak, for 25 years. Our lives have been like an open book to our friends, and it is for you to say whether or not we have done our duty. One thing I can safely say, I say it with pardonable pride, and that is, that neither of us has ever done anything that we have reason to be ashamed of ("Hear, hear," and loud applause). Mr. Mollison then alluded to his Wedding Breakfast of twenty-five years before and to the speech he made on that occasion—a speech he remembered as well to-day as on the day he delivered it—and then continued: Since then my wife and I have gone hand-in-hand through the battle of life. We have had our ups and downs, our joys and our sorrows. What one sorrow was many of you know, but I would not wish to dwell upon it now. We have always been together and under God's help have been able to support and comfort each other at all times. And now, good friends, we are, as you know, thinking of taking a run home in the spring, but it won't be for long. We shall surely come back to the land we love so well, and the friends we love so dearly, and if we find the same friends to welcome us as we have here to-night, it will be a happy return. I dedicate this glass of wine to our good friends in Yokohama and drink to the health and happiness of you all.—(Loud applause.)

The festivities continued for some time longer,

concluding with the singing of "Auld Lang Syne."

Mr. and Mrs. Mollison were the recipients of many handsome souvenirs of the day in silver, which were set out in an upper room, where they attracted much attention.

### THE BOOKSHELF.

*River, Road and Rail*, by FRANCIS FOX: London, John Murray.

AFTER forty years of a strenuous life, Mr. Francis Fox, the eminent civil engineer, has yielded to the desires of his friends and written some reminiscences of his engineering experiences, and, as his life embraces nearly the whole of the railway era in Great Britain, during which he actually took a part in the building of the Mersey Tunnel, saw the Simplon Tunnel started and almost brought to completion, and in the person of his son is superintending that gigantic engineering feat, the throwing of the cantilever bridge over the Zambesi River, it will readily be seen that Mr. Fox has a more than usually interesting story to tell. He says in his preface that his narrative is of necessity discursive, but his readers will find no fault with him for that. The book opens with some incidents in the life of his father, Sir Charles Fox, who, starting life as a surgeon, abandoned the pursuit of medicine in 1831, for railway engineering. Becoming associated with Ericsson, who was afterwards to fill such a large space in the world as an inventor, Mr. Fox drove in the celebrated Rainhill Trials the locomotive known as "The Novelty," which, but for the fact that it blew a tube, would probably have been the winner of the prize of five hundred pounds. Mr. Fox, by the way, was present on that memorable occasion when Mr. Huskisson was killed at the opening of the Liverpool and Manchester Railway. He had his first great opportunity of showing the stuff that was in him when the Watford Tunnel caved in in 1834, when 11 men were killed, and a panic ensued among the workmen. By the force of a strong personality and by his individual example in going down the shaft with a single ganger, he stayed the panic and got the tunnel finished. The late Herbert Spencer, in 1837, entered Mr. Fox's office as an assistant engineer, and it was during his time that Sir Charles designed the present roof over Euston Station, the first of the kind ever made. It was Charles Fox, too, who had the courage to take the contract for the erection of the Great Exhibition in Hyde Park in 1851, the forerunner of all subsequent World's Fairs. We have not space in this review to quote the many interesting stories connected with the building of the Crystal Palace which Mr. Francis Fox has to tell, but must pass on to his own reminiscences. He seems to have had a very happy childhood, and an equally happy school-time, and on starting life took up his father's profession. Many are the good stories he has to tell of amusing adventures that befel him as a surveyor, when railways were an absolute novelty in the great majority of English counties. What could be more laughable than the remark that he overheard in Essex, when passing a cottage garden with his surveying instruments and flags, a stout old lady called to her daughter, "Marie, here come the surveyors; take in the clothes." She evidently classed railway surveyors in the same category as tramps and gypsies. It was the case of diamond cut diamond, too, in many instances when speculative builders and hostile land-owners tried to "do" the railway companies; generally the railways won, for the tribe of Sir Miles Over-reach generally over-reaches itself. An interesting chapter is that devoted to diving and sub-aqueous work with which Mr. Fox had a good deal to do in the course of his long life. He tells a story of how the Severn Tunnel was saved by the courage of Lambert, a well-known diver, who volunteered to go down the shaft, walk in absolute darkness down the tunnel, blocked by floating timber, trucks, tubs, rails and heaps of bricks, turn from the tunnel into the staple shaft which led into a drainage heading, a total distance of 400 yards, and close a flood-door, thus shutting out the great spring which had been unex-

pectedly tapped and was flooding the tunnel at the rate of 27,000 gallons per minute. As Mr. Fox says:—

Those only who are acquainted with diving can realize what this meant. The mere losing of the sense of locality is bad enough; but, added to this the pitch darkness, the terrible loneliness, the depth of the water, the distance to be traversed, and the powerlessness of any help being given, were sufficient to cause the bravest heart to fail. Lambert went down, was absent an hour, returned, and had failed. He was induced to make a second attempt, the pumps being worked to their utmost capacity during his absence, but no lowering of the water was observable. He was away so long that it was feared he was lost, when suddenly the water in the shaft began and continued to fall, showing that he had succeeded."

Mr. Fox begins a chapter on tunnelling with some references to similar work done as early as 600 B.C. at Babylon under the river Euphrates, and after a glance at early Roman aqueducts brings his story down to date by an intensely interesting description of that greatest of all tunnelling enterprises, the excavation of the Simplon Tunnel. We can recommend this chapter to even the average reader, for the facts given are of moving interest to any person who takes a delight in reading of how nature is made to bow to the imperative demands of man.

It was not only as a railway engineer and tunnel-builder that Mr. Fox touched life. He was also interested in mining, and several of his chapters are devoted to this branch of engineering, chapters which teem with many a good thing which we have difficulty in refraining from lifting out of his book into our columns. The pursuit of his profession has taken Mr. Fox to many lands, including the United States, Canada and South America, and he enhances the charm of his narrative by the reproduction in black and white of many beautiful water-colour sketches which he took at the spots described. Spain and the Mediterranean, Egypt and the Holy Land have also been the scenes of Mr. Fox's enterprise, and each receives due notice in his book. To many the chapter devoted to Rhodesia will make the strongest appeal, for here he deals with the Cape to Cairo Railway and the bridging of the Zambesi River. Many beautiful photographs of the magnificent Victoria Falls are given. These Falls were first discovered by Dr. Livingstone in 1855. They have a height of 400 feet, and a width of about 5,700 feet, and they fall into a narrow gorge which is said to extend for about 30 miles. It might be mentioned here that the Niagara Falls are 167 feet in height, and the Niagara river gorge extends for 6 miles, so that the Zambesi Falls take premier place of them in every way.

One further extract from Mr. Fox's book and we must conclude. He says:

One is often asked how soon the railway will be completed between the Cape and Cairo, but this is not easy to answer, it may be many years; but, on the other hand, a rapid through communication is quite within measurable distance. Lake Tanganyika, being 40 miles in length a railway there is unnecessary, as commodious steamers will be placed on the lake, and the same remark applies to the other two lakes and the Nile. Thus out of a total distance of 5,611 miles no less than 1,800 miles will be performed by steamer, leaving 3,811 miles to be accomplished by rail, and of this distance 2,770 miles are already built. In other words, only 1,041 miles of railway remain to be constructed to get through communication, and as 350 miles of this are to be built shortly to reach the copper-mines, only 700 miles will then have to be accomplished.

Altogether Mr. Fox has compiled a book which will interest a very large circle of readers and he must not be surprised if he is asked to supplement it by another on similar lines.

The captain and twenty-seven sailors of the Austrian steamer *Burnah*, recently captured in the neighbourhood of Hakodate by a Japanese destroyer while on the way to Vladivostok carrying contraband of war, and brought to Yokosuka, were released on Tuesday (Feb. 7th) at the Kaigawa Kencho in the presence of the French Consul at Yokohama. They will leave by the next French mail steamer for home.

## "THE SLEEPING BEAUTY."

Beautiful costumes, delightful singing, entrancing dancing, witty dialogue, clever players, capital scenery—what more could the most captious playgoer desire! All these and much besides combine to make the musical extravaganza written by W. S. Dinsdale around the old fairy tale of "The Sleeping Beauty" one of the finest things in its way ever put upon the Yokohama stage. In years gone by Mrs. Dinsdale has placed the community hopelessly in her debt by writing and producing similar whimsicalities and there are many who still look back with pleasure and recall to happy recollection the droll characters she introduced in "Cinderella"—the two Sisters, for instance, and that inimitable life-like *junsan* (a born-in-Japan, too)—; while others, more recent comers, remember with an equally pleasant gusto her "Bluebeard" and all the fun derived from it. But "The Sleeping Beauty" in every direction outranges its predecessors, and if the temper of last night's crowded audience is any gauge this extravaganza is in for a very "long run" indeed. From the very opening, when *Alphonse*, the Chef, refuses "to make the baby's bottle," considering it an insult not to be tolerated by a *cordon bleu*, and is therefore consigned to the dungeon vaults, to the grand finale when the various couples have been paired off to the satisfaction of each and all, the best of good humour prevailed, the players and their audience being in perfect accord. But it was when *Sans Atouts* was on the stage that ripple after ripple of laughter swept over the house, to gather volume and break into a veritable storm of applause at many a telling quip and local allusion. There were very few topics of the day that did not come in for some lively sally at his hands, from the visionary golf links at Hodogaya to the latest quotation for a certain stock which shall be nameless; from the newest business enterprise in Main Street to the late church meeting; from the doings at Negishi racecourse to the writings of local Society journalists—everyone and everything came in for genial banter, while some suffered the penance inflicted on aspiring local greatness by receiving extra attention at the punster's hands—and such punstoo! Among the outstanding songs were *Sans Atouts*' "A popular man about town," and "In the good time coming" (wherein the easy gullibility of Yokohama in the matter of entertaining total strangers was smartly satirized); *Sir Ranulf de Sangazure*'s "Trifle not with Love," and his duets with *Dulcibella*; *Earl Fitzhardup*'s "Oh! married life," and the finale "A Volunteer wanted." The *caste*, as we have already said, was excellent, and though some characters naturally filled their parts better than others, there was a splendid evenness about the performance which spoke of much hard work at rehearsals. *The Lady Mandragora* filled her unpleasant rôle splendidly, and her singing was most enjoyable. The Ladies-in-waiting, *Gundrey* and *Brynild*, and their attendant swains, *Tete de Veau* and *Bovril de Boeuf* were very good, the temperamental contrast between the different couples being capitally sustained; while as for the Nurse Girls, *Philopena* and *Fritola* we will only say they danced divinely and took every possible occasion to flirt with those most handsome of pages, *Boozza* and *Baccak*. Mr. C. H. Ferrier, as *Nightshade*, the wicked fairy, took full advantage of his part, and threw into it all the malignancy required—his dancing was such that the audience would have liked to have had more of it. The part of the heroine, *Dulcibella*, was taken by Mrs. E. W. Maitland, and it could not have been in abler hands. Always a charming actress, Mrs. Maitland surpassed herself last night and loud and long were the plaudits which she drew from a delighted house.

And now a word or two to others who were greatly instrumental in achieving this famous success. The new-drop scene painted by Capt. Harrison, R.E., is a veritable work of art; it represents a scene on the grand canal at Venice, and is a worthy successor to Wirgman's beautiful *Nojiri-no-ike*, which has done such yeoman's service at the Public Hall. The setting of the various

scenes was very charming, being the work of Mr. E. Curjel, and he deserves the highest compliments. The musical director, upon whom fell a tremendous amount of work, was Mr. H. Horne, and a more capable pianist and conductor could not be found; the stage manager was Mr. E. Beart, the property man was Mr. F. J. Hall; and the prompter Mr. H. W. Kilby. Throughout the evening the Bijou Orchestra rendered selections in their usual bright fashion. The net proceeds of the entertainment will be given to the Japan Red Cross Society.

## CHARACTERS

Earl Fitzhardup, a great Lord of the 14-15 Centuries.	Mr. Skrimshire
Sir Ranulf de Sangazure, a Noble Knight	Mr. N. G. Maitland
Hon. Ralph Bareacres { A young gentleman of the 20th Century, impetuous but of ancient name }	
Bovril de Boeuf { Gentlemen in Waiting }	Mr. O. M. Poole
Tete de Veau { }	Mr. K. Dodds
Boozza { Pages }	Mr. O. M. Poole
Baccak { }	Mr. R. Bowden
Marston, Valet to the Hon. R. Bareacres	Mr. C. F. Stephens
Alphonse, Chef to Earl Fitzhardup	
Sans Atouts, the Earl's Jester	Mr. G. G. Brady
The Lady Mandragora, a Lady of Character	Miss Lloyd Thomas
Gundrey { Ladies in Waiting }	Mrs. N. G. Maitland
Brynild { }	Miss Mendelson
Nightshade, the Wicked Fairy	Mr. C. H. Ferrier
Honoraria { Good Fairies }	Miss Merriman
Hilaria { }	Miss Blundell
Hysteria { }	Miss Cameron
Mysteria { }	Miss James
Felicia { }	Miss A. Harrison
Fidelia { }	Miss A. Blundell
Deliria { }	Miss C. Merriman
Delicia { }	Miss Dinsdale
Nurse	Miss M. Kilby
Philopena { Nurse Girls }	Miss Moss
Fritola { }	Miss Rogers
Joan, Head Housemaid at the Castle	Mrs. Dinsdale
Dulcibella, "The Sleeping Beauty"	Mrs. E. W. Maitland
Attendants:—Messrs. A. Bishop, T. Kilby, E. Dinsdale.	

## FOOTBALL.

Teams captained by Messrs. W. B. White and W. S. Moss, respectively, played a match on Saturday afternoon under Rugby rules. Owing to the failure of some of the men selected to turn up it was necessary to play three men a side short. The match does not call for special notice, except for its roughness, lack of good play, and the casualties that occurred during its progress—the most regrettable of which was an accident to E. W. Kilby. While running with the ball he was tackled by Libeaud and pitched forward. He continued to play for some time but an accident later caused H. J. Hearne to retire, and it was then found that Kilby's left collar-bone was broken. In his case the unfortunate result will be his enforced absence from "The Sleeping Beauty" (where his place will be taken by Mr. Chester Poole) and from the Rugby and Association interport matches. The game resulted in one goal and three tries (14) for Colours, and one goal (5) for Whites. Teams:—

(Colours.)		(Whites.)
W. Goddard	Backs.	T. W. Kilby
E. W. Kilby		W. H. Ferrier
H. W. Kilby	3/4	B. C. Foster
L. D. Tebb	Backs.	C. E. Libeaud
K. van R. Smith		J. Abbey
W. B. Mason	3/4	D. Weed
H. J. Hearne	Backs.	W. Graham
W. S. Moss (Capt.)		W. B. White (Capt.)
F. W. R. Ward		O. Strome
A. Hills	For-	A. Kingdon
R. C. Bowden	wards.	A. W. S. Austen
F. G. Correa		L. Stornebrink

A telegram from Ujina says that 480 Russians captured at the recent battle on the Shaho left Talien on Feb. 6th and are expected to arrive at Ninoshima on the 9th.

## THE LAW COURTS.

## THE COLLINS CASE.

The preliminary examination of Mr. H. B. Collins, who has appealed against the sentence of eleven years' confinement with hard labour, given in the Yokohama District Court, began on Feb. 3rd in the Tokyo Appeal Court. The open trial will take place at 9 a.m., on Feb. 13th before Judge Watanabe.

## CLAIM FOR LIFE INSURANCE.

The case instituted by the National Bank claiming yen 15,000 against the Equitable Life Assurance Society, judgment in which had been fixed to be given on Feb. 4th was reheard on the 7th in the Yokohama District Court on account of further investigation by the Court regarding certain evidence. The Court asked for evidence of the standing of the representatives of Mr. Otani and the Sanchu Gomei Kaisha, two of the intervenors in the case, but Counsel could not give a definite reply. Again, the Court questioned which of the plaintiffs in this case and which of the participants had lodged a petition in the court to seize the policy of the late Chinese compradore of the National Bank. Counsel was not prepared with the dates regarding the petitions lodged and promised to find out at the next hearing.

Mr. Sawada, Counsel for plaintiff, however, said that the date in question has no close relation to the case and that there was no necessity to ascertain it.

Thereupon the parties entered on a brief discussion after which the hearing was adjourned till Feb. 14th.

## YOKOHAMA ICE WORKS v. STORNEBRINK.

The hearing of this case, in which plaintiff claims five thousand yen, was resumed on February 9th in the Yokohama District Court before Judge Nakanishi.

The Court declared that a statement given by Mr. Uchiyama Rossetu, as a witness before the Japanese Consul at Chemulpo, had been received by the Court. Defendant's Counsel made a protest as to the statement given by this witness, contending that the summons and examination of the witness was made in accordance with Art. 280 of the Procedure of the Civil Code and that therefore it could not be taken as valid. Counsel further stated that though Mr. Tamono deposed as a witness in the previous hearing that he had asked Mr. Stornebrink to receive a cheque of ten thousand yen payable at the Teikoku Commercial Bank, Tokyo, and drawn by J. Tominaga, now deceased, and which defendant refused to receive because his business hours were over, the fact was very vague. Mr. Tominaga never did make out a cheque in favour of plaintiff, and the former had no credit with the bank on Sept. 10th, 1896. Counsel asked the Court for leave to summon Fuji wife of the deceased Tominaga, and Mr. K. Shima, manager of the bank, as witnesses. After retiring for consultation, the Court rejected the request of Defendant's Counsel.

Plaintiff's Counsel produced a pamphlet and stated that it showed the payment of yen 1,100 made by plaintiff to defendant every month from May to July, 1896, and that defendant by signing with his initials acknowledged receipt. The monthly payment included rent of yen 100 regarding which defendant had a dispute. Discussion followed as to the rent, after which Defendant's Counsel admitted that the total sum included the rent.

As an alteration had taken place in its organization, the Court went through all the evidence, after which Counsel spoke briefly. The Court thereupon declared that the hearing was completed and that it would give judgment on Feb. 14th.

## UNION CHURCH "SOCIAL."

A very enjoyable social gathering of members of the Union Church congregation and their friends was held at Van Schaick Hall on Friday evening. The hall was prettily decorated with flags and with carpet squares and rugs spread on the floor and fauteuils and lounges distributed here and there,

assumed quite a drawing-room appearance. Rev. E. S. Booth and Mrs. Booth, as host and hostess, received the guests on entering and quickly made each and all feel welcome and at home. After half an hour's pleasant social chat and conversation Mr. Booth with a few happy remarks, in which he complimented the Yokohama community on their social proclivities, introduced the Rev. H. Loomis as chairman, and a programme of music, etc., was satisfactorily rendered to the enjoyment of those present, the attendance being quite as large as could be accommodated with comfort to all. The programme was as follows:—

Pianoforte Duet, "Larghetto" *Beethoven*, Misses Griffin and Moulton; Reading, by Dr. J. L. Dearing; Quattett, "Hold Thou my hand," Messrs. Griffin, Graham, Wallace and Macbeth; Violin solo, Mr. C. H. Thorn; song "I have something sweet to tell you," Miss Saunders; Organ and Pianoforte Duet, "Nocturne," *Chopin*, Miss Moulton and Miss Griffin; Monologue, Mr. C. Allen; Song, "The Lighthouse-keeper," Mr. L. D. Tebb; Double Quartette, "The Belfry," Miss Griffin and Moulton, Mrs. Bagnall and Miss Strain Messrs. Griffin, Graham, Wallace and Macbeth.

Miss Saunders was treated to an *encore* for her charming rendering of a dainty little *chansonnette* and the final number, the double quartette, was also deservedly and warmly applauded, while the other performers acquitted themselves most satisfactorily. After the conclusion of the music social intercourse was resumed and refreshments served and the witching hour of midnight had arrived before the last of the guests left the hall. The "social" was unanimously declared to be a success and all hoped to see it repeated on some future occasion.

#### JAPAN BREWERY COMPANY, LIMITED.

The annual meeting of this Company was held at the Company's offices, Yamate-cho, on Monday afternoon when there were present Messrs. F. S. James (Chairman and Managing Director), W. R. Bennett, R. Fachtmann and L. J. Healing (Directors) and J. H. Rosenthal, Fr. Retz, M. Russell, H. J. Snow D. Marshall, R. S. Thomson and J. H. Dinsdale (Secretary).

The CHAIRMAN said:—This is the seventh meeting of the company and it is with regret that your Directors have not a better record to place before you. As you are all aware on the 8th February, 1904 a few days after our last meeting, war broke out between Japan and Russia which at first had the effect of stimulating consumption but later on, when it was realized that taxation would have to be enormously increased in order to provide funds for the Government to prosecute the war, the demand for beer fell off and, as we mention in our report, our total deliveries were less than for 1903. This decrease in the consumption is one of the most serious features because our expenses remain about the same, no matter what quantity we sell, so that any decrease reduces the profits on the amount sold in a much greater ratio. The demand for the coming year will depend greatly on the chance of peace being made. Should the war continue consumption is expected to decline but if, happily, on the contrary, peace is made, sales should resume their normal condition. The heavy increase in the taxes this year will enhance the cost of the beer, so that unless we can raise the price our profits must be curtailed. At present we see no chance of this owing to increased competition. The export trade, which has shown up well during the year under review, is now threatened with a dangerous rival in the shape of a new brewery in China. This year promises to be a very critical one in financial matters, a great deal of money will have to be raised by Government and the banks are likely to be very cautious. Now, gentlemen, you are all aware that this company is working on a very small capital in comparison with the business it transacts and for several months in the year has to depend upon its bank for accommodation. I am glad to say that up to the present our bankers have always given us the accommodation we required and we appreciate the way in which

they have treated us, and no doubt they will continue to support us. But at the same time we must remember that in a time of war it is impossible to predict the future, and, as business men, we feel our safest action is to guard our cash and strengthen the company by making ourselves, as far as possible, independent of our bankers. All the factors combined have induced us to recommend you to forego any dividend and to carry the bulk of the profit to the Reserve Fund. This will no doubt be a disappointment to shareholders and we sympathise with them but, at the same time, feel confident that our recommendation is correct and proper. If, happily, the present year should turn out more prosperous than at present seems, the shareholders will reap the benefit. There is nothing in the accounts that I wish to remark on but before formally moving their adoption from the chair I shall be pleased to answer any question as far as advisable.

Mr. RUSSELL asked if the Reserve Fund was in cash or paper and the Chairman replied it was part of the business assets.

Mr. ROSENTHAL asked the purpose of the Guarantee Fund and the Chairman said it was a guarantee against various accounts to make the Company sure in certain contingencies.

Mr. RUSSELL asked a question with regard to the sundry debtors accounts, to which the Chairman replied that so far as they knew those accounts were perfectly sound. The accounts were paid regularly every month but they always had a large sum out, as they were bound to do, because they gave credit. Nevertheless they took every possible precaution.

The report and accounts were then unanimously adopted on the proposition of the Chairman.

The CHAIRMAN then asked the meeting to elect directors, and on the proposition of Mr. Marshall seconded by Mr. Snow, Messrs. W. R. Bennett and C. B. Bernard were re-appointed.

Mr. SNOW proposed that the appointment of Messrs. R. Fachtmann and L. J. Healing, as directors of the Company, be confirmed.

Mr. RUSSELL seconded and the motion was approved.

On the proposition of Mr. Retz, seconded by Mr. Rosenthal Messrs. F. J. Hall and J. F. Cox-Edwards were re-appointed auditors and the proceedings terminated.

#### UNION CHURCH.

The annual general meeting of seat-holders of the Union Church was held at Van Schaick Hall on Tuesday evening, the Rev. E. S. Booth (honorary pastor) presiding over a fairly large attendance.

The Rev. J. L. DEARING, in reading the report of the Trustees, said the pulpit had been filled during the past year by various ministers from Tokyo, Yokohama, and other places, and this constant change had perhaps enhanced the interest in and benefit derived from the services.

The CHAIRMAN said that though they had a very satisfactory balance shown in the statement of accounts, the membership of the Church had not grown during the year. He spoke in feeling terms of the loss the Church had sustained by the death of Mr. Geo. Booth who had long been an officer of the Church. The Consistory at their meeting had passed resolutions referring to this sad loss, and these had been engrossed and after signature would be presented to the family of the deceased. The Church missed Mr. Booth very much; he was a man of quiet demeanour, but had been steadfast in his work ever since he joined the Church years ago. Referring to the Trustees' report, the Chairman said they were under deep obligations to Dr. Dearing for the work he had done.

The HON. TREASURER (Mr. J. Macbeth) in presenting the report and accounts made special reference to the organ recitals, the proceeds from which had not been fully dealt with in the report published. The offertory at the recital held on November 29th amounted to 162.57 yen, and after expenses had been paid 62.91 yen had been donated to Van Schaick Hall Building Fund and 62.91 yen to the Union Church. Owing to the inclement weather there was but a small attend-

ance at the second recital given on December 13th, when the offertory amounted to 36.72 yen, and after paying expenses 13.27 yen was donated to the Yokohama Blind School and a similar amount towards the cost of installation of electric light in the Union Church.

The report and accounts having been adopted, the Rev. J. L. Dearing thought they ought not to congratulate themselves too much upon the balance in hand. The ministerial expenses during the past year (without a pastor) amounted to 775 yen and they ought not to reduce their offertories but rather to give more in order to form a pastor's fund, such money to be put away until they had accumulated a considerable sum.

Mr. ISAAC BUNTING called attention to the list published each year as pew rents and donations, and took exception to this list being published, as there were others who gave just as much whose names did not appear. Although they were not able to give any brilliant report of increase in membership, he thought the offertories showed that God was blessing their work.

Mr. C. GRIFFIN remarked that some people were saying they would not give further subscriptions unless a pastor were appointed. This Church after paying current expenses had only about 800 yen with which to pay a pastor, and it would be impossible for a pastor to reside here on any such sum as that. Could they possibly take some action to-night to strengthen those who were hesitating about subscribing? He thought they should empower the Trustees to form a Sustentation Fund, the balance at present remaining in hand to go to such fund. There was held by the Ladies' Auxiliary a fund known as the Building Fund. He would suggest that three funds be formed—Building, Parsonage and Pastor. They might have a collection once each year for each fund, and any balance remaining at the end of the year might also be placed to the credit of these funds; and if the Ladies Auxiliary fell in with this idea they might pass what they had into the fund and thus form a nucleus.

Mr. VILOUDAKI thought the suggestion a wise one.

The CHAIRMAN said the idea of making three separate accounts was that people might give to whichever they most favoured. He hoped the time would come when they would have a place of their own with Y. M. C. A. attached; to have a home of their own instead of merely a place where they could go and worship at the regular services.

After some further discussion, Mr. I. Bunting proposed that the Trustees be empowered to place 1,200 yen to form a Sustentation Fund, to be divided into three accounts for building, parsonage, and pastor, and that one collection be taken each year for each account.

The Rev. J. H. BALLAGH supported, and Mr. Viloudaki seconded the motion was unanimously adopted.

The Rev. H. LOOMIS read the report of the Ladies' Auxiliary, whose annual meeting was held in November. The treasurer's report at that time showed a balance in the treasury of 131.78 yen for current expenses; 138.11 yen in Poor Fund and 792.50 yen in Church Building Fund.

The CHAIRMAN thought the Ladies' Auxiliary had done excellent work.

The report having been adopted, Mr. CLARENCE GRIFFIN read the report of the Sunday School. This showed that the school had gained in numerical strength, the actual number of attendances for the nine months during which the school was in session reaching 2,987 against the previous year's 2,769. Financially the school stood fairly well, the income just covering expenses. The little people had endeavoured to show their sympathy with the gallant defenders of the land in which we sojourn, and 750 little booklets filled with suitable pictures had been forwarded to the military hospitals and 500 more were in course of preparation. The children had also saved their candy money for one week for the purchase of chillies, and 1,600 packets of these had been forwarded to the soldiers in the frozen regions of Manchuria. Special prizes presented by a lady and gentleman in Yokohama had been awarded to Willie Scott, Jeannie Scott, Muriel Cain and Dwyer Neville. In moving the adoption of the report the Rev.

J. L. Dearing spoke in highly eulogistic terms of the very earnest efforts of the Superintendent, Mr. Griffin, and the Chairman also spoke to the same effect. The report was then adopted.

The election of officers resulted as follows:—Honorary Pastor, Rev. E. S. Booth; Elders, Rev. E. S. Booth, Rev. H. Loomis, Rev. J. M. Frank, Mr. I. Bunting, Mr. L. Pollard, and Dr. Saunders; Deacons, Messrs. E. Bunting, Macbeth, Wallace, and F. S. Booth; Trustees, Rev. J. L. Dearing, Messrs. Viloudaki, C. Griffin, Macbeth, F. S. Booth, Tebb and Harris; Sunday School Superintendent, Mr. C. Griffin; Ushers, Messrs. Gray, F. E. Bunting, F. S. Booth and Victor Hearne.

The CHAIRMAN said they had been excellently served at the organ by Mr. Karl Vincent, and he sincerely hoped that gentleman would consent to serve them for a further period. The Revs. Dearing, Ballagh and others having spoken in highly appreciative terms of Mr. Vincent's services, he was accorded a very hearty vote of thanks, and an unanimous desire was expressed for his continued services at the organ.

Various other votes of thanks were passed, and the proceedings closed with the singing of the Doxology.

The annual general meeting of the church and congregation is announced for Tuesday evening next, the 7th inst. The statement of accounts for the year shows that the receipts of the Church compare favourably with those of the preceding year. In the Offerories there has been an increase of Y. 324.90 compared with that of the previous year, the figures being Y. 1,773.00 and Y. 1,448.10 respectively. There has also been an increase of Y. 235.75 over the previous year in the donations and subscriptions, the figures being Y. 1,170.75 and Y. 935.00.

The year closed with a balance to be carried forward of Y. 1,480.32, against Y. 410.36 of the preceding year, so that the receipts are Y. 1,069.96 in excess of expenditures.

The statement of accounts for year ending January 31st, 1905, was as follows:—

DR.		Yen.
Feb. 1st, 1904, Balance brought forward...		410.36
To Offerories .....		1,773.00

By Balance in hand Jan. 31st, 1905 .....		1,480.32

ROBERT WALLACE, Auditor.  
JAMES MACBETH, Hon. Treasurer.

#### HELM BROTHERS, LIMITED.

The annual meeting of the shareholders of this Company was held at the Masonic Hall on Tuesday afternoon. Mr. E. W. Frazar, Chairman, presided and there were also present Messrs. B. Schmidt-Scharff, J. A. Harmsen, J. Helm, W. Cain, H. Mahr, W. Steinsch and C. J. Helm (Secretary).

On the proposition of the Chairman, seconded by Mr. Mahr, the minutes of the last meeting were taken as read and approved.

The CHAIRMAN in proposing the adoption of the report and statement of accounts said:—In

presenting this, the sixth annual report of the Company, your directors feel entitled to claim a certain amount of satisfaction. Notwithstanding the gloomy outlook at the commencement of the year, due to the certainty of a coming war, the shipping interests of this port have kept steadily active and, thanks to the masterful supremacy of the Japanese Navy, are expanding and increasing so rapidly so to further overtax an already inadequate landing accommodation. Extra work has been thrown on the staff, but by careful management and system good results have been attained without material increase of expenses. A glance at the balance sheet and comparison with those of preceding years will show a highly satisfactory reduction in the item of claims. The salary and wages account has gone up somewhat but only in keeping with a general movement all along the line of business houses. The fleet has been constantly overhauled and is to-day in a fair condition, while the substantial amount written off places it on a firmer basis than ever before. The year's working has resulted in a net profit of yen 20,515 which, with the balance brought forward from last year's account and the payment of a 7½ per cent. interim dividend in July, makes a total balance of yen 26,949.06 and the Directors recommend that a final dividend of 10 per cent. be declared at this meeting. This will absorb yen 18,600 and leave yen 8,349.06 to be carried forward to the next year's account. The Board continues to feel much pleased with the management of the company's interest at the hands of Mr. Julius Helm and his son Charles and consider the good results largely due to their careful attention and tireless activity. An appreciation is also due to Mr. R. T. Bell who, as supervising accountant, presents clear and concise trial balances to the Board each month. The outlook for the present year is encouraging and it is the intention of the Board to take an active interest in developing and improving the landing and handling facilities of the port so as to secure a due share of the work.

Mr. STEINSCH formally seconded the adoption of the report.

Mr. H. MAHR said the report before the meeting was certainly a good one and the dividend proposed by the Directors was very satisfactory indeed. There was only one fault he found and that was with the Profit and Loss account and the amount of yen 18,000 written off the fleet. The fleet, which consisted of one steam tug, three steam launches and 56 lighters stood in the books of the company at the end of 1903 at yen 64,000, so that it was proposed to write off nearly 20 per cent. in one single year. Considering that over yen 23,000 had been written off the original value of the fleet before 1904 and considering further that all repairs and improvements to the fleet were not charged to "Fleet Account" but to Profit and Loss Account, he thought that the amount of yen 18,000 put aside for depreciation was extremely large. The fleet was now, he was told, just as good or even better than it was in 1899 when the Company was formed. He should like to see the directors taking advantage of prosperous times by making provision for rainy days. This might be done by putting part of the yen 18,000 proposed to be written off the Fleet Account into a fund to be called Depreciation Account, Reserve Fund or Dividend Equalization Fund or by any other name they liked to use. That fund would enable the Company to maintain an even rate of dividend in spite of losses, caused for instance by fire or poor years. Any such losses and differences would be borne by the Reserve Fund and the rate of dividend would not be affected at all.

The report and accounts were, on the proposal of Mr. Mahr, adopted and passed.

The retiring Directors and auditors were re-elected and the proceedings then terminated.

The Directors have the pleasure to submit to the shareholders the balance sheet and profit and loss account for the year ending 31st December, 1904.

The net profit for the year (including the sum of yen 6,433.89 brought forward from 1903) after payment of a 7½ per cent. interim dividend of yen 13,950 in July last and writing yen 18,000 off fleet

account; yen 1,567 off drays and horses account; yen 2,650 off house property account and providing for the directors and auditors fees, also a bonus to the foreign and native staff,

Yen.  
Amounts to ..... 26,949.06  
Out of which the directors recommend that a final dividend of 10 per cent be declared, which will absorb yen 18,600, leaving a balance of yen 8,349.06 to be carried forward to new account.  
Board of Directors.—Messrs. J. Helm and E. W. Frazar retire by rotation from the Board, but offer themselves for re-election.  
Auditors.—The Directors recommend the re-election of Messrs. Hall and Showler.

We have examined the foregoing accounts and compared them with the books and Vouchers of the Company and certify them to be in accordance therewith.

F. J. HALL,  
W. Y. SHOWLER, } Auditors.  
Yokohama, January, 1905.

Mr. Sugimura, Minister to Brazil, will leave Yokohama on Feb. 10th by the *Iyo Maru* for his post. The minister and his wife were received on Tuesday by the Emperor and Empress in audience.

# YOKOHAMA MEN'S READING ROOM ASSOCIATION.

The annual meeting of members of the above Association was held on Tuesday evening at the Reading Room, No. 32. Rev. E. S. Booth was in the chair and some twenty members were present.

The minutes of the last annual meeting having been read and confirmed, the Chairman introduced the third report of the Board of Direction and the statement of accounts for the past year, which after a brief discussion, were adopted and passed *unanimously*.

The Chairman then laid before the meeting a proposition made by the Trustees and supported by the retiring Board of Direction that the clause in the constitution of the Association limiting the number of members elected to the Board of Direction to four, be altered and the number increased to nine. The Chairman explained the benefits they expected to gain from the change and upon Mr. Bunting's formal motion the proposal was seconded by Mr. Wallace, put to the meeting and carried unanimously.

The election by ballot of the nine new members of the Board of Direction followed, and resulted in the election of Messrs. C. Allen, E. S. Booth, L. W. Tebb, J. Neil, P. L. Smith, L. Russel, C. Thorn, P. E. Nicolle and E. J. Moss, Jr.

The Chairman proposed that Mr. M. Russell be elected Hon. Chairman for the coming year, but Mr. Russell declined the honour, and on his motion, seconded by Mr. Macbeth, Rev. E. S. Booth was re-elected to the post.

Votes of thanks to the retiring Board of Direction, Hon. Secretary and Treasurer, and to the local press for publishing the proceedings of the Association, were passed and the meeting dissolved.

The Members of the Board of Direction of the Yokohama Men's Reading Room Association have much pleasure in presenting the third Annual Report.

The past year has been rather a trying one, and the resources of the Association have at times been taxed to their utmost. Although the outlook now appears brighter the Board of Direction earnestly hopes that all who have the interests of this Association at heart will rally round it and so insure its permanent success.

The Board of Direction has had 11 meetings at which matters relating to the welfare of the Association have been discussed. The general working has been, as formerly, in the hands of several Standing Committees.

The furnishings of the "Rooms" still leave much to be desired, the funds of the Association not having permitted much outlay in this direction during the past year. The lavatory, however, has been well fitted up, through the generosity of several of the members, a work which has been much appreciated.

It will have been noticed that for the last 3 months the rooms have been closed at 8.30 p.m. during the week and 5 p.m. on Sundays, the reason for making this change being that these hours seem to serve the wishes of the members equally as well as the former hours, and at the same time some reduction on rather a heavy electric light bill has been secured.

The privilege of taking magazines, etc., home for perusal has been much taken advantage of by the members.

The library now contains 380 volumes, 320 having been added by contribution during the past year. The grateful thanks of the Association are due to many friends for their generous donations to this branch of the Association. Special praise is due to the Assistant Librarian for his untiring zeal.

The roll of actual members now contains 83 names. It will be observed that there is a slight falling off in membership. This is chiefly due to the fact that a number of the older members, who joined the Association merely to give it a start, have resigned and their places have not yet been refilled.

There has been an attendance at the rooms during the past year of 5,476, an average of 456 per month. The figures for the previous year were 5,400 and 450 respectively.

Three very successful Social Afternoons were held during the past session with an average attendance of 60. The thanks of the Association are due to the ladies who so kindly took charge of these "At Homes" and made them pass off so well. One illustrated lecture was given which was fairly well attended.

The debates have continued and have proved a

source of much enjoyment and profit to the members and their friends. It is to be regretted that the Literary Committee was not able to arrange for more of these enjoyable evenings, only four having been held during the session.

The supplying of light refreshments in the rooms has also been continued, and has been well patronized by the members, forming a slight source of revenue to the association.

A new feature of the past year has been the Photographic Competition which was organised by a committee specially appointed for that purpose. The number of entries was not large, still as a beginning it was gratifying to note the interest displayed by those who did send in pictures. The hearty thanks of the association are due to the ladies who so kindly presented prizes, and to the judges, Messrs. H. A. and O. M. Poole for the thorough way in which they did their work. The prize winners were Messrs. Austen, Devin, Nicolle, Weston and Wallace.

In conclusion the Board of Direction would once again emphasize the fact that this Association depends entirely for its success upon the efforts of the members as individuals, and hopes that each one will feel the responsibility which rests on him, and do his utmost to promote the interests and welfare of the Association.

For the Board of Direction,

ROBERT WALLACE,  
Hon. Secretary

Yokohama, February 1st, 1905.

## ABSTRACT OF REVENUE ACCOUNT FOR THE YEAR ENDING 31ST JANUARY, 1905.

## CORRESPONDENCE.

### CHRIST CHURCH.

(TO THE EDITOR OF THE "JAPAN MAIL.")

Sir,—The Church Meeting must have been a disappointment to the High Church party, or perhaps they would prefer to be called Fieldites, inasmuch as the Chairman for himself and the other Trustees disclaimed all High Church tendencies. The "Malcontents" for the most part stayed away, so that the carefully prepared diatribes of Mr. Walter and Mr. James only fell on the willing ears of their own partisans, who were doubtless much edified and appreciatively acquiescent.

Mr. Walter's remark that Mr. W. K. Wilson's lucid statement of church accounts for the last three years was a malicious attempt to prove that the Rev. Mr. Field's incumbency was driving away seatholders from the Church, was uncalled for. Mr. Wilson merely gave figures that the Church Committee could not refute and his statement was no more an attempt in the direction indicated by

Mr. Walter than the Committee's figures were a disingenuous effort to prove that the offertories had increased from yen 3101, odd in 1903 to yen 5405, odd, in 1904. It is perfectly well known that in the latter was included a sum of yen 1791.13 specially subscribed to pay off the Church Building Debt, a large portion of which was obtained by personal appeals outside of the Church altogether and placed quite wrongly (the chartered accountant notwithstanding), to credit of offertory account. The "Malcontents" on reading the result of the so-called sealed ballot the morning after the meeting were surprised at the smallness of the vote against Mr. Field, as they believed the opposition to be much stronger than represented by the figures of 83 versus 32. It appears that the ballot box, notwithstanding Mr. Field's stating that it had been taken round to 120 seatholders at great personal trouble by the Chairman was in several, not to say many, cases not taken round at all, the ballot box in these instances being represented by the Chairman's coat-pocket, and although no one would for a moment question his scrupulous honesty in such a matter, or the honesty of the other Trustees and Hon. Treasurer in whose presence the box was opened, the fact remains that the whole proceeding was unbusiness-like and absolutely informal. The Chairman's remark that "The Trustees had noticed an ugly growth for some time past outside the Church and fortunately!!! finding it to be of a most malignant and cancerous nature and carefully diagnosing it, had decided to use the knife and cut it out, apart from its grossness, is certainly not the way to speak of people who hold different opinions from himself as regards the desirability of retaining Mr. Field's services, nor the way to breach the differences that exist amongst seatholders on the point. It is difficult to believe that this remark of Mr. Walter's was his own, savouring much as it does of the intolerance that is characteristic of the Romish Church. The Chairman's sentimental reference also to the British soldiers who had died for their country in the first attempts to open up this country to foreign trade was a bit of unnecessary clap-trap, whilst his pathetic appeal to the seatholders to trust the Trustees to do them no harm was childish and out of place. Mr. James's ideas about consistency would seem to require revising and adjusting, the matters he alluded to being more an evidence of broad mindedness on the part of the ladies who sang at the Roman Catholic Church and assisted at the Convent Bazaar; a distinctive quality that is so much lacking in the management of Christ Church affairs at present from the incumbent downwards. As regards Mr. Field's plaintive statement that he had only made a modest request to the ladies in the choir to turn to the East, it is hardly consistent with facts, he having plainly intimated that those who declined to do so had better leave the choir, which they did. If it was only conformity that Mr. Field aimed at, he might have given in to the feelings and wishes of the majority of the ladies, instead of by his arbitrary action, breaking up what used to be one of the greatest attractions of Christ Church services, viz. the singing. Mr. Field will probably say it was an equally "modest request" that resulted in the loss of Mr. W. K. Vincent as organist.

The Church meeting and the remarks that were made at it have done more harm than good, by widening the breach between Fieldites and "Malcontents"; and consequently something quite different to the three years peace and quietude prophesied by the Chairman, may be expected. The most sensible thing he said was that Mr. Field's renewed agreement for three years was terminable at six month's notice on either side and the sooner one or other gives that notice the better prospects there will be for peace and good-will in the community.

X.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—The remarks I made at the Church meeting were based on actual facts, which I challenged anyone to controvert. None of the letters which have appeared have a single sound argument against what I said, and they are not worth criticising.

The discontented Seatholders had an unique op-

portunity for ventilating their views and grievances at the meeting, but not a single one had the courage to make a remark; neither has any of them had the courage of writing over their own signatures, which shows what a weak-kneed band they must be.

Yours faithfully,

F. S. JAMES.

Yokohama, Feb. 4th, 1905.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In view of the attempt to explain the falling off in Pew Rents, the following figures may prove interesting:—

	1902	1904
Number of Seatholders.....	105	122
Amount of Pew Rents.....yen	4730.13	3966.00

Of the 105 Seatholders in 1902, 14 have died or left Yokohama; 18 are still in Yokohama but do not appear in the list of Seatholders for 1904; several of these 18 originally represented two or more sittings; I myself originally paid for five.

Of the 122 Seatholders in 1904, 47 are new names, not in the 1902 list.

The result is an increase of 17 Seatholders in 1904, but a decrease of yen 770.83.

I am, Sir, Your obedient servant,

W. K. WILSON.

Yokohama, February 4th, 1905.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—I am surprised that my letter of the 4th Feb. has brought forward no explanations from the trustees or incumbent. Am I to understand from their silence that they admit the justice and truth of all my charges. If so, Christ Church is in a deplorable condition and the sooner a change is made the better for all parties concerned. From "Malignant's" letter I see that he is anxious for his party to know when the surgical operation will take place, and I should like to know if any anaesthetic is necessary, also which of the trustees feels himself qualified to wield the knife. The minority have written to publicly justify themselves from the various charges made against them at the Church meeting, surely it is now the turn of the so-called "sound" party to contradict, if they can, our accusations of Ritualism, otherwise, the next three years of the incumbent's ministrations will be far from peaceful.

Yours truly, etc.

A DISGUSTED SEATHOLDER.

Yokohama, February 4th.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It seems a pity to disturb Mr. F. S. James' evident self-satisfaction with his indictment of certain ladies, members of Christ Church, in his speech at the Church Meeting. His statements were quite correct. It was a matter of common knowledge that the ladies he alluded to sang at the Roman Catholic Church and assisted at the Convent Bazaar, so there was nothing to contradict or deny. Mr. James' facts were incontrovertible, but, as already pointed out by various correspondents, his deductions were faulty and consequently of no value. That is all!

Yours truly,

X.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is such people as Mr. Wilson and his friends who make their world a dreary depressing place. They have not the slightest sense of humour, they are utterly void of any imagination, and the real meaning of the word "Charity" is unknown to them!

The one thing they love and prize is their label. It must be fine and large, and always to the front—and everybody who does not wear one like it is entirely in the wrong! The label of Mr. Wilson, etc., is "Protestantism!" "I am a Protestant!" Oh! what a pity he is not a "Christian" also! But, of course, if he were, he would abjure labels.

I remember in London, an old clergyman, a friend of the late Dean Stanley, answering a man, with a label, who was always troubling about the growth and well-being of his own soul, to the utter neglect of everything else. "Leave your precious soul alone," said his clergyman, "go, and make one person happy; do a kindness to another; give a word of sympathy to a third, and make the way easy for a fourth, and it will be surprising how that soul of yours will grow!"

The way some people talk and write of a clergyman, a gentleman, and a scholar, here in Yokohama, is most surprising, and very repellent to a new-comer.

It would be well if Mr. Wilson and those of his kindred could have joined Shylock and listened to Portia's advice, in old-time Venice.

"—though Justice be thy plea

Consider this, that in the course of Justice

None of us should see

Salvation.

We do pray for Mercy,—

And the same prayer,

Doth teach us all,

To render the deeds of Mercy."—

Yours etc.,

"NOT A SEATHOLDER."

Yokohama, February 4th, 1905.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Who is "Non Seatholder" that he has the temerity to attack an old and respected resident like Mr. W. K. Wilson as he does in your issue of this morning? For a person who has no interest in Christ Church, or indeed from his own showing as a new-comer, no interest in the community, and therefore no right to offer his opinion, it savours of unqualified impertinence.

Yours truly,

INDIGNANT.

## JAPAN AND KOREA.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Kindly permit me a few words suggested by your article in yesterday's issue, "Japan and Korea."

You find it "impossible to detect the least shadow of honesty or justice in some of the criticisms now published with regard to Japan's action in Korea." As far as my experience in Korea goes, there are few or no newspaper writers who have the slightest knowledge of things Korean, and I doubt that anyone who criticises Japanese doings in Korea would even attempt to lay a claim to a shadow of honesty and justice as to what he imparts to the public abroad on the subject. The only source of information, for critics abroad, that I could discover while in Korea, is the *Korea Daily News*, a tiny sheet, whose editor is either absolutely ignorant of conditions in Korea, or wilfully disfigures conditions there, for reasons best known to himself. Any critic of average commonsense, who knows anything about the Nagamori scheme could not help but compare it with what British enterprise has actually accomplished in Egypt on a larger scale. British schemes in Egypt have proved a most wonderful civilizing agent in the uplift of the down-trodden Egyptian fellah, by adding year by year to the wealth of the country.

It is Japan's logical mission to undertake in Korea what Great Britain has accomplished during the past century, with such signal success, in other parts of the world; develop resources in Korea, elevate the native to a higher level, by raising his material conditions and thus assist him to become a useful citizen of a country, which will, in the course of a few years, enjoy enlightened and just government, where individual life and property will enjoy the same enlightened protection and security which the formerly down-trodden natives of Formosa enjoy to-day to the fullest extent. Any impartial observer who travels in Korea cannot help but admire what the Japanese have accomplished during the past decade in Korea. Public and private buildings have been erected wherever Japanese have settled, such as would be a pride to any Western nation. Hundreds of Japanese who emigrated to Korea years ago as poor labourers or very small traders, are now owners of prosperous businesses, fine houses, and by their enterprise have directly benefited not only themselves, but thousands of natives as well. Public works are in construction in Seoul, Chemulpo, Mokpo, Fusan, Chinnampo and in many other places, and thus the actual wealth of the country and the standard of the people has increased. The Korean, commonly reputed as lazy, has become, wherever Japanese have settled, an industrious and satisfactory labourer, as the Japanese take very good care that native officials do not rob him of the wages earned by his industry, and thus the formerly exploited labourer is encouraged to become thrifty, feeling secure that he will remain owner of what he earns by his labour.

That the foreigner, as a rule, in China and Korea, is jealous of Japanese enterprise, is but natural, for whereas formerly he lorded it over the native, on account of his white skin, and had no competitor in his particular enterprise, he is confronted day in China, as well as in Korea, with Japanese competitors, who by their thrift, abstinence, frugality, will-power and better know-

ledge of the people and their customs, have become a very uncomfortable element for the ease-and comfort-loving foreigner, who spends his surplus energy after conservative business hours over the card table or whiskey bottle at his club.

Another factor, which gives the Japanese in China and Korea a great advantage over foreigners, is the establishment of elementary schools. Wherever a sufficient number of Japanese are settled, schools both for Japanese and Chinese or Korean children are opened. The teachers of these schools, are, without exception, true and real missionaries wherever they settle; men of high ideals, whose aim is to elevate the body and the soul of the native, without chaining the latter and the former as well, to a particular creed, not working for a salary, but for the love of the work itself, not living in comfortable and luxurious houses, furnished with the contributions of the faithful at home, but putting up with whatever circumstances afford. These teachers begin to gain a wonderful influence over the people, and are the most efficient agents for paving the way for their countrymen who leave their native land to better their conditions abroad. Not long ago, while travelling in the interior of Fuhkien Province, I discovered a Japanese settlement, some 200 miles distant from the sea, near the Min River. The settlers had, after enduring hardships for numbers of years, succeeded in developing an entirely new industry in those parts by carefully exploring the camphor forests and investing their small capital, which is now constantly increasing. They command all the native labour they require, and are on the very best terms with the Chinese, whose language they have acquired to perfection. When I returned to Foochow, the capital of Fuhkien, I heard nothing but violent criticism of the Japanese intrigues to monopolize the camphor industry in upper Fuhkien.

But, while the conservative critics had spent their time in their easy office chairs, or over the card table in the club, or private home, after a dinner in full style, the little Japanese had worked like bees in a part of the country where a foreigner would never dream of going, being afraid of the good-natured natives and the hardships connected with such a life up-country.

As to emigration, on a large scale, to Korea, that must and will come, in due time, and with it a new era of prosperity for a country and a nation that for the past century has been living in a condition of abject slavery and on a level with the common beasts of burden, but where thousands even now begin to see the dawn of a bright future.

Yours obediently,

OBSERVER.

THE LATE DR. MACDONALD.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—By mail from Canada we have heard of the death of Rev. Davidson Macdonald, M.D. Thinking that the following might be of interest to the *Japan Mail*, I send it to you. Dr. Macdonald was a native of Prince Edward County, Ontario, Canada. Entered Ministry 1860; came to Yokohama 1873; went to Shizuoka 1874, where he remained for four years laboring as teacher and physician and gathering the people of the city into his own house for religious services. At the end of four years there were 118 Baptized Believers in Christianity as a result of his work. He returned to Canada in 1878 on furlough. On his return to Japan in 1879 he settled in Tokyo where he remained until 1904. In 1880 he became the first president of the Japan Mission Conference of the Methodist Church—an office which he filled for ten successive years.

In 1904 he returned to Canada with Mrs. Macdonald and her sister, Mrs. Perry, expecting to leave them in Canada and to return to Japan alone. But just as he had settled in Toronto, after four months visit, the summons came. He was sitting, reading the morning paper containing the news of the fall of Port Arthur, on Jan. 2nd, when without warning to himself or his friends, he fell asleep.

Dr. Macdonald held for thirty years the fullest confidence of the Mission Board of the Methodist Church in Canada and was respected and loved by his fellow workers both foreign and Japanese. With his passing another of the pioneer missionaries in Japan has left us.

Sincerely yours,

C. J. L. BATES.

16 Tatsuoka-cho, Hongo, Tokyo.

## HOW ENGLISH IS AND IS NOT TAUGHT IN JAPAN.

(TO THE EDITOR OF THE "JAPAN MAIL.")

Sir.—In last week's issue (Jan. 28th) of your paper, there appeared a communicated article headed, "How English is Taught in India and How it is Not Taught in Japan." The writer of that article, basing his statements on the addresses of two gentlemen engaged in educational work in India, pictured in somewhat glowing terms the success attending the teaching of English in that land, and then depicted in terms correspondingly dark the failure to realize anything like the same success in Japan. "One thing is made clear," he says, "and that is that Indians do get to write and speak English well in a comparatively short time." After giving at some length their course of study, to explain how "the thing is done," he makes the interesting statement that "the student of India (of what grade is not definitely stated) use English from morning to night, they correspond in English, they read English newspapers, they attend English lectures for the pleasure of listening to the language."

Now, though the writer seems to me to be putting it pretty strongly, I do not here intend to question the truth of the above statement. I have on the subject no statistics to the contrary, and even if I had, they would be beside the point which is before us. But if one half of the good things said about the teaching of English in India is true, I heartily agree with the writer of the above, that such a result is in marked contrast to the results of English teaching in Japan, and that educationists here would do well to investigate the cause of, and, if possible, to find a remedy for the trouble. Why is such teaching in this country so comparatively void of results? What is the explanation of the difference in the two countries? It must be largely in the methods employed. True. And the writer of the article referred to above, then proceeds in a really admirable manner to detail some of the defects of the educational system in this country,—the lack of provision for the teaching of correct pronunciation, dictation, composition and conversation (though singularly enough nothing is said of the latter,—a most important subject if the student is going to use English "from morning to night," like the Indian). But on his next point the honorable gentleman appears to me to be sadly in error. He says: "In reference to the employment of foreign teachers in the Middle Schools," (though no previous reference to them had been made) "the men engaged are picked up in too haphazard a fashion." Then follows a lengthy digression on the foreign teachers in the Middle Schools, "young men . . . good Christians but poor teachers. . . who can't spell correctly or compose a grammatical letter." Is it not strange that so able a writer as the article up to this point shows him to be, should allow a little personal animus to interfere with the clearness of his thought? Is it not a pity? He professes to be candidly looking for the causes of failure on the part of Japanese schools really to teach English, and yet he must bring into his article, even at the expense of its real worth, a bit of his own purely personal feeling and prejudice.

Let me seem to be offending in the same way, let me say that though I did teach for one year in a school of that grade, I am not at present teaching in a Middle School. The point that I wish to make here is that the "reference" to the foreign teachers in the Middle Schools who secure their positions through the Y.M.C.A. (for it is evidently they to whom the honorable gentleman refers) is entirely inconclusive. The writer, apparently from the point of view of the High School teacher, says that the graduates of Middle Schools coming to them show an alarming ignorance of the elements of English. We do not question it. What astonishes us is that this ignorance should be laid at the door of the foreign teacher. Does the gentleman forget that every Middle School has not a foreign teacher of English? Of the 250 odd Middle Schools in the country, I doubt very much if there are foreign teachers in more than forty, or fifty at the most. Obviously then to make these fifty answer for the graduates of 250 schools is nonsense. For such a charge as the writer of the aforesaid article makes, to have any particle of weight, it must be accompanied by statistics showing how graduates of schools which employ foreign teachers, compare, in their knowledge of English, with graduates of schools which employ no foreign teachers. Even then it would be far from conclusive evidence of culpable inefficiency on the part of the Middle School foreign teacher, for the reason that in too many cases the attempt is made to spread him over more ground than he can properly cover. One man is scarcely enough for all classes in a school of 257, 400 students. He can usually meet his classes no more than twice a week, and often but once. I personally know of one case in which the foreign teacher met eighteen classes, consisting of thirty-five or forty students each, once a week. Under such

circumstances it is unnecessary to say to any teacher that satisfactory results are impossible. If, perchance, the school authorities recognize the fact that the foreign teacher cannot, with advantage to the students, take all the classes, what is done? He is given work almost invariably with the higher classes only, while the lower classes are entrusted to the tender care of the Japanese teacher. Here the beginner in the study of English learns those incorrect sounds of the vowels and consonants, and forms those habits of inaccurate pronunciation which stay with him, in too many cases, for life, while the fineness of his sense of hearing is all but irreparably lost. This is a vital mistake. The foreigner should have the student from the start, at least in the matter of pronunciation.

It will thus be conceded, I think, upon a little unbiased reflection, that the foreign teacher of English in the Middle School is very little to blame for the poor showing of graduates even of his own school let alone those of others. He will be found in most cases, like the teacher in the Higher School, doing his best under the conditions imposed. I entirely agree with the writer of the oft-quoted article in his conclusion that there is great need of reorganization in the English department of the schools. Adopt some comprehensive and thoroughly complete system, by all means, and then put men into power who can and will make it work. More foreign teachers of the right kind, and for them, more "say" in their department.

Yours, &amp;c.,

EX-TEACHER.

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

## THE TSAR RECEIVES A DEPUTATION.

London, Feb. 2.

The Tsar to-day receives a deputation of workmen in his palace at Tsarskoe Selo.

## PRINCE MIRSKY RESIGNS.

Prince Sviatopolk-Mirsky, the Russian Minister of the Interior, has finally resigned his position.

## RUSSIA SETTLING DOWN.

Except at Warsaw, where there is still considerable ferment, the Russian provinces seem to be generally settling down.

## THE CZAR AND HIS PEOPLE.

London, February 3.

It is officially reported that the Emperor, the Empress, and the Empress-Dowager of Russia, sympathising deeply with the families of those killed and wounded on the 22nd January, have placed £5,000 at the disposal of Governor Trepoff to assist those who are in need.

## RUSSIA'S "MAGNA CHARTA."

The *Daily Telegraph's* correspondent at St. Petersburg says that as the result of an interview with Minister Yermanoff on Monday, and in consequence of the latter's earnest representations, the Czar has signed a Ukase constituting Russia's Magna Charta. The Ukase directs M. de Witte to assume the post of President of the Committee of Ministers; further extends the reforms laid down in the Ukase of December 23rd; orders the people to be invited to co-operate in the Government, and leaves M. de Witte to determine the measures to be taken.

The Czar commands the restoration of order throughout the empire by peaceful methods and the pensioning of orphans and crippled through the riots of January 22.

The Council of Ministers afterwards discussed the new situation, De Witte throwing the whole of his weight on the popular side.

The captives will be released to-day. The press will be free.

Trepoff will be sent to Manchuria.

Later.

Representatives of a Council will be appointed in a fortnight.

## THE ALLEGED RUSSIAN REFORMS.

London, February 3.

It is officially stated at St. Petersburg

that the report of the granting of a Magna Charta is incorrect. The report was based on the following circumstances:—The Council of Ministers having rejected the motion of M. de Witte to place on record an expression of opinion regarding the incidents of the 22nd ult. and to adopt measures to prevent their recurrence, M. de Witte, whose motion was minuted, thereupon submitted the memorandum to the Tsar, who approved it. The Council held an extraordinary sitting on the 22st ult. to discuss two memoranda when the question of an enquiry into the incidents of the 22nd ult. was considered, and the Minister of Finance was finally empowered to prepare a scheme of social legislative reform having special reference to the labour question.

## THE TSAR'S REFORM UKASE.

London, February 4.

With reference to one section of the Tsar's reform Ukase, the Committee of Ministers have decided to recommend a series of measures, limiting the individual initiative of Ministers with the Tsar, especially with reference to alterations and suspension of laws; increasing the control and initiative of the Senate thereon; facilitating prosecutions of officials by private individuals for illegalities; and establishing local Courts in connection with the Senate, and educated juries where the loss of civil rights is involved.

## THE BALTIC SQUADRON.

London, February 5.

Admiral Bolrovosky's Squadron has left Jibutit for Madagascar. Eighteen German colliers follow the squadron.

Lloyd's correspondent at Mauritius says the Baltic Squadron were still at Nossibé on January 28.

## OTHER RUSSIAN NEWS.

It is reported that the news of Gorky's release is incorrect.

## THE OPERATIONS IN MANCHURIA.

General Kuropatkin states in a report that the Japanese on Feb. 1st after a hot bombardment, attacked Liangtaukhan on the left bank of the Hun river, driving out the Russians who, being reinforced, recaptured the village.

## GERMAN VESSELS AND CONTRABAND.

Great uneasiness prevails in German shipping circles regarding the fate of Hamburg vessels bound with contraband to Vladivostok. The recent Japanese seizures of German vessels have caused consternation. Although Russian attacks on neutral shipping were viewed with comparative indifference, shippers are now protesting against the Japanese interpretation of contraband.

## THE UNREST IN RUSSIA.

London, February 6.

An assembly of nobles at Moscow has decided to present two addresses to the Tsar, one conservative, one adopted by a majority that peace is impossible at present without humiliation. It expresses confidence in ultimate victory, but deprecates any new reforms until the war is ended.

The other address is different. It suggests collaboration between the Tsar and the people with regard to reform.

## PLAIN-SPEAKING FROM THE BRITISH ADMIRALTY.

London, February 7.

Reference has been made to a speech by Lieut.-Col. A. H. Lee, a Civil Lord of the Admiralty, in which he stated that it was not because we had so much to keep our eyes on France in the Mediterranean as that we

had to look with more anxiety (though with no fear) at the North Sea, that the fleets have been re-distributed; that if war was declared Britain must get her blow in first—Lieut.-Col. Lee now writes that he was incorrectly reported. What he meant to say was that it must be assumed that all naval powers are possible enemies owing to the growth of their naval strength. Such powers having become more numerous than before, it is now necessary not merely to keep an anxious eye on the Mediterranean and the Atlantic but on the North Sea also.

The speech is reported to have caused a sensation in Germany, where the papers are angrily demanding explanations.

The London *Standard's* correspondent in Berlin states that unless Lord Lansdowne promptly repudiates the speech the German Government will ask for an explanation.

#### A RUSSIAN LOAN.

Later.  
Negotiations have been completed for the issue of a 5 per cent. Russian loan in Paris, amounting to nearly a milliard francs.

#### ANOTHER ASSASSINATION.

Johnsson, the Procurator of the Senate at Helsingfors, has been assassinated and his son has been wounded by a man disguised as an officer.

#### THE PETERSBURG NOTABLES AND THE TSAR.

London, February 8.  
The notables of St. Petersburg have adopted by 158 to 20 an address to the Tsar urging that he should summon elected representatives of the nation.

#### THE STRIKES IN RUSSIA.

Later.  
The strike movement is spreading in all directions in Russia. It is increasing at Tiflis (?) Batum and on the Trans-Caucasian Railway. There are sanguinary conflicts between the Cossacks and the revolutionary mobs.

#### RUSSIAN AFFAIRS.

London, February 9.  
Reuter's correspondent in St. Petersburg states that Father Gapon is known to be in Switzerland. General Trepoff has summoned the Curator of the Education Department and informed him that he is determined to put down academic anarchy, and that all students or scholars refusing to return to their studies tranquilly will be summarily expelled. If any professor sympathises their education of students at St. Petersburg shall cease.

#### GENERAL GRIPENBERG.

Later.  
General Gripenberg and his staff have arrived at Irkutsk en route for St. Petersburg. The current reports are that the General is going to St. Petersburg for the purpose of accusing General Kuropatkin of leaving him in the lurch and of general inertia.

(Received at the Imperial Military Head Quarters on the 1st instant from Field-Marshal Oyama.)  
FURTHER FIGHTING.

On the 31st of January various attacks were made by the enemy in small bodies on our right, but all were repulsed.

On the same day on our left a force of the enemy about one regiment strong attacked but was driven back. The main body of the enemy in this quarter is at Niennyupau and near Sufantai. He has a force in Chantan also.

To-day (1st) the enemy is entrenching at Sufantai, Changkiawopen and near Chantan. His cavalry are encamped along the line Tsuyuto-Pienpautsz-Yeuhpautsz.

(Received at the Imperial Military Head Quarters on the forenoon of the 3rd inst. from Marquis Oyama.)

On our right wing small bodies of the enemy made attacks at various points on the 1st instant but were all repulsed by our outposts.

To-day (2nd) from 6 a.m. the enemy from the western base of Tashan and from the west of Liuchangtun fired on Fangshiu and Putsaowa (2 kilo. south of Liuchangtun). After a brief interval about 3 companies of his infantry surrounded Fangshiu and attacked it. They were repulsed. The enemy's casualties are not yet known but he left one dead and lost 2 prisoners.

In our centre to-day (2nd), the enemy's artillery, from a position about 1 kilo. north-east of Shahapau bombarded the hills on the south of Shahopau, and his force on the hill west of Wanpaoshan cannonaded North Changlingtsz and Yaotun. Further during last night there were constant collisions between his scouts and ours.

On our left the enemy from this morning (2nd) opened a heavy gun-fire on the neighbourhood of Chenchiehpau to which our artillery at the latter place replied. According to a trustworthy scout the enemy has extended the railway to Sukiatun and Suhopau—the former about 5 miles north of Lamutun, the latter 5 miles north of Mentapau—and is running trains both ways.

This morning (2nd) from 8 o'clock the enemy's field-pieces and heavy guns concentrated their fire on the vicinity of Yatszpau, whereafter about one Division entered Wangkiawopeng (a village south-east of Changtan). About one Brigade of this Division attacked us but was repulsed.

The enemy who yesterday (1st) were driven from Liutiaokau left from 160 to 170 dead upon the field as well as a number of rifles. According to prisoners' statements the colonels of the Second and Fourth Regiments of Rifles were wounded there. A reliable report says that on the 26th of January a small outpost of ours, consisting of one officer and 28 men, was surrounded by the enemy in Hwanglashetsz. The detachment fought to the end. The greater part were wounded and the rest were made prisoners. The Russians butchered all the wounded.

(Received at the Imperial Military Head Quarters on the afternoon of the 3rd February from the Manchurian Army.)

#### FROM THE FRONT.

The enemy's artillery cannonaded various positions on our Right Wing on the 2nd. There was nothing else out of the common.

In our Centre at half an hour after midnight on the 2nd about a double company of the enemy's infantry, coming along the Mukden high-road and from places on its west, attacked our outposts. Also at half past 5 a.m. on the 3rd a single company of his attacked in the neighbourhood of Wankiayuantz. These attacks were repulsed. During the night there were four surrenders.

On our Left Wing the two brigades of the First and Fifth Rifles, which attacked Liutiaokau from the morning of the 2nd, were driven back in the direction of Changtan. The enemy's casualties were comparatively large. He can not have lost less than 700. He was observed carrying off over 300 dead. In the Battle of Heikautai the enemy's dead buried by our troops near Sumopau alone have already reached over 900.

(Received at the Imperial Military Head Quarters on the 4th inst.)

#### HAMGYONDO DISTRICT.

Scouts report that since the 24th about 300 Russian cavalry which had been at

Tanchhon, with 2 guns, left that place for Songchin on the 28th January.

#### SHAHO DISTRICT.

During the night of the 3rd small bodies of the enemy's infantry attacked in the vicinity of Waitaushan and Titishan, but were repulsed. On the afternoon of the same day the enemy cannonaded our various positions north of Liuchangtun, Wanpaushau and Shahopau and near Hanchingpau (about 1 kilo south-east of Wenshingpau), East Kukiatsz (about 2 kilos. south-west of Wenshingpau) and West Kukiatsz (about 2½ miles north of Chenchiehpau). At 11 a.m. on the 4th a body of the enemy consisting of 500 or 600 cavalry, moving along the right bank of the Hun, together with a force of two double companies of infantry and a battery of artillery, advanced from Santaitz to attack Chitaitz. This force seems to be followed by others coming from the rear. Our garrison in Chitaitz is now engaged with it.

(Latest.)

The meaning of the telegram received on the 4th instant from Marshal Oyama may be briefly stated. It amounts to this, that during the night of the 3rd the Russians cannonaded five of the Japanese positions near the Mukden high-road and the railway, and also trained their guns on Chenchiehpau. In other words, they bombarded the Japanese centre and left. Then, on the forenoon of the 4th, they sent a force composed of about 600 cavalry, 500 infantry and a battery of artillery to attack Chitaitz, which is the most southerly point where they re-crossed the Hun when retreating after the recent battle. This force seems to be followed by others, and an engagement was in progress at Chitaitz when the telegram was despatched. We can neither decipher nor identify the village where, according to Reuter, Kuropatkin reports that his men, having been driven out by the Japanese on the 1st instant, recovered their ground on receiving re-inforcements. The Japanese official despatches do not describe any such incident on the 1st, and if the affair occurred at all it must have been very trivial. What seems evident, however, is that the Russians have not resigned themselves to the situation resulting from the battle of Heikautai. They are endeavouring to obtain a position from which to menace the Japanese left.

(Received at the Imperial Head Quarters on the 5th inst.)

#### HAMGYONDO DISTRICT.

Spies report that the enemy has burned the provisions stored by him at three places in Songchin. According to a letter from a Korean subject who was attached to the enemy's force in the capacity of interpreter, the Russian soldiers said that Port Arthur having fallen and Harbin being likely to be soon in danger, even if they won a victory in Hamgyondo it would be useless, and therefore they were to retire northward.

#### THE SHAHO DISTRICT.

On the afternoon of the 4th the enemy's artillery from a position west of Tashan cannonaded Machwangtszshan, and on the morning of the 5th detachments of his infantry attacked at various points but were repulsed.

In the Changtan region things are quiet except that the enemy is diligently entrenching. His troops who attacked Chitaitz on the 4th were checked by our garrison there, and halted at Santaitz. This morning (5th) they retreated in the direction of Tzuyuto (about 5 miles north of Chitaitz).

(Received at the Imperial Military Head Quarters on the 6th instant.)

#### THE SHAHO.

On the morning of yesterday, 5th, about a company of the enemy's infantry attacked Sankiatz (some 10 miles east of Hsiang-shantz) but was repulsed.

On the afternoon of the same day the enemy's artillery at Sanchingtszshan, Liu-changtun, on the western height of Wanpaoshan, at Sanglantz and at Kwanlinpau, cannonaded our positions. At about 10 p.m. his artillery at Hanchingpau fired in the direction of the railway bridge. Otherwise, with the exception of skirmishes between scouts there was no change.

On the right bank of the Hun River nothing special occurred.

(Received at the Imperial Military Head Quarters on the 8th instant.)

#### THE SHAHO.

Yesterday, the 6th instant, the enemy at Tangkiatunshihshan, Sanglantz, Shahopau, Hanchingpau, Kwanlinpau and Hsiaohantai (about 2½ miles north of Chenchielpau) cannonaded our positions.

Also, last night, one or two companies of the enemy's infantry made attacks at Machwantszshan, Kingluntun and the heights westward of Yaotun, but were repulsed by our outposts.

In front of Wankiyuantz, Litajentun, Cheuchiehpau and Heikautai the enemy continues to construct defensive works.

(Received at the Naval Department.)

The British steamer *Eastly* (2,998 tons gross), under suspicion of carrying coal to Vladivostok, was seized last night (7th) in the northern sea.

The Port Arthur Admiralty Office was opened from the 6th instant.

#### THE SHAHO.

(Received at the Imperial Military Head Quarters on the forenoon of the 9th inst.)

January 7.

The enemy's artillery on the hill west of Wanpaoshan, at Shahopau, at Hanchingpau and at Mantapau bombarded our position, also he continued his defensive works in front of Linshingpau, Wankiyantanz and Heikautai.

(RECEIVED AT THE FOREIGN OFFICE.)

#### AN IMPORTANT DECLARATION IN PARIS.

The Chairman of the Budget Committee of the French Chamber of Deputies, now in session, in his remarks on the Foreign Office department of the Budget, makes some interesting comments on the Russo-Japanese war. He says that Japan took up arms to defend her peace and independence against Russian aggressions in Manchuria, and that Russia relied on her own contrivances and on her greatness to escape all the troublesome results of her foreign policy. He goes on to discuss in the clearest and most impartial terms the course of the negotiations and the rupture of diplomatic relations, and concludes by saying:—"Is it not strange that the Sovereign who took the lead in organizing the Hague Peace tribunal should have allowed things to reach such a stage."

M. Dubois, Chairman of the Budget Committee, is a most influential politician and the fact of his placing such remarks in such a document is an evidence of the state of feeling entertained in France regarding the Russo-Japanese war.

#### A RUSSIAN VIEW.

The *Russky Invalid* says that according

to telegrams received at the Headquarters Staff and at the Ministry of War, the present troubles in Russia are due entirely to English and Japanese contrivances. It goes on to say that 15,000,000 roubles were distributed amongst the revolutionists and Liberals to induce them to smash the dockyards and thus create obstacles for the Baltic and Black Sea fleets, and prevent the despatch of supplies to Kuropatkin and thus force Russia to sue for peace. The *Invalid* says this shows that Japan's resources are exhausted and that Japan has nothing to do but to ask for peace on any terms. It says that Japanese residents in Paris were the instruments through which the disturbances were caused in Russia.

#### THE STRIKES.

The strikes have spread to Irkutsk; 400 workmen at one station on the Siberian railway have stopped work. It is expected that Martial law will be proclaimed in Irkutsk. The strikes have spread to Kadow, Katush and some other places.

The *Daily Telegraph's* St. Petersburg correspondent says that the Czar received a deputation of 34 men, each man representing a thousand strikers. The Czar in addressing the men said that the late deplorable events were due to the influence of the enemies of Russia, who had misled the people. He went on to say that this was a time when all Russians should be united against the stubborn enemy by whom they were confronted. His Majesty promised that all legitimate complaints should be duly considered and pointed out their duty to resume work as speedily as possible.

(RECEIVED IN TOKYO.)

#### OFFICIAL TELEGRAMS.

It is credibly stated that the second part of the Second Pacific Squadron under Dobrotensky, consisting of the *Oleg*, the *Izumrud*, the *Petersburg* and the *Smolensk*, with three destroyers and 18 transports, left Jibouti on the 2nd for Madagascar.

The Third Squadron, consisting of the *Semivine*, the *Oushakoff*, the *Apraksin* and the *Vladimir Monomach* is to leave Libau on the 8th instant.

(RECEIVED AT THE FOREIGN OFFICE.)

A Russian news agency reports that General Gripenburg has resigned owing to ill-health. With reference to this the German newspapers say that there is no precedent for a general officer retiring from his commission for such a reason. They are of opinion that his resignation is due to his failure in the recent battle, for which they seem to think he alone was responsible.

A further telegram from Mauritius, dated the 3rd, says that a traveller who has returned from Diego Suarez reports that on Jan. 28th nine German coaling steamers were at anchor in Diego Suarez and that the Baltic squadron were then at anchor in Nossibé.

Mr. Uchida, Japanese Representative in Peking, returned to his post on the 6th, and on the following day attended the New Year's Levee.

#### THE ASSASSINATION OF A SENATOR.

A Senator of Finland who has been in disrepute on account of his pro-Russian tendencies, has been assassinated in his own house.

#### THE WORKMEN'S DELEGATES.

Although the representatives of the workmen recently met the Tsar in St. Petersburg, they were chosen by the employers of the labourers and were not direct representa-

tives. The labourers have therefore decided to choose representatives of their own and to seek for them a formal interview.

#### THE NOTABLES OF ST. PETERSBURG.

On the 6th the notables of St. Petersburg held a meeting and adopted an address to the Throne. It said that in order to deal with the difficult situation in respect of disturbances at home and troubles abroad, the prime necessity was for all subjects to unite their strength. It also asked that representatives chosen by the people themselves should be permitted to address the Throne and take part in legislation.

#### NOTABLES IN MOSCOW.

A meeting of notables in Moscow on the 4th adopted two petitions to the Throne. The first was affirmative and urged the carrying on of the war to the end. This was supported by 209 votes. The other petition was Liberal. It asked for the immediate convocation of a national assembly and it had 154 supporters. The supporters of the latter petition issued a manifesto claiming the vital importance of securing organized co-operation between the Sovereign and his subjects, and of having freely elected representatives, and condemning the petition of the majority as worthless and conducing to error.

The St. Petersburg notables have ranged themselves on the side of reform and have petitioned the Throne in that sense: namely that the people be given a share in legislation.

In various places a state of siege has been proclaimed.

#### RUSSIAN AFFAIRS.

According to a Russian news agency the Council of nobles in St. Petersburg adopted a petition to the Tsar. In it they said that Russia has now to face two foes, foes at home and foes abroad. In this difficult situation their loyalty was unshaken and they relied on the Sovereign to rescue the people from their troubles. The petition proceeded as follows:—"This is not the first time that Russia has encountered evil fortune. But since ancient times whenever she has met trials she has emerged from them successfully and even with increased strength. In truth everything depends upon co-operation between Sovereign and subject. We noble, firmly believe that none can stand against such a union and that victory must crown it. Your Majesty is wise and all the people pray to see the practical operation of your wisdom. But unhappily the officials of the Government and the statesmen have no intelligence to solve problems that concern the weal of the State. Your Majesty's ancestors sought an expression of popular view through the people's representatives, but the foundations of autocratic government were never weakened by the act. On the country, there resulted the State as it now is. Therefore, we Your Majesty's subjects, trust that Your Majesty will order the people's representatives to submit their opinions to the Throne, and that Your Majesty will grant them a share in the legislative and administrative power. If Your Majesty has recourse to co-operation between ruler and ruled, the domestic troubles of the country will disappear, all the people will become zealous for the glory of Russia and will discharge their loyal duty so as to overthrow the enemy."

The Moscow nobles also have presented a petition. That of the majority merely displayed their loyalty towards the autocracy, but that of the minority set forth a desire for representative government.

(RECEIVED BY THE "JIJI SHIMPO.")

London, 2.50 p.m., Feb. 5.

European financiers, looking at the conditions existing in Russia, consider it impossible for her to raise another loan.

Witte is not engaged in the compilation of a constitution. He is making investigations as to a national council which shall enunciate opinions with regard to continuing the war.

The Tsar will assent to reforms such as will satisfy the people so as to secure the stability of the Imperial House.

It is anticipated in France that peace will be seen in a few months.

Many thousands of refugees are leaving Poland. A large number of them are arriving in London.

In Sosnitsa and Bombara (?) there are 30,000 strikers. In Warsaw the confusion continues. Armed insurgents are looting in the Caucasus.

## THE UNREST IN RUSSIA.

London, February 7.

The Russian Grand Dukes have held a meeting and passed a resolution in favour of restoring peace. The Russian Ambassador in London has been instructed to obtain the good-will of England with regard to peace-terms.

The disturbance in Siberia is spreading rapidly. The telegraphs are stopped. Three thousand police and reservists have raised a revolt.

## NEWS OF THE WEEK.

On the night of Feb. 5th, 1,790 invalids arrived at Ujina by three transports from the front.

A telegram from Ujina reports that on Feb. 5th, 1,014 invalids were brought there by three transports from the front.

The *Asahi* reports that on Jan. 19th, a floating torpedo was found about 100 feet off the village of Masuke, in Hokkaido. It was removed to a police office.

The list of Japanese Lighthouses, Lightships, Buoys and Beacons corrected to Nov. 30th, 1904, is to hand. It is as usual replete with information relative to the subject, including many charts.

The opium habit is said to be on the increase among Koreans and the Police Department, according to the *Korea Daily News*, has asked that some restraint be placed on the indiscriminate sale, by Chinamen, of this article.

Some one in the Home Office is a humourist, says the *Korea Daily News*. The magistrate of Hong Won having reported that the Russians have established telegraph offices there, the Home Office now informs him that "you may prohibit it."

A telegram has been received in Tokyo that the Oshiro Steamship Co's steamer *Musashiro Maru* (formerly *Hindustan*) went ashore on Feb. 4th in the neighbourhood of Kaiyo island. The details are not yet known. She was built in 1888 in England and had a capacity of 2,978 tons.

We have to hand *The Graphic* of Dec. 31st which contains a number of pictures illustrative of the war, the best of which is perhaps that demonstrating the "blast" from a heavy gun outside Port Arthur. The number is excellently made up and contains much good reading.

Early on Wednesday morning, fire broke out at Yoshidamachi near Isezaki-cho, Yokohama, burning down an unoccupied house belonging to Hamada-ya, dry goods dealer. The cause is not known. On the previous morning, a well-known tea-house, the Uwoyei, at Omori, was destroyed by a fire which occurred in an upstairs room. Two firemen were severely injured by falling from the roof.

## THE TOKYO THEATRICALS.

Following is the statement of accounts for the theatrical entertainment at Tora-no Mon, Tokyo, on January 25th and 27th:

## Speedy Cure Treatment.

Bathe the affected parts with Hot Water and Cuticura Soap, to cleanse the surface of crusts and scales, and soften the thickened cuticle. Dry, without hard rubbing, and apply Cuticura Ointment freely, to allay itching, irritation, and inflammation, and soothe and heal, and lastly take Cuticura Resolvent Pills, to cool and cleanse the blood. A single set is often sufficient to cure the most torturing, disfiguring, itching, burning, scaly, pimply humours, eczemas, rashes, irritations, and chafings, with loss of hair, when all else fails.

The agonizing itching and burning of the skin, as in eczema; the frightful scaling, as in psoriasis; the loss of hair and crusting of the scalp, as in scalded head; the facial disfigurement, as in pimples and ringworm; the awful suffering of infants and the anxiety of worn-out parents, as in milk crust, tetter, and salt rheum,—all demand a remedy of almost superhuman virtues to successfully cope with them. Such are the CUTICURA remedies, the purest, sweetest, most speedy and economical curatives for the skin, scalp, and blood ever compounded. Mothers are their warmest friends.

## Millions of Women Use Cuticura Soap

Assisted by CUTICURA OINTMENT for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes and chafings, in the form of baths for annoying irritations and inflammations of women, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and many sanative, antiseptic purposes which readily suggest themselves, as well as for all the purposes of the toilet, bath, and nursery.

**CUTICURA RESOLVENT PILLS** (Chocolate Coated) are a new, tasteless, odourless, economical substitute for the celebrated Liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humour cures. Put up in screw-cap pocket vials, containing 90 doses.

Cuticura Remedies are sold throughout the world. American Depot: E. T. TOWN & Co., Sydney. British Depot: J. B. CLARKE & Co., London. French Depot: 5 Rue de la Paix, Paris. Forster Drug and Chem. Co., Sole Props., Boston, U. S. A.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 18TH, 1905.

## SUMMARY OF NEWS.

PRINCE KITASHIRAKAWA was promoted Lieutenant on Feb. 11th.

THE French armoured cruiser *Sully* has been lost on the coast of Annam.

THE Italian cruiser *Marco Polo* left Nagasaki on Feb. 15th for Shanghai.

NINE fresh cases of small-pox were reported on Feb. 14th at Matsuyama.

THE Emperor has presented a thousand yen to the family of the late Lieut.-General Matsumura.

ON Feb. 9th, snow fell at Sasebo and other western places, and severe cold was experienced.

CAPTAIN PRINCE HIGASHI FUSHIMI, commander of a warship, left Nagasaki on Feb. 15th for the front.

MR. R. KAMEYAMA, Police Superintendent of Nagasaki prefecture, has been appointed attaché of Legation at Seoul.

PRESIDENT ROOSEVELT, owing to the action of the Senate, has dropped the arbitration treaties with several foreign Powers.

M. ARTIMIEFF, the editor of the *Novoe Krai*, released at Port Arthur, arrived on Feb. 13th at

Nagasaki and left there on the following day for Shanghai.

PEACE rumours still come out from Europe; meanwhile preparations are being made by both sides for a big battle on the Hun.

THE *Jiji* says that Lieut.-Commander Kutsumi has been appointed to command the new destroyer *Ariake* which is being equipped at Yokosuka.

A NIGATA telegram says that typhus is prevalent in the district of Shibata. Some 130 soldiers in the Shibata barracks are suffering from the disease.

JAPANESE prisoners now in Russia number 410 including 302 non-combatants. Besides these there are 94 whose cases are under investigation.

MR. JAMES WALTER has been re-elected President of the St. George's Society of Yokohama and Tokyo. It is probable that the Society will give a ball this year.

THE Emperor of China has decorated General Nodzu, Commander-in-Chief of the Fourth Army in Manchuria, with the Third Order of Double Dragons with Star.

SILVER bullion valued at yen 217,540 being the interest on the Chinese indemnity, was brought on Feb. 13th from Shanghai to Nagasaki, whence it was removed to the Osaka Mint.

IT is reported by telegram from Seoul that the Seoul-Anju section of the Seoul-Wiju Railway was opened for traffic on Feb. 8th. The remaining sections will be completed by March.

IT is reported in Tokyo that in appreciation of the excellent services of the late Lieut.-General Matsumura, the Emperor will confer posthumous honour, promoting him to the rank of Baron.

A TELEGRAM from Sapporo reports that owing to the heavy snow, traffic on the northern line of the Hokkaido Railway has been stopped since Feb. 8th. Postal matter is carried via Muroran.

K. HIRAKAWA (26) a delivery man of the Kyobashi Post Office Tokyo, has been arrested on a charge of having stolen several money orders from letters which he should have distributed.

AT 8.33 p.m. on Feb. 11th, a freight train collided with four empty goods cars at Nagoya, destroying the latter. A coolie was severely injured. The cause was negligence on the part of a pointman.

THE French Consul at Kobe recently re-visited yen 1,970 to the Russians detained at Nagoya. On Feb. 9th, General Smirnov paid a visit to the Nagoya Primary School in company with two Russian officers and two Japanese.

K. SUTO (46), who had been sentenced in the Tokyo Appeal Court to death, was executed on Feb. 15th in the Ichigaya Prison, Tokyo. Last year, he murdered C. Ito, a farmer residing at the village of Yagi, Chiba prefecture, and robbed his victim.

MR. K. TAKAHASHI, Vice-President of the Bank of Japan, left Yokohama on Friday by the *Empress of India* on his way to London. His business is reported to be connected with the new loan which is now under negotiation by a British syndicate.

A TELEGRAM received at the Home Department reports that owing to heavy snow, traffic on the Hakodate-Otaru Railway was recently greatly delayed. A train left Hakodate for Otaru at 7.30 p.m. on Feb. 7th and was stopped by the snowdrifts for 10 hours in the neighbourhood;

another delay of 6 hours occurred at Kuchiyasu, but a detention of 96 hours was experienced at Ogawa, the journey to Otaru being finally accomplished at 1 p.m. on Feb. 12th.

THE Admiralty announces that the British fleets throughout the world will participate in the 1905 manoeuvres on a war basis, in order to test the strategic efficiency of the reorganisation.

A TELEGRAM reports that counterfeited notes and machinery for making them have been found in the residence of a farmer named S. Koniwa, in the village of Takeda, Hitachi province. All were seized and the man and others concerned in the work were arrested.

THE steamer *Fernand*, from Japan to Java with coal, put into Hongkong in distress on the 3rd. The chief officer died of small-pox in Japan, and the captain, chief engineer, and steward all had the disease at sea. The second officer brought the vessel to Hongkong.

THE Japanese Government intends to establish an administrative office at Dalny which has been remained Dairen. The organization will be proclaimed within a few days. A Tokyo paper says that Mr. Maeta Masana, will be appointed superintendent of the office.

IT is reported by a telegram from Ujina that 1,060 Russian prisoners and 922 Japanese invalids are expected to arrive there to-day, Feb. 15th. The same day, some seven hundred Russians, recently brought from Port Arthur to Ninoshin, a, will be removed to Hamada.

ONLY one bid, says the *Nagasaki Press*, was received in answer to the advertisement issued by the United States Quartermaster at Nagasaki for the supply of 5,000 tons of coal to be delivered at Honolulu. The Mitsui Bussan Kaisha were the bidders at \$5.75 (U.S.) per ton.

THE death is announced of Naval Paymaster General S. Hasegawa, in reserve, a member of the Upper House. He was 61 years of age. Previous to his death, the Emperor promoted him to Junior Third Rank and decorated him with the Second Order of the Sacred Treasure.

ACCORDING to the *Official Gazette*, an Imperial ordinance was issued on Feb. 15th exempting from income tax the interest on Exchange Bills and on Savings Bonds of the Industry Encouragement Bank, issued since the year 1904. Tax which has already been paid to the Government will not be returned.

GENERAL TERAUCHI, Minister for War, entertained Lieut.-General Sir Ian Hamilton, on the evening of Feb. 16th at his official residence when Sir C. MacDonald, British Minister, and his staff, Marshal Yamagata, Chief of the Staff Office, and other high officers of the army and navy were present.

T. OZAKI (37), residing at Yoshida-machi, Yokohama, at 3 p.m. on Feb. 10th attempted to murder Tsune (30) the wife of a merchant, inflicting severe injuries upon her with a short sword while she was passing Fukutomi-cho, Yokohama. The culprit was immediately arrested by the Iszaki-cho police. The cause is stated to be jealousy.

THE funeral of S. Onoda, a soldier who died at the front, took place on Feb. 16th at the Buddhist temple Joseiji, Chojima-machi, Yokohama, the cortege leaving his residence in Ota-machi Nichome at 2 p.m. His father being engaged in the export and import business, the leading traders in the city were present at the obsequies. The usual procession was made up of various bodies.

been sent to Dalny. The former official had previously served as Governor of Mukden, and it is supposed that he established very close relations with the Russians when acting in that capacity. If this step has really been taken, it will cause some commotion, though the Russians have acted similarly on more than one occasion. The Japanese must be in a position to judge very accurately what colour the conduct of Chinese officials at Liaoyang and Haicheng shows.

A Japanese officer who has just returned from the front says (*Nippon*) that the Russians have received and are still receiving many new troops, so that the number of Divisions now in the field is very large. They have not, however, filled up the vacancies caused by wounds, death and sickness, so that in all probability their Divisions do not average much more, numerically, than a brigade. He estimates their total force at 340,000 of all ranks. The great bulk of these troops are concentrated in and about Mukden, but about 40,000 are in the Hanchang district, where light railways have been laid establishing communication with Fushun. There is a report that a number of 13-cent. field-guns have been received. Hitherto the only pieces of this calibre used by the enemy have been mortars.

If these estimates be correct Kuropatkin should be satisfied, arithmetically at all events. His original estimate of the number required to crush the Japanese was 200,000 and he made the essay with 220,000 in the Battle of the Shaho. Between that fight and the 10th of February there was an interval of 120 days, and if we assume that the railway carried a thousand men daily to Mukden, it would follow that the total now at the front is 340,000, as estimated above. But that takes no account of casualties, so that if Kuropatkin now has 340,000 effectives, the railway must have been surpassing all expectations.

Friday, February 17.

The *Hochi Shinbun* quotes a high staff officer's opinion with regard to the situation on the Shaho. This authority thinks that the fight now impending will decide the fate of Manchuria. Something like a million men will be engaged. He does not predict definitely to which side victory will incline, but he plainly expects his countrymen to conquer. The question he then discusses is, what next? Supposing that fortune smiles on Japan's arms, what will be the course adopted by the Russians? Many people imagine that they will fall back upon Tieling. This officer does not think so. Tieling, being only 50 miles from Mukden, is too close to the latter place to be the rallying point of a huge army in retreat. Besides, it does not offer the necessary facilities: it is very far from offering them. Will the Russians, then, fall back upon Harbin? That, too, seems doubtful for if attacked and routed at Harbin they would be cut off from Vladivostok. By this process of exhaustion the *Hochi's* authority arrives at the conclusion that should they be driven from Mukden the Russians will make their next stand at Changchun, which is 167 miles from Harbin and 175 miles north of Mukden. Changchun offers some strategical advantages. It is within easy reach of Kirin and it has the Sungari River to flank it on the east. On the other hand it lies in a comparatively uninhabited region and a large army would be much embarrassed to find accommodation and facilities there. Therefore there is reason to doubt whether even at Changchun a stand would be made. The sum of the matter is that the pending battle in the valleys of the

Shaho and the Hun will be the decisive fight of the campaign, and both sides, being sensible of the fact, are omitting no precaution or preparation.

We may supplement this by saying that the distance from Port Arthur to Mukden is 250 miles in round figures. Therefore the march from Mukden to Changchun would be 75 miles shorter than the march from Port Arthur to Mukden. But whether Tieling be an advantageous position or not, it is certain that the Russians—supposing them beaten at Mukden—will fight a heavy rear-guard action at Tieling, and probably at other points between that place and Changchun.

#### THE MINISTER OF FINANCE.

It was expected that the meeting of business men at the house of the Premier on the 11th inst.—when 142 prominent merchants and manufacturers attended—would be the occasion for an announcement of another issue of domestic loan-bonds. Such was not the case, however. Baron Sone's main object seems to have been the cultivation of good relations with business circles. His speech was of a most practical character. In the head and front of his remarks he placed the unfortunate fact that Japanese manufacturers show a suicidal tendency to destroy their own prospects by dishonest practices. He adduced the cases of fancy matting and *habutaye*, for both of which staples a most promising market had offered in foreign countries when the reputation of the goods began suddenly to suffer from careless manufacture, short length and recourse to adulteration. Japan, he added, had now won by arms a place among the Great Powers, and it would be more than ever essential that she should cultivate her material resources. Therefore he exhorted his hearers to employ all their influence in the cause of establishing a higher business standard. Then, passing on to finance, he explained that the sum expended upon the war during the first year had been 520 million *yen*. Excluding the close of the year from the record, the total volume of paper currency did not exceed from 250 to 260 million *yen*, and as from 50 to 60 millions of that aggregate were circulating in Manchuria and Korea, it could not be said that the amount remaining in Japan proper was too large. On the other hand, there could be no question that large sums of money had passed into the hands of the people, since most of the war outlays had been made in Japan. It was the Government's object to recall as much of this money as possible so as to ease the future situation. The methods resorted to were by increased taxation, by encouraging economy and by floating loans. It was noticeable that the deposits in the postal savings banks alone had shown an increase of 8 million *yen* during the year, and that the amount of transactions at the clearing houses had grown from 3,600 million *yen* to 41,600 millions. On the whole they might congratulate themselves on the financial situation. But they had to remember that a very large expenditure would be required next year, and that although the country's arms had hitherto been successful, her enemy was one of the greatest military Powers of the world, a Power not likely to acknowledge defeat easily.

#### THE NAVAL "KANJO."

The staff officers of the Navy seem to be more erudite than their brothers of the Army. Admiral Togo's general order to the fleet after the destruction of the Port Arthur Squadron, an order for the literary polish of which the Admiral's Secretary may be presumed to have been responsible, is regarded by the Japanese as the most classical document published since the war began, and we now observe that the *Kanjo* granted by Admiral Togo to officers and men have the peculiar charm of being couched in exactly the language of their originals in the *Genki* and *Tensho* eras when Hideyoshi, the great employer of this kind of reward, issued so many of them to his warriors. The *Kanjo* being essentially a revival of an ancient custom, the use of the old forms of speech seems specially appropriate in its composition, particularly when we consider that the Sinitic-Japanese language employed for documentary purposes has not undergone during many hundreds of years any of the changes observable in Occidental languages. There are twenty-four different forms of *Kanjo* among those issued by Admiral Togo, and all recall the times of the Taiko.

Among these *Kanjo* there are two which reveal very interesting facts. One is addressed to second-lieutenant Yokowo of the *Fuji's* torpedo-boat. The achievements on account of which this much coveted honour is granted to him are these:—(1) Having frequently placed mechanical mines within the harbour at Port Arthur; (2) having on several occasions reconnoitered the state of the enemy to the no small advantage of the Japanese blockading squadron; (3) having on three separate occasions during the month of July undertaken the dangerous duty of swimming with a fish-torpedo into the harbour of Port Arthur; and (4) having, on the 13th of September, rescued from under the enemy's fire the crew of the *Maya's* torpedo-boat which had been shattered.

That is a sufficiently long list of achievements standing to the credit of this gallant young officer. His friends and relatives must be justly proud of him and so must the country he serves and the Navy he serves in. Imagine the grand courage and self-reliance of swimming on a dark night into the harbour of a fortress, steering a fish-torpedo, with the knowledge that at any moment he might find himself in the centre of a blaze of electric light and might become the target for innumerable rifles and quick-firers. Admiral Togo does not say how these extraordinary ventures fared in point of success, but that they were essayed, and thrice, is the wonder.

Another *Kanjo* is addressed to Lieutenant Hotta of the *Asama's* torpedo-boat. His exploits were:—(1) Frequently placing mechanical mines within the harbour; (2) frequently performing valuable reconnaissances; and (3) on the 20th of August and on 9th September steering automatic rafts into the port for the purpose of destroying the enemy's ships.

Of course no description is given of these rafts, but we judge that they were fitted with some contrivance which enabled them to be discharged like a torpedo in a given direction. Evidently the officers and sailors manning them must have escaped by swimming, or by the aid of a small boat. Again nothing is said as to their success. The brave lieutenant receives his *Kanjo* for making the attempt. What thrilling interest would attach to an accurate diary of the doings and experiences of the Japanese fleet during that blockade!

### THE NUMERICAL STRENGTH OF THE RUSSIANS.

The Russians are said to have 450,000 men south of Harbin. That means 450,000 men including the garrisons in Vladivostok and elsewhere and including the non-combatant section of the army. Making deductions on these accounts the force nominally in the fighting line is put at 270,000, including the sick and wounded, of whom there must be a very great number. Heikautai is now reported to have cost the Russians 25,000 in killed and wounded, and a large addition must be made to that figure on account of frost-bite. In truth this last cause must have worked havoc unless the troops were extraordinarily well provided. For we must remember that they began the movement towards the Hun as early as the 20th of January, and that they did not re-cross the river until the 29th and 30th. We must also remember that the snow began to fall on the 22nd and continued falling until the 28th, and that out of these 7 days, 5—from the 24th to the 28th—were rendered almost unendurable by a heavy northerly gale which kept the thermometer 20° below freezing point. The Japanese were not exposed during much more than half of the period of the snow-storm. We shall not know for a long time, if ever, what the Russians suffered and how many of them perished or were crippled by the cold, but it may truly be said that this march through the snow and storm displayed a degree of endurance and bravery not inferior to anything that has hitherto taken place during the war. There could not, of course, be any turning back. Armies can not counter-march at a moment's notice. Gripenberg, or was it Kaulbars—was bound to go on, hoping always, no doubt, for kinder skies, and seeing his troops thinned every day even before they encountered the enemy.

It is stated, on apparently good authority, that the sufferings of the Japanese troops from frost-bite have been comparatively small. There have only been two hundred cases since winter set in, and of these the number sufficiently serious to require hospital treatment was but ten. Not one fatal case occurred. The Russians, on the contrary, seem to have suffered very much. Deserters and prisoners are unanimous in saying that their ranks are greatly weakened owing to this cause, and the fact is further established by examining the condition of the wounded and the dead, when it is plainly seen that the men are frequently unprovided with proper winter clothing and that their sufferings from cold must be intense. In the matter of foot-gear especially they seem to be deficient. Even the officers are not always provided with the boots which the Manchurian Chinese use and which are so essential as a protection. There can be little doubt that the Russians looked forward to the decimation, if not the crippling, of the Japanese army owing to climatic rigour during the long Manchurian winter. Very likely that conviction largely informed their plans in the Heikautai battle. For they, it must be remembered, have few opportunities of learning the condition of the Japanese. They do not receive Japanese deserters nor do Japanese prisoners give them much information. Kuropatkin recently described the condition of some wounded Japanese, and from his description one would infer that frost and snow must be playing havoc with the Japanese army. But we suspect that he was misled by the results of privations suffered after these men fell into the hands of his own troops.

A telegram to the *Fiji Shimpō* from Shanghai says that according to the statements of Russian officers there, namely, the statements of General Dessino and the naval men, Gripenburg was not in command of the Russian troops in the battle of Heikautai. They allege that the troops engaged were a mixed body, consisting partly of those under Linevitch and partly of the new arrivals under Kaulbars. Gripenberg, they add, had set out for Russia five days before the battle.

This is an interesting piece of intelligence but whether it is truthful or whether it is invented to cover up a scandal, who will venture to affirm? We are bound to say that the stories about the war which get into circulation from Russian sources in Shanghai have not hitherto been so veracious as to warrant implicit reliance on anything emanating from that quarter. The belief in Gripenberg's presence in the battle is too universal to be lightly dismissed.

### BARONESS SANNO MIYA AND HER CHARITABLE EFFORTS.

(COMMUNICATED.)

Insane people in Japan are in no sense in a favourable condition. They are not at any rate the favourites of society as in some European countries. Unless generous folk come to their aid their circumstances will remain very deplorable, as now, till the war shall end. Baroness Sannomiya, a member of the Ladies Aid-Association for Lunatics, is one of the most warm-hearted helpers of insane people. She often visits the Tokyo City Lunatic Asylum, speaks in a friendly manner with the insane people, and sees where the gap of sympathy is widest. Many articles of which lunatics are destitute, have recently been furnished by many charitable people through the Baroness's hands. Among them were 20 *yen* in cheques from Lady MacDonald, the wife of the English Minister, and 268 articles of various kinds of clothing from the following ladies and gentlemen:—Madame Sonoda, Madame Ota, Madame Yamashita, Mr. Duer, Mrs. Brinkley, Mrs. Lowder, Madame Satoko Narita, Madame Matsumura, Countess Toda, Mrs. Sakata Riyoko, Madame Sakurai, Madame Terauchi, wife of the Minister for War, Madame Kurino, wife of the late Japanese Minister to Russia, Madame Watanabe, Mrs. Scidmore, Mrs. J. McD. Gardiner, Mrs. Marsh, Mr. Wood, Mr. Swift, Mrs. Kirby, Mrs. Benetard, Mr. Adam, Miss Lowell, and Mrs. Wilson.

### FAMINE IN RIUKIU.

There appears to be a very unhappy state of affairs in the Riukiu Islands. With the exception of 3 months no rain whatever fell during 1904, and the drought has proved most destructive. Even trees a hundred years old have withered. No less than 2,486 wells are dry—68 per cent. of the total—and water has to be drawn from the river at 4 *sen* a bucket. The area of land rendered unproductive is 40,965 acres, representing a loss of 1,915,000 *yen*, and the crop of sweet potatoes on which the people place most reliance, failed to the extent of 1,314,747 *yen*. An official of the Department of Agriculture and Commerce, who has just returned from inspecting the islands, says that 13,970 households live entirely on purchased food; 30,990 live mainly on purchased food, and 13,884 are in a state of destitution.

The Emperor and Empress have given 2,500 *yen* to assist the sufferers by famine in Okinawa Prefecture.

### MORE CAPTURED STEAMERS.

Of the 10 steamers captured *en route* for Vladivostok since the 11th of January, four have been adjudicated lawful prizes with all their cargo.

The crews of the Austrian steamer *Siam* and the British steamer *Wyefield*, 28 men and 32 men respectively, were duly handed over on the 9th instant to the Austro-Hungarian and British Consulates. Mr. Consul Hall addressed to each crew—there being several British subjects among the men of the *Siam*—a warning that as the relations between Japan and Great Britain were of the closest character, violations of neutrality by British subjects should be avoided. We take this from the *Kokumin Shimbun*.

The steamer *Eastly* has been released by the Yokosuka Prize Court. She was able to prove that she was carrying a cargo of Yubari coal to Singapore. There seems to have been a rather grave previous record against her, which helped to bring her under suspicion, but the *bona fides* of her last voyage was successfully demonstrated.

The German steamer *Tavos* (2,398 tons) laden with war material for Vladivostok was seized in the north by our war-ships on the 10th instant.

On the 14th instant in the northern sea the British steamer *Apollo* (3,829 tons gross) laden with 5,700 tons of Cardiff coal for Vladivostok, and the British steamer *Scotchman* (1,679 tons) laden with provisions for Vladivostok, were seized by Japanese war vessels.

### PRISONERS' STORIES.

There is a striking uniformity in the statements made by Russian soldiers who come to the Japanese lines to surrender. They all complain that they are insufficiently fed—black bread only and not enough of that is the latest account—and they all represent a most dispirited condition among Kuropatkin's troops. On the right of the line, that is to say, in the positions occupied by Kuroki's Army, there seems to be a regular system of interchanging letters and presents. Certain places have come to be recognised as post offices, and thither letters and parcels are carried and deposited, no attempt being made to molest either those that carry them or those that come to seek them. Recently the Japanese left some white bread and some pictorial post-cards at one of these novel stations, and the Russians returned the compliment with some sweet-meats. The fall of Port Arthur was of course duly conveyed by letter, but the Russians declined to believe it. On the contrary, they accused their Japanese correspondents of seeing just a little too far in the exercise of their inventive faculties. For answer detailed accounts were "posted" as to the facts of the capitulation and General Stoessel's journey to Japan, so that probably light ultimately dawned on the Russians. It is said that these communications make quite an exciting feature in the monotonous life of the camps. The Japanese have been careful to send photographs illustrating the kindly treatment afforded to Russian prisoners in Japan, and have urged the Russians to be equally merciful in their treatment of the Japanese who have fallen into their hands, since men that fight for their country should respect each other.

## THE TRADE ASSOCIATION.

The Trade Association of Japan has been engaged of late enquiring into business matters in China and Korea with a view to devising improvements in the methods now adopted. The Association has found in the conduct of the war a special subject of consideration, and has passed a resolution dealing with the question of the employment of Chinese coolies for transport purposes. It is well known that in the war with China a great number of Japanese labourers were taken across the sea and used on the line of communications. Experience proved that much inconvenience was connected with this system, and thereafter a new organization was formed in Japan, its leading idea being to draft into the transport corps men who, though not unfit for service in the field, laboured under some disqualifications which rendered them fitter for handling baggage than for taking their place in the fighting line. But the available number of these men has not proved, it is understood, more than sufficient for the work of transport at the front, and large bodies of Chinese have necessarily been engaged for the ordinary commissariat carriage. The Trade Association speaks of 100,000 men and 10,000 carts being thus employed, and estimating the men's wage at 1 yen daily and the hire of a cart at 8 yen, finds on this account an expenditure of 180,000 yen per diem or nearly 5½ million yen per month. The resolution speaks of this number having to be doubled soon, and then urges that Japanese coolies should be sent across the sea so as to keep down the prices charged by the Chinese. It puts the daily wage of a Japanese at 40 sen and calculates that if food and clothing be supplied the outlay per diem would not exceed one yen, most of which money, if paid to Japanese, would return to Japan. This last consideration probably, has much influence with the association.

The resolution refers also to the stringent regulations imposed on ships and merchants visiting Dairen (Dalny). So severe is the system of surveillance that no vessels can enter there at present except the steamers of the Osaka Shosen Kaisha, and the number of tradesmen gaining admittance is very small. It is not claimed by the Association that to admit merchants is in any sense essential, but the committee think that not a few Japanese traders go thither with the purpose of exchanging the products of their country for the bank notes circulated by the army, and that if greater liberty were granted such traders might prove very useful in that way.

## JAPANESE SILK AT THE LOUISIANA EXPOSITION.

We have received a copy of the report of Mr. Franklin Allen, President of the International Silk Jury at the Louisiana Purchase Exposition, from which we learn that by far the greatest number of medals fell to this country. Japan gained 13 Grand Prizes for raw materials against France's 21 for tissue and Italy's 11 for raw materials. In all other departments she absolutely swept the board. Her awards were: Raw Materials: 13 Grand Prizes, 36 gold medals, 82 silver medals, 39 bronze medals—total 170; Tissues: 4 Grand Prizes, 6 gold medals, 22 silver medals, 31 bronze medals—total 63; grand total 233 out of 348 awards. She had 17 out of 71 Grand Prizes; 42 out of 76 gold medals; 104 out of 126 silver medals, and 70 out of 72 bronze

medals. We extract the following from the report:—

Japan contributed more than one-half of all the silk exhibits at the Louisiana Purchase Exposition at St. Louis, there being 171 exhibits of raw silk, spun silk, etc., and 95 exhibits of woven tissues. The latter included Habutai silks from Kyoto, Kiriu, Gumma-ken Fukui-ken, (where the largest production of Habutai both plain and fancies is located), Kanazawa, Fukushima-ken, Toyama-ken, and Yokohama. The exhibits from Kyoto included also well constructed plain, fancy and white crepes, figured silks, satins for dresses made on power looms, black satins showing remarkable progress in the manufacture, export silks of good commercial value and harmonious colorings. Beautiful crepes were shown from Shiga-ken, Gifu-ken, and Gumma-ken. Gumma-ken, and Yamanashi-ken showed also lining and umbrella silks of good quality. There were also umbrella silks from Tokyo, silk fabrics mixed with gold from Osaka, excellent white satins and figured silks from Niigata-ken, kaiki silks from Kanazawa, and damasks from Yokohama.

Although the modern factory system including the use of elaborate machinery has been generally applied to the manufacturing industries of Japan it has not been generally introduced in the silk industry outside of reeling filatures and throwing plants. Mr. Haruki Yamawaki, Secretary of the Department of Agriculture and Commerce of Japan, who is a Commissioner of Japan at the Louisiana Purchase Exposition states in his admirable work, "Japan in the beginning of the Twentieth Century," that while the number of manufacturing companies, including joint stock, limited liability and unlimited companies was 2,477 in 1901 with a paid up capital of \$88,000,000, but 42 of the number with a paid up capital of \$500,000, were devoted to silk weaving. There were 321 raw silk companies with a paid up capital of \$3,000,000 and 11 throwing silk companies with a paid up capital of \$365,000.

The largest power loom silk fabric company in Japan, located at Kyoto with a plant of 500 looms, was an exhibitor at this Exposition. Its production is broadened silk fabrics and obis for domestic use, and cotton back satins chiefly for export to China. 464,000 yards output of cotton back satins was reported by this company for 1903.

The Jury awarded Gold Medals to each of the three following named organizations identified with the silk industry of Japan: The Imperial Japanese Silk Conditioning House at Yokohama, the Silk Association of Japan at Tokyo, and the Government Sericultural Institute at Tokyo.

The raw silk exhibits from Japan were by far the most numerous and important of similar exhibits ever made by Japan at any previous International Exposition. This was a gratifying fact to the American silk manufacturers who found it more natural than surprising in view of the commercial fact that the United States now consume two-thirds of Japan's entire export of raw silk. The increase in the raw silk trade between the two countries has been very marked in recent years, and Japan's export of raw silks this year is the largest in its history.

The excellence and varied number of qualities exhibited being over 170 in number were fairly representative of the production of more than two thousand reellers in Japan and covered the grades Double Extra silk to Number One. The exhibit of reeels represented a large production of this class of silk and also that which has come to the particular notice of the American manufacturers within the last few years, namely, the better grades of Kakedas. On the whole it may be assumed that this is the most complete and diversified raw silk exhibit made by any country at any international exposition up to the present time.

## TOKYO BANKERS AND THE NEXT DOMESTIC LOAN.

On the 14th instant a meeting of the principal bankers of Tokyo was held in the Bankers' Club to consider the terms of the next domestic loan. There were present Baron Shibusawa, Mr. Toyokawa, Mr. Sonoda, Mr. Ikeda, Mr. Soma, Mr. Soyeda, Mr. Hayakawa and others. After much consultation they decided to formulate two proposals and submit them to the Government as representing the views of Tokyo bankers. One was that the amount of the loan should be 100 million yen; that the interest should be 5 per cent.; that the issue price should be 90 and that the period of maturity should be 3 years. The other was that, the amount remaining

the same and also the issue price, the interest should be 6 per cent. and the period 7 years. There is no indication as to which of these proposals has the greater favour with the bankers, but it will probably be agreed that the latter is the more onerous from the Treasury's point of view.

The Osaka bankers also have had a meeting, and they too are divided in their views, one party being in favour of a five-per-cent loan at 90 with a period of 3 years; while the other advocates a six-per-cent. loan at 90 with a period of 10 years. Further, the Osaka bankers think that the loan should be 200 millions, not 100. Both Tokyo and Yokohama seem to be agreed that the loan should produce, on the whole, about 8 per cent. interest, and upon that hypothesis they base their calculations.

## JAPANESE SETTLEMENTS.

The Japanese Government has submitted to the Diet a Bill for granting local self-government to communities of Japanese settlers in foreign countries, such grant to be dependent on the judgment of the Minister of State for Foreign Affairs. Evidently the scene of the Bill's first operation would be Korea. There has long been a demand for some such measure among the Japanese settlers in that country. They claim that substantial progress is impossible in their settlements unless the municipal affairs are in the hands of the Japanese community. This is a problem about which many memories of old residents in Yokohama cluster. Yokohama never could get the boon because, as Sir Harry Parkes used to say, it would have required a century, more or less, to bring 17 Treaty Powers into line so that their consuls might be ended with the necessary authority. Kobe had it in a measure, and Kobe thrived under it. The *Nichi Nichi Shinbun* says that this question has been before the Japanese Government since 1899, and that the delay in settling it is very reprehensible. The Japanese settlers have been unable to take any of the sanitary measures or to effect any of the improvements that any civilized community would deem essential.

## THE NORMAL SCHOOL AT URAWA.

A strange event has occurred at the Normal School of Urawa, in Saitama Prefecture. From accounts in the newspapers, accounts which have a prejudiced sound, the students asked twice for permission to hold a celebration on the 10th instant, that being the day when the Emperor's Declaration of War was published last year. The Director refused permission. Then the students collected in their class room, sang the national anthem, and after hearing one or two speeches, dispersed. Altogether their conduct up to that time is represented as quite harmless. But the Director thought differently. He put an end to the holiday and ordered the students to re-assemble in their class-rooms. This they did, remaining there until 3 p.m., when, as usual, they went out, only to find that they were not allowed to leave the enclosure. As the gate was not locked, however, they passed through freely, returning at the normal hour of 5 o'clock. Thereupon they were informed that, by the order of the local authorities conveyed through the Director, 220 of them were rusticated for an indefinite time, only 20 being allowed to remain. We suspect that this is only a part of the story.

## KOREA.

Mr. Megata, who has just returned to Tokyo from Seoul, says, speaking through the columns of the *Shogyo Shimpō*, that there is no occasion to be in a hurry about Korean reform. The time has fortunately come when the interference of other countries has ceased to impede Japan's efforts. As to the Koreans themselves, Mr. Megata seems to think that one of their great faults is love of academical formalities and neglect of practical facts. They will argue in the most learned way about international law and imperial rights as though these things were professionally familiar to them, but beyond discussion their ideas do not extend. By way of illustrating their attachment to fineness of terminology, he adduces the case of the late Crown Princess's obsequies. They were not called obsequies (*so*): they were called *charity* (*jutsu*). It was not a "national funeral" but a "national charity," the underlying idea being that all the money expended in connexion with such ceremonies goes into the pockets of the people at large. By this manoeuvre all criticism on the score of lavish expenditure is disarmed, and nobody pauses to consider whence the money is to come in the first place. It is so with almost everything, and to add to the drawback of this impractical disposition, which blocks all progress, there is the further trouble that offices are virtually bought and sold so that the best men seldom get into power. Still Mr. Megata is evidently hopeful. He thinks that with improved methods of agriculture the country's yield can be increased manifold, and he looks forward to the time when the revenue of the State will be 70 or 80 million *yen* instead of 10 millions. He expects, also, that excellent results will follow the currency reform just inaugurated. A great impetus will be given to trade. But on the whole the dominant note of his remarks is *festina lente*. Reform has to be very radical. In Japan's case there was no occasion to begin at the base: the foundations were already laid. But in Korea's case the building must be from the very bottom.

An officer who reached Moji on the 14th from Yuensan, reports that on the 26th of January 400 Russian troopers, hitherto stationed at Hoilyong, evacuated that place and retired northward across the Tumen. On the same day the remnant of Cossacks in Songchin broke the telegraph communicating with Kilju, burned their stores and retreated to the north.

We take the following from the *Korean Daily News*:

The Japanese Consul at Fusan complains that the officials of the Imperial Household Department are demanding excessive taxes on the Japanese exports of cotton, fish, rice and other produce.

On account of the murder of a Wei-hai-wei Chinaman at Haichu the British Minister has presented a claim against the Korean Government for \$2,674 and a request that it may be considered.

There is trouble in Djon-Chu. Taxes fell due, and the magistrate (supported by the governor) demanded payment in copper cash. Those who proffered nickels were imprisoned, hence the trouble.

We learn that the contract of Mr. Frampton, Head Master of the English language school, has been renewed for a further three years dating from January 1st.

The magistrate of Syukchōu is in hiding. He punished a man too severely; the man died under

the operation and the man's relatives are looking for the magistrate.

The magistrate of Wiju is not, apparently, very busy. He has found time to send the Home Office an account of a Japanese Port Arthur celebration which he recently attended in his district.

On Thursday night (Feb. 2nd) the Hotel du Palais was destroyed by fire.

Robin Hood and his merry men seem to have their counterparts in Korea. The magistrate of Tai-in reports that over 50 robbers armed with rifles invaded his district and "collected" 80 bags of rice from Mr. Kim, 130 bags from Mr. Min, 150 bags from another Mr. Kim, 28 bags from Mr. Choi, \$30 from a third Mr. Kim and 150 bags of rice from Mr. Yi. The robbers, after distributing their spoil amongst the poor people of that locality, left for fresh fields and pastures new.

A proposal is on foot to appoint only Japanese-speaking magistrates to the districts in North and South Ham Kyeng provinces.

It is reported that when Mr. Paik Sung Ki was Governor of North Pyeng-an province, he amassed considerable wealth at the expense of the people. Some of the people recently came up to Seoul and compelled him to disgorge.

Some Koreans who have studied police methods in Japan will, it is said, return to Korea and become inspectors.

It is reported that several millions of dollars have been recently received at the Imperial treasury. These are the taxes from the provinces.

## THE THIRD SQUADRON.

In connexion with the return of Vice-Admiral Kataoka to Tokyo the *Jiji Shimpō* calls attention to the record of the Third Squadron which, although its achievements were not so conspicuous as those of the United Squadron under Admiral Togo, nevertheless did work that the nation should long remember. It was this Third Squadron that cooperated with General Kuroki's Army so effectively at the Battle of the Yalu. It was the same Squadron that covered the landing of the troops on the Liaotung Peninsula. It was the same Squadron that assisted to win the Battle of Nanshan by its operations in the Bay of Kinchow. It was the same Squadron that protected the left flank of the army marching against Port Arthur. It was the same Squadron that undertook the work of clearing away mines and blockading Port Arthur, in which dangerous task the *Miyako*, the *Heien*, the *Saiyu* and the *Kaimon* were lost. And it was the same Squadron that made the last torpedo attack at Port Arthur, the attack on the *Serastopol*. It is quite true that Admiral Kataoka and his men have done splendid work though the public do not seem to have fully appreciated it.

## NOTES ON CURRENT EVENTS.

Mr. Sugimura, who goes to Brazil in the capacity of Minister Resident, left Shimbashi by the 9.30 a.m. train on the 10th instant en route for his post. At Yokohama he embarked in the S.S. *Iyo Maru*. Mr. Chinda, Vice-Minister of State for Foreign Affairs, and many others assembled at Shimbashi to bid him farewell.

The *Official Gazette* publishes, over the signatures of all the Ministers of State a series of rules prescribing the exact measures to be taken in examining Portland cement for use by Departments of State, and the

precise standards that have to be attained. Inasmuch as resistance to sea-water is specially mentioned, we presume that the cement is intended for use in coast fortifications.

It is confidently affirmed that General Kuropatkin has broken down under the nervous strain of the past ten months, and that he is now unable to take any decisive step or to come to a definite resolution on any subject. This is the state of affairs which General Gripenburg is expected to make known in Petersburg on his arrival. There is talk of Grand Duke Nicholas himself coming to Manchuria to examine the state of affairs.

There are now 30,897 Russian prisoners in Japan, namely, 3,789 who were in detention prior to the fall of Port Arthur, and 27,108 who have come from the fortress. These figures do not profess to be absolutely accurate, but if they err at all it is on the side of deficiency. Among the prisoners are 7 officers of the rank of general or admiral, all of whom are at Nagoya; 49 staff officers, of whom 44 are at Matsuyama and 5 at Shizuoka; and 612 officers of or below the rank of captain, of whom 557 are at Matsuyama, 55 at Shizuoka and 5 at Nagoya. The rank and file aggregate 30,229. Osaka has the largest number of them, namely, 17,597; and Matsuyama comes next with 3,036.

We have often thought, when reading or hearing the now familiar complaint about want of commercial probity in Japan, whether the formulists of the charge look at home as closely as they peer abroad. If, for example, one examines the latest report of Commissioner Garfield of the Bureau of Corporations, one finds this declaration:—"Under the present industrial conditions secrecy and dishonesty in the promotion of companies, over-capitalization, unfair discrimination by means of transportation and rebates, unfair and predatory competition, secrecy of corporate administration, and misleading or dishonest financial statements are generally recognised as the principal evils." Mr. Garfield is here speaking of the ways of men who stand very high on the roll of business magnates. It is evidently unsafe for Occidental merchants of every degree to throw stones at their Japanese confreres.

One of our English contemporaries quotes a German trade-journalist who lectures his countrymen on their commercial "slowness" as compared with their English competitors. Egypt and Abyssinia are the fields where this unexpected rapidity is shown by the Britisher, and the particular business in question is the sale of needles and fancy pins, for which the slim Englishman finds custom by enclosing the articles in *necessaires* of great beauty and valuable out of proportion to their contents. "The whole thing shows in a most striking way," says the German critic, "with what prodigious rapidity the English move when business is at stake. The proverbial German slowness has certainly its good side, but in respect to export English swiftness of action is ever victorious. Let the German manufacturer learn mobility." This is turning the tables with a vengeance. The boot was supposed to be on the other foot.

From London again comes news that the Argentine Republic has sold its fleet of 7 cruisers to Russia, and that Rojestvensky is waiting for them to join him. The *Jiji Shimpō* says that nothing has been heard of this in official quarters and that the truth of

the story is very doubtful. The Argentine Republic might sell one or two vessels, but that it should dispose of its whole fleet is not credible, in view of its relations with Chile.

Mr. Kurino seems to have been interviewed, for we read in two or three Tokyo journals that he has again expressed himself as he did on his return to Japan after hauling down his flag in St. Petersburg. He said then that Russia had not intended to fight, and he says so now, observing, at the same time, that his original statement provoked much adverse criticism. Did it? We do not remember that any thoughtful person suspected Russia of any other mood. On the contrary the general belief was that the Government in St. Petersburg rested happy in the conviction that Japan was not in earnest and that the sword would never be drawn. It is tolerably certain that such was also the view of the Russian Legation in Tokyo. Indeed one can not easily avoid the conviction that had St. Petersburg received from Tokyo a correct estimate of Japan's mood, war would have been averted. Mr. Kurino's view, therefore, was almost axiomatic. He adds, to-day, that some further heavy blows will have to be given to Russia before the proper moment for peace comes. We agree with him.

There has been a sharp frost at Dalny. It is stated that ice has formed inside the breakwater to the depth of a foot. Ice-crushers are busily at work, but a cold westerly wind causes the water to freeze almost as soon as it is cleared, and much inconvenience is said to be caused.

The latest invention, credit for which belongs to Professors Simonsen and Classen of Aix-la-Chapelle, is that alcohol can be produced profitably from saw-dust or wood-shavings. The cost of obtaining a hundred litres from that material, after allowing for all charges, is put at 15.86 marks, whereas the cost of getting the same amount of spirit from potatoes would be 25 marks. The nature of the saw-dust and shavings or their kind does not seem to be a point of any importance whatever. Fir or pine is equally good though birch is slightly better than either. There is something respectable about whiskey brewed from potatoes, but a decoction of the sweepings of a carpenter's shop is not appetizing.

It is interesting to compare the quotations on the share market to-day with the quotations at the outbreak of war a year ago. Taking February 8th in both years as a date for comparison, the *Fiji Shimpō* gives the following figures:—

	Feb. 8th. 1905. Yen.	Feb. 8th. 1904. Yen.	Difference.
Kyushu Tetsudo .....	37.05	52.63	4.40
Tanko Tetsudo .....	71.85	68.50	3.35
Densha .....	74.55	77.80	3.25
Kei-Hin-denki Tetsudo..	54.90	50.00	4.90
Shigai Tetsudo .....	76.70	68.10	8.60
Yusen Kwaisha .....	81.80	70.90	10.90
Toyo Kisen Kwaisha ..	30.90	27.40	3.50
Kanagafuchi Boseki ...	54.10	52.80	1.30
Seito Kwaisha .....	90.00	50.80	39.20
Tokyo Kabushiki-Torishikijo .....	157.90	147.50	10.40

It will be noticed that the only shares which have declined are thus of the Densha Company—the old street cars. The 3 sen fare has brought down these once so favourite securities, and also, perhaps, the knowledge that relaying of the road-bed is a necessity of the not very distant future.

The *France Militaire* publishes a glowing account of the new French 9.45 in. gun by one of the French members of Parliament

who were present with the French Minister of War during the experiments at Havre on December 18. According to this account, the French regulation 10.63 in. mortar is a mere toy in its effects in comparison with the new gun, which weighs ten tons and throws a projectile of 359.35 lb., with a muzzle velocity of 1,610 ft. per second, making it impossible to follow its flight. The energy of the recoil being used for doing all the heavy work, including the loading, the crew of the gun is reduced to three—one to attend to the sighting, a second to duties which may not be revealed, and a third to the loading. The last is protected by a cuirass of padded material and a mask of the same, which closes hermetically his ears and mouth, as the return of the flame from that portion of the powder which ignites only on coming into contact with the air at the muzzle is so considerable as to be dangerous and the noise requires the ears to be protected. The three gunners who fired the 15 rounds at the experiments had worked the gun only three times before. These 15 rounds, however, made 480 rounds altogether which had been fired from the gun without its showing signs of serious damage, although 500 rounds represent the average capability of guns of this calibre. The cost of a single gun, including ammunition (the number of rounds is not stated), is estimated at £20,000. The firing of the gun took place from the battery of the Hève, which is so elevated as to be considered out of danger of return fire from the sea. The rate of firing was three rounds a minute directed against a target, towed at a speed of five knots, 5,000 metres (3 miles and 188 yards) out at sea. The French Minister of War expressed himself as highly satisfied with the results of the experiments.

The reports of the officer commanding the forts at Nagasaki, dating from the 10th of January to the 22nd, show that the total number of Russian officers and men paroled and released at Port Arthur was 1,250; of whom 652 were officers and 598 privates. They were accompanied by 83 females, 28 children, 3 maids and 3 servants.

The *Outlook* promises to begin, at an early date, the publication of "The Story of Port Arthur" from the pen of Mr. George Kennan, its special correspondent, who spent two months in the Japanese camp during the siege and saw everything there was to be seen. We look forward with much interest to this account. Mr. Kennan is, in our opinion, an ideal correspondent. His style, while of the most attractive and lucid character, is absolutely free from fine writing, and his wide knowledge, long and varied experience and sound judgment enable him to choose the most interesting features of his subject and to present all their most important aspects. In the latest number of *The Outlook* there appears an extract from a private letter of his which concludes with the words: "The general result of my observation and experience was to increase the profound admiration that I already felt for Japanese officers and soldiers. In daring, endurance and resourcefulness they are not only unequalled but they never have been equalled in the history of the world."

Antung seems to be flourishing. The military administration is under the control of Major Ohara, who enjoys a high reputation earned during his service at Wuchang where he filled the post of director of military schools. The Japanese methods of government have proved so satisfactory to the

Chinese inhabitants that many of these have asked to have the functions of the administration extended, a fruitless request, of course. Business is said to be very brisk, and the Japanese settlement is rapidly acquiring an air of prosperity. In fact the place promises to have a future rivalling that of Newchwang. Something of all this must be attributed to the artificial activity resulting from the war, but much is said to be of a permanent character. It is noticeable that Japanese women have been allowed to enter Antung and also Heng-hwang. In fact all signs of war have been nearly obliterated.

The death of Sir Erasmus Ommanney, last December has removed one of the very few and, perhaps, the most interesting among the survivors of the battle of Navarino, fought on October 20, 1827. There are still, however, two, if not three survivors of the battle—Com. John Cawley, who was a midshipman on board the *Genoa*, and was wounded in the action; he is more than 94 years of age. Jonathan Henderson, of Westward Ho, who was a boy on board the *Albion*, the ship in which Sir Erasmus Ommanney was a midshipman; he is reported to be in his 92nd year. John O'Sullivan, of Bangalore, who was a boy on board the *Asia*, the flagship of Sir Edward Codrington; he must also be over 90 years of age, if yet living. It is quite likely also that there may be survivors of the foreign squadron which took part in the battle. There were present four French line-of-battleships and one frigate, while the Russian force comprised eight ships. The Turkish-Egyptian fleet to which these vessels were opposed, consisted of seven line-of-battleships, 15 frigates, with a number of corvettes and smaller craft. The *Asia*, Sir Edward Codrington's flagship, is still in existence.

A Japanese who has just returned from China says that the Russian ships interned at Kiaochow have now been completely repaired as to their exteriors, and numbers of Chinese workmen are engaged repairing their interiors. They fly the German flag. The same authority alleges that the trade in contraband for Vladivostok continues as briskly as ever at Kiaochow. An uninhabited island is used as a place for storing goods, whence they are shipped without let or hindrance. Probably other places than Kiaochow are similarly utilized. The conditions of vicarious sovereignty and divided authority that exist in certain regions of the Far East lend themselves to curious incidents, but, as we have often had cause to observe, Germany at all events has shown an unflinching resolve to discharge her neutral obligations.

Although the industrial record for 1904 in Japan was remarkably satisfactory considering the existence of a state of war, the cotton-spinning industry undoubtedly suffered. Statistics published by the Department of Agriculture and Commerce show that whereas the number of working days per month in 1903 was 26.65 on the average, it fell to 25.70 in 1904; the number of working hours per day declined from 21.46 to 20.50, and the average number of workmen diminished from 74,731 to 62,670. These figures, if reduced to per-centages, represent a fall of 2.8 per cent. in days, 4.4 per cent. in hours and 14.8 per cent. in workmen.

Disquieting rumours come from Shanghai about the *Askold*. She is said to have had substitutes made for the parts of her machinery which had been removed as a precau-

tion, and as she has not used any of the coal placed on board from time to time, she is in a condition to put to sea at any moment. These facts have been brought to the notice of the Taotai by the Japanese Consul and an examination of the ship's condition is to take place soon. There does not appear to be much ground for supposing that Russia would perpetrate such a flagrant breach of Chinese neutrality as to take the vessel out of Shanghai, and, moreover, although her machinery may be restored her armament must remain unfit for active operations, nor could she have it re-fitted without going to Vladivostok. On the whole, therefore, the rumour is more curious than grave.

Japanese securities continue to appreciate in the London market. The latest quotations were:—

Wednesday, February 15.

Four per-cents...£ 81 7s. 6d. (a rise of 17/6)  
Five per-cents...£ 98 17s. 10d. (a rise of £1 4s. 3d.)  
War Bonds.....£ 97 9s. 10d. (a rise of £1 5s. 7d.)  
Six per-cents...£ 102 5s. 0d. (a rise of 12/6)  
New Bonds.....£ 98 17s. 0d. (a rise of 12/6)

The Russian fives are quoted at £90 5s. 0d.

Friday, February 17.

4 per cents.....£ 82. 5s. (5s. rise.)  
5 per cent War Bonds.....£ 99. 0s. 5d. (5/1 rise.)  
Five per cents.....£ 100. 2s. 10d. (2/7 rise.)  
Six per cents.....£ 102. 17s. 6d. (as before.)  
Second Six per cents.....£ 99. 0s. 0d. (2/6 rise.)

It is noted by Tokyo journals that the *Ariake* and the *Fubuki*, two destroyers recently launched at Kure, are similar in all respects to the *Harusame* and *Murasame*, launched in 1903. That to say, they have a displacement of 380 tons, and a speed of 29 knots, and their armament consists of one 12 pr. gun, five 6-pounders and two torpedo-tubes. These two will soon be ready for sea. Another, called the *Arare*, belonging to the same class, will be launched at Yokosuka in a few days.

Admiral Togo left Kure in his flag-ship on the 14th instant. Some ceremony seems to have attended his departure, but there is naturally no bruit of the plan he intends to pursue. Meanwhile we notice that Vice-Admiral Kataoka, Commander of the Third Squadron, returned to Kure on the same day. Admiral Togo can not have any special work to do at Port Arthur, so that this synchronism between his departure and Admiral Kataoka's return is probably fortuitous.

It is stated that the machinery imported by the Japanese Government for the manufacture of coal briquettes has arrived and is now being erected, so that from the middle of next month the Japanese mineral will suffice for the uses of the fleet. The briquettes are said to be as good for steam-producing purposes as Cardiff coal. They have been manufactured hitherto at Amakusa for use in private factories, but the quantity thus obtained was very limited. The new machinery is in course of erection at Mine in Yamaguchi prefecture, where the Government, last year, acquired a mine. It is anticipated that a very large saving will be effected by the employment of Japanese fuel for naval purposes.

The Bank finds its loans returning on its hands. Its unsecured note-issues are now below the legal limit. The Bank's loans to private individuals total 41 million yen; its loans to the Government, 42½ millions; its note-issues, 247 millions; and its specie reserve 127 millions.

The *Shoyyo Shimpō's* Washington corres-

pondent writes that Mr. Griscorn, in response to a request from his Government, has submitted to the State Department a long analysis of Japanese finance and commerce. His Excellency takes an optimistic view. He shows with what alacrity the nation has paid the increased taxes; how readily the country's capitalists have come forward to subscribe the loans; how marked has been the expansion of the empire's foreign commerce and how little disturbance the war has produced in financial and economic circles. Altogether the report is most favourable to Japan, and is described as a masterly *résumé*, showing great research and clear insight.

What really happened in Washington seems to have been that the Senate inserted the following amendment in the text of the Arbitration Treaties' drafts:—"In future when an incident occurs which ought to be submitted to arbitration, the ratification (*hijun*) of the Senate must be sought in every instance." President Roosevelt seems to have regarded this as a vote of want of confidence.

### "THE SLEEPING BEAUTY."

"The Sleeping Beauty" was played to another good house at the Public Hall on Saturday night, and again the big audience went away thoroughly delighted with the evening's fun. Mr. Skrimshire was better than ever as *Earl Fitzharding*, singing and dancing with the gayest abandon. Mr. Brady had two new and thoroughly up to date verses added to his intensely popular song "In the good time coming," which went down splendidly; and of course he had several new jokes and local allusions, some of which referred to the Interport match played at Kobe that afternoon, to the *Minnesota*, etc. The Nurse-Girls had to repeat their song and dance—one of the most charming interludes in the whole performance—and encores were freely accorded the other characters. We were glad to see that the Fairies had arranged their coiffures in accordance with old-time tradition, thus greatly enhancing the picturesqueness of their appearance, while one or two other improvements which need not be particularly specified all tended to make the extravaganza sparkle with even a greater brilliancy than that which distinguished the opening night. The Bijou Orchestra's efforts were also warmly applauded, and in response to an insistent encore they played a selection from one of Gluck's operas that most of their hearers agreed was among the best things they have yet given us.

### CONCERT IN TOKYO.

The concert in aid of the Army Work of the Young Men's Christian Association, which took place in the Uyeno Music Hall on the 11th instant was an eminent success. Four performers alone bore the burden of the first part, Miss Kayser, Miss Koda, Dr. von Koeber and Professor Junker. All were heard at their best, and the audience, which filled the Hall to overflowing, testified its delight in a most emphatic manner. The second part consisted of Japanese music solely. It was pronounced excellent by competent critics, and indeed the names of the instrumentalists and vocalists are to those acquainted with such matters a sufficient guarantee of high quality. We venture to suggest in connexion with this that if any foreigners among an audience on such occasions find themselves unable to suppress audible evidences of amusement when they hear Japanese music, it would be a wise precaution on their part to leave the hall before their courtesy was put to the test. The projectors of this admirable entertainment deserve great credit, and too much gratitude can not be expressed to the ladies and gentlemen who so kindly gave their

services in the cause of a most deserving charity. We append the programme:—

#### PART I.

- I.—VIOLIN DUET: Concert .....Bach.  
Prof. JUNKER and Miss K. KODA.
- II.—PIANO DUET: Variationen über ein Thema  
on Beethoven.....Saint-Saëns.  
Dr. VON KOEBER and Miss N. KODA.
- III.—VOCAL SOLO:  
a. Largo.....Haendel.  
b. "Meine Seele ist stille zu  
Gott" .....Emmerich.  
Miss KAYSER.
- IV.—PIANO SOLO:  
a. Impromptu .....Chopin.  
b. Caprice .....Rubinstein.  
Dr. VON KOEBER.
- V.—VIOLIN SOLO: Romanze .....Jensen.  
Prof. JUNKER.

#### PART II.

- 1.—SANKYOKU:  
Totsugawa no Kyoku...Mr. S. Sato and others.
- 2.—TOKIWAZU:  
Tokiwa no Oimatsu...Tayu Rinchu and others.
- 3.—SHAKUHACHI:  
Zangatsu .....Mr. C. Araki and others.
- 4.—NAGATA:  
Sekikyo.....Mr. R. Kineya and others.

### THE CONCERT AT THE GRAND HOTEL.

The Filipino Orchestra afforded a very pleasant evening's entertainment to a fairly numerous audience that assembled to listen to their melodious strains in the dining saloon of the Grand Hotel on Wednesday night. Owing to the delay occasioned by clearing away the tables and arranging the stage and auditorium the hour was rather late, about 9.50 p.m., before the concert opened. This orchestral company, as many of our readers are aware, has been in existence as a company some thirty years, though many of its present members are quite juvenile, and is now on its way home to the Philippines after a season, as the musical representatives of their country, in the Visayan Village at the St. Louis Exposition. The Filipinos have always been credited with being naturally a very musical people, and the members of the Orchestra which performed on Wednesday evening proved themselves worthy representatives. The instruments included seven violins, cello and double bass, flute, two clarionets, cornet and two French horns. No score-books were used by any of the performers, except for the last item, the Japanese National anthem, which had been seen only for the first time on the previous evening, but nevertheless the time kept by each and every performer, under the skilful baton of the very able Conductor, Señor Juan Delors, was marvellously accurate and the technique and execution most finished. It was not easy to say which of the numbers of the Orchestra were the best, but two of them, "Carama" in the first, and "Annona," in the second part were vociferously *encored* and responded to. The vocal portion of the programme comprised six numbers and brought out some half dozen lasses and about an equal number of lads, it might be from ten to twenty years of age. The singers threw plenty of spirit into their parts and sang in excellent tune and time. The dances, "Cunacha" and the "Luzon Lancers," were of the old country dance style, graceful and grave. The full chorus, vocal and instrumental, the "Star Spangled Banner," sung all standing, and the Japanese national anthem, brought an enjoyable entertainment to an end. After this the room was cleared for an hour's dancing by such of the audience as cared to indulge at the general assistant manager's invitation, in terpsichorean evolutions. The programme was as follows:—

1. Orchestra....."Blanche."
2. Song....."Brind de la Mascote."
3. Orchestra....."Salud à Copenhague."
4. Song (Duet)....."Paqguas."
5. Dance....."Cunacha."
6. Orchestra....."Carama."
7. Song....."Cadis."
8. Orchestra....."Annona."
9. Song and Chorus....."Cavallero de Gracia."
10. Orchestrs....."Pepa Chating."
11. Song....."Bluebell."
12. Dance....."Luzon Lancers."
13. Orchestra....."Aguinaldo March."
14. Song and Chorus....."Timoratas."

## KUROPATKIN AND GRIPENBERG.

PRESENT appearances go to indicate that there may be truth in the rumour of strained relations between KUROPATKIN and GRIPENBERG. Hitherto the theory most widely entertained was that the Russian commander-in-chief had decided to regulate the movements of his own forces by those of GRIPENBERG's army. On KUROPATKIN's centre and left, where he is confronted by the corps of NOZU and KUROKI respectively, the Japanese are so strongly entrenched that no direct frontal attack could hope for success, and the same is true of the Russian position from a Japanese point of view. It was therefore essential that a staggering blow should be delivered against the Japanese left down the valley of the Hun, where level plains and comparatively weak entrenchments invite such an essay. This blow, then, GRIPENBERG undertook to deliver, and in the event of his getting within measurable reach of success, the Russian centre and left was to make a general advance. Such had been, in fact, the Shaho programme *mutatis mutandis*. But GRIPENBERG did not succeed and therefore KUROPATKIN remained quiescent. So it has hitherto been assumed. But a closer examination of the battle shows that on the 25th and the 26th victory seemed to be within the grasp of GRIPENBERG. On these days he drove the Japanese outposts from the west bank of the Hun, he gained possession of Heikautai, and he advanced the head of his flanking columns so far that the probability of being able to envelop the Japanese must have appeared very considerable. The force opposing him was then only one division whereas he himself had three *corps d'armee* in the field; in fact his troops outnumbered his enemy by about four to one. From the morning of the 27th two other Japanese divisions forced their way through the snow to the front, and from that time the complexion of the battle changed, though not by any means so signally as to indicate defeat for GRIPENBERG, since it was on the night of the 27th that he delivered his fiercest attacks against the extreme left of the Japanese. Now the question is, would an advance by KUROPATKIN upon the 25th and 26th, if not even on the 27th, would such an advance have ensured victory for GRIPENBERG? It would seem that GRIPENBERG thinks so, and that his indignation because of KUROPATKIN's failure to make such an advance has led him to resign his command and return to St. Petersburg. Incredible as such an event appeared at first sight, there is now some reason to think that the Berlin critics judged rightly and that we are witnessing the almost unprecedented sight of a second-in-command turning his back upon a campaign and, in effect, proclaiming not only his own defeat but also his disapproval of his senior officer's strategy. If such be indeed the case, General GRIPENBERG's anger must have been absorbing, if not blinding.

Whether anything conceivable could have justified the step attributed to him is a query that different minds may answer differently, but the vast majority, we think, will reply in the negative. The demoralization produced by GRIPENBERG's act; its most pernicious effect on the confidence of the troops and the example it presents of defective discipline must be patent to every one. Was KUROPATKIN in the right? It seems almost presumptuous to discuss such a problem, but one plain consideration suggests itself. KUROPATKIN's advance must have depended on the contingency that the shock of GRIPENBERG's flank attack would detach some important units from the Japanese centre. It was upon such a weakening of the centre that the chance against it depended, and, further, it was obviously not in KUROPATKIN's game to hold Nozu in position by prematurely assaulting him. The Japanese, however, appreciated this strategy. They did not detach so much as a company from the corps under Nozu. They trusted OKU to roll back GRIPENBERG. Thus KUROPATKIN's opportunity never came. Suppose that on the 25th or the 26th, when fortune seemed to be smiling on GRIPENBERG's venture, KUROPATKIN had launched his divisions against the strong fortifications guarded by the army under Nozu, can there be any doubt as to the result? There may be a question as to the degree of the resulting Russian defeat, but that a shattering repulse would have ensued appears quite certain. If these reflections be just, then KUROPATKIN gave another demonstration of one faculty which he certainly possesses, the faculty of waiting. But then, also, GRIPENBERG should not have complained, since the object of his attack not having been realized, there could have been no warrant for a general advance along the whole line. Thus we are landed once more at an impasse. If KUROPATKIN was right, GRIPENBERG was hopelessly wrong. Yet GRIPENBERG is an old man, who has seen much service, who enjoys the fullest trust and who must be accredited with a due sense of responsibility. It will be fortunate for himself and for Russia should sickness prove to be the true explanation of his return to St. Petersburg, yet, even to save his own life, he should not have abandoned the field at such a juncture.

## THE CHINESE.

IN the *Fiji Shimpō's* Peking correspondence there are some very strong comments on the conduct of the Chinese Authorities. They are said to be still wavering, still uncertain as to the result of the war, and still so reluctant to discharge their neutral duties or enforce neutral rights with any degree of vigour that Russia is taking flagrant advantage of their weakness. Thus instructions have been issued secretly to General MA forbidding him on any account to come into collision with the Russian soldiers. These may trespass in nominally neutral territory westward of the Liao or anywhere

else, but MA is to carefully restrain his men from interference. Then again, although Viceroy YUAN has attempted to prevent the carriage of Russian stores by the Shanghai-kwan line, he can not guard against the corruption of his subordinates, and these, acting in collusion with merchants who find their account in supplying the Russians, contrive to despatch some 4 trains daily to Hsinmintun, loaded with food-stuffs, clothing and munitions of war. The distress in Mukden is a most convenient and plausible pretext. Advantage is taken of it to forward large quantities of goods which, nominally intended for the destitute inhabitants, are really destined for use by KUROPATKIN's armies. On the other hand Japan is treating Chinese neutrality with the utmost punctiliousness. She has not allowed one of her soldiers to cross the Liao westward, and she is carefully avoiding every step of even a questionable nature. The *Fiji's* correspondent says that he learns these facts from one of the Foreign Representatives in Peking, who expresses profound surprise that such a state of things should exist. For our own part, we do not share the surprise. China having again and again proved her invertebrate character, even where her own most vital interests are concerned, could never have been expected to show efficient fortitude in carrying out such intangible and altruistic duties as those of neutrality; and, moreover, the corruptibility of her officials and the cupidity of her merchants constitute an admirable opportunity for any one desiring to exploit her weakness. Perhaps, indeed, when we remember what things are happening in Europe with regard to RODJESTVENSKY'S Squadron, we ought to speak with hated breath of the want of integrity of Chinese officials and the covetousness of Chinese merchants. Still these are the facts, whatever parallels may be found in the self-satisfied Occident. The amusing part of it all—if there can be an amusing element in such a matter—is that we can now see how absolutely and entirely the recent Russian complaint against China was intended to cover the tracks of Russia herself. The circular was an instance of that ancient device, carrying the war into the enemy's camp. Seeing that her own breaches of Chinese neutrality must involve international complications unless public attention was diverted from them, Russia's officials compiled a sweeping indictment against China on the pretence that she favoured Japan. One wonders whether there is no method of getting even with such duplicity. The Japanese should be able to collect evidences of China's laches so as at least to be in a position to fine her smartly if in truth she has been guilty. Nothing can compensate for the lives that are sacrificed to this corruption on the part of officials and cupidity on the part of tradesmen. But the prime offender can at least be made to pay heavily by and bye.

## JAPAN'S FINANCIAL CONDITION.

**T**HE *Statist* (*Tokei Shushi*) makes some valuable comments on the financial condition of Japan. Last year, it says, 280 million *yen* worth of loan bonds were floated in the country and 50 million *yen* was collected in the form of extra taxes, yet the money market showed no signs of disturbance. In July and December the Bank of Japan raised its rate of interest, but neither did this produce any notable effect. Everything remained quiet. By way of illustration, reference may be made to the figures showing the amounts of note issues in December and November—which are the busiest seasons—during the past four years:—

## NOTE ISSUES.

	End of November.	End of December.
	Yen.	Yen.
1901.....	187,490,000.....	214,095,000
1902.....	200,435,000.....	232,094,000
1903.....	201,501,000.....	232,920,000
1904.....	248,069,000.....	277,000,000

It appears from this table that the volume of notes in circulation in December of last year was greater by from 36 to 44 millions than the volume at the corresponding period of any of the three previous years, but when we observe that the volume circulating in Manchuria and Korea is some 25 or 26 millions, it becomes evident that the increase in the domestic currency can scarcely be said to have outgrown the development which the population and the mass of business transactions naturally showed.

As for the circulation of specie at the same periods of the above 4 years, the figures stand thus:—

## CIRCULATION OF SPECIE.

	End of November.	End of December.
	Yen.	Yen.
1901.....	93,652,000.....	92,610,000
1902.....	97,255,000.....	94,478,000
1903.....	105,848,000.....	98,231,000
1904.....	101,139,000.....	97,247,000

The authorities state that in China, Korea and Formosa the quantity of Japanese coined money in circulation is from 25 to 26 million *yen*, a considerable part of which is likely to return to Japan. Hence the exact volume of the coins in the hands of the people at home is not easy to determine.

The Bank of Japan's deposits are next considered:—

## BANK OF JAPAN'S DEPOSITS.

	End of November.	End of December.
	Yen.	Yen.
1901.....	5,052,000.....	3,140,000
1902.....	4,679,000.....	4,295,000
1903.....	7,344,000.....	3,931,000
1904.....	9,337,000.....	17,000,000

(Approximately).

The last figure here given shows the state of affairs on the 27th of December. Very probably the deposit was much reduced by the 31st, for the payments made by all classes during the final 4 days of December are always very large.

The *Statist* now exhibits the deposits in the Banks of Tokyo, Osaka, Kyoto, Nagoya, Yokohama and Kobe, omitting, of course, the Bank of Japan. The figures are as follow:—

## DEPOSITS IN THE BANKS OF TOKYO, OSAKA, KYOTO, NAGOYA, YOKOHAMA AND KORE.

	End of November.	End of December.
	Yen.	Yen.
1901.....	264,191,000.....	271,207,000
1902.....	307,578,000.....	309,926,000
1903.....	337,380,000.....	336,765,000
1904.....	351,730,000.....	355,502,000

(approximately).

There is here a very noticeable increase in the deposits for last year. Something of that may be due to dullness of trade and industry resulting from the war, but it must also be taken as indicating an augmented development of the effective spirit of economy, and it is certainly remarkable that such a phenomenon should be witnessed side by side with the fact that the people were paying much heavier taxes than usual and were also subscribing to large war loans. The Post Office Savings Bank's returns show a similar result:—

## DEPOSITS IN THE POST OFFICE SAVINGS BANK.

	End of November.	End of December.
	Yen.	Yen.
1901.....	27,393,000.....	26,806,000
1902.....	28,893,000.....	28,836,000
1903.....	31,736,000.....	31,257,000
1904.....	37,876,000.....	37,264,000

(approximately).

This growth of savings is emphatically a sign of economic habits and improved conditions, for the depositors in the Post Office Bank belong to a class distinct from merchants and manufacturers.

Of course at the outset of the war the Government had to borrow from the Bank of Japan. Its indebtedness grew to 82 million *yen* in July. But in May a loan was floated in London and New York, and with the proceeds these advances were repaid, so that in August the indebtedness fell to 27 millions. Thereafter it again increased, and on December 28th it stood at 89 millions. Meanwhile the volume of convertible notes in circulation swelled to the unprecedented figure of 277 million *yen*, and as the import trade for the year showed an excess of 49½ millions compared with the export, while, at the same time, payments had to be made abroad on account of war material, the outflow of specie amounted to 74 million *yen*. Under these circumstances the Bank of Japan raised its rate of daily interest by 2 *per cent* each in July and December, as was inevitable. The Bank's rates of discount for the past four years were:—

## DISCOUNT RATES OF BANK OF JAPAN.

	Sen.	Sen.
1901 End of Nov.....	2.4.....	End of Dec. .... 2.4
1902 ".....	1.8.....	"..... 1.8
1903 ".....	1.6.....	"..... 1.6
1904 ".....	1.8.....	"..... 2.0

AVERAGE MARKET RATE OF INTEREST IN TOKYO.

	Sen.	Sen.
1901 End of Nov.....	3.13.....	End of Dec. .... 3.01
1902 ".....	2.36.....	"..... 2.31
1903 ".....	2.00.....	"..... 2.02
1904 ".....	2.19.....	"..... 2.35

The year 1903 was one of comparative stagnation, and the increased rate of interest in 1904 indicates a brisker tone in business circles.

The volume of cheques dealt with at the clearing houses of Tokyo, Osaka and Kobe is next given:—

## VOLUME OF CHEQUES PASSED THROUGH CLEARING HOUSES.

	End of November.	End of December.
	Yen.	Yen.
1901.....	162,784,000.....	182,359,000
1902.....	199,886,000.....	249,557,000
1903.....	234,460,000.....	289,893,000
1904.....	301,287,000.....	364,195,000

This table disposes of the idea that the increased deposits in the banks may have been due to business stagnation. On the contrary it is evident from the returns at the clearing houses that business was exceptionally brisk.

The *Statist* shows also the average prices of commodities in the Tokyo market:—

## AVERAGE PRICES OF COMMODITIES IN TOKYO.

	End of November.	End of December.
	Yen.	Yen.
1901.....	95.14.....	94.54
1902.....	98.21.....	99.36
1903.....	103.41.....	102.98
1904.....	112.00.....	112.00

Most of the increase here noticeable in 1904 was in commodities used in war and therefore in exceptional demand.

Transactions on the Stock Exchanges in Tokyo were as follow:—

## TRANSACTIONS IN SHARES.

	End of November.	End of December.
	Shares.	Shares.
1901.....	208,735.....	234,830
1902.....	108,710.....	128,560
1903.....	359,370.....	360,010
1904.....	187,870.....	200,900

There was evidently great dullness in this region of business, but on the other hand, if 1901 or 1902 be taken as the basis of comparison no special change is noticeable.

Figures compiled by the Bank of Japan with regard to increased outgoings of capital in 1904 are as follows:—

## OUTGOING OF CAPITAL.

	Yen.
Throughout the year 1901.....	14,673,000
" " 1902.....	7,190,000
" " 1903.....	8,223,000
" " 1904.....	17,700,000

These figures relate to sums put upon the market by the Treasury. But in point of fact the figure for 1904 was only 2 millions, for the sum of 17,700,000 shown in the table includes a redemption of 15 million *yen* worth of Exchequer Bonds, which was immediately followed by an issue of similar amount.

## A REPRESENTATION RELATING TO SHIPPING SUBSIDIES.

THERE is now awaiting discussion by the Lower House a Representation to the Government on the subject of shipping subsidies. The proposers are Messrs. HANAI TAKUZO, SHIMADA SABURO, TAGUCHI UKICHI, KONO HIRONAKA and 6 others, and the supporters are Mr. OZAKI YUKIO and 36 others. The gist of the document is that a large number of the subsidies now granted should be abandoned altogether or greatly reduced. In 1901, which is the year taken by the objectors, the Treasury paid out a sum of 8,295,218 *yen* in subsidies. They mention that in 1903 this total was increased by supplementary budgets to 8,818,723 *yen*, but the table on which they base their contention shows the former total only:—

	Yen.
To the Nippon Yusen Kaisha .....	5,231,191
To the Toyo Kisen Kaisha .....	1,013,880
To the Osaka Shosen Kaisha .....	977,210
To the Mitsui Bishi Building Yard .....	337,190
To the Mitsui Bussan Kaisha .....	198,321
To Oye Shichibei .....	140,000
To the Mitsui Bishi Goshi Kaisha .....	80,539
To the Kawasaki Building Yard .....	74,158
To the Daito Kisen Kaisha .....	57,873
To Others .....	184,847

Total..... 8,295,209

It will be observed that the total in this table differs by 9 *yen* from the figure previously given, but that, we presume, is a clerical error. The critics allege that the table, when carefully examined, shows many abuses. They set out from the conduct of the subsidized companies when the war began, and when the steamers of the various companies were requisitioned for the service of the State. Especially do they condemn the Nippon Yusen Kaisha, because, when required to supply its steamers at 3.75 *yen* per ton, it first asked for 7 *yen*, and ultimately came down to 4½ as a superior limit and 3 as an inferior. This behaviour the Representation calls "crafty and improper" on the part of a company which pays a dividend of 12 per cent, has a large reserve, works on extravagant lines, and secures the services of evil men to intimidate the public and silence their doubts. In fact it is quite plain that the Representation is an attack upon the Nippon Yusen Kaisha, not by any means a dispassionate exposition of the economical side of the question. The critics then go on to support their contention by quoting statistics relating to foreign countries, and naturally the results are striking, for since the State income of England is 7 times the income of Japan, and the income of France is 5 times as great, the subsidies paid by these countries, though larger in actual amount than the subsidies paid by Japan, represent a very much smaller per-centage of their respective revenues. Nothing is more deceptive than this method of per-centages, yet, at the same time, it can not be denied that Japan is very liberal in the matter of shipping subsidies. She stands third on the list of the 6 great Powers with regard to the actual sum paid out by her, yet she is sixth with regard to revenue. The explanation of that, however, seems simple enough. Japan is in a hurry. She has to be in a hurry. She does not already possess a great mercantile marine as England and France do. She has to equip herself with one as rapidly as possible, and we are astonished that men like Mr. TAGUCHI UKICHI, Mr. SHIMADA SABURO and Mr. OZAKI YUKIO do not take due note of that fact. The post-bellum programme of armaments expansion would have been entirely futile had it not been accompanied by a measure for encouraging ship-building and ship-owning, and when this war with Russia broke out Japan would have been virtually helpless had not wise statesmen like Marquis IRO inaugurated, 8 years ago, the system to which the country owes its mercantile marine to-day. If it had been necessary for Japan to go out into the highways and byways for the purpose of

chartering vessels to carry her troops over-sea, she could not have fought Russia or thought of fighting her. Yet it is just now when the war is at its height and when the advantages of the post-bellum system of encouragement are demonstrated by striking facts, it is just now that these members of the Lower House bring forward their Representation. We are constrained to say, too, that they confound sentiment with business in a manner not to have been expected from practical men. They appear to think, in fact they unequivocally assert, that the Directors of the Yusen Kaisha, bound by some tie of gratitude, should have handed over the Company's ships to the Government at prices only about one half of the rate then ruling in the market. In what did this obligation consist? It begs the whole question. It assumes that the subsidies are excessive and that their recipients are large beneficiaries of the State. There is a charming survival of old feudal notions in such a contention. One recalls the days when, in return for support in time of peace, feudatories had to supply a certain force of troops for service in time of war. The very essence of the system now in operation in Japan is that men who would not otherwise invest their capital in such a precarious enterprise as maritime transport, where they have to compete with old-established foreign companies and against the prejudice of foreign shippers and travellers, are induced by a promise of state aid to make the venture. The State wants transports always available. Private individuals can not be expected to supply the want at the expense of foregoing profits obtainable in other enterprises. There is nothing for it except that the State should overcome the natural reluctance of capitalists by extending to them compensatory benefits. It is a fair bargain by which both sides profit, and it does not place either of them under any obligation whatever to the other. There exists, however, another obligation which the proposers of the Representation do not seem to have considered; the obligation devolving on a shipping company which has established certain lines of steamers essential to the convenience of the public's trade and travel. Such lines have to be kept up, above all in time of war when there is a plain duty to promote in every possible manner the wealth-earning capacity of the nation. We presume that when the Nippon Yusen Kaisha was asked to hand over its steamers, the thought immediately presenting itself was that substitutes must be found so as to maintain the various lines, and neither to inconvenience the public nor to sacrifice the custom built up by years of state-assisted effort. Therefore the Company probably asked for something like the market rate; the rate it would itself have to pay for chartered vessels to navigate in lieu of those requisitioned. That is precisely what English business-men would have done under the circumstances, and we venture to affirm that no English politician would have thought of censuring them. For the rest, it is difficult

to discover any sense of justice in the theory that a steam-ship company, because it habitually receives a subsidy, should be required to pay a war-tax enormously heavier than that imposed on any other enterprise. That is what the Representation asserts in effect. For if, in addition to defraying the taxes to which it becomes liable, in common with the general public, a maritime carrying company is to give the services of its steamers at rates far below those ruling in the open market, then to the extent of the difference the company is discriminated against fiscally. Conceive the British Government calling on the Peninsular and Oriental Company to submit to be thus penalized in return for the subsidy it has been receiving for a vast number of years? A Government that essayed anything of the kind would become a laughing stock. The feeling of instability that such propositions engender is also a serious obstacle to Japan's material progress. Who can be expected to invest capital in a Japanese enterprise if the laws under which he makes the investment are subject to radical alteration at the caprice of emotional politicians? It certainly is not from men like Messrs. TAGUCHI, SHIMADA and OZAKI that we look for such sentimental eversion of their legislative functions.

#### WILL ADAMS.

[On April 12th, 1600, a Dutch ship piloted by one William Adams, an Englishman, reached Japan. As the price of permission to build a factory at Firando they were compelled to hand over Adams to the Tycoon, for whom he built the first Japanese fleet. He was treated with all honours, but never allowed to return to England. He was the founder of Japanese shipbuilding, and after his death a shrine was built to his memory. He is buried on the hillside of Hemimura, above naval arsenal of Yokosuka.]

On the hill of Hemimura, looking out across the sea

O'er the docks of Yokosuka and the warships sailing free

Midst the Shinto pennons streaming,  
Lies Will Adams, still a-dreaming

Of the busy Port o' London and the Kentish wood and lea.

He forgets the fleet he builded and the decks that once he trod,

That his grave's afar from England and his pall is alien sod,

That the incense-sticks are burning  
And the praying-wheels a-turning

To the name of William Adams, Kentish sailor-man and god.

So he drowns till the screaming of the sirens once again

Calls him back to where beneath him, like mailed barons of the main,

Ride the warships; while the rattle  
Of Dai Nippon's seaward battle

Rings and mingles through his dreaming like a distant song's refrain:

For whenas the great grey battleships roll down upon the foe,

Or when Togo's lean torpedo-boats charge shoreward through the snow,

When the giant shells are crashing  
And the league-long searchlights flashing,

Then Will Adams sees the triumph of his toil of long ago.

J. H. KNIGHT-ADKIN, in the "Spectator."

## THE IMPERIAL DIET.

## HOUSE OF PEERS.

SATURDAY, FEBRUARY 11TH.

The House met at 10.15 p.m. A number of Government Bills sent up from the Lower House were read for the first time and handed to Special Committees. Among these Bills was the measure for amending the Mining Law. Baron Kioura, Minister of Agriculture and Commerce, introducing the Bill, explained that one of its principal objects was to distinguish clearly between trial borings and practical workings. It was also designed to facilitate the mortgaging of mining property and to impose a tax on trial lots. The area of such lots held by speculators who had no intention of working them was no less than from two thousand two hundred millions of *tsubo* to two thousand three hundred millions, and the Government deemed that such a practice constituted a serious abuse.

An important Bill introduced by the Government related to the mortgaging of factories. This measure is on the same lines as that for amending the Railway Law. At present the law allows the mortgaging of immovable property but does not allow the simultaneous mortgaging of movable plant standing on that property. Hence it is impossible for a mortgagee to take over a factory as a going concern, and that disability greatly impairs the working resources of such concerns. Baron Hadano, Minister of Justice, explained the Bill and it was handed to a Special Committee. The same explanation was given of a Mine Mortgage Bill, which was similarly treated.

A Special Committee reported favourably on a Government Bill for subjecting Japanese banks in foreign countries to special regulations enacted by Imperial Ordinance, the regulations for banks in Japan not being applicable to such institutions. The Bill was passed through all its readings.

The Bill for amending the regulations relating to the Colonization Bank in Hokkaido, in the sense of extending the Bank's functions and powers, was read a second time and passed with some amendments, as was a similar Bill relating to the *Kwangyo Ginko*.

Two private Bills sent up from the Lower House were handed to Committees, the Government delegates having declared disapproval of them, and the House rose at noon.

The House met at the usual hour on Monday and committed to special committees 11 bills presented by the Government and sent up from the Lower House. Two measures similarly sent up by the Lower House were passed. The House rose at 10.45 a.m., after a session of 40 minutes.

## HOUSE OF REPRESENTATIVES.

The House met at the usual hour on Tuesday. On the motion of Mr. Ebara Soroku it was agreed that the House should be represented at the funeral of Lieut.-General Matsumura.

There appeared on the Order of the Day ten bills all seeking post-facto approval of disbursements made by the Government in previous years—5 for 1902 and 5 for 1903. With reference to the Bills for 1902, the chairman of the Special Committee reported that inasmuch as the Government had presented the Settled Accounts for 1902 simultaneously with this application for post-facto approval of some of the disbursements concerned, the committee regarded the procedure as irregular and likely to lead to confusion, and had therefore been disposed to recommend the House to withhold its consent. The Government Delegate, however, had explained that the Bills would have been presented sooner had not the House been dissolved, and had there been an opportunity in the subsequent special session. He had in effect promised that such an irregularity should be avoided in future, and in consideration of this explanation the Committee had decided to recommend the passing of the Bills. Among the Bills relating to 1903, however, there appeared expenditures for the official compilation of text books and for

harbour-works at Kelung. These appropriations had both been disallowed by the House and it appeared to the Committee that the expenditure of these monies in the face of parliamentary disapproval was a most reprehensible practice. Concerning the text-books the Minister of Education had explained that had not the official compilations of these text books been undertaken in 1903, there would not have been any books for use at the schools in 1904. It had been, he said, a matter of urgent necessity. As to the Kelung Harbour, that Government Delegate's explanation was that without the appropriation in question the harbour works already commenced would have become useless, thus involving a very heavy loss. There had virtually been no choice except to make such appropriations as would avert that waste. Nevertheless it seemed to the Committee that the Government's disbursement of public monies immediately after the Diet's refusal to sanction such a course, was too flagrant a disregard of constitutional procedure, and the rejection of the Bills was therefore recommended.

The Minister of Finance now ascended the rostrum, and having repeated the above explanations, said that the Government had acted after mature deliberation.

Considerable discussion ensued. This expression "mature deliberation," seemed to cause offense as it suggested that the Government, with full cognisance and a complete sense of responsibility, had disregarded the House's vote.

Ultimately the House decided to withhold its consent in the case of these two appropriations, namely, that on account of the text-books and that on account of Kelung Harbour, but to pass all the other Bills.

Mr. Motoda Hajime's Bill relating to the reform of the Judiciary, then came up for its second reading. The gist of this Bill is that the local courts (*Ku Saibansho*) do not now possess sufficiently wide jurisdiction, and that the convenience of the public would be greatly promoted by extending their scope. Thus whereas a local court is not now competent to try a case involving more than 100 *yen*, Mr. Motoda proposed that the limit should be raised to 300. He also proposed certain extensions of such tribunals' criminal jurisdiction. The Special Committee recommended this Bill with slight amendments, and the Government Delegate explained that the Government approved of the measure on the whole. The second reading was voted, and the provisions were discussed one by one. The clause relating to a 300 *yen* limit led to some discussion. The *Seiyu-kai* members supported the 300 *yen* limit, but the Progressists opposed it on the ground that such a figure was not of proportion to the Japanese scale of living, that if it were adopted, the district courts (*Chiu Saibansho*) would cease to have any criminal jurisdiction, and that 200 *yen* would be a suitable limit. A show of hands resulted in a majority vote for the 300 *yen* limit, but the President's ruling being challenged, a ballot was taken, when 152 voted for the 200 *yen* limit and only 128 for the 300 *yen*. Further, Mr. Motoda's proposal that crimes involving a year's imprisonment should be tried at the local courts, was amended to one half of that time. Otherwise the Bill was passed in its entirety.

Fourteen Bills presented by *Seiyu-kai* members were then handed to Special Committees and the House rose at 3.50 p.m.

## HOUSE OF PEERS.

WEDNESDAY, FEBRUARY 15TH.

The House opened at the usual hour and having approved a proposal to convey a message of condolence to the family of the late Lieut.-General Matsumura and commissioned the President to attend the funeral in behalf of the House, proceeded to the Order of the Day.

The first Bill related to loans with security by syndicates (*shintaku*). The object of the measure is to facilitate the borrowing of money from syndicates by extending and defining the range of objects that may be given as security for such accommodation. It is provided that in the case of a foreign syndicate the permission of the authorities must be obtained, and that if such

syndicate has no branch office in Japan, it must appoint a representative.

Viscount Okabe, chairman of Committee, reported in favour of the Bill with slight amendments of phraseology, and with an addition to the 17th Article. The Article as it now stands seems to require that syndicates not having a branch office in Japan must appoint an individual as its representative, but the Committee recommended the addition of words indicating that a commercial firm in Japan might act in that capacity.

The House voted for the second reading and finally passed the Bill after discussing it clause by clause.

The second reading was then taken of a Bill for extending the functions of the Industries Bank. This Bill adds largely to the powers of the Bank for financial purposes, and was recommended by Count Okimachi, chairman of Committee. Mr. Sakatani, Vice-Minister of Finance, explained that in view of the pending extension of Japanese enterprise to China and Korea, facilities for obtaining capital must be enlarged, and he added that this applied also to Japan where many mines were lying unexploited for lack of capital.

The House carried the Bill through all its readings.

A Bill for extending to Okinawa Prefecture the operation of the Revised Law for dealing with Second-hand objects; and two Bills relating to the consumption tax on sugar were then passed as sent up from the Lower House.

A private Bill sent up from the Lower House for amending the system of local government was rejected though it had received the Government's consent.

The 10 Bills relating to post-facto approval of State outlays, which Bills had been sent up from the Lower House, and a private Bill with reference to titles granted to persons not in the direct line of inheritance, were handed to special committees, and the House was about to rise when Mr. Komatsubara moved that a Bill for subsidizing vessels used for war purposes should be placed on the Order. This Bill had a very large number of supporters. Its ultimate purpose was to facilitate the formation of a volunteer fleet by extending the system of navigation encouragement to ships which, though not originally intended to engage in the ordinary maritime carrying trade, occupied themselves in that trade during the intervals of their war services. The Bill was handed at a special committee and the House rose at noon.

## HOUSE OF REPRESENTATIVES.

THURSDAY, FEBRUARY 16TH.

The House met at the usual hour.

Mr. Inouye Jintaro explained a question relating to the encouragement of improved methods of rice culture.

Two Government Bills sent down from the Upper House were handed to special Committees.

The Government Bill providing for special legislation by Imperial Ordinance in the case of Japanese subjects engaging in banking business in foreign countries, led to some questions, but Mr. Sakatani, Vice-Minister of Finance, explained that the different customs of different countries necessitated this provision. He quoted the case of the First Bank now doing business in Korea. Asked whether the First Bank was to deal with the military notes circulated at the front and what was the amount of such notes, the Vice-Minister answered in the negative as to the first point, and concerning the second said that the value of the notes actually struck was 80 millions of *yen*, but that not more than 30 or 40 millions had actually gone into circulation. The Bill handed to a special committee of 18.

A Government Bill relating to methods of collecting taxes was then entrusted to a Committee, as was also a Government Bill for extending the Japanese system of pensions to the families of teachers in schools established in Korea with the approval of the Ministers of State for Foreign Affairs and Education.

The House then took the Government Bill for extending the operation of Law No. 63 of 1896, namely, the Law investing the Governor General of Formosa with legislative powers. To this Law the House has always shown itself hostile.

Originally the period of the law was 3 years. Then in 1899 it was renewed for 3 years longer; then again in 1902 for a like period which will expire in March next. The Government now asks that the Law remain operative until the end of the year succeeding the restoration of peace. The Home Minister explained that the Government had hoped to propose some suitable measure as a substitute, but the war and the absence of General Kodama, Governor-General of Formosa, had intertered.

Mr. Seki Naohiko objected that the Minister's explanation suggested the absolute necessity of Baron Kodama's aid in managing Formosan affairs, and also that the proposed extension was too indefinite. Mr. Hanai Takuzo supported the latter objection. But Viscount Yoshikawa easily disposed of these quibbles and the Bill was handed to a special committee of 18.

Six minor Bills were then passed through all their readings and one was handed to a special committee.

Three Representations were then taken and voted. One of them urged the necessity of losing no time in re-assessing the taxable value of building lands throughout the Empire. The Government Delegate declared that the purport of this Representation had the entire approval of the Government. Another Representation related to extending the rights and privileges of Japanese subjects settling in foreign countries.

The House rose at 4.35 p.m.

#### CHINA.

Telegrams to the *Fiji Shimpō* announce that the Chinese Government has arranged with the Hongkong and Shanghai Banking Corporation and the German Asiatic Bank a loan of ten million pounds sterling, the proceeds to be applied to making up a deficiency in the payment of the Indemnity. The terms are 5 per cent. interest, issue price 91, and security the taxes collected at the Sungwen Gate of Peking and the Likin revenue of Shansi. Each bank takes one-half of the loan. The period of the loan is 20 years, with optional repayment at any time on giving 6 months' notice.

Rev. J. B. Martinet, late Procureur General in Hongkong of the Society of the Missions Etrangères, died at the French Sanatorium at Pokfulam, on February 7th. He was a Frenchman, who came to China so long ago as 1870. He was successively Procurator of his mission at Singapore (four years) at Shanghai (14 years) and at Hongkong, since 1889.

Few sea-faring men were better known along the China coast, from Hongkong to Tientsin, than was Mr. James Kirkwood, first engineer of the Chinese revenue cruiser *Chuen Tiao*, whose death is recorded in the *Hongkong Daily Press*. Mr. Kirkwood died at Chinkiang on the 5th inst. Originally in the service of the Hongkong and Whampoa Dock Co. as an engineer, he joined the Imperial Maritime Customs service in 1872, nearly thirty-three years ago, and held the rank of first engineer since 1876. When Admiral Lang undertook the organisation of a Chinese Navy, the Inspector-General of Customs lent Mr. Kirkwood to assist, and in the early Eighties he was stationed at Weihaiwei and Port Arthur with the rank of Engineer-in-Chief to the Peiyang Squadron, which the Japanese destroyed in 1895. Mr. Kirkwood was an active Mason, being an old member of Zetland and St. John's Lodges in Hongkong, and one of the founders of the Eastern Scotia Lodge there and the Saltoun Lodge at Shanghai. Mr. Kirkwood, who was 58 years of age, was a widower, his wife having died fourteen years ago, and he leaves a family of three children, two girls and a boy, who are living at Kilmar-nock, Scotland.

The aspect of things is everywhere so peaceful in the Far East, that it has been decided to reduce the garrison of Hongkong by one regiment of native infantry.

The Banque de l'Indo-Chine is reported to be

issuing a further loan of 35,000,000 francs (£1,400,000) for the Pei-Han railway.

Staff Surgeon Bishop, R.N., of H.M.S. *Iphigenia*, has identified Malta fever as endemic in Shanghai. It is a disease, he says, of low mortality, and was formerly supposed to be of limited geographical range. It is made up of a series of febrile attacks, and may continue more or less for weeks or even months. Dr. Wright, the bacteriologist, states that it occurs in India, and this discovery is confirmed by Dr. Bishop's researches, in which he is confirmed by the eminent Japanese bacteriologist, Dr. Kitasato, which shows that many cases in China heretofore treated as typhoid and malarial fever are really cases of Malta fever.

The *North China Daily News* has the two following paragraphs referring to the Russian refugees.

The M. M. steamer *Himalaya* left Shanghai for Europe on Saturday with a large number of Russian refugees on board. The numbers she took away were apparently but as a drop in the ocean, for after their departure the Settlement seemed every bit as crowded with our fur-capped and fur-coated friends as ever. Although the natives celebrated their Chinese New Year holiday as usual, some foreign stores were open on Saturday, Sunday, and yesterday, presumably for the benefit of our Russian visitors, and seemed to be doing splendid business. During the past few days resident householders have had to be up very early indeed, as long before the accustomed hour for closing the markets the newcomers have cleared out all the stock. Riksha coolies have reaped a rich harvest at the time of the year when they most require it. Their favourite customer, "Jack Tar," has had to take to "shanks's pony" during the Russian visitation, for Russia's ignorance of fares and pidgin English has been a godsend to our local carriers.

Our streets have been full of Russian non-combatants from Port Arthur during the holidays, and as these visitors are likely to be with us for another ten days at least, we are glad to be able to bear testimony to their generally excellent demeanour, notwithstanding the difficulty they have in making their jinrikishamen understand where they want to go. Their pockets, almost without exception, are full of money, for up to the surrender they were earning from eight to twelve roubles a day in Port Arthur. This universal wealth is proving rather embarrassing to the captain and agents of the *Princess Marie* which is to take away a large contingent of them. Hitherto in a steamer crowded with emigrants it has always been possible to find many who would gladly assist in the stewards' and cooks' departments for a bonus of fifty or a hundred dollars, and the assistance is urgently required, but these men are so well off that they have been approached in vain. "We've got plenty of money, why should we work?" is their reply to the offers made them.

The *Hongkong Telegraph* has the following account of a noteworthy financial scandal in Hongkong:—

A tale of what may prove a most gigantic fraud has just been brought to light, and from the particulars to hand there is a fear that as a result several prominent Chinese business houses in the Colony may be compelled to close. It appears that a certain Chinese merchant leased from Madame Musso her godowns at West Point, called the Hop Yik Godowns, and it was agreed between the parties that Madame Musso should keep a set of books of the lessee's business, in order to secure better rates of insurance. This was the sole extent of the Musso connection with the business. Some little time ago, the man, as it is alleged, finding himself in financial difficulties, owing to some of his speculations having gone wrong, conceived an ingenious scheme to secure funds. He issued a number of what are known amongst traders as "godown warrants," purporting to show the quantity and description of the goods supposed to be stored in the various godowns under his control, and these warrants, being negotiable instruments with the Chinese, it is alleged that he set about securing all the advances he could obtain on them. He had a partner in the business, and this man too, it is said, negotiated some of these warrants. In the meantime, a number of the holders of these warrants began to apply for the goods supposed to be in the godown to their account, but were put off on various pretexts, until the man could stand out no longer, and finally made a bolt, his partner disappearing at the same time. From one firm so large a sum of money had been borrowed that when it was discovered that the warrants were bogus, that firm failed, according to report, for \$800,000, against which there is a small quantity of goods in the godown, consisting of tin,

sugar and rice. The head of that firm is also alleged to have left the Colony, on discovering the state of affairs. But a very few days ago, it is stated, the first debtor went to another firm with which he had had straightforward dealings previously, and on the strength of his supposed credit induced them to "lend" him a quantity of tin stored in their godowns, but not to stir properly, under promise of return in a few days' time. Before the time had expired the crash had come, and the borrower, it is said, had done the vanishing act. It is understood that the Wing On Bank is heavily involved over this affair, besides several banks of lesser business standing. The Yeung On Insurance Co. is also said to be a heavy loser, while but a few days ago the alleged absconder obtained from Mr. Cheng Chow an advance in hard cash of \$15,000. Other native firms, we learn on excellent authority, which stand to lose heavily, are the Fok Kee, \$40,000; Fok Su Ting, \$20,000; Wong Choi, \$20,000; Fok On, \$30,000; Chi Cheong, \$40,000; Ming Sun, \$60,000; the International Banking Corporation, \$10,000, and several others. While the Mussoes have no connection whatever with the defaulter's business beyond the keeping of the set of books in English, as stated above, they are doing all they can to bring order out of chaos, and trace the real ownership of the goods still lying in the godowns. Further developments are expected as the matter unwinds itself. Police detectives are now watching the premises.

Shanghai papers report the death at Berlin of Mr. H. Sneathage, a very well-known resident of Shanghai, who went home with his wife not long since suffering, it is believed, from cancer. Mr. Sneathage's first appearance in Shanghai was as a clerk in the Japanese Post-office, and he began business as a land-agent when the Japanese postal authorities were able to dispense with the services of European assistants. The Shanghai Land Investment Co., Ltd., was his conception, and to the success of that company he owed his fortune, which he increased by the lumber business which he subsequently started. His widow, for whom much sympathy is felt, was the only child of Mr. W. S. Percival, of the Supreme Court staff, and a niece of the Assistant Judge, Mr. R. A. Mowat, subsequently Judge in Japan. Mr. Sneathage was in his sixtieth year.

A Peking letter, translated by a Shanghai contemporary, reports the arrest the other day in that city by the newly-organised foreign-modelled gendarmes of the capital of two Manchurian impostors who have been going about Peking and vicinity, one masquerading as Prince Tsai Lien, 4th Order, and the other as Prince Tsai Chên, 4th Order, son and heir of Prince Ching. It is stated that the two impostors succeeded in "gulling" a large number of too easily persuaded people, and as a result have had a most "royal" time of it for quite six months. The two are now awaiting trial in the prison of the Board of Punishment, and it is quite probable that death by strangulation will be the penalty of their audacity in passing themselves off as princes of the Blood.

#### FIRES.

A fire occurred at the Atsuta arsenal, a branch of the Tokyo arsenal, on the 14th instant. The flames broke out in a store 180 feet long by 42 feet wide, at 10 minutes past 8 at night and were extinguished in 70 minutes. The store contained hides and machinery, and it is said that the damage was trifling. The origin of the fire has not yet been ascertained.

At 4 a.m. on Sunday, Feb. 12th, fire broke out at Aoki-machi, near Kanagawa, destroying three houses. The cause was incendiarism. A fireman was injured.

A little past noon on Saturday, fire occurred in the printing office Choyei-sha, Sakuragi-cho, burning down seventeen buildings, including a godown, and damaging six. Negligence was the cause. An employee of the printing office was severely injured.

At the Ashio Copper Mine, fire occurred on Feb. 9th, destroying some fifty houses. The cause is reported to be incendiarism.

On the morning of Feb. 9th, fire broke out in the house of T. Shimokawa, grocer, Idzumi cho

Kanda, Tokyo, destroying it. His wife was killed while struggling to remove articles from an upstairs room, the floor collapsing.

Fire broke out early on the morning of Feb. 12th in the compound of the Oaki Shipbuilding Yard, formerly the fourth fort off Shinagawa, burning down fifteen buildings.

The well-known Buddhist temple Keirinji, in Yamanashi prefecture, was destroyed on Feb. 11th by fire. It was built some three hundred and fifty years ago by Takeda Shingen, a feudal lord of that time. The temple was famous for its cherry blossoms and for a number of old and valuable works of art.

#### ODE TO ST. VALENTINE.

Gentle St. Valentine,  
Though others peak and pine  
You boldly come out in  
Such wintry weather.  
Come then to me a while,  
Give me one fleeting smile,  
Then quickly like you hence,  
Light as a feather.

If you stayed long, you see,  
You might extort from me  
Things I would rather not  
Tell such a fellow.  
You, with your childlike eyes,  
Are, I have heard too wise,  
And are a cynic too  
Though your hair's yellow.

Gentle St. Valentine,  
There is a friend of mine,  
Oh! how you listen, Sir,  
Think I'm confessing?  
Says you are out of date,  
And none of sane estate  
Would leave their love affairs  
To idle guessing.

For you've been known to cheat  
Taking some missive sweet,  
With the outpourings of  
Some silly lover,  
To the wrong Miss, and oh!  
Though its now long ago  
Such painful facts as these  
Nothing can cover.

Just think of Jane's surprise  
When fair Belinda's eyes  
Are praised by Charles, who once  
Thought her most charming.  
Think of her haughty stare  
And her pert head in air,  
Poor Charles, the innocent,  
Vaguely alarming.

So dear St. Valentine,  
No secret love of mine  
Will I confide in you,  
Now Sir or ever.  
I have more sense, you see,  
So you will bear from me  
Pink hearts and shooting darts,  
Never Sir, never.

M. K.

#### ST. GEORGE'S SOCIETY.

The annual meeting of the St. George's Society of Yokohama and Tokyo was held at the Masonic Hall on Monday afternoon. Mr. James Walter, the President, being in the chair and 20 members being present. The report and accounts were passed on the proposition of Mr. W. H. Percival seconded by Mr. V. R. Bowden. Mr. James Walter was re-elected President by acclamation, and Mr. L. J. Healing Vice-President; Mr. E. Eddison was elected Hon. Treasurer, and Mr. H. I. Sharp, Hon. Secretary. A ballot was taken for the new committee and resulted as follows:—Messrs. H. M. Arnould, A. Bellamy Brown, E. C. Davis, F. L. Elliott and C. Thwaites.

Mr. L. J. HEALING then proposed that the Society celebrate St. George's Day this year with a public ball.

Mr. F. S. JAMES seconded.—Carried unanimously.

A vote of thanks to the Chairman concluded the proceedings.

#### THE AMERICAN LEGATION.

The following is a list of guests at the Dinner given at the United States Legation, on February 9th, in honour of Field Marshal Marquis Yamagata:—Field Marshal Marquis Yamagata, General Count Katsura, Minister President; Major General Nagaoka, Major General Murata, General Staff; General Sakuma, Commander-in-Chief of the Tokyo Garrison; Lieut. General Ishimoto, Vice Minister of War; Baron Komura, Minister for Foreign Affairs; Prince Tokugawa, President of the House of Peers; Count Arco d'Valley, Minister of Germany; Mr. H. W. Denison, Viscount Okabe, Governor Sufu, Colonel Horiuchi, Lieutenant Kanare, Colonel Hume, Military Attache to the British Legation; Captain Tsuno, Secretary to the Minister of War; Captain Uda, Mr. Sugi, Baron Nakajima, Private Secretaries to the Minister President; Mr. Soma, Bishop Harris, Mr. E. W. Frazar, Mr. D. H. Blake, Mr. Martin Egan, Mr. F. W. Horne, Mr. V. Ito, Mr. Huntington Wilson, Colonel Wood, Lieutenant Gillis, Mr. Laughlin, and Mr. Miller.

#### THE LAW COURTS.

##### THE COLLINS CASE.

The hearing of the appeal of Mr. H. R. Collins against the sentence of eleven years' confinement with hard labour given in the Yokohama District Court, took place on Feb. 13th in the Tokyo Appeal Court before Judge Watanabe and Public Procurator Matsutera.

Mr. K. Hara was present for the defence and J. Sudzuki as interpreter.

The course of the examination was generally similar to that in the lower Court. The accused stated that he had lived in Yokohama for about thirty years and that during part of that period he was employed in the offices of the *Japan Herald* and the *Japan Gazette*. He does not speak the Russian language but knows the Japanese, Chinese and French. He married, at Port Arthur, a Russian woman who was carrying on business in curios and other goods. In March last, he and his wife were ordered to leave the fortress, so they removed to Tientsin, and later his wife left for Shanghai. At Tientsin he received instructions from Colonel Ogorodinkoff of the Russian army, to proceed to Japan in order to supply the latter with Japanese military secrets. Having received \$1,000 and a letter from the Russian Colonel recommending him to Major-General Dessino, he went to Shanghai, leaving Tientsin on July 5th last. He arrived on July 18th at Yokohama in company with his wife and put up at the Hotel de Paris. His wife returned to Shanghai about ten days after their arrival in Yokohama.

The Court—Did your wife carry your letter to Major-General Dessino when she left for Shanghai? Accused—No.

The Court—Why did you arrange with your wife to send her letters to *post restante* since you were residing at the hotel?—Because, I was often travelling about.

The accused further stated that he sent telegrams to Tientsin. He was acquainted with a girl named Fujita Bun, and he promised to give her money as capital with which to start the *geisha* business. On Oct. 24th, he wrote a letter addressed to Major-General Dessino and posted it on the 29th. The contents of the communication were made, up from various sources, viz.—from the *Japan Mail* of Oct. 24th, and from information given by Mr. Sekimoto a detective of the Kagacho police office, Yokohama, who, however, mixed his news with flights of his imagination. When he had obtained money from the Russian Officers for supplying them with Japanese military secrets, he was to give yen 500 to Mr. Sekimoto, the detective. His purpose was merely to obtain money from the Russians by fraud.

At this stage the Court closed the doors of the

Court-room in accordance with Art. 59 of the Imperial Constitution, on the ground that the further examination in public might be injurious to public order. After a short interval, the Court was re-opened when arguments between the Public Procurator and Counsel took place.

The Court decided to deliver its decision on Feb. 17th.

#### YOKOHAMA ICE WORKS v. L. STORNEBRINK.

This case, in which plaintiff claims five thousand yen, was brought up again on Feb. 14th in the Yokohama District Court, when Judge Nakanishi delivered judgment, rejecting the claim of plaintiff.

#### CLAIM FOR LIFE INSURANCE.

On Feb. 14th, the hearing of a case instituted by the National Bank against the Equitable Life Insurance Society claiming yen 2,500, was resumed in the Yokohama District Court before Judge Nakanishi.

Mr. Sato, representative of intervenors—G. Katsumi and fifteen other Japanese merchants—in this case, stated that he had come to an arrangement with plaintiff as to the result of this case and that therefore he would not take up the time of the Court by replying.

Defendant's Counsel repeated that an order for transferring the right of receiving money stipulated in the policy was received on Nov. 12th 1903 by the Yokohama agent of the Equitable Life Insurance Society from the Yokohama Local Court but the company did not know when the intervenor had lodged a petition in the Court for issuing the order. The petition seems to have been lodged earlier than that of plaintiff. As the date is an important point in dispute, Counsel promised the Court to produce the copy of the petition made by intervenors in the Local Court.

Plaintiff's Counsel stated that the late Cheong Min Chee, Compradore of the National Bank, himself made the endorsement on his policy given by the Equitable Insurance Society and handed it over to the bank with instructions to receive the insurance money. The policy had been issued in New York in accordance with American law. According to this law, the endorsement is taken to be valid for transferring the right of receiving the money assured by the policy, whereas the Japanese Civil Code limits the right to the legal heir or successor only. Thus there should not be any protest against the seizure of the policy by plaintiff and further there is no necessity to ascertain the day when the intervenors lodged a petition in the Local Court for transferring the payment to them, and not to the heir of the deceased Chinaman. Counsel asked the Court for leave to examine T. Yoshiwara, as witness and the Court gave consent.

Yoshiwara, called, deposed that he had been employed by the National Bank together with the late Chinaman and therefore he was well acquainted with the handwriting of the latter. Being showed the endorsement of the policy by the Court, which says: "Pay to the National Bank of China, Cheong Min Chee," witness stated that it was made by the Chinaman. The bank had received a telegram from Shanghai saying that some drafts and promissory notes guaranteed by him were dishonoured. As the result, the Chinese Compradore presented the policy to the bank as security for loss.

Plaintiff's Counsel contended that the policy was a moveable property in accordance with American law, so that it might be transferred to a third person. Defendant's Counsel contended that the endorsement was made in Japan and consequently it must be treated under the Japanese Civil Code, which does not permit transfer to a third person other than the legal heir or successor of the deceased.

The Court declared the hearing finished and decided to give judgment on Feb. 18th.

A Hakodate correspondent of the *Nichi Nichi* reports that on Feb. 13th, the German steamer *Hindo* (3,633 tons) arrived there from Vladivostok in order to undergo repairs. According to the Captain, defensive preparations at the fortress are complete and there are some warships and about ten destroyers there.

## "KOKORO."

## A MODERN JAPANESE PLAY.

On Tuesday evening a public meeting, under the auspices of the Asiatic Society of Japan, was held in the Van Schaick Hall, Yokohama, to hear a paper read by Professor Arthur Lloyd of Tokyo, the subject of which is "Kokoro: a Modern Japanese Play." There was a very small attendance.

Mr. J. C. HALL, H.B.M.'s Consul-General, said he need hardly waste any words in introducing the lecturer of the evening, Professor Lloyd, who had, he thought, spent some 17 years in Japan. He had from an early stage of that period been one of the most prolific of the enquirers into Japanese subjects and now occupied a prominent position in literary circles in the capital. He was sure they were all very much obliged to Mr. Lloyd for coming down to Yokohama to lecture to them on a subject of such very great interest—indeed he could hardly have chosen one of more wide or universal interest than *kokoro*, the human heart.

Professor LLOYD's lecture was listened to with the deepest attention, but as it is to be delivered in Tokyo before the Asiatic Society of Japan on Friday we refrain at present from publishing a summary.

At its close the Chairman said he felt certain they had listened with great pleasure to Mr. Lloyd's paper. It was usual to have a discussion among members after papers were read, but as there were so few members present he would be glad if any ladies or gentlemen who were not members would make remarks upon the present paper.

Rev. W. WESTON spoke with reference to what he described as the deeply interesting suggestion as to the way in which the younger Japanese of the present day are looking upon such questions as that of adoption and the right to act for themselves in the matter of marriage. These questions, he said, had been brought before Mrs. Weston and himself in a very striking way and he now asked: if there is an individualistic spirit among modern Japanese in the way of more independence for the individual and less subjection to family restrictions—is that independence of spirit likely to be carried to a further stage impairing the loyalty of the individual towards his country? That is, the more individualistic the individual becomes the more his loyalty to his country is impaired.

Professor LLOYD said he did not think so. He thought one of their objections to sacrificing themselves for the family was that the family was very often merely conventional—so many had been adopted that the family had become a mere club. But the idea of the sovereign would always remain as a real true entity and was not likely to be disturbed by the ideas about adoption.

Rev. DR. DEARING thought it a rather remarkable fact that while the numerical strength of the Christian Church in Japan was so small, Christianity should in this play and in many other works be given such a large place. It might, he thought, be taken as an evidence of the growth of Christian influence in this country.

The CHAIRMAN agreed with Dr. Dearing that the paper showed the influence of Christian thought in the way it handled its topic of adoption into the family and in its reference to ancestral worship, a subject so closely connected therewith. It was a fact that ancestral worship was now condemned by all sections of the Christian missionary body and even by laymen. The Western man looked down upon ancestral worship as little better than idolatry. But he (the Chairman) asked to be allowed to put himself in the position of counsel for the defence, and to do so he would endeavour to place himself in the situation of an intelligent Chinaman in his attitude towards the objections raised against the time-honoured practice of worshipping ancestors. He thought that from a sympathetic view a great deal was to be said in favour of ancestral worship. In the first place the fact that a whole family on the *mei-nichi*, recalling the memory of an ancestor, should observe rites to his soul and honour his spirit, which was supposed to be present, was neither

a degrading nor an idolatrous practice. Christians and Orientals alike believed that after death the soul survived, that the spirit still existed somewhere apart from the body, the difference between them being that the Christian believed that the soul had gone to Heaven or purgatory, while the Chinese and Japanese thought it remained on this earth not far from its former home and its descendants. Both believed in the survival of the soul after the death of the body, and the Christian also believed that it would again be united with the body at the Resurrection. There was not therefore much difference in point of theory between the theological believer and the ancestral worshipper, and certainly the practice of the latter was not degrading from an intellectual point of view. Nor was ancestral worship degrading morally, for the intelligent Chinaman that he took the liberty of supposing himself to be would say that the consciousness of living in the presence of ancestors who presumably were good people during their earthly existence must have a good tendency. If the father taught his children to be good, and the soul of that ancestor still looked after them, they would be as anxious to win his approval in the after world as they had been before in this. Therefore he thought ancestral worship tended to promote good morals. In the second place the fact of a whole family annually uniting to worship the soul of a dead ancestor had a tendency to strengthen the family tie. That was the second advantage; and a third was that it promoted a sense of continuity between the generations. It helped to remind the living that they were the successors and inheritors of the past—of bygone generations. And the intelligent Chinaman, if they passed on to modern thought, would derive further confirmation of the excellence of the institution. He would be still less inclined to abandon that practice which the missionaries condemned. For modern science, whilst it had not a single argument to advance or a single theory to propose in favour of the immortality of the soul or of the resurrection of the body, had nevertheless something more to say about worship. Modern science had found religious thought inadequate to deal with moral and social phenomena. Some intelligent people all over the world now believed that the phenomena of society, of the heart, were as certainly subject to laws of nature as were the movements of the heavenly bodies or the reactions of the chemical elements: only that human beings and societies, being organisms of a highly complex character, were subject to laws which it was much harder to discover. In fact it was only in the last century that any discoveries in the science of Sociology were made; and the intelligent Chinaman would be aware that the very same thinker who founded the science of Sociology had also laid the doctrinal basis of a new religion—a religion that had no room for God or for the objective immortality of the soul in its scheme of doctrine. He believed that the missionaries were dashing themselves against a rock in China in the attempt to get the Chinese nation out of ancestral worship. He believed it would survive the attacks of all the missionaries; and that it would be expanded and developed and would ultimately be transfigured into the worship of Humanity with the spread in China of sociological science. Those were the ideas suggested to him by the reference to the subject in Mr. Lloyd's paper. He supposed they would to many appear heterodox; to his mind they were reasonable and sound. He added that all the foreign missionaries had not always condemned ancestral worship. One of the most successful missionary bodies, the Jesuit Society in China, in the sixteenth and seventeenth centuries had carefully refrained from doing so.

Rev. E. S. BOOTH rose as a missionary to repudiate the idea that the missionaries condemned ancestral worship. They condemned it in the same way that they condemned sun and moon and star worship. But they were in favour of it in the way that St. Paul was when he declared to the Athenians that men are the offspring of God the Father, and it was therefore their endeavour to substitute the worship of God the Father for ancestral worship in China and Japan. That was his impression and it was also, he thought,

the impression of every sincere missionary who was engaged in that work.

The Chairman said there was one point on which he was sure they would all agree with him and that was that they were very much obliged to Mr. Lloyd for his most interesting paper. He understood it was to be repeated in Tokyo in the course of this week. He hoped there would be a much larger, but there could not be a more appreciative audience. (Applause.)

Mr. LLOYD thanked the audience for having thanked him, and said it had been a pleasure to him to think that they had been able to revive the practice of having meetings in Yokohama.

In the course of the evening pianoforte selections were given by Messrs. H. Horne and S. W. Argent.

## SPRING.

When the West winds blow, Babette,  
Over the hills we'll go  
To a sunny nook, by a rippling brook,  
Where the wild violets grow.  
There on the bank we'll sit, Babette,  
And mother will tell you, dear,  
How those flowers blue, the winter through  
Sleep, till Spring is here.  
Hearing her glad call, Babette,  
Up from their beds they rise,  
In dresses new, soft bathed with dew;  
To greet her with smiling eyes.  
Alone with Nature there, Babette,  
Happy the hours will be.  
And birds' their song, the afternoon long,  
Will sing to you and me.  
Then the hill we'll climb, Babette,  
To watch the sunset dye  
With crimson and gold, as the clouds unfold,  
The purple darkening sky.  
From that peaceful scene, Babette,  
Lit by the starlight's glow,  
Back from the hush, to the glare and rush  
Of the city, we must go.

"O."

## YOKOHAMA LITERARY SOCIETY.

The usual fortnightly meeting of the Yokohama Literary Society was held last evening at the Van Schaick Hall. The lecturer was the Rev. I. W. Cate, who dealt in a most illuminative way with the life and writings of the American poet Eugene Field. He gave many delightful examples of the poet's work, dealing particularly on the charm of his verse written for or about children. The musical portion of the programme was as given below:—

Song....."Nowhere Land"....J. M. Capel.  
Mr. K. Dodds.  
Song....."Dutch Lullaby"....Words by  
Miss C. Saunders. Eugene Field.  
Song....."Only Once More"....Frank L. Moir.  
Mr. A. E. Cooper.  
Recitation...."Not in the Programme"....Edwin Collier.  
Miss Reah Kenderdine.  
Song....."The Worldly Hope"....Liza Leymann.  
Mr. B. C. Foster.

## FOOTBALL.

The Association game on Saturday naturally bore a scratch character so many of the regular players being absent in Kobe, and the sides were so unevenly balanced that Colours won by seven goals to one. Two goals were made by the winners in the first half, the other 5 being rolled up after change of ends. For Colours the goals were scored by D. Drummond (3) O. Strome (2) J. E. Drummond and Upton. Libeaud scored for Whites. Many of the younger players show great promise. Teams:—Colours: O. Strome, (Capt.) A. Andreis, J. F. Drummond, D. Drummond, J. E. Drummond, F. E. Bunling, G. Upton, G. N. Fairhurst, W. E. J. Demold, A. W. Read and a Momban. Whites: S. W. Argent, V. A. Hearne, Libeaud, Worden, J. Helm, C. T. Mayes, A. E. Cooper, W. B. Mason (capt.) Holmes. Mr. Pollard was referee.

## CHURCH-GOING.

(COMMUNICATED).

Why don't more professing Christians attend public worship? This is a question which certain Japanese Methodists have been asking of late. The answers given, which have been published in full in the Methodist organ, the *Gokyo*, may be summed up in a sentence. The services don't attract most of the people for whose benefit they are held; the doctrines preached are not those which educated men want to hear preached. Dr. Takagi, the editor of the *Gokyo*, observed some time back that the reasons which keep people away from Church are pretty much the same in Japan as in Europe and America. The subject of non-church-going seems to have been widely discussed in England. In a recent issue of *Longman's Magazine* no less a writer than Mr. Andrew Lang published a very racy, but in many respects a very superficial and misleading article on this topic. But since it contains a good deal of information on the state of English opinion on Church-going, we give the gist of it below.

The attendance of women is almost always larger than that of men. But that is the case in all non-political gatherings. At a series of Hegelian lectures in a University town most of the attendants were women, though the subject was incomprehensible to most of them. One cause of non-church-going and non-chapel-going is scepticism. But this need not be discussed here. Men believe in Haeckel who cannot believe in revealed religion. But those who stay away from Church are not necessarily irreligious. Most of them are tired and want to rest or spend the time in the open air after being shut up in offices all the week. They fish, or walk, or play golf. To don frock coats and tall hats and march solemnly off to Church is repugnant to them. The Israelites, from whom we inherit the sabbath, did not attend temple every sabbath. Jerusalem was too far away, and in their palmy days there were few synagogues anywhere. They were forbidden not to work, but were not told they must not play. "The command, not to play is a Protestant injunction, a thing of human invention." So Knox ought logically to have denounced it as idolatrous. Calvin played bowls on Sunday and would have no doubt umpired at least at cricket had it been popular in Geneva in his day. I follow Dr. Johnson in asserting that many not irreligious people seldom go to Church. Johnson says of his friend, Dr. Campbell, "He never lied on paper," "never with pen and ink. Campbell is a good man, a pious man. I am afraid he has not been on the inside of a Church for many years, but he never passes a Church without pulling off his hat. This shows that he has good principles." Campbell declared that he drank 13 bottles of port at a sitting. Dr. Johnson doubted this; but said:—"I loved Campbell: he was a solid orthodox man; he had a reverence for religion. Though defective in practice, he was religious in principle." Many of us, if the clergy will believe me, are Campbellites. Mr. Lang next makes a quotation from a sermon of the Rev. R. J. Campbell, of the City Temple, in which the latter, according to Mr. Lang, grossly misrepresents the views and motives of the average workingman. This misrepresentation Mr. Lang goes for in his wonted style, scoffing at the notion that mechanical work, mere routine, can be liked for its own sake, as Mr. Campbell said it should be. Men work, not because they delight in it, but because they want money. Having finished the drudgery, they pine for recreation. The church or chapel does not supply the right sort. Had the workingman an innings in the pulpit he would like the excitement of the thing. "Though many Britons do not rejoice in being quiescent listeners in churches (or temples), I am convinced that almost every one of us would dearly love to have his innings in the pulpit." A workingman tells us that of about 3,000 factory hands with whom he worked not more than 20 per cent professed any interest in matters of religion. The remainder were indifferent. Dress is responsible for keeping many artisans away from church. His "Sunday best" is not a tasteful garb and he knows it. Why not have a church uniform for all male attendants?

Ladies would have to be exempted, or the congregations would thin down to nothing. "Let us have a church-going uniform—say, a vestment like an umpire's coat, made of canvas (or of sackcloth—anything cheap will do) and covering the wearer from neck to heel. A canvas cap will do the rest, and place all men on a level—in Church. Nobody will be ashamed to go because he has not a frock-coat and a tall hat. Let the bishops see to this, and let the non-conformists aid in this salutary reform of the vestments of the laity."

But the most serious of all obstacles to church-going is the class of sermons preached. In French *le prêche* means Protestantism; *aller au prêche* means to join the Protestant Church. Among a large number of Protestant sects the preacher is everything. His extempore prayers are only a variety of his sermons, being topical, political, often newsy. The hearers can "only listen, admire and criticize"; as they do not know what the minister is going to pray for, they can't pray with him. The number of silly sermons and irritating sermons that are preached is very large. Modern etiquette does not allow attendants to shout like King James:—"Man, either speak sense or come down," or with Queen Elizabeth:—"Hold there: leave that alone." The sermon has to be heard out. I resist the temptation to give examples of the kind of sermons alluded to. To be told that as in heaven "there will be no more sea," therefore there will be no more vegetation is a mild specimen of the thing that troubles us. We must not be too hard on the preachers. The art of literary composition, the saving sense of humour, knowledge, wisdom, are not given to all, even in holy orders, and yet these men are compelled to exercise a difficult form of the literary art. Their compulsory sermons are very great deterrents to the Campbellite: they frighten him away from church. What is to be done? Let laymen preach, in turn, I say, but the bishops would not sanction it. It would be possible to keep the pulpits for those who can preach, but this would upset the whole of the present church system. . . . Many of the clergy are quite ignorant of the views of non-church-goers. Mr. Lang proceeds to give an account of a certain vicar who took umbrage because a man was found reading Darwin's "Descent of man" on a Sunday and who denounced Darwin in the style of the Rev. Nehemiah Holdenhough. Thus far Mr. Andrew Lang.

The Protestant devices for attracting audiences are very numerous compared to those relied on by the Roman Catholics and the Greek Churches; if indeed it is correct to say that these latter bodies employ any devices at all. In addition to ritualistic practices, and elaborate music, we have Salvation Army tactics and clap-trap and social functions of all kinds held for the amusement of church-goers. These seem to outsiders to be attempts to render more palatable doctrines which are no longer accepted for their intrinsic value. Do these devices accomplish their object? The Roman Catholic and the Greek Church Christians say no. It is astonishing how much of a mixture of the secular with the spiritual there is in the Young Men's Christian Association work at the front. Mr. Ochiai, of Sendai, as stated in these columns, told his hearers a few weeks ago that it was not mere preaching work that was being carried on but forming clubs, lending novels to the soldiers, etc. The reports of the Young Men's Christian Association published in the *Japan Mail*, have all furnished the same kind of evidence that mere preaching of the Gospel is no longer found to answer. Nobody seems to ask why. Nobody seems to condemn the tea, the cakes, the dinners, and other entertainments given by Protestant Missionaries as bait wherewith to catch fish. When we say nobody, we mean Protestants, but these methods are habitually condemned and carefully avoided by the Roman Catholic body of missionaries working in this country and by the Greek Church Christians. It may be worth while to call the attention of Christian workers to this subject. Even what Mr. Lang says about preaching seems to us wide of the mark and in many ways objectionable. If people go to church to worship, if they sincerely believe

in Christianity, why need they insist on hearing an eloquent sermon? Is eloquence an essential part of Christianity or inseparably connected with Christianity at all? Why is so much stress laid on all the accessories of the faith—the preachers, the places of worship, the music, the manner of conducting the service, the dress of the worshippers, and what not—and so little said about the intrinsic worth of the faith itself? If this is a sign of the growth of religious belief, of the deepening of devotion, of the unworldliness of professing Christians, of a high spiritual tone in the Christian Church, then our eyes deceive us. We must confess that to us the methods of rendering Protestant Christianity palatable which are followed by the majority of Protestant sects in these modern days appear very much like a degradation of the noble faith of Christ, a departure from the lovely simplicity, straightforwardness and spirituality which characterized all Christian Churches in early times; but which only characterize a few Christian bodies to-day. The sum and substance of what Mr. Andrew Lang says is:—"Make your Christianity a bit more attractive by mixing more secular elements with it—copy the world more. The bar depends on eloquence; the hustings on oratory; follow suit if you would succeed. The Christian faith, pure and simple, in all its bare spirituality does not attract us. Dilute it, modify it, mix it up with secular things, only administering discreet, small doses at a time, and even the workingman of England may be made to swallow the pill. How will the thousands of really devout souls in the church receive such advice? They will of course utterly disregard it. It is all very shallow, though in many parts so racy. It shows that the talented, voluminous Scotch writer, though an adept in certain kinds of interpretation, has failed altogether to discover the true significance of the present attitude of the English nation to their traditional faith. When he observed at the beginning of the article that unbelief is the chief cause of non-church-going he stated a fact. But he was content to win a little cheap popularity by sneering at scepticism as though it were the result of mere perversity and blindness and not the effect of deep thought, extensive research, and a love of truth for its own sake."

## "LONG FINGERS."

(TRANSLATED FOR THE "JAPAN MAIL" FROM THE "BERLINER TAGESBLATT.")

Far, very far from St. Petersburg lies the scene of war, and very strict is the censorship concerning all information intended for the world at large, more especially the dark side of the administration of affairs at the front. Nevertheless, the complaints from the scene of war are increasing and show that while Russia is supposed to be fighting for her honour many dishonourable acts are perpetrated, and that all is not as it ought to be. Here we read of great deficiency in foot-gear, and that in many cases feet have been frozen off. If we recall in this connection the official reports of last summer, of the enormous quantity of warm furs and boots that were sent to the front, the question arises where have these things gone to? One reads of millions which the Russian people have in all confidence contributed on behalf of the army, but here comes a letter from a Russian soldier at the front in which the following sentence occurs: "You have no doubt heard of the thousands of contributions, where these have gone to is not clear to me, for all we soldiers have received therefrom is two cigarettes each."

When the public reads such things its confidence is at an end. Why should it contribute after being once convinced that its contributions flow into the pockets of long-fingered officials, who transform, as it were, the blood and the tears of the people into rubies and brilliants which subsequently serve as ornaments of some coquette or chansonette singer? Alas! alas, these are no suppositions, they are naked truths! During the Russo-Turkish war the State was robbed of enormous sums. Now after 28 years that history is repeated, if not to the same extent yet to such a degree that it demands exposure. Before I produce

some characteristic evidences I will quote from a letter which appeared in the *Noroe Vremya* from a commander of a battery at the front. "A campaign against the numerous dishonesties is simply impossible. It would be as though one were surrounded, on a public highway, by a solid wall of thieves and robbers, who, if you would give alarm, would not hesitate for a moment to silence you for ever. Heretofore I had only served in large cities like Petersburg and Odessa, now I am paralyzed by fright. Where am I? What has happened to me? I can call this no longer robbery; it is more, it is a general attachment of everything, and he who will not join in the theft is cast out. Do write about it, give alarm, and expose the matter in public!"

But what can the unfortunate Russian press do? Its hands are fettered. At the best it may print such a letter, but the long-fingered criminals it dare not expose. Nor would it be easy to do so. I know that at the head of these institutions, such as the Intendence and the Red Cross, there are persons of very high standing who would never take a farthing dishonestly, and whose honesty is far above suspicion. These would become highly indignant if such lines should come to their notice. They are not the cause of the trouble, though the responsibility ultimately falls back on them. The guilty ones are not easily found, for this system of robbery and fraud is constituted into a solid compact which it is difficult to attack.

I will now give some striking illustrations of these peculations.

Here are first two notices taken from the *Noroe Vremya*, one from Novgorod, the other from Wilna. Both treat of the same subject. Horses had been supplied for the army in the East, but for days the poor animals were left standing in the open air without food, in cold winds and bad weather, hungry, trembling, freezing, while the officers at the place sold the oats that had been furnished them for the horses and spent the money on women. The horses became so hungry that they began to eat the wooden posts to which they had been tied. Thirty died at the place while the others were sick when they were finally sent off. Can we be surprised that many of these, after the long journey were unfit for service?

A second instance refers to the warm boots for the army. The people who had heard of the insufficiency of boots among their brethren at the front, offered to supply felt-boots made of wool, at cost price, or if need be, donate them to the army, but the Government offered to pay for them. The farmers then offer to make felt boots such as they wear, at the cost of the price of the wool. These boots usually last them about two years. But this offer did not fit into the programme of the administration, it preferred to furnish their miserable stuff. Here is what the *Russkaya Vedomosti* published on the subject from Kineshma: "In this place felt boots of the poorest and cheapest kind had always been manufactured. The felt is not made of wool but of horse and cow-hair, pressed together with a paste. Strike such a felt boot against a hard object and that is the last of it. The manufacturers of these boots admit that the best of them will not last more than two or three weeks, here in Russia, in Manchuria perhaps as many days. The price of a pair is one rouble. This miserable ware attracted the attention of the officials whose duty it was to procure boots for the army. Commissioners arrived and bought up all these useless boots. The price soon doubled and the stuff was ultimately sold in baskets by weight, one-half of them being women's shoes. What are the soldiers to do with such boots? Is it not ridiculous to send such good-for-nothing stuff to the defenders of the country, in order that a few men may enrich themselves at the expense of the people? It did not suit the Government to accept the offer of the farmers, independent of a general, though the latter might understand nothing as to the quality of boots. The farmers had asked that an expert should examine their boots. They were right. Yet this valuable offer of the people was declined and a double price was paid for worthless stuff. The following instance will show the reason why.

In those days a well-known cloth manufacturer

from Lodz call on me and related the following: One day a major called on him with an order for five million *arshin* (Russian yards) of cloth for the army. The manufacturer is not indisposed to accept the offer but, of course, asks under what conditions he is to furnish the goods. He is told that first 500,000 roubles will have to be paid to two higher officers, and 50,000 must go to him the contractor, whereupon the goods will be accepted without inspection. That meant, that after such bribery the meanest stuff may be furnished without question. Under such conditions the manufacturer declined the offer and candidly told the major that for such a price the material he could furnish would only last a few days, and that the reputation of his firm was too valuable to permit them to stoop to such a mean transaction. The order went to another factory and the army again was robbed of about 1,200,000 marks.

Who are the vampires that suck the Russian people's blood, and are at the same time highly respected? Who will name them? Were the farmers not consistent in demanding that an impartial specialist should examine the wares ordered by the State, rather than officials who understood little or nothing about the quality of the goods and who would associate their orders with bribery? Can serious work be accomplished under such unhealthy conditions? Will the corruption not assume still greater dimensions when those who ought to set a good example are guilty of the most disreputable transactions?

Every one who reads this may say, "Well, these are Russian conditions." This is not correct. Right here in the capital of Russia great changes have been effected, so that the old system of bribery and embezzlement have been thoroughly eradicated. But the war has allowed old Adam to revive, even at the expense of the State's money-bag. "The state is rich and the Tsar is far away." This is the device in the army at the front, and with this in mind the long-fingered gentry perform their nefarious work, void of self-respect and without the slightest concern for the welfare of their country.

#### CORRESPONDENCE.

##### THE TEACHING OF ENGLISH IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—There can be no reasonable ground for opposition found to the general contention of your contributor, as expressed in the article entitled "How English is taught in India and how it is not taught in Japan," which appeared in your issue of the 1st inst. The system of teaching our tongue in the Middle Schools of Japan is about as far from that followed in giving rudimentary instruction in a foreign language at schools of any other known country as can well be imagined. As a matter of fact English, as a language, is not taught at all in such schools. It is probably not too much to say that there is not a public school in Japan wherein the teachers are permitted to use the synthetic system of language teaching, and it is doubtful if many of the Japanese teachers are competent to do thorough work in giving such instruction, if the pupils would permit its use. The usual process in Middle Schools, and it is in them that the so-called teaching of English begins, is to teach the alphabet, then a few syllables, and then to take up a reading-book—the lessons being "explained" in Japanese. Promptly after this the pupils are advanced to higher reading books, the pernicious habit of "explanation" is continued, and at the end of the fifth year the pupils are graduated, rarely having had a single hour's work in practical English, certainly without having been encouraged or compelled to "think" in English. It is to be said, to the credit of the Japanese teachers of English, that a considerable number of them have discarded the bad habit of using the *kana* to teach pronunciation.

How many Middle School boys are required to learn, actually and literally learn, the full conjugation of a verb and with the different moods and tenses construct sentences, at first simple ones, then modified ones, then compound ones, and then complex ones? The writer of the article under consideration, is perfectly correct in asserting that most of the Japanese teachers of English are not competent to give instruction in pronunciation, and, of their own knowledge, in grammatical and idiomatic forms, but nearly all of them could guide their pupils in the constructing of sentences,—using good models themselves,—

if only they were willing to undertake the little drudgery that such a method entails, and if (and this is much the larger IF) they were permitted to do so by the inspectors of schools. It is quantity that is too often required rather than quality. If the average school inspector were to visit a fifth form room of a prefectural Middle School, and found the boys engaged in constructing sentences, building them up from the conjugations and declensions that had been memorised, in the synthetic manner, without a reading-book in their hands, it is probable there would be an uncomfortable quarter of an hour for the teacher! The writer has visited many Middle Schools and has had the opportunity of examining the pupils in their attainments in English, and without exception he has found that entire absence of agreement between subject and predicate, pronoun and antecedent, that indicates utter lack of training in such matters. It is hardly fair to institute a comparison between the public schools of India and those of Japan. In the former it is possible to insist upon using the English language as the medium for giving instruction in all branches: it is impossible to do the same thing in Japan, and it is not necessary, although there can be no denying that those middle-aged Japanese, who went to school in the early days of Meiji, when all text-books were in English, acquired a command of idiomatic English that survives to this day, and which enables them to talk all round the graduates of the English classes of the College of Literature who have passed through Middle and Higher Schools before entering the University. But the incentive to learn English is not the same in Japan as in India, and the desirability of putting aside the vernacular does not exist; neither does the necessity to do so. The major part of the student's work in his future life is to be done through the medium of Japanese, and his sciences, pure and applied, may just as well be taught in Japanese as in any foreign language; the advantage of using English even in such lessons being always admitted. The student's foreign language is to be an incident and it is not wise, it is not necessary that it should entirely supplant the vernacular. It may be remarked in this connection, however, that as a rule the students in the Science and Engineering Department of the Higher Schools, who habitually use English text-books for mathematics, chemistry, etc., are distinctly in advance of their fellow-students of the other departments in their command of English.

To change the method of teaching English in the Japanese schools so as to make it entirely satisfactory could easily be done, if the Mombusho officials would listen to the advice of competent teachers; but it would result at once in "strikes" that would leave the classrooms empty for some time, that is to say until the pupils and their parents realised that the Government was thoroughly in earnest. This change can be accomplished without adding much to the present expense; without, indeed, demanding the employment of competent foreign teachers in every Middle School. It is necessary only to begin the synthetic method at the earliest possible moment, in the first year at the Middle School, and to continue it regularly through the whole Middle School course. If anyone will read carefully the article in the *Mail* which is now being discussed, he will see that just such a course is pursued in the schools of India. It is unquestionably most desirable to combine correct pronunciation with proper grammatical construction and clear use of idiom, but if teachers who are entirely qualified in all these details, that is—of course—foreign teachers, are not available, let the pronunciation go for a while; a sentence that is correctly constructed will be intelligible even if the pronunciation be not all that is desired; and if that sentence be written, faults of pronunciation count for nothing. By compelling the Japanese teachers to shut up their reading-books and to stop their "explanations," and to confine their efforts to grammar and the construction of sentences, the setting right of the Middle Schools will have been commenced, at least, and if the pupils subsequently come into the hands of a competent foreign teacher, there will be only one fault to correct, the minor one of pronunciation, instead of, as at present, faults of pronunciation, spelling, grammatical construction, and the use of idiom; but there will be fierce opposition from most of the teachers as well for they are wedded to their reading-books and to their "explanations." Of course, it must not be supposed that reading-books are to be discarded altogether, since they are needed to enlarge the pupils' vocabulary, and when rightly used, such books are of more practical benefit in the hands of a native teacher than in those of a foreigner, for there must be some translating done.

The writer has frequently tested these "explanations," both with English and with Japanese, and he has almost invariably found that the literal explanation has robbed the original of its meaning as completely as if an English boy were to read "The Divine Comedy" with a master who expounded the Italian literally, used a text-book with ex-

planatory notes for every other word and a glossary for every tenth one: in the first instance the English meaning has disappeared; as in the second the force and beauty of Danie's thought would vanish. If the Indian system is objectionable because it leaves little room for individual initiative and for the development of originality and imagination, and because too much cramming is required, what shall we say of the Japanese system, with its present rigid formalism, its mid-term examinations, its term examinations, and its annual examinations? Can anything be more conducive to rigidity and to cramming?

The Higher Schools of Japan are intended to be colleges, or at least collegiate in their methods, and the course of instruction should be such as to relieve the teachers from all rudimentary work in English, in order that the whole three years course may be devoted to finishing and polishing an idiomatic use of that language. If the Middle Schools did their work properly, and as it might easily be done if a system such as has been suggested herein were followed, this province of the Higher Schools might be achieved: as it is, the undoing of the bad work of the lower schools is hardly accomplished before the students are passed on to the Universities, and the foreign teacher in such a school who does his work conscientiously, must feel, at the end of the three years course, that the best result he has accomplished is to have done over again the work of somebody else, without advancing his students so much as he knows ought to be done.

It is just a little amusing to see in a paper that was evidently written by a teacher in a Japanese Government or Prefectural School, some odd slips of the pen, for example: "There are five such universities; that of Calcutta, Madras, Bombay, Allahabad and the Punjab." One asks what is the antecedent of the pronoun "that," and hopes that it and other similar mistakes are to be charged to the compositor rather than to the author.

Yours, etc.,

G. K. J.

## TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A very interesting communication in the *Japan Mail* of the 1st inst. has excited considerable interest among your readers who are engaged in teaching the young idea how to shoot, and with your kind forbearance I will venture to jot down here some of the comments that it has aroused. The object of the article is evident in the last sentence. It is a bid for power on the part of a foreign High School employe, who desires to displace certain teachers in the Middle Schools with those of his own selection, who are to be permanent. He points to India as a place where better work is done, etc. It is to be hoped that he may succeed in improving the oral and written work in the High Schools that the University Students may be able to understand the language of their foreign instructors better. But the question very naturally arises: Why is the teaching of English so much better in India? and the answer is not far away, it is because there are service and rewards awaiting the student who is successful. India is a part of the British Empire, and natives with a practical knowledge of English are needed in large numbers in all branches of the government service.

Japan is not now, nor is this land ever likely to be, any part of the British Empire, and it is impossible to create here the market for ability in the use of English that exists in that Empire. Sometimes the success of English teaching in the Philippines is quoted to us and the answer is the same.

So long as Uncle Sam holds on to the islands he must teach his foster children to understand the voice of authority. The voice of authority in Japan is not uttered in the English language alone.

We who use in this land our mother tongue are apt to forget sometimes that here English is after all only a polite accomplishment, as French is in England. The serious business of Japan in this twentieth century is the preservation of the peace of this part of Asia, and that is to be done by means of the Chinese written character. Of course English has its place and use, but it has not the same place nor the same use that it has in India or in the Philippines. Perhaps the one foreign country where English is sought most thoroughly and with the most signal success is Germany but as the Reverend Arthur Lloyd pointed out recently to the Imperial Education Society, those methods while admirable are not yet popular with the mass of Japanese students who may feel their need of being hustled, but whom we must hustle gently and with such sweetness and light that they may not be conscious that they are being hustled. The great object of learning English in this land is to be able to use the vast stores of accurate and interesting information that are printed in that language and are preserved in encyclopedias and other books of reference and that are streaming from the daily press. For this the Japanese can help each other to explain in the vernacular difficult passages, the foreign teacher may

be consulted when other means fail. This learning comes through the eye mostly and it is the means for the use of fully nine-tenths of the English that reaches the intellect of the people. Earnest teachers who wish to be accurate in their explanations to their pupils eagerly consult the foreign teacher for pronunciation and the explanation of ambiguous passages. The Japanese teacher of English is the friend of the foreign teacher, and is always most zealous to secure him employment, because he feels most keenly the need of his help.

It is these teachers who keep the language from being studied as Classical Chinese is studied or as the so-called dead languages were once studied in the West; they keep it alive by their demand for oral explanations.

These teachers are subject to severe criticism from above and below and if the foreign teacher in any way incompetent they very quickly find it out, and he loses their support. It is very absurd for your unknown contributor to talk about the employment of "a number of incompetent foreign teachers in the place of the Japanese teachers hitherto relied on." In this and in a number of statements he seems to be drawing on his imagination for his facts; but as he hides his name it is not at present possible to assign him his part in the lake that he will ultimately reach.

If he has a case let him bring out his evidence. No one for a moment would contend that bad spelling or incorrect grammar is any necessary part of Christianity. If the foreign teachers cannot pronounce Shibboleth by all means let them be decapitated, but before the fatal sentence is finally uttered let them have a fair hearing.

So far as can be seen it is the policy of the Government to secure in their foreign teachers all the ethical results of Christianity without its supernaturalism. Other things being equal, in the choice between a Christian and a pagan, the pagan would be preferred, but he must keep the ten commandments.

Now some of the ten commandments are broken with a facility in this balmy climate that would not be fashionable elsewhere, but now-a-days it is expected that they should be kept by anyone aspiring to teach youth.

The experience of the Government with pagan teachers had best be buried in oblivion, but it has been what has made the Christian teacher popular *pro tempore*. Your contributor states that "The Middle Schools are at present being exploited in the interests of Christian propaganda in a way that is detrimental to high class education."

Is it not rather the fact that the interests of Christian propaganda are being exploited for the benefit of secular education. We will say nothing whatever about the immense amounts of Mission money that are poured out for secular education in schools "where the teaching of Christianity is strictly forbidden," but we will confine ourselves to those "poor teachers" who take up teaching "as a means of spreading Christianity." Do they not over estimate their opportunities? Are they not often wasting their sweetness on the desert air? Is it really likely that any spiritual truth will pierce the soul that is clothed in the armour of a foreign language? Can we not rather believe that the astute Japanese are willing to meet the foreigner half-way and let him talk about what he will, without caring to try to understand him so long as they can catch with their ears the words with which their eyes are so familiar.

Almost every foreign teacher who is not notoriously immoral is asked to teach the English Bible. Now the English Bible is, next to the Prayer Book, the first classic of the English language to be translated from the Vulgate into "a tongue understood of the people."

For this reason from ancient times unto the present its words and its ideas are woven into the common speech of every man, and it is impossible to understand a page of even a newspaper without some knowledge of the stories in the Bible, e.g. your contributor's reference to making bricks without straw.

Now the pagan teacher is not going to spend his play-time in extra unpaid teaching of the Bible, but the Christian teacher gladly gives up his time and energy to teaching the Bible in the English language and will even use such shockingly vulgar texts as the Twentieth Century New Testament in the hope of saving some souls from hell, while the pupils are getting instruction that they need to understand English literature that they can get nowhere else. They cannot get along without the literature of the Bible, as both Matthew Arnold and Mr. Huxley unite in bearing testimony, and who can give it better than the missionary whose heart is throbbing with enthusiasm for the teaching of the Book of Books. Your contributor says, "The foreign teaching profession in this country has been greatly spoilt by the practice of certain missionaries."

Should he not rather say that the foreign teaching profession in this country owes its very existence to the practice of missionaries teaching sacred literature in English and thus arousing an appetite in the

minds of youth (who care for religion least of all) for the learning that can give them food for thought.

Yours, etc.,

RUSTICUS.

## (TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—An "Ex-teacher's" reply was in common justice to the foreign teachers in Middle Schools. As the writer of the article commented on seems to write "from the point of view of the High School teacher" I beg to do the same, and think he will be obliged to admit that the shining lights—if any—of his first year students are almost without exception those who have received instruction during their Middle School course either from a specially engaged foreign teacher, or from local missionaries. "How English is taught in India" will also have to admit that even in the High Schools the results attained in conversational work leave considerable room for improvement.

Yours truly,

February 11th, 1905.

"KOTO."

## (TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—A few days ago a letter appeared in your columns signed "Ex-teacher," finding fault with statements made in an article of which I was the writer. In reference to Indian education, the account given by me was, as stated in the introduction to my article, wholly based on the utterances of Professor Sharp, a scholar and a thoroughly competent exponent of Indian education, and an Indian gentleman who is a Bachelor of Arts and who has spent his whole life in India. Since "Ex-teacher" professes to have no knowledge whatever of Indian education, it strikes me as impertinence on his part to question the truth of what these gentlemen stated while in Japan. This he certainly does when he says:—"Now, though the writer seems to me to be putting it pretty strongly;" and again, "if one half of the good things said about the teaching of English is true." The first part of "Ex-teacher's" letter is full of blunders that he might have avoided. Speaking of me, he says, "he makes the interesting statement that the students of India use English from morning to night, &c." Since all this part of my article, as indicated quite plainly, was based on Mr. Potdar's remarks, which were reported in English in the *Asiatic Review*, "Ex-teacher's" sneer must be handed on to Mr. Potdar.

The latter part of "Ex-teacher's" letter is no less inaccurate than the first part. He says, "What astonishes us is that this ignorance should be laid at the door of the foreign teacher." If "Ex-teacher" had read my article a little more carefully he would see that in my description of the evils of the Middle School teaching of English the foreign teacher occupies a very subordinate place indeed. I should say there are far less than 50 foreign teachers in Middle Schools. They are overworked and have little show at all. Yet some of them are doing excellent work. But the point is that semi-educated foreign teachers ought not to be teaching in Middle Schools under the banner of the Young Men's Christian Association or any other banner. That one such teacher was employed in a large and important Middle School is an undeniable fact, and if report be true there are more teachers of the same kind elsewhere. If "Ex-teacher" intends to defend this practice, let him say so in plain English, and be condemned by all earnest educationists of whatever school. If he does not approve of the tactics complained of, then what his grievance is against the writer of the article in question it is hard to see. There are some people who would always prefer to have unpleasant truths left unsaid, but the present writer not being one of these, he ventured to call attention to what he deemed unwarrantable tactics on the part of certain Christian Zealots. If "Ex-teacher" approves of these tactics, to argue with him further would serve no good purpose.

I am, Sir, yours, etc.

WRITER OF THE ARTICLE.

WILL ADAMS' TOMB.

## (TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Appropos the poem in to-day's *Japan Mail* on "Will Adams," I may say that his tomb at Hemi, just out of Yokosuka, is still in a disgraceful condition. As was reported in your columns not long ago, the iron railing around the tomb-stones of Will Adams and his wife has been broken down; several of the stones of the foundation platform have been carried off; and the stone containing an English inscription has been broken into pieces. When I visited the spot the other day, I was informed by my guide, a jinrikisha-man, that, after the war, the authorities intend to put it all in perfect repair, perhaps make a park around it and keep it under better control and protection.

Sincerely yours,

Tokyo, February 15th.

E.W.C.

## THE JAPANESE NATIONAL ANTHEM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In Mrs. Fraser's "A Diplomatist's Wife in Japan" she says, page 520,—that Her Majesty the Empress is said to be the author of the national anthem. Can you tell me if this is true, and also who wrote the words.

It would be an added pleasure in singing it if one knew Her Majesty wrote it. Thanking you in advance, I am,

Very truly yours,

AN AMERICAN GIRL.

Kagoshima, February 3rd, 1905.

(It is not known exactly who wrote the words of the *Kimi-ga-ya*. Hideyoshi transcribed them, but they certainly existed long before his time. The Empress had nothing to do with them.—Ed. J.M.)

YOUNG MEN'S CHRISTIAN ASSOCIATION  
ARMY DEPARTMENT PROGRESS.

The work at Yingkow was opened as an experiment, the result there to determine largely the policy of officers in charge as to permitting extension to other points. After a thorough trial of the work at Yingkow, Col. Miyazaki forwarded the following official report to Gen. Nishi concerning the work of the Association.

Niuchatung, December 20, 1904.

Chief of Staff, Liaotung.

SIR,—I beg to report to your Excellency the "Tent Work" started here by the Army Department of the Y. M. C. A. in Japan. I shall be very glad if this report be taken into consideration by your Excellency in regard to work of this nature elsewhere. I remain, Sir,

Yours faithfully,

(Signed) Lieut. Col Y. Miyazaki.

Col. Miyazaki's report contains the following observations: "Since the place has been opened it has attracted most of the garrison and commissariat soldiers in this vicinity when they were off duty. The number of soldiers who find it their best resort now averages about three hundred and fifty a day. What the men most appreciate is the writing materials which they receive free. Those that need to can get their letters written by the kind workers there. The two above-mentioned Japanese secretaries are busy from morning till night with letters for the soldiers. Then too there are newspapers, magazines, musical instruments, a gramophone and various other means of amusement. All these are greatly appreciated by the troops, who are remote from their homes, and I am quite pleased to see that these things are not in the least prejudicial to the strict maintenance of discipline. My firm belief is that when this work is fully equipped there can be no better form of recreation and diversion for the soldiers whose hardships and privations it is unnecessary to mention."

FENGWANCHEN:—At the earnest request of the authorities Messrs. Hibbard and Hibi proceeded from Antung to Fengwanchen to open Association work at that point. The following extracts from letters from Mr. Hibbard indicate the encouraging opening and prospects at that point:

Fengwanchen, December 23, 1904.

Our reception was more than could have been desired. We called first on the head of the local military government, then on the couple of other officials whom I had the good fortune to meet in Antung. In the street we met numbers of soldiers who recognized me as "the soldiers comforting foreigner." Everywhere the reputation of the Antung work secured us the most cordial treatment. The commandant of commissariat regretted that he could not provide us permanent quarter at once, but offered to do the best he could for us temporarily. A soldier guided us to a very good room in a Chinese house and set the Chinese to cleaning the same. When we returned from the station with the baggage a cart was at the door and a couple of soldiers were carrying in a great wooden bucket of cooked rice, a parcel of fresh meat, canned fish, a fire box, charcoal and firewood and a lamp. With the facility that comes from practice in that sort of thing we were soon comfortably established.

I have often wondered that a busy commissary commandant, an overworked military railway or other official should find time and patience not only to listen to my requests but to think of little things pertaining to my comfort that I had over looked or disregarded. All this has often brought home to me the fact that we of the West have much to learn from the people of the East.

The second day the Chinese interpreter and the commandant of the commissariat called to show us the buildings which had been offered for our use. We selected one, the location of which is all that can be desired and the arrangement of the rooms offers hopeful possibilities. On our return we found that the military government had anticipated our decision

and posted a notice to the effect that the place was occupied by the Young Men's Christian Association. Closer examination justified the choice. With the benefit of our Antung experience and opportunity offered by the arrangement of buildings, etc., we can develop a much better plant than that at Antung. We will have our own entrance gate, an open court for games, a good room for soldiers to do washing, a good well on the premises, lodgings in the very centre of the whole thing and a separate room for officers. The separate room for officers may suggest invidious distinctions, but it is quite as much in behalf of the men themselves as the officers that we adopt the arrangement. Imagine trying to have a real leisurely good time when at any moment and at frequent intervals you may have to spring instantly to the salute. The officers as a rule are quite willing to dispense with the formality, but by the time they can say so the mischief is done. In the main room is a large kham (Chinese stove) on which we intend to spread matting and get everything up in Japanese style. I think we can get plants and in other ways make the place very attractive. We have two Japanese bathtubs in which we intend to heat water for laundry purposes.

The town is much more interesting, though far less prosperous than Antung. The buildings are old and substantial. Shops face the main streets, and side streets are shut in by high stone walls. At intervals Chinese totem poles advertise the enterprise of leading merchants. During the middle of the day the wider portions of the main street are utilized as markets, and the Chinese fakir, butcher and haberdasher mingle in a right noisy crowd. The military is more in evidence than in Antung, or so it seems to me, for at any hour of the day or night the shuffling tread of marching feet is likely to sound along the frozen streets.

I cannot say too much for the climate. It is simply superb. The nights are cold, but clear and dry. The sky is exquisite, either by day or night, and the moonlight over mountain and plain is wonderful.

Fengwanchen, January 9, 1905.

FENGWANCHEN:—Our work in Fengwanchen has opened with unexpected success. I knew it would be easier here than at Antung, but we have learned some things, and there were enough men sprinkled through the ranks who knew the work in Antung to advertise it, and the result was that it opened with a boom. We have had from 200 to 300 every day and yesterday I spoke to fully 150—all the place would hold and a good many standing outside.

On the second day a captain came in and looked around. A couple of other commissioned officers were in playing games and he stayed for two or three hours. Then he came around and said that he had been a student of the Doshisha for several years. He was interested in Christian work and greatly pleased with our enterprise. "I heard of this thing last night and came right over here to see about it. I am the only commissioned officer in the company at present and I can't talk with the men for this everlasting bowing and scraping. The result is I am pretty lonesome and want company. Some of the men in the company have been frequenting low drinking places in the town and I have winked at it, because there was no other place for them to go, but now I will come down on them hard."

We have a little printed statement of the work for distribution among the men and the day before yesterday a man came in and asked for one, saying "My people have been a good deal worried about me over here, thinking that I had no pleasures and a good many hardships, but I want to send them one of these statements of your work, so they will know about it." A great many send these printed statements home, but he expressed the feeling better than most of them do.

I have a theory, not original, that he is a wise man who when in a foreign country adopts as many of the native customs as he can reasonably. It stands to reason that the people who have tried it have had some experience of value. Well, I have only seen a bed once in nearly five months and I did not have a chance to sleep in that, but the Chinese substitute, a brick and mud affair, is a very sensible contrivance. In the afternoon you build a fire in a hole in the side of the house and the hot air winds through a labyrinth of flues and finally out, but with characteristic oriental economy the Chinaman has managed to squeeze the last available heat out of the smoke, and his bed is warm, not to say hot, for twenty-four hours.

Well, as we have to have this fire any way and had on hand two Japanese bath tubs or water heaters, we decided to supply hot water to any man with a dirty shirt who was disposed to profit thereby. Be it said to the ever lasting credit of the sons of Dai Nippon that this department is second in patronage only to the barber shop.

One of the interesting characteristics of the Japanese as I see him is his ability to get a lot of fun out of everyday affairs. To illustrate: the other day, a chap with some skill at the clippers was furnishing

free hair-cuts to all comers. On the crown he left a single wisp, in the manner that Japanese mothers shave the heads of their youngsters. As he managed to pull a solemn face, the joke had made some progress before it was discovered.

As you may understand, there is no mail service here aside from the army post. We had, of course, no claim on that, but have been permitted to use it under certain merely formal restrictions. I do not think a single letter of mine has ever been censored. But to-day the local commandant told us to go ahead and use the same envelopes that we issued to the soldiers, and that there would be no trouble about it. So here is another point gained.

DALNY:—Three Japanese secretaries have already arrived at Dalny, where they are in active preparations for opening the Association at that point. Mr. George Gleason, Secretary at Osaka, has proceeded to Yingkow, where he will spend a short time assisting the secretaries, from there expecting to proceed to Dalny, where he is to co-operate in the work.

Japanese residents of New York City have recently forwarded \$1,400, which they have gathered as a contribution for the Association Army Department. Several prominent Japanese residents in Tokyo have already made liberal contributions, and others have expressed their intention of doing so. This is particularly encouraging to the Army Committee of the Association as the enlarging work will demand that they secure all the financial aid possible.

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

## THE TROUBLE IN POLAND.

London, February 10.

The hospitals in Warsaw are full and refuse to admit more cases.

## THE RUSSIAN STRIKES.

Despite the official announcement rumours are rife in St. Petersburg that there was a resumption of the strike on Sunday. The whole situation is full of uncertainty.

## SCANDINAVIAN POLITICS.

King Oscar, who is in indifferent health, has transferred his functions to the Crown Prince.

Later.

The King has done so because he is not sufficiently robust to deal with the new crisis arising out of the final disagreement between Sweden and Norway concerning a separate consular service.

## A NEW CHINESE LOAN.

A Chinese 5 per cent. loan of a million sterling will be issued on Friday in London and Berlin at 87.

## CHURCH AND STATE IN FRANCE.

London, February 11.

The Government bill providing for the separation of church and state has been introduced in the French Chamber of Deputies and has been referred to a committee.

## A COLLIER SUNK.

The steamer *Craftsman*, from Calcutta, has collided with and sunk the collier *Congal*, for Hongkong, in Port Said harbour.

AMERICA AND THE CHINESE  
INDEMNITY.

The *New York World* says that the American Government has practically decided to return to China, after the war, twenty-two million dollars of the Indemnity remaining after the settlement of American claims.

LIBERAL WHIP EXPECTS  
DISSOLUTION.

Later.

Mr. Herbert Gladstone, Chief Liberal Whip, has warned all Liberal agents to complete immediately all arrangements for a General Election, as he expects that dissolution may take place at any moment after the opening of Parliament on February 14th.

## THE BALTIC ARMADA.

London, February 12.

Reuter's Port Louis correspondent says

that arrivals from Nossibé report that the Russian Baltic squadron is still there. A conflict has arisen between Admiral Rozdienstvensky and the German companies supplying coal. The Admiral wishes the colliers to follow the fleet. They refuse on account of the too close proximity of the Japanese.

#### THE RUSSIAN STRIKES.

Later.

There is a revival of anxiety in St. Petersburg.

The general strike has been resumed in Warsaw.

#### JAPAN-AMERICA ARBITRATION TREATY.

The Japan-American arbitration treaty has been signed at Washington.

#### THE CHINESE LOAN.

There was a great rush of subscribers to the Hongkong and Shanghai Bank loan (raised for the Chinese Government, as mentioned in the cables of the 10th inst). The crowds that collected were so dense that the police had to be called upon. The issue of the loan closed immediately, instead of remaining open till Monday. The loan was largely over-subscribed.

#### THE THIRD BAL TIC SQUADRON.

London, February 13.

The third Baltic squadron has been ordered to be ready to sail immediately.

#### ST. PETERSBURG OVERAWED.

Yesterday passed quietly at St. Petersburg, the strikers being overawed by the display of military force.

#### POLAND STILL UNQUIET.

The situation in Poland still remains serious.

#### GERMAN NEUTRALITY MAINTAINED.

Five Russian cruisers anchored in German waters in Damaraland (?) were ordered to leave and complied.

#### INSUBORDINATE RUSSIANS.

London, February 14.

A certain amount of insubordination prevails among the third Baltic squadron. A sailor was shot on Saturday for stabbing a Lieutenant.

#### RAILWAY ENGINES FOR JAPAN.

The Japanese Government has placed an urgent order for fifty locomotives in Glasgow.

#### THE U.S. SENATE AND THE ARBITRATION TREATIES.

Later.

President Roosevelt and the U.S. Senate have reached a disagreement concerning the arbitration treaties which Mr. Secretary Hay had labouriously concluded with Japan, Great Britain and several other European Powers. The Senate disregarded the strong pressure brought to bear by President Roosevelt and inserted an amendment by a vote of 50 to 9 securing its right to intervene before any question is submitted for arbitration. Consequently President Roosevelt has resolved to drop the treaties altogether.

Public opinion apparently endorses the action of the Senate.

#### VLADIVOSTOCK IN STATE OF SIEGE.

London, February 15.

It is announced in St. Petersburg that a state of siege has been proclaimed in Vladivostock.

Part of the inhabitants hurriedly left.

#### THE RUSSIAN DISTURBANCES.

The situation in Russia is somewhat more hopeful. At Lodz workmen in many of the factories have resumed work.

#### OPENING OF THE BRITISH PARLIAMENT.

The British Parliament was opened yesterday.

Speaking in the House of Commons, Sir Henry Campbell-Bannerman, the Liberal leader, said that the fiscal question still overshadowed everything else. He vigorously condemned the Government for clinging to office, though the feeling of the country had demonstrated indubitably that the prolongation of the present situation was a public danger and an usurpation of power. With reference to the war, he hoped that Lord Lansdowne would embrace the earliest opportunity of using England's influence on the side of peace. He said that the Tibet Expedition had been a tragic comedy, and asked why the Government's censure on the Political Agent was not carried higher.

In the House of Lords, Earl Spencer, the Liberal leader, said he trusted that the Government would not lose any opportunity occurring in trying with the other Powers to bring the war to a peaceful solution.

#### LORD LANSDOWNE ON MEDIATION.

London, February 16.

Speaking in the House of Lords, the Marquis of Lansdowne, Principal Secretary of State for Foreign Affairs, said that ill-considered intervention in the Russo-Japan war would be likely to be fraught with the worst results. It was unnecessary for him to say that should an opportunity offer the British Government would avail itself thereof with alacrity.

#### TALK OF DISSOLUTION.

Mr. H. H. Asquith will move in the House of Commons that the fiscal question having been discussed by the nation for two years, the time had now come for submitting the issue to the country without further delay. With reference to Sir Henry Campbell-Bannerman's suggestion that the ministry should resign, Mr. Asquith said that this was a matter which rested with the House of Commons. The discussion of the fiscal question in the present parliament would be irrelevant. He taunted the Opposition (? Government) with being thrown into a state of confusion about their future programme.

(Received at the Imperial Military Head Quarters on the afternoon of the 9th.)

#### NEWS FROM THE FRONT.

Yesterday (8th instant) the enemy's guns fired from near Hanchingpau at the railway bridge north-west of Lamutun and from Nienyupau in the direction of Yentaitz. On the night of that day about a company and a half of his infantry advanced against the highland north-east of Changlingtsz and against Fangshin. He was repulsed. To-day (9th) his artillery bombarded the south bank (of the Shaho) at Waitanshan from the south-west of Sanchingtszshah, and also cannonaded Titishan from the north-west of Tangkiatunshihshan.

(Received at the Imperial Military Head Quarters, on the forenoon of the 11th.)

At about 9 a.m. on the 9th a detachment of our troops occupied the highland south of Changchisai. Some two double companies of the enemy's infantry stationed there retired in the direction of Changchisai carrying one dead and 10 wounded.

On the afternoon of the same day the enemy's artillery posted on the hills northward of Tangkiatun, at Sanglantsz, on the hills north-west of Wanpaoshan, at Hanchingpau and at Mentapau cannonaded our positions.

Again on the 10th his field guns at Shaho-

pau and Hanchingpau and his heavy guns at Mentapau cannonaded us.

Up to to-day (10th) the Russian dead buried by our men in the Heikautai region number about 2,000. We have taken 2,000 rifles.

(Received at the Imperial Military Head Quarters on the afternoon of the 11th.)

On the night of the 10th a company of the enemy's infantry marched against Waitaushan but was repulsed.

On the same day the enemy's artillery at the western base of Tashau and near Shahopau fired on Putsaowa.

On the 11th at 6 a.m. about a company of the enemy's infantry attacked Litajentun but was at once repulsed. For the rest, his guns, heavy and field, kept up a desultory fire on Litajentun and Yupatai (about 2½ miles west of Litajentun).

The enemy in the Wankiyuantsz and Litajentun region is busily entrenching, and seems to have extended a light railway as far as Hsiaofangshin (2 kilo. east of Mentapau).

#### THE KINGKING\* DISTRICT.

(Received at the Imperial Military Head Quarters on the afternoon of the 12th instant.)

[\* This is the first time that the term "Kingking district" occurs in official reports. Hitherto the expression used has been "Hanchang District." If our readers consult the map published by us on December 22nd they will find "Kingking"—there written "Kingching"—on the road from Hwaijen to Fushun and about mid-way between the two. It is far north of Hanchang.—ED. J.M.]

A detachment of ours surrounded some 20 of the enemy's cavalry at a place about 7½ miles west of Hanchang, and killed 3, wounding 11. We carried away 3 horses, 11 bullocks and 40 sheep.

#### THE SHAHO DISTRICT.

On the night of yesterday, the 11th, the enemy's artillery posted at Shanchutsz, near Shahopau and near Hou-Mahulingtsz (about 2 kilo. north-west of Hwanglatschetsz) cannonaded our positions, and his heavy guns near Paohsiangtun opened a desultory fire on Yapatai.

The enemy in the direction of Wankiyuantsz and Chenchichpau continued his defensive works. He has built a 24-gun breast-work on the south-west of Mentapau.

According to a Russian official report, the Colonels of the Second, Third and Sixth Regiments of Rifles and the officer who commanded the Second Brigade of Rifles were wounded in the Battle of Heikautai.

(Received at the Military Head Quarters on the afternoon of the 13th.)

#### THE SHAHO REGION.

At about 10 a.m. on the 12th the enemy's artillery cannonaded Waitaushan. Simultaneously a company of his infantry attacked Waitaushan but was repulsed.

On the night of the 12th a company of the enemy's infantry attacked Waitaushan and Tsen-sungmupautsz (about one kilo. east of Waitaushan), and at 10 a.m. on the 13th a small body of his infantry attacked Yapatai and Hanshantai. These were all repulsed.

In the Heikautai the enemy continues to carry on defensive works. There is nothing else to report.

(Received at the Military Head Quarters on the forenoon of the 15th instant.)

On the 13th the enemy's artillery bombarded our position from the east of Tashan, from the highland west of Wanpaoshan, from Sanglantsz, from Talientun and from Hwangchi. On the 14th he cannonaded us from the highland west of Wanpaoshan, from Mentapau and from Shahopau.

In the direction of Chitaitz on the after-

noon of the 14th instant some two companies of the enemy's cavalry entered Laohwanto from Rhshtsz. Another body of his cavalry, two companies strong, advanced from Pingfang towards Tahcha, and yet another body, numbering from 8,000 to 9,000 sabres with artillery, proceeding southward from Pingfang, are now (6 p.m. 14th instant) about to advance to the left bank of the Hun from a point about 15 miles south-west of Chitaitz.

The enemy continues his construction of defensive works in front of Litajentun, Lingshingpau and Heikautai.

(Received at the Military Head Quarters on the forenoon of the 16th.)

#### SHAHO DISTRICT.

On the 14th our artillery cannonaded Tsen-sungmupautsz and set the village on fire. The enemy's artillery at Sanching-shantsz replied.

On the night of the 14th about one company of the enemy's infantry attacked Waitaushan, and on the morning of the 15th the attack was continued by about a battalion of his infantry. He was repulsed.

#### CHITAITSZ DISTRICT.

On the forenoon of the 15th about 500 of the enemy's cavalry entered Santaitz from Shangtsaimun (a place about 2½ miles north-west of Chitaitz). On the night of the 14th the enemy who had pushed southward along the west bank of the Hun, bivouacked at Chenkiawatz (about 10 miles south west of the Taitz River where it joins the Hun). Its scouts were thrown out to Kauchangtsz (about 2½ miles east of Chenkiawatz). Therefore a body of our troops advanced, with the intention of driving back this force, and was just about to attack when the enemy began to retreat to the north. We at once pursued in the direction of Heiyukau (about 7½ miles west of the Taitz) and inflicted some loss. The enemy planted artillery at Wangkiapoweng (about 10 miles west of the Taitz) to cover his retreat, which he continued. He seems to have had about 10 sotnias with artillery.

According to a Russian official report General Stackelburg, commander of the First Siberian Army Corps, and the Colonels commanding the Third, Thirty-third, Thirty-sixth and Nineteenth Regiments of Siberian Rifles were wounded.

(RECEIVED AT THE FOREIGN OFFICE.)

#### WAR TOPICS.

According to Reuter, Kuropatkin has sent the following telegram:—"On the 4th of February during the night and on the 5th a body of Cossacks from our left wing with some volunteers attacked a village occupied by the enemy and with bayonets and spears killed 50 Japanese. At dawn the Japanese infantry approached, and our detachment accordingly retired. It had completed its object without any loss and it carried off one prisoner."

(This is too complete as a tale. The experiences of the war do not incline us to believe that a detachment of Cossacks could kill 50 Japanese in a hand-to-hand fight without incurring any loss themselves. Otherwise the story is consistent with custom. Russian so-called victories always end in retreats.—Ed. J. AL.)

Reuter telegraphs that the strike continues in Warsaw and the neighbouring districts. In the two towns of Lodz there were riots on the 6th and 7th, and some were killed and wounded. Also in Tschentochow the strikers have reached 25,000. At Radom and its neighbourhood riots have taken place, and over 80 men have been killed or wounded. At Kutno the strike commenced on the 6th instant. At Tiflis there was a

riot on the 6th and 11 resulted in several casualties. The strike is spreading along the railway across the Caucasus and work has been stopped at Batoum.

The tone of the French journals towards Russia is gradually changing, specially since the recent strike. The *Humanité*, which is a socialist organ, openly condemns the Franco-Russian alliance, as need hardly be said. From *Le Temps* and the *Petit Parisien* downwards all the moderate journals, and even the Russophil *Echo de Paris*, no longer maintain their habitually reserved attitude, but daily publish telegrams and letters describing the disordered condition of the Russian Government. The *Petit Parisien* in its issue of the 5th instant published a telegram from St. Petersburg dated the 1st of February which gave the main points of an interview with a certain person of high standing in Russia. He vehemently declared the war to be a disastrous and senseless business, and said that the only way to prevent a revolution was to make peace with Japan.

Most of the Berlin newspapers publish articles with reference to the war during the past year.

The *Local Anzeiger* recounts the events of the war on land and on sea, and after congratulating the Japanese on their successes, says:—"The Russo-Japanese war during the first year of its course has very unhappy results to show for the Russians. No one places any confidence in the Baltic Squadron which has set out for the East. The domestic disturbances in Russia and the constant defeats of her army constitute a very heavy burden for the latter. Moreover, the indications now clearly shown of dissensions among the superior officers and much to the future difficulties of the military situation. Whereas Japan enters upon the second year of the war with rejoicing and confidence, the Russian Army and the Russian people see doubts and disquiet confronting them in the future."

The *Vossische Zeitung* says:—"Russia might have avoided this war which has led to such a loss of her power and prestige on the two continents of Europe and Asia. It is widely known how much the Tsar loves peace, and the responsibility for having brought about the war rests on those who at the time administered the Government. The Japanese, previous to the rupture, showed patience deserving of the highest admiration in their attitude towards Russia's policy of expansion, and that Japan, on the 6th of February last year finally broke off diplomatic relations was altogether inevitable. At that time every day's delay meant a day's material loss for Japan as regards the military situation, and therefore not an hour's hesitation was permissible. It is true that Japan began the war but the responsibility rests on the Russian Ministers of the Crown. Ever since the summer of 1903 they had abused to the extreme limits the patience of the Japanese, and had shown their contempt for Japan's military power and for her warlike preparations."

#### RUSSIAN STRIKES.

According to a Russian telegraphic agency the employers and employed have failed to come to an understanding at the Pechelof works and the strike recommenced from the morning of the 16th. There are apprehensions that it will spread.

#### RUSSIA.

On the 10th instant the troops quelled the strikers in Lotz shooting down over a hundred of them. Again on the 9th instant there was a strike in Tosna and the troops opened fire on the strikers killing or wound-

ing over 100. In St. Petersburg several thousands of strikers, belonging chiefly to the Puchiloff factory, have again gone on strike. Their principal demand is that their working day should be reduced to 8 hours.

#### THE BALTIC FLEET.

A Reuter's telegram from Port Louis dated the 10th instant, says that according to the statement of a person who left Nossé Be on the 2nd and reached Mauritius on the 10th, the Baltic Squadron was still in Nossé Be on the 2nd. A difficulty had arisen between Admiral Rodjestvensky and the Russian colliers, the latter being unwilling to go beyond Madagascar.

#### KUROPATKIN'S REPORTS.

Kuropatkin telegraph as follows:—

On the 8th of February at 11 p.m. the Japanese troops approached to within 2 versts of our left and assumed the offensive. We repulsed them on the 9th at 5 a.m. Subsequently on the same day at 7 a.m. they again assumed the offensive and we again repulsed them. We had 5 casualties.

#### VLADIVOSTOCK.

According to the Russian *Official Gazette* Vladivostock is made a first-class fortress and General Kazbeg (?) is appointed to command it.

A telegram from Vladivostock to Russian newspapers says that all non-combatants have been ordered to leave the place.

#### THE PEST.

Bombay, February 10.

Pest has appeared at Rangoon, and there have been many fatal cases. The disease is, as usual, rampant in Bombay.

#### ARBITRATION.

On the 4th instant the Anglo-American Arbitration Treaty was signed in Washington. It will be published in a few days.

#### THE BALTIC FLEET.

A Reuter's telegram from Port Louis dated the 11th instant says that the Baltic Squadron will not leave Nossé Be until the end of February. Seventeen transport steamers will accompany the Squadron.

#### THE TSAR AND THE STRIKE.

According to a Reuter's telegram the Tsar, on the 12th instant, issued an ukase ordering that steps should be immediately taken to investigate the origin of the discontent among workmen in St. Petersburg and the provinces, and to consider means for averting the recurrence of such troubles; the Government officials concerned, the employers and representatives of the various bodies of workmen to form a committee for the purpose.

#### RUSSIAN FINANCE.

According to Wolf's telegram an Imperial ukase issued by the Tsar announces that in addition to three-per-cent. Treasury bonds amounting to 12 million roubles which fall due for redemption on the 1st of February (Russian style), 38 million roubles, worth will be redeemed, but at the same time there will be two new issues each of 25 millions. These new issues will carry 3.6 per cent. interest and will be redeemable in 4 years.

#### RUSSIA AND MEXICO.

A telegram from Mexico says that since the fall of Port Arthur, public opinion in that country has changed and most of the newspapers write in an anti-Russian strain. On the 8th of February the Russian Minister in Mexico addressed a long letter to the *Mexican Herald* defending his country. He claimed that Japan had been instigated by England to make war on Russia and that although she claimed to be acting in self-defence her real object was to give

effect to her own ambition. He further declared that although Russia had hitherto sustained a series of defeats, there could be no doubt that her national resources would ultimately win for her the victory.

The editor of the same journal in his issue of the 10th instant ridiculed this letter. He clearly explained Japan's reason for going to war and her object; declared that she acted entirely in self-defence and was not instigated by the shallow motives attributed to her by the Russian Minister, and predicted that if Russia were beaten at Mukden, her internal disturbances would incapacitate her for making further head against Japan, and the Tsar would have to sue for peace.

#### CUSTOMS PROTEST.

The Director of the Yokohama Customs delivered a decision on Feb. 16th in regard to a protest by Mr. F. Owston. He imported "electric lamps" and "insulated brackets" on which the appraisers imposed 20 per cent. *ad valorem* duty in accordance with Nos. 452 and 497 respectively of the tariff. The importer contended that they ought to be dealt with under No. 10 of the tariff and the duty should be 10 per cent. The protest was not sustained on the ground that No. 10 of the tariff refers only to parts of apparatus, and that the Minister for Finance had already given a decision in a similar instance.

The same day, the Director rendered another decision on a protest by Messrs. Paul Schramm and Co., No. 202, Yokohama. The firm imported mixed linen and jute cloth on which the Customs authorities ordered them to pay 15 per cent *ad valorem* duty under No. 357 of the tariff. The importers held that goods should be treated under No. 354 of the same tariff which provides "flax or linen canvas" and the duty should be 10 per cent per square yard as the certificate of origin was attached. The protest was dismissed on the ground that the quantity of linen in the tissue predominated in weight.

#### NEWS OF THE WEEK.

The French evacuated Chantabun on the 8th ult.

Eight hundred Russians were brought on Feb. 12th from the front to Moji. They were sent to Ninoshima.

On Feb. 14th, 1,200 Russians including 73 officers, arrived at Nagasaki from Port Arthur. The officers left for Shanghai by a French steamer.

An engineer of the Russian cruiser *Retvizan* and our refugees from Port Arthur arrived on Feb. 13th at Nagasaki from Shanghai on their way home via America.

Feb. 15th was *Nehan*, the anniversary of the death of Shaka, the founder of Buddhism. The weather being fine, all the temples were visited by crowds praying for happiness in the next world.

Bluff Lots Nos. 251 and 261 were offered for sale by public auction on Wednesday afternoon by Jno. W. Hall. Lot 251 realized the sum of yen 18,500, Lot 261 being withdrawn at yen 17,500.

A telegram from Matsue reports that the crew of the small steamer *Toba Maru*, which is at Mihonoseki, started a quarrel among themselves on Feb. 13th. One of them was killed and two were severely wounded.

The Transvaal gold-mining companies disbursed £3,908,670 in dividends for the year 1904. The total amount paid in dividends by mining companies, including coal companies and the Premier Diamond Co., was £4,750,000.

Another of the very enjoyable teas given by the Board of Managers of the Ladies' International Reading Room came off in the Association's room at the Public Hall on Monday afternoon. There was a very representative attendance and

after tea two banjo trios were given as well as a reading by Mr. L. D. Tebb, who took for his subject the "Wee McGregor's" adventures with the photographers.

Five sets of new War picture Postcards have recently been issued by the Communications Department and will be on sale on and after the 11th inst. at Japanese Post Offices or postal agencies, at the price of 5 *sen* per set of 3. They can be used for both Domestic and foreign postage when the charge is prepaid by means of postage stamps, i.e. 1½ *sen* and 4 *sen* respectively.

Captain Feyen, of the N. D. L. steamer *Sachsen*, who, on his last trip to the East brought out Prince Karl Anton of Hohenzollern, has been decorated, in connection with that voyage, by the Kaiser and the father of Prince Karl Anton with the Order of the Prussian Crown and the Knight Cross of Hohenzollern. The German Minister, Count Arco-Valley, gave a tiffin, on Wednesday at the Oriental Palace Hotel, Yokohama, in honour of the event.

The *Kobe Herald* of Feb. 9th regrets to have to record that Mr. H. R. Raspe, of Messrs. Raspe and Co., was found dead at the office of the firm that afternoon under circumstances which showed that he had died from a bullet wound self-inflicted. The deceased gentleman had suffered for some time from disorder of the nerves and it is believed that this fact is responsible for the sad event. Great sympathy will be felt with Mrs. Raspe in her great affliction.

According to official investigations, convicts, etc. in prison throughout the Empire are as follows:—

	Dec. 31, 1904.	Dec. 31, 1903.
Convicts.....	52,384	54,946
Convicts in penitentiary .....	461	361
Convicts under special detention ...	67	293
Infants with mothers .....	67	111
Awaiting trial.....	3,724	7,522
	56,703	63,233

Mr. Clarence Griffin's Magic Lantern Entertainment for the little folks at Van Schaick Hall on Saturday afternoon proved very delightful. The Hall was packed with wee men and women—and many of a larger growth—who thoroughly enjoyed their trip to Siam, the Malay Peninsula, Canada, the English Lakes, etc. Mr. Griffin promises to repeat the entertainment shortly, which is good news. We believe he devoted the proceeds, after expenses are paid, to the Yokohama Blind School, a very deserving charity.

A Nagoya correspondent of the *Kokummi* reports that Lieutenant Martinie, Naval Attaché of the French Legation at Tokyo, on Feb. 8th transferred to Major-General Elmann a telegram received from General Stoessel, despatched from Saigon on his way home. The late Commander of Port Arthur decorated the officer with the Fourth Cross of St. George in appreciation, of his excellent services at the 203-Hill. The correspondent adds that Major-General Elmann was promoted to his present rank after the battle of Ninchow on May 13th. When the Japanese closed round the fortress he was ordered to command the left wing. During the desperate attacks from the 2nd to the 9th of August he held his post though five companies were killed, leaving only two hundred wounded. The hill, however, was at last captured by the besiegers.

The funeral of Sergeant Shibata, six men of the army, and a bluejacket who died at the front in the various engagements took place on Sunday, February 12th, at the Buddhist temple Seishoko, Fukutomi-cho, when officials of the local government and representatives of various bodies were present. There was the usual procession. The day being fine and many people having left their business, the procession was very large—larger than has ever been seen in the city. At 1 p.m., the cortege started from the Buddhist Temple Hongwanji, Umegai-cho, where locks of hair belonging to the deceased, which

had been sent from the front, had been taken in caskets. The procession proceeded through Yanagi-cho along the canal, Sumiyoshi-cho, Bashamichi and Yoshida-machi. When it reached Fukutomi-cho bombs were sent up in the compound of the Seishoko temple. Many soldiers who are now in Yokohama, awaiting the arrival of transports, were also present at the obsequies and one of them, who seemed to be a man of good education, delivered a speech in which he said that the deceased set a good lesson to their comrades by their death and that the Japanese would never be taught to surrender.

#### THE INTERPORT RUGBY MATCH.

##### YOKOHAMA WINS BY THREE TO NIL.

Kobe has seldom seen a more perfect afternoon than that of last Saturday, when the Rugby Football Match between Yokohama and the home port was played. A gentle wind was blowing from the West, slightly in favour of the visitors, who, winning the toss, elected to play from windward. The teams were composed as follows:

YOKOHAMA.		KOBE.
Robertson	Backs	Warren
Van Smith		Carst
H. W. Kilby	3/4	Comrie
D. Weed		Whitmore
Stornebrink		Wheeler
Hayward	1/2	G. H. Moss
T. W. Kilby		Lucas
W. S. Moss		Murray
Ward		Scudamore
W. J. White	Forwards	C. L. Spence
W. B. White		Kilpatrick
Kingdon		Cornes
Hills		Williams
Austin		Graves
Hearne		Rankin

Upon comparison the Yokohama team appeared to have the advantage in point of weight, Kobe perhaps having, from our point of view, too much valuable weight behind the scrum.

At 3.15, Murray kicked off, the ball being immediately recalled for scrum. From this there was a knockout, resulting in close play, which was the order of the day for some time. Yokohama then gained some slight advantage in kicking out, coming well into the home 25 yard limit. The ball soon after went into touch, and a scrimmage took place within 5 yards of the home team's line, Kobe saving nicely, and carrying the sphere outside their 25.

From a throw in Kobe obtained the ball, and, from a drop kick, they worked into the Yokohama 25 line. From a scrum in front of Yokohama's goal Kobe kicked, the ball going behind, and Yokohama was close pressed, only saving by touching down. Immediately after the kick from quarter the ball came into play in centre-field. Some wild play followed to the advantage of neither side till Whitmore punted out to Kobe's advantage, the ball, with the combined efforts of Murray and Spence, being carried into the Visitors' territory. Soon a foul was claimed by Yokohama, and the Umpire allowed the penalty.

The ball being returned, Whitmore made a pretty sprint for 50 yards, being downed just outside the Yokohama 25 limit, close play in front of the Yokohama goal following.

So far the play seemed to be in favour of the home team. The ball going back, Carst kicked nicely out of bounds, a sharp scrum following from the throw in. Whitmore, here kicking into touch, forced Yokohama to save again. Thereafter the play was close up to the Yokohama line, Comrie playing brilliantly. From a throw in at the centre the ball was transferred to the Kobe 25, and, soon after, from fouls, Yokohama marked twice in quick succession.

Here the game was broken short in sympathy with the obsequies of Mr. Hans Raspe, the play recommencing when the funeral cortege had passed. Yokohama kicking from their latest mark into the Kobe 25, a scrum resulted, and Warren saved happily by a kick out.

Yokohama was here penalised for a foul, Murray kicking out. Hard scrumming resulted within the Kobe 25 line, while for the visitors here playing well and hard, Kilby assisting. The play at this stage was all in middle field, soon afterwards being transferred to Yokohama's territory. Lucas got the ball but passed wildly, to Yokohama's advantage, Warren saving by kicking out. Wheeler here put in good work, forcing the ball into Yokohama's ground, and subsequently doing nice work. Stornebrink with a short run did valorous service for the winners.

##### HALF TIME.

Some sharp play then took place within the Kobe 25 line with no advantage to either side and half time was called, the first half of a deadly uninteresting

ing game resulting slightly in Kobe's favour as the heavier team. Yokohama kicked off after the interval, and made good play inside the home 25 line, a nice kick from Murray sending the ball well down the other end of the field, where it was subsequently kicked into touch. Soon after Whitmore did yeoman's work, Kilby responding for Yokohama, and punting out prettily, the ball being carried close up to the Kobe goal-line, where it remained for some time, scrum following scrum with tedious repetition till Hayward got the ball and put in an effort for Yokohama, but without result.

Jack Lucas soon after saved Kobe from an awkward predicament, kicking out nobly just at the right time. Yokohama, represented by Van Smith, here took a mark from a foul, and Moss, kicking from place, negotiated a goal, but not without difficulty, the ball striking the post in its journey.

Score 3 to nil in Yokohama's favour.

After some close fighting right on the Kobe goal-line, Van Smith got the ball out and made a fine rush, but failed to do much good. A nice long kick into touch from Lucas resulted in a scrum in Yokohama's quarter line, and soon after Murray, with a nice long drop, seemed about to help Kobe, but there was nothing to back him up. Directly after this the two Kilbys took practically their first hand in the game and with a nice little run and good passing took the sphere into Kobe's ground. Soon the final whistle blew, leaving the game in Yokohama's hands as victors by three points to nothing.

This interpart match was perhaps one of the most uninteresting we have ever watched, the play being close the whole way through. There was practically no passing, and individual effort was limited upon either side to two or three, for Yokohama Van Smith and the Kilbys, and for Kobe Whitmore, Comrie and Murray. Mr. Jeffrey, as umpire, gave unbounded satisfaction, but was kept busy with the whistle throughout the game by the unreasonable amount of throwing forward by both teams.

To-day's match cannot, by any stretch of the imagination, be called an interesting one from the on-lookers' point of view.—*Kobe Herald.*

# FOR BABY'S SKIN

## SCALP AND HAIR

### Something for Mothers to Think About

EVERY CHILD born into the world with an inherited or early developed tendency to distressing, disfiguring humours of the skin, scalp, and blood, becomes an object of the most tender solicitude, not only because of its suffering but because of the dreadful fear that the disfigurement is to be lifelong and mar its future happiness and prosperity. Hence it becomes the duty of mothers of such afflicted children to acquaint themselves with the best, the purest, and most effective treatment available, viz., THE CUTICURA TREATMENT.

Warm baths with CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, gentle anointings with CUTICURA OINTMENT, to instantly allay itching, irritation, and inflammation, and soothe and heal, to be followed in the severer cases by mild doses of CUTICURA RESOLVENT PILLS (see below), to cool and cleanse the blood, are all that can be desired for the alleviation of the suffering of skin-tortured infants and children and the comfort of worn-out, worried mothers. A single set is often sufficient to cure when the best physicians fail.

### Millions of Women Use Cuticura Soap

Assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itchings, and chafings, in the form of baths for annoying irritations and inflammations, or too free or offensive perspiration, in the form of washes for alderic weaknesses, and for many sensitive, and delicate purposes which readily suggest themselves to women, especially mothers, and for all the purposes of the toilet, bath, and nursery.

CUTICURA RESOLVENT PILLS (Chocolate Coated) are prepared to meet the wants of delicate women, and sensitive children, and are pure, sweet, and tasteless. They are beyond question the most successful blood purifiers and humour cures yet compounded.

CUTICURA REMEDIES are sold throughout the world. Australian Depot: R. Towns & Co., Sydney. British Depot: 37-39, Charterhouse Sq., London. French Depot: 4 Rue de la Paix, Paris. Forth & Co., Glasgow. Sole Agents, Boston, U. S. A.: "All about the Skin," Free.

## WASTE SILK.

As the close the tone of the market is slightly weaker; goods now arriving from the interior, chiefly from Southern Japan, are offering freely at lower prices owing to their uncertain quality. Desirable qualities of waste silk are on the other hand firmly held.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 25TH, 1905.

## BIRTH.

On the 22nd February, at No. 127-B Bluff, Yokohama, the wife of HANS TEMME, Esq., of a Son.

## DEATHS.

At No. 15, Dote Sanbancho, Kojimachi-ku, Tokyo, on Saturday, the 18th Feb. at 5.30 p.m., Dr. F. W. EASTLAKE.

At 159, Motomachi, Yokohama, on Sunday, the 19th inst. at 8.15 p.m., INOUE SHIGESABU, aged 61 years.

## SUMMARY OF NEWS.

A CASE of small-pox was reported on Feb. 22nd at Kobe.

A CASE of small-pox was reported in Osaka on Feb. 22nd.

M. GERMAIN, President of the Credit Lyonnais, is dead.

A CONFERENCE of local governors will be held on Feb. 24th or 25th in Tokyo.

A DEAD rat infected with plague has been found at the Fukagawa Urban Office, Tokyo.

WEDNESDAY was George Washington's Birthday, and as such was duly celebrated by Americans.

A HUNDRED and seventeen Russian non-combatants, including 21 women and 15 children, were removed on Feb. 20th from Port Arthur to Chefoo,

where they were delivered to the Russian Consul in the presence of the Japanese representative.

A LONDON telegram to the *Jiji* says that the British police authorities intend to adopt jujutsu.

ON Feb. 16th, 16 fresh cases of small-pox were reported at the village of Misaki near Matsuyama.

TOKYO papers report that some fifteen thousand invalid Russians are still in hospital at Port Arthur.

VICE-ADMIRAL MATSUNAGA left Tokyo on Feb. 21st for western cities, probably on his way to the front.

THE work of floating the Russian cruiser *Varyag*, sunk at Chemulpo, will be recommenced in March.

A VERY heavy fall of snow was experienced over a wide area of Japan on Sunday, Monday and Tuesday.

THE Interport football match between Kobe and Yokohama takes place at the latter port on March 11th.

PEACE rumours are gathering strength, and Reuter affirms that it is only the question of an indemnity that blocks the way.

THE American Minister at Peking, who had been for a trip to Manila, arrived on Feb. 21st at Nagasaki on his way back to his post.

A DANCE given on Friday evening at the Kobe Gymnasium for the benefit of Mr. Rizetti and his band realized a net amount of about yen 200.

OWING to the heavy snow, a house in the village of Minezawa, near Aomori, was crushed on Feb. 19th and one of the occupants was killed.

VICE-ADMIRAL OMOTO, who was under treatment in the Naval Hospital at Saseho, was discharged on February 16th. He will leave shortly for Tokyo.

THE Nippon Life Insurance Company, Osaka, held a general meeting on Feb. 18th, when the net profit of the latter half of 1904 was declared to be yen 587,339.

A TELEGRAM from Taipei, Formosa, reports that on Feb. 20th, some savages attacked the native village of Palichow in Yiran province, and killed eight of the villagers.

A GERMAN medical professor has arrived at Nagasaki in company with a doctor and a nurse. Their purpose is to inspect the work of the Japanese Red Cross hospitals.

THE Emperor and Empress have distributed yen 5,000 among the families of the crew and passengers of the steamer *Natori-gawa Maru*, which recently sank at Osaka.

MR. KAWAGUCHI YEIKAI, the Buddhist priest, now on his way to Tibet, is at present in Nepal. The *Jiji* contradicts a report that he proceeded to Tibet with a letter of introduction from Lord Curzon, Viceroy of India.

THE death is announced at Kobe of Mr. W. Down, of the Club Hotel, Akashimachi. Mr. Down, who was formerly in the employment of the Nippon Yusen Kaisha, was well known to old residents of Yokohama.

THE steamer *Hinode Maru* which has been built at the Tsukijima Yard, was launched on Feb. 19th. She is 180 gross tons, 102 feet in length, 17 feet in width, 125 feet in depth and makes 10 knots. The trial trip will take place

on March 10th. She will be employed on the service between Tokyo and Idzu.

A TELEGRAM has been received in Tokyo that the Duke Abruzzi, who left Italy in the beginning of February for Japan, has returned home on account of the illness of the Duchess.

M. GOUDARREAU, French Consul at Nagasaki, paid a visit on Feb. 16th to the Russians detained at Daisi, near Kokura. On the following day he was to leave for Hiroshima for a similar purpose.

MAJOR-GENERAL N. KAMADA has been ordered to command a brigade at the front, succeeding Major-General Tanabe, who was wounded at the recent battle of Heikautai. The latter will return shortly to Awamori.

THE funeral of Lieut.-General Matsumura took place on the 19th at Aoyama Cemetery, the cortege leaving his residence at 1 p.m. The Ministers of State, high officers of the Army and Navy, and some foreign notables were present.

A NAGASAKI telegram states that the American Consul there gave a banquet on the night of Feb. 22nd at the Consulate to various Japanese and foreign notables. Admiral Samejima, Commander of the Saseho Naval Station, was among those present.

GERMANY is introducing Chinese labour in Samoa, according to the *Cologne Gazette*, which says 600 coolies have been collected at Swatow, China, awaiting transshipment to Samoa. The German Government pays half the cost of the transportation of the labourers.

MR. J. A. HAMILTON, chief engineer of the British steamer *Scotchman*, which was recently captured in the North Sea, and which is under examination at Yokosuka, was released on Feb. 20th on account of illness. He arrived at Yokohama the same day for treatment.

GENERAL BARON OKAZAWA chief Aide-de-camp to the Emperor, who had been in the district of the Shabo under instruction from His Majesty, enquiring as to the hardships and health of the men, arrived on Feb. 20th at Yinkow. The following day he left for Dairen on his way home.

S. YONEKURA, a teacher of the Tsuchiai Primary School, in the district of North Adachi, Saitama prefecture, on the morning of Feb. 21st murdered his wife and his wife's mother and son by beating them with a large stick while they were asleep. The murderer gave himself up to a policeman. The cause is not yet known but it is believed to be temporary insanity.

WITH the object of meeting the demand for alcohol in Manchuria and Korea, which is reported to be very large, Mr. D. Kamiya and some prominent sake brewers in Tokyo and Osaka intend to establish an alcohol distillery at Seoul with a capital of two million yen. It is said by the *Nichi Nichi* that the Korea Court has promised to subscribe for shares in the proposed factory.

THE Tea Guild of Shizuoka have held a six days' meeting, ending Feb. 21st. Among other decisions the following were passed: to pay yen 1,500 as expenses for improving tea manufacturing machinery; to pay yen 5,000 for sending abroad an expert to report on the preference of customers and to encourage business; yen 1,500 for advertising charges in foreign newspapers; yen 5,000 with which to send samples to the Portland Expedition; and yen 1,600 to assist a student who will leave for America to investigate the agricultural industry.

Friday, February 24.

Telegrams from Yingkow indicate that there has been another cavalry raid in the same district as that where Mischenko's troopers made their appearance early in January. It is a little difficult to follow the somewhat confused statement of place-names contained in the messages, but, if the news be credible, one fact emerges quite clearly, namely, that the Russians have again totally disregarded China's neutrality. They have actually marched down to the railway which connects Yingkow with Shanhaikwan and have advanced as far along the line as Tienchwangtai, while their main concentration is at Chankiatun, a point still further west and also on the line. On the 21st instant a body of some 3,000 troopers with guns attacked Takaukan, which will be remembered in connexion with the recent raid on a place midway between Yingkow and old Niuchwang. These 3,000 were immediately repulsed by the Takaukan garrison. They seem to have been merely a detachment, and we must assume that a very large cavalry force is at Tienchwangtai and Chankiatun. It is stated that some damage was done to the railway but that it was quickly repaired. Of course by the term "railway" in this context we understand the line which is in Japanese hands, namely, the line from the Liaotung Peninsula to Mukden. The other railway, running west from Yingkow to Shanhaikwan through Tienchwangtai and Chankiatun where the main body of the Russian cavalry are said to be posted, is not in Japanese hands and has nothing to do with the war. A body of volunteers has been formed, or is in process of formation, in Yingkow. The *Asahi Shimbun* has at present a monopoly of this intelligence and we find much difficulty in crediting it in the absence of official news.

In the face of Russia's recent circular about China's neutrality, this last breach of it, should the accounts prove correct, is almost incredibly audacious. The fact that her troopers moved down the west bank of the Liao in January when they made their raid against Niuchwang, Haicheng and Niukiatun, rested mainly on Japanese testimony and the world took only a languid interest in it. But if the Russians have really occupied for offensive purposes towns along the Yingkow-Shanhaikwan Railway, then it will follow indisputably that they have thrown Chinese neutrality to the winds. Confirmatory information is needed.

The *Asahi Shimbun* contains an account of another meeting between Japanese and Russian officers at Likipautsz. The principal officers were as before, Captain Heijo on the Japanese side and Captain Prince Belebours (?) on the Russian. With them were two other officers, a Captain and a Lieutenant on the Russian side and two lieutenants on the Japanese. There had been some miscarriage of letters fixing the date of the meeting, and whereas it should have taken place on the 30th of January, it did not actually occur until February 2nd. On either side there were two who could speak English, and among the Russians two could speak German, with which language one of the Japanese was acquainted. We hear nothing of French, which, one imagines, would have been a more likely medium of communication. Each party consisted of six in all, namely, 3 officers, an interpreter and 2 orderlies. The Russians acted as hosts and showed their usual hospitality and courtesy. There is nothing special to relate about the meeting. It seems

to have been a most convivial, friendly affair. Captain Heijo said that the officer commanding the Division to which he belonged had expressed great satisfaction about the previous meeting, and the Russian Prince declared that his own commanding officer would have been glad himself to join the gathering had his duties permitted. One of the Russians asked particularly about General Fock, to whom, he said, he owed many favours, and he requested the Japanese to convey a letter to the General, which commission they gladly undertook. Another of the officers asked them to convey a letter to a brother-officer of his, a cavalry captain who had been wounded in the leg and arm and was now a prisoner in Japanese hands. The letter said that the writer prayed for his comrade's speedy recovery; that telegraphic news had been sent to his parents; that his favourite charger was safe in the keeping of the writer, and that as the war would probably not last long, he hoped they would both meet soon in St. Petersburg. The meeting broke up after hearty interchanges of toasts.

## MAJOR-GENERAL KOIZUMI.

This officer, who, having been wounded in the Battle of Telisz, subsequently rejoined the army, was recently reported as again wounded, and people supposed that his second misfortune had occurred at Heikantai. But it now appears that he fell over a bridge. He and his staff were travelling by train to Tashikiao when the engine suddenly whistled and pulled up. Supposing that something had gone wrong with the locomotive, the General stepped out of his carriage, not knowing that the train was then standing on a bridge. He fell over the girders to the river bed a distance of some 21 feet, and was taken up insensible. But he is now rapidly recovering, though it was found necessary to send him back to the Kokura hospital. Interviewed by a representative of the *Asahi Shimbun* the General praises the stubborn courage of the Russian soldiers but says that they lack intelligence. Want of education, he thinks, is their failing. They obey orders with admirable fidelity, but they have no idea of adapting themselves to circumstances. It is there that the Japanese get the better of them. The Russian officers, too, have not their heart in their work. They do not understand what they have been sent to fight for, and instead of being zealous they are discontented.

## FIGURES RELATING TO THE NEXT DOMESTIC LOAN.

The *Shogyo Shimpo* has obtained some interesting statistics with reference to the ability of the banks to subscribe to the next domestic loan. It gives the following figures:

	End of 1904.	End of 1903.	Diff.
	Yen.	Yen.	Yen.
Paid-up Capital.	106,144,390	108,307,625	* 2,163,235
Reserves .....	35,571,005	33,324,260	† 2,246,745
Fixed Deposits.	97,105,865	100,433,959	* 3,328,094
Current Accounts .....	124,942,410	101,982,424	† 22,959,986
Savings Deposits .....	73,112,666	67,288,844	† 5,823,822
	62,841,461	61,029,441	† 1,812,020
Totals .....	495,747,737	472,277,153	† 23,470,584
	* Decrease.	† Increase.	

From these figures it will be seen that at the close of 1904 the banks were in a better position for lending than they had been a twelvemonth previously. Yet during 1904

they had paid out in the form of loans to the Treasury sums exceeding 150 million yen. Thus:—

PAYMENTS MADE ON ACCOUNT OF INSTALLMENTS OF LOANS.		
	Millions of yen.	Amount of Specie in hand, yen.
1904.		
March .....	2	41,070,295

May .....	15	41,295,406
June .....	2	41,666,638
July .....	25	48,125,893
August .....	10	38,308,384
September .....	25	41,454,682
October .....	25	40,511,788
November .....	20	39,025,881
December .....	15	47,059,122
Total .....	154	

It is certainly remarkable that these unusual contributions to the war-chest did not cause a perceptible diminution of the banks' stock of specie, and the inference is that ample ability exists to subscribe the future loans. There can be little doubt that if the banks raised their rate of interest on deposits and current accounts they would attract still larger sums to their coffers, but they have not deemed it necessary to take that step.

## THE OSAKA SHOSEN KAISHA.

This company is becoming a very important enterprise. We find in the *Fiji Shimpo* interesting statistics with regard to its development. The Company, we learn, has decided to purchase seven steamers, namely four English, one German, one Norwegian and one Chinese. Three are for the Taiwan trade, one for the Korean, two for the South China and one for the Yangtze. These seven vessels aggregate 14,862 tons, and if the *Taiko Maru*, bought last year, be added, there is a total of 8 vessels and 17,800 tons. The Company further has ten steamers under construction which represent 14,550 tons, and it already possesses 101 vessels aggregating 85,604 tons—55 originally owned, which total 38,975 tons, and 46 recently bought, which total 46,629 tons—, to which must be added 29 vessels of 29,965 tons now chartered to the Government. Hence, its fleet may be put at 148 steamers aggregating 147,919 tons. It appears to us that some plethora of marine transport facilities is not unlikely to be felt by and bye.

## JAPANESE AND RUSSIAN SECURITIES.

London continues to run up the prices of Japanese securities. They now quote as follows:—

Four per-cents .....	£ 82 10s.	( 5/ rise.)
Five per-cent. War Bonds .....	£ 99 0s. 5d.	(unchanged.)
Five per-cents .....	£ 100 5s. 11d.	( 3/1 rise.)
Six per-cents. (first issue) .....	£ 103 2s. 6d.	( 5/ rise.)
do (second issue) .....	£ 99 10s.	(10/ rise.)

Russian securities have also risen. They are quoted at £91 (a rise of 5/) in London, and at 90 frs. 75. (a rise of 1.25 frs.) in Paris.

The rise continues on the London market. The latest quotations stand as follows, and make an interesting contrast with the lowest corresponding figures recorded during the year:—

	Present Figures.	Lowest Figures in 1904.
4 per cents .....	£ 82 10s.	£ 77
5 per cent War Bonds .....	£ 99 15s. 9d.	£ 90 17s. 2d.
5 per cents .....	£ 101 1s. 3d.	£ 92 12s. 10d.
6 per cents. (First) .....	£ 103 10s. 0d.	£ 98 10s. 0d.
6 per cents. (Second) .....	£ 100 0s. 0d.	

## PROFESSOR SHIGA ON PORT ARTHUR.

Professor Shiga, who recently paid a visit to Port Arthur, has delivered a very interesting lecture to the students of the First High School. He recalls the fact that every one, not in Japan alone but throughout the world, was deceived as to the probable time of Port Arthur's fall. It is fresh in public recollection how the officers and correspondents who went on the *Manshu Maru* when she made her first trip, were betting on the day of the stronghold's fall and how the Japanese authorities themselves expected to take it in July or August at latest. Why did people err so greatly in their estimate? The Professor's answer is that the world had not previously had any experience of the investment of first-class modern fortresses, and that the most recent European war had established a misleading precedent. Sedan fell forthwith; Metz in 20 days; Strasburg in 7 weeks; Belfort in 3 months. These were the records that men looked to see repeated, forgetting the enormous strides that have been made since then in the development of arms and means of defence. The Japanese themselves may have been partly misled by the rapidity with which they captured the place in 1894, but their main source of error was similar to that of continental Europe; they did not really know what was before them. As to the reasons of the place's final capitulation, Professor Shiga declines altogether to credit the explanation that food-stuffs or ammunition had failed. There were supplies of both sufficient to last for at least six weeks longer. The true explanation, in his opinion, is that the morale of the garrison had broken down completely. Here he propounds a theory which reconciles the flagrant divergence between the statements made by Russian officers and the facts as actually ascertained. The Russian officers who escaped to Chefoo on the eve of the capitulation declared that only four or five thousand men remained fit for duty in the fortress. General Reis, when he visited the Japanese head-quarters with the proposal to capitulate and when asked about the number of the garrison's effectives, made reply that the question, to his shame, could not be answered accurately, but he thought that there were not more than from four to five thousand. Stoessel also, in a despatch to the Tsar, spoke of some such number. When the garrison came to be counted, people were astonished to find that these various statements had been flagrantly misleading. But Professor Shiga thinks that the Russian officers were themselves deceived. Their men were malingering in hospital or otherwise evading duty. They had, in fact, lost all heart for the fight, and it was only when the day of battle had passed that they emerged from hiding and took their place among the prisoners who would not have to do battle again throughout the war. Speaking of General Stoessel, Professor Shiga observes that his character has been much discussed, but note has not been taken of one suggestive fact, namely, the love children had for him. Children and horses are the best judges of human character. In Stoessel's household there were 11 orphans ranging from 12 to 5 years of age, and every one of them regarded Stoessel as a father and treated him with the utmost affection and familiarity. Probably the General had a tender spot in his moral equipment, and thus the sufferings of the garrison he commanded became ultimately unendurable to him. In fine the Professor said that the siege of Port Arthur had

established three points, first that fortresses properly constructed and duly armed are most formidable things; secondly, that the right to pose as authorities on the art of sieges now belongs to the Japanese; and thirdly, that education, the tenets of *Bushido* and the bravery of the individual are all powerless without the aid of science. He thought also that the immense difficulty of capturing Port Arthur and the terrible sacrifices it entailed had exercised a most sobering and wholesome influence on the Japanese nation. Had everything swung along in an easy, unimpeded groove, the Japanese might have learned to regard war as an affair of newspaper extras and torch-light processions, and the wine of easy success might have turned their heads. But this bitter experience had educated in them a very different and a much more profitable mood. Such a lesson was well worth the price paid for it.

## REPORT OF RUSSIAN BRUTALITY.

A telegram comes across the military wires from Takau which has created much indignation in Japan. It says that on the 3rd instant the Russians in Mukden marshalled 126 wounded Japanese soldiers whom they had captured in the Battle of Heikautai, and tying them together in a long row after the manner of common felons, compelled them to parade the streets of Mukden hither and thither, the procession being accompanied by placards announcing a great Russian victory. This story comes on the evidence of Chinese eye-witnesses. It is scarcely credible. Should it turn out to be true, no words will be strong enough to condemn the brutality of the Russians. They have already made in this war a record which, had it been written by the deeds of an Oriental nation, would have set the whole Occident into a turmoil. But people have quietly put aside the iterated and reiterated charges partly because they were preferred by non-Christian nationals, partly because those that are disposed to be indolently tolerant of savageries that do not touch themselves or their fellow-countrymen directly, can always find an excuse in the proverbial mixture of brutes and human beings that every large body of men includes, or in platitudes about abnormal circumstances exciting elementary passions. But if this enormity was perpetrated in Mukden it must have had the approval and the sanction of high Russian officers, and thus the army which resorted to such barbarism will stand permanently disgraced. It is hard to imagine that the Chinese who claim to have actually seen this most cruel spectacle can have been wholly mistaken, yet there is always some hope in that direction.

Let us note here another and happily a very different record. Letters from correspondents who witnessed the Battle of Heikautai, say that a most wholesome difference was for the first time observable in the conduct of the Russian troops towards men of the hospital corps who bore the Red-cross badge. They did not fire on these men or molest them in the discharge of their duty. It is a poor thing indeed that now after a twelve-month's fighting, such praise should be accorded to Russian troops for the first time, but such is the fact. Probably the explanation is that the Heikautai Army included an exceptionally large element of troops recently arrived from Europe. There seem, indeed, to be remarkably dissimilar elements in the Russian forces. Instances have been shown of the presence of men

typical of the Russians met outside Russia, courteous, kind-hearted gentlemen representing a very high type of humanity. But there have been evidences also of the presence of a very different class of human beings. If the Mukden incident be confirmed, it will stand as one of the most brutal acts in the history of war, wholly irreconcilable with Russian character as we know it.

## THE CASUALTIES AT HEIKAUTAI.

An interesting medical statement is published (*Nichi Nichi Shimbun*) with regard to the Japanese casualties in the Battle of Heikautai. We learn from it that the figures, were as follow:—

	Totals
Killed—Officers.....	82
Rank and File.....	760
Wounded—Officers.....	271
Rank and File.....	7743
Grand Total.....	8856

In addition to the above there were 526 missing, so that the total casualties reached 9,382.

With regard to the officers, the wounded included Major-General Tanabe, Colonel Tsugawa, Colonel Onoye, and Colonel Toyama, and among the killed were one Lieut.-Colonel and four Majors.

The troops were for two days and two nights without any hot food. Every possible effort was made to supply them with charcoal and warm viands, but the attempt proved futile and they had to stave off their hunger by means of twice baked bread softened with snow. Under these circumstances the suffering from frost-bite was expected to be very great, especially on the 27th and 28th instant when a snow-storm raged and the thermometer registered 16° and 24° respectively, below freezing point. This expectation, however, was happily not verified to any large extent. The number of men who had to leave the field on account of frost bite was only 505 in all, 300 in one Division and 205 in another. As for the wounded, however, nearly one half of them were more or less affected in this way, though on the whole the suffering was not serious. In very few cases was the amputation of a finger or toe necessary. It was observable that the greatest number of cases were among men who had already suffered once from this cause; then came the men who had suffered twice, and finally those that had been affected three times. Soldiers who wore 2 or 3 pairs of socks came off worst as to the feet, probably because the resulting tightness impeded the circulation of the blood. Very few of the men had more than one pair of gloves, but their hands were comparatively little affected, doubtless because they rubbed them or beat them on their breasts. Provision had been made of Chinese foot-gear and straw boots, but the men did not wear them, finding them inconvenient for fighting purposes. Owing to the suddenness of the emergency there was not time to make general application of the anti-frost-bite plaster (*tosho-ko*), but where it was used the results were excellent. There were not a few cases—though slight—of frost-bites resulting from blood frozen about a wound, and it was noted that wounded men suffered most where they had been obliged to tear or remove their clothing in order to bandage the wound. This latter point is one which the writers of the report refer to as demanding special attention.

## POLITICAL TOPICS.

Marquis Saionji entertained a party of distinguished personages at the Imperial Hotel on the evening of the 18th. Among the guests were Marquis Yamagata, Count Matsukata, Count Katsura, the Ministers of State, and the principal members of the *Seiyu-kai* and the Progressists. Marquis Saionji, in a short speech, congratulated the Cabinet and the political parties on the peaceful session of the Diet, now drawing to a close. He said that the Government had frankly taken the party leaders into its confidence as to the programme of warlike operations, and it had thus been possible to pass measures of increased taxation without undue friction. As a matter of fact the *Seiyu-kai* had been prepared from the spring of 1904 to give whole-hearted support, and he did not doubt that such had been the mood of the Progressists also, as it was surely the mood of the whole nation. Even though the Ministers of State had not approached the parties the *Seiyu-kai*, for which alone he could speak authoritatively, would have readily voted all needful supplies. But when it came to giving practical effect to these intentions, many serious difficulties had been encountered. The burden laid on the people was heavy, above all in view of its suddenness, and it had been the duty of those responsible to spare no means of alleviating the fiscal situation. He trusted and thought that his Party had done what was right in these circumstances, and he ventured to compliment the Progressists on their very great patience and labour as well as the Government upon its magnanimity, which things had materially contributed to bring about a result that all must regard with satisfaction. It could not be denied that as the war progressed the nation's responsibilities would increase, but neither could it be doubted that if this spirit of mutual consideration and cooperation were obeyed, the result need not inspire any uneasiness. They must have differences of opinion. Indeed it was for the public weal that such differences should exist and should be fully discussed. But between reasonable controversy and blind opposition there was a wide interval, and it was happy for the country that the former disposition existed, not the latter. He concluded by saying that in view of the existing situation, some radical development seemed desirable in the world of politics.

Count Katsura confirmed Marquis Saionji's statement as to the relations that had been opened between the leader of the *Seiyu-kai* and the Prime Minister. He said that he and his colleagues appreciated the importance of a mutual understanding between the Cabinet and the Parties, and that to the establishment of such an understanding he attributed the fortunate progress of affairs in the present session of the Diet. It was natural and desirable that there should be free discussion of public affairs, but nothing could be gained by allowing such discussion to be carried into private life. On the contrary, there should always be maintained a disposition to frankly cooperate whenever national exigencies demanded such a course. He begged the leaders of the two great Parties whom he had the honour of addressing to recognise that he sought to conduct the Government in that spirit.

Mr. Oishi Masami, on behalf of the Progressists, expressed entire endorsement of the statement that a free interchange of thought between the Cabinet and the Parties had contributed largely to this happy result. But much was due to the nation also, which

in its united and contented conduct presented a marked contrast to the dissatisfaction and disunion that prevailed in Russia. He thought that for this fortunate state of affairs in Japan the elder statesmen were to be thanked who had been instrumental in conferring on their country the boon of a constitution.

Marquis Yamagata spoke a few words expressing the greatest pleasure and thankfulness that this happy harmony should exist and these "airs of spring and this atmosphere of peace" should pervade the nation at a time when the fullest union was so essential.

The Special Committee of the House of Representatives has decided, by a large majority, to endorse the Government's application for a further extension of Law No. 63, which invests the Governor General of Taiwan with legislative authority. Viscount Yoshikawa and Count Katsura were questioned by the Committee, but their replies added nothing to the facts already published in our columns, except that Count Katsura declared the Government's intention of treating Taiwan as a colony and not as an integral part of the empire.

The special committee charged with the duty of examining and reporting upon the Representation to which we lately alluded in a leading article, namely, that relating to subsidies to steamship companies, has decided to reject the measure. Apparently a majority of the committee took the rational view that the House would be acting in a most unreflecting manner if it presented such a Representation with regard to subsidies for which it had already voted in the Budget. Besides, during the legally fixed period of paying the subsidies no change could be made, and therefore the Representation was untimely. To this latter objection the supporters of the measure replied that a change would not be impossible in the sequel of consultation between the officials and the companies, but naturally the responsible members of the committee could not endorse such a hypothetical recommendation. So by a heavy vote the Representation was condemned. Doubtless the House will take the same view.

Both Houses of the Diet seem disposed to make some commotion about a financial question connected with the building of the Asahi-gawa Barracks for the Seventh Division in Hokkaido. The contract for the work was given to the Okura Company at a price which is thought to have been excessive, and now that the accounts are presented for the inspection of the Diet an outcry is raised. The weak point in the official case is that tenders were not called for, the contract being assigned without competition. There is nothing illegal in that, but it suggests suspicions for which, in this instance, considerable foundation is said to exist, though with what truth we can not tell. Mr. Tomatsu, chief of the Quartermasters Bureau (*Keirikyoku*) in the War Department has tendered his resignation, and much sympathy is felt with him because the contract was given out under the regimen of his predecessor, Mr. Noda Katsu. Nothing but good is spoken of Mr. Tomatsu. His management in connexion with war supplies is said to have been extraordinarily clever. Essential articles of diet for the troops, such as *katsuwoboshi* and *takuan*, cost great sums in the war of 1894-5, because the big dealers in these staples combined to put up the prices and because the authorities came in to the market as buyers suddenly and on an enor-

mous scale. But Mr. Tomatsu had sufficient foresight and prudence to spread his purchases over the whole empire and over a considerable period. Each centre of production was simultaneously required to furnish a certain amount at ruling prices, and thus without any sensible strain great quantities were collected. Of course had not the need for these exceptional steps actually occurred the War Department must have suffered some loss, but, on the other hand, if the need did occur, the economy effected would be very great. Mr. Tomatsu took the risk and the event amply justified him. How much he saved the Treasury we have never heard stated, but it was surely a large sum. Now, however, he has thought it necessary to tender his resignation in connexion with this wretched Asahi-gawa contract, for which he has no direct responsibility whatever, and sympathy is very widely expressed with him.

## SPIES.

There appear to be many spies working now-a-days. Two Chinese recently captured when attempting to set fire to a military store at Dairen were fusilled on the 10th instant, and two others caught at Yentai in the Shaho lines, were beheaded. We read also of a Pole named, apparently, Mionchinsky, who has been arrested at Yingkow and sent to Ujina. Then again both sides appear to be becoming very suspicious of Chinese officialdom. The telegraph said that, a few days ago, the Japanese arrested the Governors of Liaoyang and Haicheng, while from Peking comes news that the Russians have impounded eleven telegraph officials in Mukden whom they suspected of conveying information to the enemy. If the Russians are not themselves in effective control of all the telegraph offices throughout the regions occupied by their troops, it would be very strange.

The two Chinese executed near Yentai are said to have confessed that the Russians give 4,000 roubles to any one who burns a Japanese store or a Japanese commissariat station, and 1,000 roubles for the cutting of a telegraph wire, while to the family of any man apprehended when making such an attempt, they donate 2,000 roubles. Therefore several hundreds of Chinamen are engaged in this business.

The Russians seem to be spending a great deal of money on the purchase of Chinese. Seven of these men have just been arrested at Dairen and have confessed that they were employed by the Staff in Mukden to set fire to Japanese store-houses. Each of the seven received 600 taels, and they were promised that in the event of success this reward would be very largely increased. They explained that fifty persons had been thus bribed. The Japanese therefore have redoubled their vigilance. Six of the seven were executed, the seventh having probably been utilized for the detection of his comrades. China is a country where this kind of belligerency is particularly possible. Men do not value life in comparison with the possibility of bequeathing to their families such a sum as shall save them from the grinding struggle for existence that is the lot of the lower orders in their over-populated country.

The *Kokumin Shimbun's* information is that these men were incited by a promise of 200,000 taels in the event of success, and that the whole seven have been, or are to be, executed. Among the fifty thus let loose by Kuropatkin, some should succeed.

## THE HOUSE OF PEERS.

Considerable interest attaches to the Bill just introduced by the Government in the House of Peers for fixing a superior limit to the number of the Chamber's members. According to the law as it now stands holders of the three highest titles sit by right of heredity—that is to say, the Princes of the Blood, the non-imperial Princes and the Marquises. The next three Orders—Counts, Viscounts and Barons—elect their own representatives, each Order for itself, the only restriction being that no Order may return more than one-fifth of its total number. Then come two classes of members who have no titles. They are, first representatives of the highest tax-payers, one for each prefecture and city, and, secondly, persons who, having performed meritorious services to the State or distinguished themselves by erudition, receive from the Emperor the honour of nomination to life membership. It is provided that these nominees, together with the representatives of the highest tax-payers, must not exceed the aggregate of titled members. Evidently such a House is of unlimited elasticity. For, in the first place, the number of titled members may grow indefinitely. In point of fact each order of nobility, the Imperial Princes excepted, and perhaps also the non-imperial Princes, does actually receive constant accessions as patents are granted by the Throne for meritorious services. Thus whereas at present the Counts, Viscounts, and Barons return a total of 143 representatives—17 Counts, 70 Viscounts and 56 Barons—it might very well happen that one of these days they would return 250 members, when the aggregate strength of the three Orders had swelled to 1,250. If to this total of 250 we add the 13 Imperial Princes, 10 non-imperial Princes and 30 Marquises, to-day having seats in the House, we obtain a total of 303 titled members, and as the non-titled members may be of equal strength, the figure for the whole House would be 606, costing the State 1,212,000 yen annually in salaries alone. To remedy this inconvenient and expensive elasticity the Government has drafted the new law. It provides two limits in the matter of the titled members—that is the elected members, for the Princes and Marquises are left untouched. One limit is as at present, namely, that the members elected by an Order must never exceed five per cent. of its number; the other, that however great that number, the Counts must not return more than 17 representatives, the Viscounts more than 70 and the Barons more than 56. The Bill further provides that the Imperial nominees shall never exceed 125. Thus, in fact, the House is crystallized at its present establishment so far as the elected and nominated members are concerned. For the numbers now and the enacted limits are:—

	Present.	New Superior limits.	
Princes of the Blood.....	13	13	Subject to change.
Princes .....	10	10	
Marquises .....	30	30	
Counts .....	17	17	
Viscounts .....	70	70	
Barons .....	56	56	
Highest Tax-payers .....	43	43	
Imperial Nominees .....	125	125	
	364	364	

It may be presumed that these limits have been fixed in view of the probably large accessions that the ranks of the Peers will receive at the close of the present war. There will be some criticism. Folks will certainly say that since life-membership of the House of Peers, carrying as it does a salary of 2,000

yen annually apart from the honour, is one of the most precious rewards in the sovereign's gift, there is some indiscretion in choosing for the time of limiting His Majesty's right the very moment when a number of men are qualifying for the distinction by most conspicuous services to the State. However, as Count Katsura hinted when introducing the Bill, the question of ways and means is paramount.

## NEW DESTROYERS.

The Minister of the Navy has given the following names to 25 destroyers now about to be constructed or in course of construction. The following is the list:—

## PLACE OF BUILDING.

1	Yokosuka Kaigun Koshu.....	Kamikaze.
2	" .....	Hatsushimo.
3	" .....	Yayoi.
4	" .....	Kisaragi.
5	Nagasaki, Mitsubishi Zosenjo.....	Shiratsuyu.
6	" .....	Shirayuki.
7	" .....	Matsukaze.
8	Kobe, Kawasaki-Zosenjo.....	Osakaze.
9	" .....	Hurukaze.
10	" .....	Shigure.
11	Osaka, Tekkojo .....	Asatsuyu.
12	" .....	Hayakaze.
13	Mitsuru, Kaigun Koshu .....	Oita.
14	" .....	Yunagi.
15	Sasebo, Kaigun Koshu .....	Yugure.
16	" .....	Yudachi.
17	" .....	Mikazuki.
18	" .....	Nowake.
19	Kure, Kaigun Koshu .....	Ushiwo.
20	" .....	Nenohi.
21	Yokosuka Kaigun Koshu .....	Hibiki.
22	Nagasaki, Mitsubishi Zosenjo.....	Shirotaye.
23	Kobe, Kawasaki Zosenjo .....	Hatsuharu.
24	Yokosuka Kaigun Koshu .....	Wakaba.
25	" .....	Hatsuyuki.

Some particulars are published with regard to the twenty-five new destroyers which were mentioned in our last issue as being under construction in Japanese dockyards. We can not distinguish quite clearly the time when these craft will be ready for sea. One account alleges that ten are already completed, and another speaks broadly of the whole twenty-five being added to the Navy by the close of the year. The boats are said to have some features which distinguish them from any destroyers now afloat—features suggested to the Japanese by the teachings of the present war, but what these features are there is, of course, no revelation. The displacement of the boats is said to be 380 tons; their speed 29 knots, and their armament consists of one 12-pounder; five 6-pounders and two torpedo-tubes. When this war broke out we suggested that the Japanese would probably be found to possess qualities exceptionally suited to the use of torpedo-craft. Indeed that was a foregone conclusion in view of the record of the war of 1894-5. The addition of twenty-five destroyers to their naval strength means, therefore, a great deal. It should be observed in connexion with this that the number of destroyers in the Japanese navy at present is only 19. There were 20 until the sinking of the *Niji* reduced the number to 19. This was before the present war. No destroyer has been lost during the war, and of torpedo-boats only two have gone to the bottom. The addition of 25 would bring the total to 44, but there are 3 others to be included, namely, the recently launched *Ariake* and *Fubuki*, and the presently to be launched *Arare*. Hence Japan's flotilla of destroyers at the end of this year will total 47. Her torpedo-boats number 82.

## MR. TSUNODA SHIMPEI ON THE SITUATION.

This well-known politician, one of the Progressist leaders, was among the second batch of passengers taken by the *Manchu Maru* to the seat of war. He recently delivered before the *Keizai Kyokai* a most interesting account of his experience, and the address is reproduced by the *Keizai Zasshi*. Mr. Tsunoda says that the journey by rail from Dairen to Liaoyang took 24 hours. The Japanese had changed the whole line to the narrow gauge, and were working it with rolling stock brought from Japan. Evidently the Russians, when they laid the line, had contemplated doubling it at some future period, for they left a spare space of from 20 to 30 yards everywhere. The grand scale adopted by them in building stations was very remarkable. Arrived at the Shaho, Mr. Tsunoda found everybody below the rank of a divisional commander living in holes in the ground. Not necessarily small holes: some of them, on the contrary, had the dimensions of a good-sized chamber and were duly ceiled. The Japanese armies were disposed in the shape of an arc of a circle with the concave side towards the enemy so that the two wings over-lapped him, an arrangement which to the civilian eye of Mr. Tsunoda appeared highly advantageous. The two wing armies were beyond the Shaho, but the central army was on the southern side of the river. A considerable distance separated the gun-positions on both sides, and the Japanese seldom fired, but about 10 shells were discharged for the edification of the visitors when Mr. Tsunoda and his friends were in the fighting line. Some of the infantry positions, however, were so close that short of perpetual fighting there was nothing for it but to be on amicable terms, and the Japanese chose the latter alternative, fraternizing constantly with the Russians. The intervening space was regarded as neutral ground, and pigs or barn-yard fowls wandered about freely within its limits, safe so long as they did not venture altogether within the lines of either side. Mr. Tsunoda witnessed the flying of the big kites sent up by the Japanese to convey to the Russians intelligence of the fall of Port Arthur. Each kite was painted with a picture representing Stoessel and Nogi shaking hands, and carried a legend politely suggesting to the Russians on the Shaho that since their Port Arthur comrades had resumed friendly relations with the enemy, they should do likewise, and thus be enabled to return home to their wives and families.

## CHINA.

Fifteen Chinese who are said to have been implicated in the recent murder of two Japanese workmen near Swatow on the railway, have been arrested and are undergoing trial. The Japanese Consul is actively pressing the inquiry, and the Chinese Authorities are said to be giving every facility.

Shanghai telegraphs that three Chinese men have been arrested at Chefoo on suspicion of having been implicated in the murder of Captain Gilgenheim and Captain Baron de Cuerville who have been missing for some months. They were known to have left Liaotishan by junk and thereafter nothing was heard of them. It is now reported that two of the apprehended Chinese have confessed to having thrown the officers overboard.

A Peking telegram says that some three

thousand Russian troops have made an irruption into Ili and are raiding the country at will. The Governor of the district has made application to the Authorities in Peking, asking them to approach the Russian Minister on the subject. Is this true, we wonder. If so, it suggests that Russia is determined to remain a troubler of the peace of the East.

A Peking telegram says that the Russians at Mukden have enrolled large numbers of Chinese subjects in corps intended for guarding the railways and the commissariat stations. It is scarcely credible. For if the Russians are driven to employing for such vital purposes men in whose efficiency and loyalty so little trust can be placed, they must be in *extremis*.

It appears that the Chinamen who threw overboard the German and French military *attachés* were captured by a very simple process. They presented themselves in Chefoo to change the promissory note which their victims had given them in payment for the fatal voyage. This method of financing such transactions had been common. The charterers of a junk from Port Arthur to Chefoo would give the junkmen a cheque on Chefoo to be presented after the service was performed. In Chefoo, however, the possibility that these two officers' disappearance was connected with Chinese pirates, had been understood, and careful watch was kept for any Chinamen from Laichow-fu, the great piratical haunt. Thus the two men were apprehended. They have confessed. Their story is that on the 27th of August they left Pigeon Bay with the two *attachés*, who had chartered their junk for 80 dollars as far as Chefoo. After putting out to sea the weather became so bad that the junkmen desired to return, but the *attachés* demurred and a dispute arose, the Chinamen finally becoming so enraged that in the heat of the wrangle they threw the two foreigners overboard. Had they then torn up the promissory note they might have escaped unscathed, or even had they presented it speedily suspicion might not have been excited. But they kept it by them so long that its production in Chefoo, especially by Laichow men, marked them at once.

A telegram from Peking to the *Fiji Shimpō* says that the Russian Representative has expressed himself satisfied with China's explanations as to her neutrality in connexion with the Hunghutsz, and adds that the Peking Government has instructed General Tseng to exert all his force for the purpose of restraining these freebooters. It is amusing to hear that M. Lessar keeps up the farce of discussing China's neutral obligations when his own country's troops are flagrantly treating her as though she were a belligerent. That Japanese adventurers should be serving with the Hunghutsz, if indeed they are so serving, is the veriest bagatelle compared with the marching of large bodies of Russian troops through the neutral territory of China to attack the Japanese.

It would be interesting to know, remarks the *North China Daily News*, how many non-combatants there were in Port Arthur at the time of the surrender. We read in the *Chefoo Daily News* that "one month after the surrender of the fortress, thousands of helpless non-combatants are kept back, no one knows where." There is not much helplessness about the non-combatants who fill the streets of Shanghai, continues our contemporary, and it is rather ungrateful of the Rusophile papers to keep up this constant nagging at Japan, seeing that hardly ever in the history of sieges have the inhabitants

of a town that has surrendered practically unconditionally been treated with such scrupulous consideration as the non-combatant population of Port Arthur.

The Report of the Hongkong Ice Co., Ltd., for 1904 shows a divisible balance, after payment of an interim dividend of \$4 per share, of \$103,357. It is proposed to pay a final dividend of \$13 per share, making 68 per cent. for the year, to put \$25,000 to contingencies, and write off \$8,000 from property, and carry forward the balance, \$5,357.

A Peking dispatch, translated by the *North China Daily News*, reports that news has been received there from Urumtsi, or Tihua, the capital of Chinese Turkestan, to the effect that a Russian force on the 31st of January last suddenly appeared before the city of Kashgar, took the place, and expelled the Chinese garrison. Apropos, Kashgar has two cities, the Old, or Mohammedan, City (Huicheng) where the Taotai, or Chief Civil Mandarin of the four Kashgarian cities of Kashgar, Yangishar, Yarkand, and Kholan, resides with the chihhsien and a small garrison of about 200 locally born Chinese soldiers, under a major, and the New, or Chinese City (Hen-ch'eng), about three and a half miles' distance from the Old City. In the New City resides the Titu, or Provincial Commander-in-Chief of Chinese Turkestan, with some five or six battalions of Hunanese troops under him, occupying walled camps outside the Chinese city proper. In this city also resides the sub-prefect of Kashgar. If the news above noted be true, matters are serious indeed, as this would be tantamount to open hostilities on the part of the Russians. Our Peking dispatch goes on to state further that the Waiwupai has telegraphed H. E. Hu Wei-té, the Chinese Minister at St. Petersburg, demanding an explanation.

About 200 persons were drowned in the recent river-boat fire at Wuchou.

The Canton correspondent of the *China Mail* writes on the 1st instant:—

For some time past a Chinese named Wong Ngatsui, who had eschewed the queue, and had attired himself in European dress, has been an object of suspicion to the officials of Canton. It is difficult to ascertain of what offence against Chinese law the man was guilty, or even to discover what the officials had against him. They affirm, however, that he was deceiving the people and was giving himself out as a Japanese.

It is reported that less than a fortnight ago he was summarily executed in Canton.

Possibly the officials feared that he was in some way connected with the secret reform movement, and therefore thought it wise to remove his head. This and the recent executions indicate the cheapness at which the mandarins appraise human life. But nothing can prevent the present discontent from spreading and deepening, for the native papers have taken the execution of this man as a text to write a diatribe against the cruelty of the officials, and have compared the officials of China with those of Russia, and have been pouring scorn upon both parties.

Translating from a native paper, the *North China Daily News* has the following note under the heading "Good Cause for Degradation":—

A Peking correspondent, writing about the recent degradation of H. E. Sheng Yun, Governor of Shensi, to the post of Deputy Military Governor of Ch'ahar, Eastern Mongolia, announcement of which in the *Peking Gazette* last January was received throughout the Empire with much astonishment, since to all intents and purposes his Excellency had given satisfaction to their Majesties during their stay in Hsian in 1900-1, while he was Governor there, now gives an explanation which shows that Prince Ching is a good later and acts up to his reputation of never forgetting a bad turn against himself, although he has received favours from people with an object in view. It appears now that when the Imperial court was in Hsian Governor Sheng Yun, who is also an Imperial clansman, presented their Majesties a secret memorial denouncing Prince Ching, who it will be remembered was then in Peking suing for peace with the Allies, stating that his Highness was a traitor and pro-Russian to a degree dangerous to the dynasty. The result was that Prince Ching received a secret communication from the Empress Dowager bidding him beware for there were those who suspected his loyalty and had charged him with tampering with the Western Bar-

barians. Of course, his Highness stoutly defended himself against the accusations and demanded to face his accuser. Governor Sheng Yun's name was given. Prince Ching never forgot this and seeing no way of "getting even" with his accuser just then has kept quiet for nearly four years, lulling his enemy to a feeling of false security until the opportunity came. Russians were reported to be getting active in Eastern Mongolia and a "strong" man was needed in Ch'ahar as Deputy Military Governor to watch the Muscovites. As the post is an exceedingly poor one no one is anxious to go to Ch'ahar. Prince Ching saw his chance and recommended Sheng Yun as the very man who could keep the Russians in check, with the result that Sheng has had to go to Eastern Mongolia. This is an essentially Chinese mandarin way of getting even with one's enemy. The one who recommends his enemy to the Throne "as a very good man" for a difficult and poorly paid post is on paper, "promoting" his nominee; practically speaking it is a degradation. Prince Ching has got his revenge and Sheng Yun will be fortunate if it merely stops at that point.

A dispatch received by Shanghai mandarins from the North reports that the ex-Dalai Lama of Tibet is at Urga, Mongolia, and suspected by the Peking Government of seeking to escape into an alien country. Word has been sent accordingly to the Deputy Military Governor of Urga to place the ex-Buddhist Pontiff under the closest surveillance and to send him under strong escort without delay to Hsining, in Kansu province, where he will be taken care of by the Assistant Imperial Resident of Tibet in the city, and where also is a large force of Chinese troops under a Major-General. It is thought that guarded by these officials the ex-Dalai Lama will find it difficult to leave Chinese territory.

The Chinese Government has consented to representatives of the various Powers witnessing the Spring manoeuvres of the newly-organised foreign modelled army of the Peiyang under Viceroy Yuan Shih-kai, which are to take place in the beginning of May next at Paoting. It is expected that both their Imperial Majesties, the Emperor and Empress Dowager, as well as the Empress, will be present and that something like 30,000 well drilled and well armed troops will take part in the operations, which will include a great sham battle.

#### SNOW.

There has been a heavy fall of snow near Kyoto, so heavy as to interrupt the passage of trains. This, doubtless, is connected with the bitter weather of the past three days in Tokyo and Yokohama.

A telegram from Hakodate reports that heavy snow was experienced on the night of Feb. 17th. Traffic on the Hokkaido Railway was stopped, but was reopened the following day.

On the 18th, snow fell in the district of Sekigahara, near Nagoya. It measured some two feet and caused two or three hours' train detention. Thus, the train from Kobe which was due to arrive at 5.30 p.m. at Shimbashi, was one hour and a half late, and another train also from Kobe which was expected to arrive at 11.58 p.m. at Tokyo was delayed some three hours.

A telegram was received on Feb. 18th in Tokyo to the effect that owing to a snow-storm, the small steamer *Kwaiyeki Maru* was wrecked off Esashi, Toshima, in Hokkaido.

Since Feb. 19th, snow has been falling in Yamagata prefecture and railway traffic north of Shinsho is stopped.

The official trial trip of the Chinese gunboat *Kiangyen*, built at the Kawasaki Yard, Kobe, was made on Feb. 20th. The vessel got under way at 10 a.m., and after cruising off Kobe, proceeded to Osaka Bay. The result was satisfactory in every way, a speed of 14.8 knots being recorded. Her armament consists of one 13-c.m., one 7-c.m. and four smaller guns. The Kawasaki Yard has been ordered by the Chinese Government to build five more gunboats and four torpedo-boats, which are to be completed in thirty-five months.

## NOTES ON CURRENT EVENTS.

A telegram to the *Hochi Shimbun* says that some of the crew of the *Lena* having violated their parole and returned to Russia, the United States Government has protested to St. Petersburg. Their manner of observing their parole does not contribute to the reputation of the Russians in this war. This is the third dishonourable example which appears to be authenticated. Military and naval men have hitherto held a parole to be a sacred obligation of honour and have observed it with the utmost scrupulousness.

A Russian semi-official organ alleges that the United States can not have preferred any serious complaint with reference to the escape of paroled officers of the *Lena*, inasmuch as the officers of that ship were not put upon parole. From this an admission may be inferred that some officers have actually made their escape. We do not suppose that they had taken oath to remain in the United States, but should it prove that they did so, Russia will doubtless restore them rather than have trouble with America.

Mr. Horino Teiji, one of the prominent men engaged in the Hokkaido fishing industry, and over 500 fellow-thinkers, presented a petition to the Lower House on the 16th instant through the hands of Messrs. Kuribara Ryoichi and Shiba Shiro. The petitioners ask that Saghalien should be recovered.

The Emperor and Empress recently despatched General Baron Okazawa and the Prince Imperial sent Major-General Muraki to inquire into the condition of the troops at the front. These delegates reached the headquarters of the left wing on the 5th instant, and from thence proceeded to make the rounds. They were equipped with an immense quantity of cakes and tobacco for presentation to the various corps, and they carried very gracious messages, indicating that the state of the troops after their long campaign in Manchuria and their endurance of the hardships of a Manchurian winter was a source of constant solicitude to the Imperial personages, who accordingly sent these delegates to make accurate inquiries. There were messages to the Commander-in-chief and to the commanders of army corps, making six messages in all.

The Appeal Court in Tokyo has confirmed the sentence of 11 years' imprisonment in this case, but has altered the judgment of the lower tribunal as to the provision of law under which the penalty is inflicted. We presume that the case will now be carried to the Supreme Court. The accused has at least gained one point, namely, that since the basis of the lower Court's finding was incorrect, the period of the detention from the day of arrest to the day of the Appeal Court's decision will count in his term of sentence.

Residents of Yokohama will read with great regret of the death of Mr. Inouye Shigeyasu, who passed away at his residence in Motomachi on Sunday at 8.15 p.m. Mr. Inouye was born at Nara in 1845, and began business in Osaka as a photographer, but moved to Yokohama in 1879. Since that year he conducted an ever increasing business as electrician and supplier of electric goods, his shop in Motomachi being one of the best known establishments in the country. Through his industry and foresight he attained success, and as the founder of the Yokohama Electric Light Works, he must be regarded as one of the first pioneers

of electricity in Japan. He is succeeded in business by his son Mr. K. C. Inouye, whom he sent to England and America to study at the age of fifteen, and who has lately conducted the undertakings of the firm during the long illness of his father.

Sir Ian Hamilton has gone to the Hakone region. It is expected that he will leave Japan for England on the 4th proximo.

Colonel Hume left Tokyo on the 20th instant for Manchuria. He is indefatigable. Having spent months with the Japanese armies at the front, he returned to Tokyo on duty, and after a few days in Japan, has now hurried off again. Colonel Hume will have garnered a vast amount of valuable experience. It was unfortunate that he had to come back to Tokyo in January for he just missed the Battle of Heikautai, but on the other hand, except for its unique character as a four days' fight in a snow-storm, there probably never was a battle where less could have been seen by a military attaché.

The bankers of Tokyo and Osaka held a meeting on the 20th instant and decided to submit to the Government two proposals, either of which would be acceptable, namely, a six-per-cent loan issued at 90 for 7 years, or a five-per-cent issued at 90 for 3 years. The former represents interest at the rate of 8.25 per cent; the latter, at the rate of 9.25 per cent. The bankers, however, though willing to abide by the Treasury's choice, declare their preference for the 6 per-cent scheme.

Apparently the terms of the fourth domestic loan have been definitely settled. The amount is to be 100 million yen; the rate of interest 6 per cent; the selling price 90 and the period 7 years. These conditions are understood to have been approved by the bankers of Tokyo, Osaka and Kyoto, but the exact date for issuing the loan does not seem to be yet fixed.

In the *Fiji Shimpō* we find a mysterious letter dated from "a landing place" to which no name is attached. The communication is headed *shin homon jugun-ki* (correspondence from the new quarter), and in it there is a certain reserved account of the appearance of a place where Japanese troops are represented as having landed. The correspondent says that it had not been intended to land there, but the bay being found unexpectedly free from ice, a change of plan took place. He speaks of a large foreign building, and of a number of small Japanese houses such as might not have been looked for in a foreign country, but he gives no further clue to assist identification.

It is said that the Dalai Lama, who fled from Lassa at the time of the Younghusband expedition, is sojourning at Kaolong in Mongolia, one result being that the place has become a kind of Mecca. Thousands repair thither daily to worship the incarnation and the town has leaped into sudden prosperity. In Chinese circles there is said to be an apprehension that the Russian Consul may seize the opportunity to make a prisoner of the great personage.

Some time ago there was talk of a device resorted to by the Japanese with the object of inviting surrenders from the Russian army. It is now explained that this device consisted in firing from wooden guns thick glass bottles containing a number of letters written in the Russian language. They appear to have produced some effect, for at Linshingpau about five or six Russian de-

serters are said to reach the Japanese lines daily. Linshingpau is on the north of the Shaho and westward of the railway. Rumour says that the two armies approach each other there to a distance of only 80 metres, and that there is a frequent interchange of heavy-gun fire.

The Japanese Generals at the front are said to be in excellent health and spirits. During the Heikautai engagement General Kodama scarcely slept at all for a whole week, but did not seem one whit the worse for this experience. General Nozu, says a correspondent of the *Hochi Shimbun*, is learning calligraphy—a story doubtless inspired by recollections of Saigo Takamori's celebrated comment on Nozu's scanty erudition in early Meiji days—; General Kuroki is keeping barn-door fowls, and Marquis Oyama is the same robust, merry-hearted gentleman as ever. The troops are in the highest spirits and enjoy excellent health.

There are very conflicting accounts about General Gripenberg's reception by the Tsar. Reuter has told us that the Emperor treated him with great consideration, whereas London telegraphs to the *Fiji Shimpō* that the General was severely berated for not subordinating himself more completely to Kuropatkin. What the public would like to know, however, is why Gripenberg went to St. Petersburg; why he deserted the field on the morrow of a catastrophe believed to have taken place under his leadership. At one moment we were told that he was lying fatally ill at Irkutsk and the next we hear of him in the Russian capital having audience of the Tsar. It is all profoundly mysterious.

The *Kashima* and the *Katori*, two battleships, now in course of construction for Japan at Messrs. Vickers and Armstrongs respectively, are progressing rapidly and will be launched, it is expected, next May.

Seventy-seven bodies have been recovered at the scene of the *Natori-gawa Maru's* disaster but only 18 have been identified. The police have taken photographs of the remainder and buried them temporarily. The cause of the disaster seems to be still obscure. Originally it was stated that the vessel got off her course in a fog, but now people allege that the fog was not thick enough to constitute an explanation.

In connexion with the action brought against the Russo-Chinese Bank by its former Compradore, Mr. Yuan, for 535,307 yen, an application was made by the plaintiff's counsel to provisionally attach the property of the Bank, and the Tokyo Local Court, before which the suit is being heard, granted the application on the 25th of last March. An appeal was immediately lodged by the Bank but was rejected on the 19th of October, and having been thereafter carried to the Court of Cassation, was again dismissed by the latter on the 15th instant. The Bank's property has therefore been attached temporarily, but of course this step, being a mere legal precaution, has no significance as concerns the merits of the suit. Should the plaintiff be cast, he will have to bear all expenses connected with the attachment.

The Tokyo papers announce that a monument to the memory of 243 warrant-officers and sailors of the *Takasago* has just been erected in Kure.

The military authorities in Sendai have decided to provide a detention house there to take fifty Russian officers.

## THE SHAHO.

THERE are rumours of great activity on both flanks of the Russian army, its right threatening to strike at Liaoyang from the west, and its left menacing the Yalu line. The former movement is probably the cavalry advance described in the last two official reports, and the latter is the massing of troops said to have been going on in the Hanchang and Kingking districts. It would seem that the cavalry affair of the 14th and 15th along the Hun was in the nature of a reconnaissance in force. Fifteen or twenty sotnias of Cossacks did not push down and across the river merely for the purpose of retreating at the first sight of a Japanese force. They went there with an object, and that object, it can not be doubted, was to ascertain the disposition of the enemy's forces in the region southward of the junction of the Taitz and the Hun. The Taitz, we may explain, is known by the name of the "Hsiaopeh" in the interval between its junction with the Hun and the point where it receives the waters of the Shaho. The Russian attempt at the Battle of Heikautai was made in the angle between the Hsiaopeh and the Hun northward of the former river, whereas the recent cavalry march would seem to indicate that they now aim at a flanking operation in the southern angle between the same rivers. The fact is that KUROPATKIN's position is exceedingly difficult from a strategical point of view, and his difficulty consists mainly in the fact that the assumption of the offensive is in some measure a necessity to him. Not much credit, probably, should be placed in stories of his shortness of provisions. There may be a measure of inconvenience on that account, but we have always to remember that since insufficient supplies would be fatal to the whole of his army whereas to stop the flow of re-inforcements would merely arrest the development of its strength, there could be no hesitation in choosing between the two alternatives. The railway, if devoted to the transport of food-stuffs and war material only, is fully competent to supply an army of 350,000 men, and consequently if there were any menace of scarcity in KUROPATKIN's store-houses, nothing would be needed except to devote the entire capacities of the railway to equipping him and to relieve it altogether of its troop-carrying duties. Still in the face of such a contingency KUROPATKIN would be impelled to assume the offensive, since every week's delay must weaken him comparatively. At any rate it is for him to strike. He and his army have been driven from the strategical centre of Manchuria and from the whole littoral, so that the Three Eastern Provinces have ceased to possess any value for Russia unless KUROPATKIN can force back the Japanese and recover Liaotung. In that duty of assuming the offensive lies the source of his embarrassment. He dare not throw his forces direct against the Japanese centre, which has been rendered so strong

that they would certainly be shattered by the impact. It is imperative that he should find a line of least resistance on either flank, and it is for such a line that he is now groping. Evidently he thinks he can find it on the west of Liaoyang, and if his latest cavalry reconnaissance has disclosed to him a weak spot there, then we may expect a repetition of the Heikautai attempt, this time on the west and south-west of Liaoyang, instead of on the north and north-east. But unless KUROPATKIN has a great numerical superiority over the enemy, he can not hope for solid success by these tactics, and, moreover, since his armies are now extended over a front of some sixty miles, the further he stretches his arms to the right or to the left in search of an avenue of exit, the more he weakens his line and the more he exposes its extremities to the disaster of being cut off. There is no reason to believe, however, that he has a numerical superiority, and events have shown that with equal forces his chances of victory are very small. His position, therefore, is most perplexing. To no event in modern history has greater interest attached than to the plans now seething in his brain and in the brain of the Japanese Head Quarter Staff. The Port Arthur Army has disappeared into space. It was an army of four Divisions—the First (Tokyo), the Seventh (Hokkaido), the Ninth (Kana-zawa) and the Eleventh (Shikoku),—and it is not necessary to remind the public that the arrival of such a force upon the scene of combat in the Shaho Valley would greatly affect the situation. We do not know that it has arrived there. We do not know whether it has gone. Neither does KUROPATKIN, and his anxiety to make the discovery must be absorbing. Therefore we may expect to learn that his troops are kept very busy in the immediate future, reconnoitering here and scouting there. The days now available for final decision are few, and a decision must be made.

## CHINA.

TELEGRAMS published in Tokyo say that the Chinese Government anticipates with much uneasiness the state of affairs that may occur in the empire at the close of the war. The Yangtze Valley is alleged to be the region on which these eyes of apprehension are fixed, and the story runs that all possible military preparations are being made to meet the emergency, and that the Viceroy has been warned to confer and take measures for mutually assisting each other. It may be presumed that an anti-foreign rising is the dreaded contingency. Predictions that something of the kind is in the air have been made from time to time by the *North-China Daily News*, and we can not forget how correct that journal's forecast proved in the case of the Boxer riots. Prophets always take a great risk, for even though they be absolutely correct in their diagnosis of the conditions precluding a catas-

trophe, they can not possibly gage the innumerable accidents that may intervene to avert it. The one thing quite certain is that elements of anti-foreign disturbance always exist in China, and the other thing quite certain is that if such elements did not exist the Chinese would not be human. A moderately careful perusal of China's history, and especially of the history of her foreign relations, must prove to anyone, first, that more pacifically disposed or long-suffering people do not exist on the face of the earth; and, secondly, that no imperial nation has ever received at the hands of foreign States, their subjects and their citizens, treatment so provocative of indignation and aversion as the Chinese have received at the hands of the Occident ever since the Portuguese made their *debut* on the Far-Eastern stage. We deliberately use the words "ever since," for although it is not deniable that during modern times great amelioration has been effected in the conduct of China's foreign intercourse, there would be no difficulty in adducing very recent examples of treatment which no sovereign State in the Occident would endure for one moment without drawing the sword. Even at this instant there is in progress on China's soil, between two foreign Powers, a war having for motive to determine whether three of her fairest provinces shall be stolen from her dominions, and even at this moment hundreds of millions of her people are paying heavy taxes on account of an *ennemi* in which they had neither hand, act nor part, yet with the spirit of which they can not choose but sympathise if any spark of manliness and patriotism still smoulders in their breasts. The doings of Chinese mobs may not harmonize with civilization's canons—how often has the world seen such phenomena as civilized mobs? The Boxers may have discredited themselves by their excesses. But in what degree is civilization honoured by the methods of the West towards the East; by the unscrupulous, predatory and masterful behaviour that disfigures the Occident's record in the Orient? Possibly it is all inevitable. Possibly it is a part of the unhappy decree which condemns humanity to a perpetual struggle for the survival of the fittest. But, whatever be the ultimate cause, the effects are plain enough to those that look for them dispassionately, and one of them is that there must be working in the huge Chinese mass a strong leaven of bitter anger against foreigners, and a profound desire to expel them beyond the borders of the Middle Kingdom. It is a thing to be reckoned with just as is the plague or the cholera. But how? The present method of Russia, the present method of Germany, the present method of France and the former method of England represent a frank appeal to violence for purposes of spoliation. It is not more sure that two and two make four than it is that forces such as those of which Liaotung, Shantung and Annam have been made the generating centres, must, if

left to develop without check, end in the disruption of the Chinese empire and its partition among the predatory Powers. Could those ends be compassed peacefully, perhaps the results would be happy for the Chinese; that is to say, for a nation which in respect of homogeneity and numbers occupies the premier place on our globe. But there can be no peaceful accomplishment. In the face of courses such as the Occident has hitherto pursued; in the face of the inveterate antipathy those courses have aroused among the Chinese, and in the face of the burning jealousies that sway Western Powers, there can be no pacific partition of these rich spoils. Many publicists think and say that the sight of Japan's successes against Russia complicates the Chinese problem. A strange contention surely! It assumes as axiomatic that craven submission on China's part is the only mood to suit the situation. Is it not evident on the contrary, that since a century of contact with masterful Powers has failed to educate that submissive mood, the true solution lies in conceding China's right to assert herself, in recognising her title to independent existence and in encouraging her to struggle for her own integrity? If these victories that Japan is winning assist to rouse Chinese patriotic resolution, they will be promoting the policy that the United States and Great Britain have finally adopted. The pity is that this policy was not adopted long ago, for then we should not now be living on the edge of a volcano, nor anticipating repetitions of the shocking scenes of 1900.

#### SAGHALIAN.

MENTION has already been made in these columns of the fact that a tendency is plainly manifested by Japanese journals to advocate the occupation of Saghalien. The history of this island is too well known to need repetition here. Japan's title to its ownership far ante-dates Russia's title. In fact so little was known about Saghalien by Europeans in general that not until 1849 was it discovered to be an island. LA PEROUSE, BROUGHTON and KRUSENSTERN, who visited the east Asian coast at the close of the 18th century and the beginning of the 19th, imagined that a narrow isthmus connected Saghalien on the north with the continent, although long before that time the nomenclature of the Japanese showed that they understood the place to be an island. NEVOLSKOI was the Russian who in 1849 made what his countrymen called a "discovery." He sailed through the channel, 4 miles wide, that divides the north-west shore of Saghalien from the mainland. In those days knowledge travelled slowly. Six years after NEVOLSKOI's "discovery," a British naval officer, Commodore ELLIOTT, lay quietly with his squadron in the Gulf of Tartary, imagining that he held a Russian squadron blockaded between Saghalien and the continent, whereas the Russian ships had sailed unscathed through the northern

channel and entered the Amur River. Saghalien would be a most valuable possession in Japanese hands on account of its splendid fisheries and on account of its mineral deposits which, though supposed to be very rich, are practically undeveloped. In Russian hands it seems at first sight to be valuable chiefly as a convict station. But it has also great political importance; for if the passage from the Gulf of Tartary between the island and the continent were closed, then the mouth of the Amur would be accessible from the Sea of Okhotsk only, where the coasts are ice-bound for many months, which is not the case with the Gulf of Tartary. Evidently to close this passage would be an easy matter for a Power able to plant batteries commanding the narrow strait, and consequently if Saghalien were in Japanese possession, all the explorations and acquisitions of MURAVIOFF in the Amur Valley might be erased from Russian records so far as their imperial value was concerned. The *Nichi Nichi Shimbu*n was the first to raise this question about the recovery of Saghalien, and, as our readers know, a representation on the subject is now awaiting consideration by the House of Representatives, so that very possibly the cry of *Karafuto kwaijuku* may soon become quite fashionable. No one can be at all surprised. If Japan is to obtain favourable terms from her enemy, it is essential that she should hold some pledges, and Saghalien is at once one of the most valuable and the most accessible. Interesting statistics as to its fishing capacities are given in the columns of the *Fiji Shimp*o. The take by Japanese fishermen since 1892 shows the following results:—

	Herrings. <i>Koku.</i>	Salmon. <i>Koku.</i>	Cod. <i>Koku.</i>	Total. <i>Koku.</i>
1892 .....	3,318	2,517	20,418	29,253
1895 .....	16,593	8,590	34,246	59,428
1901 .....	52,194	3,089	12,626	67,908
1902 .....	61,401	2,217	18,320	81,939
1903 .....	90,014	2,559	16,862	109,435

In addition to the above, the quantity of fish oil, whale oil and edible sea-weed obtained brought the total to 113,639 *koku* in 1905, having in the Hakodate market a value of 1,902,404 *yen*. On the Russian side the total was slightly larger, namely, 117,133 *koku*, but in obtaining this the Russians made such free use of Japanese fishermen that from 30 to 60 per cent. of the whole value of the nominally Russian take came into Japanese hands. This, our contemporary says, is clearly proved by the fact that whereas, in 1903, the number of Japanese fishing stations was 99 worked by 3,921 fishermen, the number of so-called Russian stations was 79 employing 3,251 Japanese. It is moreover believed that unlicensed fishing is carried on by the Japanese to the extent of a million *yen* yearly, their total interest in the fisheries being thus from 2 to 3 millions per annum. The *Fiji* writes thus:— "This island belonged to us originally, and the whole nation desires that it should be recovered. It is 5,400 square miles larger than Shikoku and Kyushu combined, its total superficies being 29,000 square miles.

Though the climate is cold the soil is fertile. It has large forests, its fisheries are immensely valuable, and of late years agriculture has made considerable strides. History clearly shows it to have been our property, but in Tokugawa times we did not deal with it thoroughly, and Russia, taking advantage of the fact, invaded it, so that finally in 1874 it became a Russian possession. The nation regrets the event much. The island would naturally be recovered in the sequel of the war, but our opinion is that the better plan would be to occupy it at once. For since last year the war has made it impossible to carry on our fishing industry there and we have thus suffered heavy loss. From April the fishing season commences, and were the place occupied at once our fishermen could get to work this year. There are not more than something over 2,000 Russian troops in the island, and to take the place would not in any degree affect the present strategical programme, whereas its capture would greatly inspire our troops. The material and immaterial results would be great. Take it at once."

In our opinion the *Fiji Shimp*o under-rates the matter when it says that to take the island "would not in any degree affect the present strategical programme" (*Gomo ima no gunjinkaiaku ni yekyo wa oyobosazu.*) What our contemporary doubtless means is that the effort would not interfere with the prosecution of designs contemplated in other parts of the field, which is probably true. But as to the effect upon Russia there can be no second opinion. So long as she fights in Manchuria only she does not lose anything that actually belongs to her. But Saghalien is her own territory and, as shown above, its tenure is essential to her development of the Amur region. To lose it would be a heavy blow; a blow hurtful to her prestige and to her empire.

#### RAILWAYS IN JAPAN.

WITH reference to our article published elsewhere showing the borrowing capacity of Japanese railways, a correspondent writes:—"Surely a mistake has been made in your to-day's article on the value of the railways of Japan. You take the capital subscribed as so much and you deduct any further money borrowed. But the money was obtained to extend and improve the railways, and in so much as it was well spent it added to their value as a whole and to the amount which a foreign syndicate would lend on them. One way to get at the value of the railways is to take the subscribed capital and add the borrowed money. But I think a simpler plan is to take the mileage. This, at the end of 1903, was about 3,300 miles of private lines and, say, 1,300 miles of Government lines, or a total of about 4,600 miles. Taking the cost as about £10,000 per mile (the Siberian Railway cost Russia £16,000 per mile), we have a total value of £45,000,000. Of course I am

taking the railways public and private and am not considering how the latter would be made available to Government. I am simply looking at the value of the railways to foreign lenders."

All this is quite true. But our correspondent has not noticed one most important point, namely, that the sixth Article of the Railway Hypothecation Law, now before the Diet, provides that "the amount of indebtedness contracted on the security of a railway foundation (*saidan*) added to the company's debts shall not exceed the total of the company's paid up capital." It was with reference to this draft of law that we published the tables to which our correspondent takes exception—exception which would be valid in the absence of restricting legislation. Since, however, the new law clearly indicates that the amount of paid up capital minus the amount of the railway company's debts shall be the maximum of its borrowing power, the importance of a table of capital and debts becomes plain.

We may take the opportunity of saying that according to the latest officially published railway statistics—those for 1902—the mileage of State Railways actually open to traffic was 1,226 miles, and the cost of construction had been 125,714,859 *yen*, the outlay per mile thus standing at 102,540 *yen*, which is very near the figure assumed by our correspondent. But in this outlay is included a large sum spent upon extensive workshops and other extras. If we turn to the private railways we find that the mileage then open to traffic was 3,007, upon which 213,231,933 *yen* had been expended, so that here the cost per mile is something less than 71,000 *yen*. It appears to us that if the law did not impose restrictions, the best way to get at the value of the railways for borrowing purposes would be to consider their earnings. For example, the figures relating to the State lines in 1902 were these:—

	Yen.
Total Income.....	18,316,582
Running expenses .....	9,066,165
Nett Profit .....	9,270,417

Thus the nett earnings represented 7.4 per cent. of the capital invested. These lines, therefore, should be ample security for a loan of 150 million *yen*, whereas the new law would not sanction their hypothecation for more than 126 millions.

In the case of the private lines, the record is:—

	Yen.
Total Income.....	51,980,795
Working Expenses .....	25,269,388
Nett Profit .....	26,411,407

This, which is independent of State subsidies (523,913 *yen* in all), represented a return of 7.8 per cent. on the capital invested, a figure remarkably close to the 7.4 per cent. realized on the State lines. Some of the latter, having been the first constructed, were naturally in the most favourable localities, and consequently though their cost was much heavier—if we include all the workshops, &c., and the excep-

tionally large outlays incurred at the outset—they pay almost as well as the private lines. Here too it may be noted *en passant* that though official management is generally supposed to be much more extravagant than private and though a great deal of that kind of criticism was heard in Japan when the question of the State purchase of private railways was on the *tapis*, the above figures show that whereas the working expenses on Government lines were only 7,395 *yen* per mile in 1902, they were 8,403 *yen* on private roads.

The financial condition of the private lines represents a borrowing power of fully four hundred million *yen*, whereas the new law limits their hypothecation value to 190 millions.

#### KOREA.

FROM time to time there have been vague rumours of secret communications between the Korean Authorities and Russia ever since the war commenced. M. PABLOV's name, as might have been expected, has generally been connected with these stories, and it was understood that though his direct functions in Seoul had ceased to exist, he had contrived to establish machinery for preserving a measure of his old influence in the Korean capital. These rumours took more definite shape when it became known that the two Korean politicians whose visit to Port Arthur in the days of Yong-Anpho excitement had awaked much attention, were subsequently attracted to Shanghai after M. PABLOV's withdrawal to that place; all of which things were recounted not by any means to the discredit of M. PABLOV, but rather as evidence of his activity in his country's interests. Then for a time talk of that kind ceased to be audible, and in the presence of events more absorbingly interesting, M. PABLOV and his manoeuvres faded out of sight. This phase of the situation has now again been brought into salience by reports of the discovery of a kind of Russian intelligence bureau within the Korean palace itself. It has been found—so the story runs—that certain officials in the very inner circle have been keeping up a regular correspondence with Shanghai, with St. Petersburg, and, prior to the withdrawal of the Russian troops from north-eastern Korea, with Hamghyong-do also. As between Russia and Japan there are many Koreans who find little difficulty in choosing. They believe that *vis-à-vis* either Power the independence of their country will ultimately be illusory, and since that stake is no longer to be struggled for—if indeed they have any strong disposition to struggle for it—their conception of a wise policy is one which will guarantee themselves personally against change. If the empire can not be preserved, then at least, they think, let us seek to preserve the conditions which from time immemorial have provided securities for us and ours. Now Russia is essentially conservative. If she gain the

mastery in Korea, she will be quite content to let all things, or nearly all things, run on smoothly in their old grooves. That is her system of so-called "civilizing," just as at home she counts civilization to be the preservation of the ancient order. Japan, on the other hand, is most strenuously liberal. Her influence in Korea will be directed and is already directed to the uprooting of all abuses that tend to weaken the empire, and to the introduction of sweeping reforms in every branch of the administration. Japan's predominance, therefore, would spell ruin for quite a little army of eunuchs, court councillors, necromancers and other parasites of the ancient regimen, who therefore not unnaturally arm themselves against the development of the island empire's authority. The EMPEROR, little better than a puppet at any time, ought to be fully sensible that if any remnants of imperialism are to be his, they must come to him through Japan, not through Russia, since Japan's treatment of the Korean problem is necessarily swayed by considerations which have no weight whatever for Russia. Japan has to play to the gallery of the world, an audience that Russia holds in supreme indifference, as all her history shows, and from that difference the Korean monarch should be able to deduce a rule of conduct were he accustomed to think for himself or competent to obey his own thoughts. But by his side always and at his ear always are the men alluded to above, the men who see their account in ostracizing reform and embracing conservatism. By these advisers HIS MAJESTY seems to have been for a time persuaded that Japan contemplated his speedy dethronement, and that the only hope of salvation lay in placing himself under the shadow of a species of condominium of all the Powers with Russia at their head. The EMPEROR, it appears, has never divested himself of the recollection that once upon a time he actually took refuge in the Russian Legation, and actually emerged from that asylum with a renewed lease of sovereign power. He retains a sort of secret inclination to have renewed recourse to that device when storm and stress confront him, and what between the bewilderment of reforms which he does not understand or appreciate and the persuasions of his conservative *entourage* he recently, it is said, drew very near to a desperate step. Yet it was hard to see what avenue towards effective retrogression could be found just at present, and Minister HAYASHI's counsels are reported to have not only convinced the Monarch of that fact but also to have largely reconciled him to the programme which the Russophil party in the Palace dislikes so greatly. It was under these circumstances that the secret-intelligence bureau came to light. We are not informed how it has been disposed of, but as LI YONG-IK's rustication from the capital is recounted in the same context, as well as the rustication of others whose names are constantly connected with rumours of intrigue and disturbance, it may be presumed that a total change of atmosphere is to be effected. Korea is more to Japan, much more, than Egypt is to England, and if Japan limit herself to following in Seoul the example set by Great Britain on the banks of the Nile, she will be showing much moderation.

MONTHLY SUMMARY OF JAPANESE  
CURRENT LITERATURE.

In the pages of this month's *Taiyō* Dr. Katō Hiroyuki reverts to the questions at issue between Major-General Satō and Mr. K. Ukita connected with the suicides perpetrated on the *Kinshū Maru*, the *Hitachi Maru* and the *Sado Maru*. A full account of the controversy that raged for many weeks over this subject having appeared in these columns, we give a brief epitome of Dr. Katō's defence of the practice of suicide among Japanese warriors, for we think that it is impossible to regard his article in any other light than as a defence of the practice, though in one or two places he admits that readiness to commit suicide may lead to serious abuses. Here is the substance of his remarks. There is a wide difference between the ideas of Japanese and those of Europeans and Americans in reference to the disgrace attending capture. If overpowered by numbers and no longer able to resist, Western troops quietly surrender and become prisoners. But it is quite impossible for Japanese soldiers to entirely get over the notion that their capture involves shame.\* Now supposing, as some have recommended them to do, our troops were always in the habit of thinking that it was their duty to preserve their lives for a grander occasion on which to sacrifice them, to become prisoners temporarily in order to fight for their country at some later period, is it to be imagined that they would fight as they do now? This spirit of extreme caution would be fatal to success. It is because our warriors all say *now* is the time to die that they are so formidable to their enemies. The determination not to be taken alive it is which makes our men fight so desperately; and when resistance is no longer possible, for a warrior to take his own life rather than succumb shows a grand spirit—a spirit that we hope never to see lost. But of course this can be carried to extremes, and men may get to think that there is merit in dying apart from the realization of the object of fighting, the defeat of the enemy. In reference to suicide, it is impossible to lay down any hard and fast rules that shall apply to all circumstances. On some occasions it is justifiable, on some occasions not. But if, in order to stop suicide, officers were to constantly impress on soldiers the importance of reserving themselves for future service it would certainly have a bad effect. (*Gwanrai jisatsu to iu koto wa migi no gosoki baai de aru kara, settai-teki ni warui, settai-teki ni yoi to iu yoni giran suru koto wa dehinai no de, iroito toki no moyō ni yoru koto de aru; keredomo dōmo jisatsu no narubeku todomeru, toriko ni matte mo, nande mo yoroshii kara, nochi no hakarigoto wo nase, nochi no hakarigoto wo nasu ni wa jisatsu shite shimatte wa nani mo narunai kara to itte, naru dake jisatsuyō todomeru to iu hō no setsu wa taihen warau eikyō wo oyoboshite kitaru darō to omou.*) After once falling into the enemy's hands, there is no reason why soldiers should kill themselves. But when they reach the critical moment, when the choice lies between death by their own hands or surrender, it is for each one to decide which course he will follow. It is said that among English soldiers there is no such custom, and yet that they fight bravely enough. They do not regard capture as a disgrace. This is with them no doubt the result of force of habit; but in Japan we have not come to this way of thinking and the repugnancy of our men to be taken prisoners has much to do with our success, and so we are not desirous of seeing this feeling weakened. In reference to the Sato-Ukita discussion on fighting for duty and fighting for reputation, I am inclined to think that the fulfilment of duty and reputation are inseparable from each other. The man who does his duty best has the highest reputation and there is no fame worthy of the name apart from the discharge by each individual of the duties that devolve on him.

That part of the *Taiyō* which bears the title of

\* This, as Mr. Ukita argued, is a relic of feudalism. The question discussed by Dr. Katō is, how far, if at all, should it be encouraged?—(WRITER OF SUMMARY.)

*Jimbutsu Gettan* (人物月旦), "Character Sketches," edited by Mr. Toyabe Shuntei, is this month devoted to an analysis of Admiral Tōgō's character and its relation to hero-worship. Nothing could be more beautiful, says Mr. Toyabe, than the modesty displayed by Admiral Tōgō on every occasion when the nation has given expression to its great admiration for the part he has played in the war. All his dispatches and his speeches have breathed the same tone of self-depreciation and self-effacement. If victories were won, they were the result of the Emperor's virtues and the bravery of the officers and men who fought under him. Napoleon once said that the great epoch-making battles of history were won by great generals rather than by the soldiers who fought under them. It was Caesar and not the Romans who conquered Gaul; Hannibal and not the Carthaginians who won successive battles against the Romans; Alexander the Great and not the Macedonians who made extensive conquests in India, Frederic the Great and not the troops who fought under him who won victory after victory in the great Seven Years' War. This remark perhaps embodies the general opinion of Europeans, and so in all the great wars of history the names of great generals or admirals have received more honour than all those who served under them. Military hero-worship has been carried so far that victory has been represented as dependent on leadership rather than on the efficiency and bravery of large bodies of troops. Admiral Tōgō's whole attitude in this war, it seems to us, is a protest against any such notion. Whatever people say of him, his opinion of himself is that he is only an ordinary Japanese who is scrupulously discharging his duties as an Admiral. He does not claim to possess any faculties which other Japanese do not share. He objects to have attributed to him magical powers of any kind. In this he is right; for to us he does not seem to be other than a typical Japanese (*Waga Tōgō kaigun Taishō wa Nihon kokumin no nōryoku jō no koto wo nasazu. Mata kore wo nasu no daimajutsu too yū suru kishin* (鬼神) ni arazu).

At the close of the feudal age the great clans were wont to boast that all Japan's military strength centred in them. The Chōshū men spoke of the Army as though it were of their creation and the Satsuma men did the same with the Navy. In the second session of the Diet Count Kabayama, the Minister of the Navy, astonished the members of the Lower House by a speech he made in which he referred to the Navy as though it were a clan creation and as though its very existence depended on the Satsuma men. This state of feeling lasted up to the time of the China-Japan war, when it was discovered that both on land and on the sea ordinary Japanese plebeians fought just as well as the leading clansmen and when the nation began to awaken to the fact that the Army was no longer a Chōshū Army and the Navy no longer a Satsuma Navy, but that both the land and sea forces were national forces fighting for His Majesty the Emperor with equal bravery. Admiral Tōgō realizes this most thoroughly and has repeatedly drawn attention to it. Though educated under clan influences, he is essentially the people's man. Modest, reticent, retiring, he treads the path of duty with a firm step and expects all his subordinates to do the same. Anything like ostentation or boastfulness he loathes. So in not a few things he resembles the great Nelson, while not possessing his talents. In reading Mahan's Life of Nelson one is struck with the fact that he became England's greatest hero, not because of his marvellous feats as a naval commander but on account of great beauty and strength of character. To be remembered as the man "who did his duty" was Nelson's highest ambition, and this is Tōgō's highest ambition too.

Tōgō studied in England at the beginning of the Meiji era. But in his early days he showed no remarkable proficiency. He did not receive high marks at school or college and he was quite unknown to fame till the China-Japan war, when

he suddenly displayed great resolution, calm judgment and fruitfulness of resource. In the Tōgō of that period discerning men saw the elements of the man whom the whole nation worships to-day. Tōgō, like Nelson, is a seaman to the backbone. No detail connected with the management of ships is unfamiliar to him. As the destroyer of the Russian fleet, Admiral Tōgō has attracted the eyes of all the world to himself. But his greatness consists in his beautiful unconsciousness of superiority to others. In genius, if report be true, Kamimura and Shibayama both surpass him. The former of these is a great man for hitting on new plans—possessing a mind full of resourcefulness. The latter is a born strategist and all the naval tactics which have been carried out have, it is said, been the product of his brains. But these two clever men need to work in conjunction with a man of Tōgō's type in order to effect anything great; for in the carrying out of manoeuvres decided on Tōgō and his staff display astonishing efficiency. To the keen observer it must seem that Admiral Tōgō is a man born to command. His eye is keen, his face expresses great firmness; his manner and carriage are quiet and dignified. But at the same time he is so very unassuming and undemonstrative and so simple in all his ways that certain foreign journalists when they first saw him asked, "Can this be the man that the whole world is talking about?" So it may be truthfully said that Europe and America have been as much astonished at the character of the man who has done such wonders on the sea as by his great exploits, and they recognize that we have given to the world a hero of a new type.\* In not a few particulars Tōgō resembles Saigō Takamori, who may be said to have been until now Japan's greatest modern hero. The motto of Saigō's life was embodied in those memorable words of his:—*Ayamachi wo mite wa, kore wo onore ni hiki; tsaochi wa kore wo hito ni yasuri; danjite okonayeba, kishin mo saku.* "Where you see faults, take the blame of them yourself, where there is worth, attribute it to others. Act resolutely and the very gods and devils shall flee before you." This is the rule of Tōgō's life. Is it possible that he has consciously or unconsciously made Saigō his ideal? There was nothing more remarkable about Saigō than his thorough rustic simplicity of nature. When at home he appeared in the garb of a mere student. So poor was his dress that it is related that when the late Sir Harry Parkes first went to visit him, he mistook him for the servant and took no notice of him whatever. Tōgō at home is just the same. When after one of Tōgō's victories, a certain foreign Minister in Tōkyō went to his house to offer his congratulations to the care-taker he was surprised to find the said house to be one of the humblest of dwellings, such as are occupied by subordinate officers, with a simple rough-looking wooden label on the gate marked in small letters "Tōgō Heihachirō." Such simplicity combined with such fame, it is said, impressed the said minister deeply with the superiority of the great Admiral's character.

The *Taiyō* may be said to be a magazine and a news' journal all in one. Its enormous bulk, exceeding 200 large-size pages, enables it to publish a great variety of matter much of which is of a most valuable kind. It has adopted newspaper tactics in the matter of interviewing. Members of its staff visit men who are authorities on special subjects and elicit from them information which is not infrequently of exceptional interest. This month's *Taiyō*, for example, contains an account of Mr. Uchida's views on the political situation in Peking confided to an interviewer; from which we extract the following. Before the war began China's sympathies were with Japan, and it is not for a moment to be supposed that our success against Russia is anything but welcome to China. But

\* *Kore wa Rekoku kantai no ōmetsu ni oite Ō-Bei jin no odorokashitaru noni narazu, mata sono jimbutsu fūzai no ihyō* (意表 未looked-for) *waru ni oite Ō-Bei jin wo odorokashitari. Karera wa waga Tōgō Kaigun Taishō wo yete, tashikani yēyū no shin-mokai* (New type or design) *wo sekai ni sayetaru wo shinjitarubeshi.*

\* "Our Admiral Tōgō does nothing that is beyond the powers of ordinary Japanese; nor is he a preternatural being that can work great miracles."

China has to be diplomatic and to keep other countries on as good terms with her as possible. If any reliance can be placed on what appears in foreign newspapers, every country represented at Peking is receiving some special marks of favour from China. The Russians are said to be quite pleased with the treatment they meet with. While things are as they are now China has a difficult part to play, and our newspapers and magazines will do well to take note of this and not to say anything that might alienate Chinese sympathy with Japan. The less that is said about the attitude China ought to adopt in the final settlement the better. As it is impossible to foresee how China will act then, the publication of conjectures does more harm than good, as some of them are decidedly irritating to China. The press of this country has great responsibility in this respect. It must be fully borne in mind that as a conquering country our position in China demands very careful handling if we are going to reap all the benefits we hope to reap. It ought to be plain to every thoughtful person in this country that however uprightly and disinterestedly we may act, at the present stage of affairs there will be not a few Chinese statesmen who will suspect our motives and our intentions. So that it is the duty of all Japanese publicists to avoid furnishing material that may tend to increase this suspicion. There are not wanting diplomatists and others in Peking who are endeavouring to prejudice the Chinese against us and to predict that we shall make an improper use of the power we have gained. Russia of course, will try this game on for all it is worth. By mere inadvertency or from ignorance of the real situation of affairs and its extreme delicacy, newspaper writers may do our country much harm. It is quite true that up to our capture of Liaoyang and even on to the fall of Port Arthur the Chinese Government took a gloomy view of the situation. But we ourselves were not without a certain amount of apprehension as to the result of the war. And even now China has to play a difficult diplomatic game and as a neutral Power it would ill become her to be too vociferous over our successes. But to interpret this undermonstrativeness and caution on her part as an indication of a revulsion of feeling at the Peking Court in favour of Russia and against us is to show ignorance of the political chess-board and the rules that are observed by successful players. . . .

The Court at Peking makes a point of finding out what is the trend of public opinion in this country in reference to Chinese affairs. All important utterances and newspaper articles on this subject are translated and kept for reference. Then we must bear in mind that we have some 3,000 Chinese students in this country who write home to their friends all the information they are able to pick up here on every subject; so there are few things that happen in Japan which are not perfectly well known to the Chinese. These considerations make it incumbent on all Japanese writers and speakers to weigh their words well when expressing opinions on Chinese politics and to avoid indulging in wild surmises of any kind.

Mr. Shimada Saburō writes in the *Taiyō* condemning the tax on imported rice, giving many weighty reasons against its imposition. The *Taiyō* will issue an extra number on the 20th of this month. It will constitute Vol. II of the History of the Meiji Era and will deal exclusively with the history of finance. A review of the state of finance in 1904 will form a supplement to the work. It is likely to be a carefully compiled record, if we may judge from Vol. I, which we examined carefully and reviewed in these columns when it appeared.

If any student of Japanese is anxious to read one of Gorky's recent stories in modern Japanese he will find a translation of one in the February number of the *Taiyō* (p. 81 et seq.). The title is *Yudaya jin no ukiyo* ('The Fleeting World of the Few'). It covers about 30 pages of the magazine. The style adopted is colloquial throughout.

\* \* \*

The well known publishing company the Fuzambō issues a monthly review of new books called the *Tokushokai* ('The Reading World'). This firm announces the publication of an

elaborate history of Western Countries called *Seiyō Tūshū*, compiled by Dr. H. Segawa. It covers over 780 pages, has 15 maps and sells at 2 yen a copy. Dr. Miyoshi, we are told, is publishing his lectures on Botany. Vol. I is already out, bearing the title *Shimpen Shokubutsugaku Kōgi*. The Fuzambō announces that it has in course of publication or has actually issued 12 new works. By far the largest and most important of these is the *Sekai Tetsugaku Bunko* ('The World's Philosophy Library'). This work is edited by Dr. Inoue Tetsujirō, Dr. Nakajima and a few others. The work is to consist of 15 volumes, each volume costing 70 sen. The next work announced is the *Sekai Taikwan* (大觀), 15 vols. at 50 sen per vol. The title of the other 10 works, which all consist of a number of volumes, are *Saishin Montō Zensho* (A complete collection of the most recent Questions and Answers); *Joshi Jishu Bunko* (Library on Self-training for Women); *Gembunitchi no Futsugaku Zensho* (A complete collection of general literature, in the new style called Gembunitchi) 30 vols. at 20 sen a vol.; *Hakubutsu Sōsho* (A Natural History Collection, 24 vols. at 35 sen a vol.; *Gembun Itchi Nōgei Sōsho*, edited by Dr. Yokoi, a voluminous writer on agriculture; *Nichiyō Rikwa* (理化叢書); *Shōnen Sekai Bungaku* (Literature for the Young), 50 vols. at 12 sen a vol.; *Tsūzoku Sekai Bungaku* (Literature for the Masses) 50 vols. at 25 sen a vol.; *Meicho Bunko* (A Library of Noted Books), 100 vols. at 20 sen a vol.; *Zuichitsu Sōsho*; in the press.

The war seems to be affecting the book trade a great deal. Works that had been begun have been left unfinished, and it is difficult to get publishers to take up new works. As regards book catalogues, concerning which we have occasionally been asked for information, all the large booksellers issue catalogues at any rate once or twice a year. Then there are catalogues that are issued by Associations; such is the monthly catalogue published by the Tōkyō Shōjaku-shō (商) Kumiai called *Zusho Geppō*, which has been coming out for nearly 3 years. A Selection from the writings of Bakin called *Bakin Myōbunshū* (A Collection of Noted Passages from Bakin) published by the Bungaku Dōshikai seems to have had a wonderful sale. It has reached its 17th edition. The price is 20 sen.

\* \* \*

Radical changes in the educational system of the country have so long been talked of and apparently so often, indefinitely postponed that there are those who despair of seeing anything effected, no matter who is Minister of Education. The *Kyōiku-kai*, which may be said to be the leading educational magazine, has for many years past constantly agitated for reform. In the New Year's number it discusses the subject anew, inquiring whether the present is a suitable time for the carrying out of the scheme of reform which the Mombushō is said to have elaborated. Anyhow it is high time that the scheme were made known to the educational world, says the *Kyōiku-kai*. It will of course be a very comprehensive affair dealing with a great variety of subjects and the Mombushō would doubtless be greatly benefited by hearing what the outside public has to say about the new system. The carrying out of certain parts of the contemplated reform may require large sums of money and it is almost certain that the Treasury would not grant these sums just at present; but there will undoubtedly be other parts that can be effected without increasing expenditure. These may well be put into operation at once. No big reform can be carried out in a few months, and the sooner the desired changes are begun the better for the country. The present political situation does not furnish an adequate cause for further delay and the public anxiety on the subject of education would be greatly allayed by an outspoken declaration of policy on the part of the Education Department.

"Methods of Teaching in Middle Schools" is the title of an article written by Mr. Sakata Chūjiro, a teacher in the Yonezawa Middle School, published in the *Kyōiku-kai*. Mr. Sakata states that some little time ago the Minister of Education instructed the Directors of Middle Schools to collect from the teachers expressions of opinion

on the desirability of changing the subjects taught and the adoption of new methods of teaching. The kind of subjects treated by the teachers who responded to this application may be judged of by Mr. Sakata's observations, from which we now proceed to make a few extracts. (1) *Methods of teaching*. Those now employed may be said to be two, the expository and the catechetical. One has been called the pouring-in method, and the other the mind developing method. It seems to me that both methods may be followed with advantage according to subjects. Some teachers seem to think that the catechetical method is only suited to very elementary teaching and that it occupies more time than can be spared for it. But this depends very much on the kind of questions that are put to classes and the answers which the pupils are expected to give. For forward pupils the less there is of catechetical teaching the better, but in the case of backward ones it is necessary. But one great effect of the catechetical method is that it awakens interest in dormant minds and makes students think who otherwise would listen to lectures in a very sleepy fashion. (2) *Subjects Taught*. These all need a somewhat different handling. Perhaps neglect to teach students how to pronounce and how to use their own language is common to all Middle Schools. Enunciation is too often indistinct and incorrect and choice of words in speech is hardly taught at all in many schools. It is unfortunate that in a large number of cases the teachers of English in Middle Schools should possess such an inadequate knowledge of their own tongue, because for purposes of translation a very extensive use of terms and expressions is necessary. This should be remedied at once. It is very desirable that Middle School teachers should have opportunities of visiting various schools for the purpose of studying methods of teaching. No facilities for this have been generally provided hitherto.

Mr. Ozaki Yukio, the Mayor of Tōkyō, is quoted in the *Kyōiku-kai* as observing that the Japanese as a people lack the power to assimilate foreigners to themselves, though they excel in the power of assimilating themselves to foreigners. Japan, says Mr. Ozaki, may become great in war and great in business, but if she lacks the power to impress foreigners, to make them desire to become like her, she never will be really great. Mr. Ozaki goes on to observe that the Chinese greatly excel in the art of assimilating foreigners to themselves. Their power in this respect is displayed all over the great continent, their motto seem to be "Assimilate yourself to nobody, but assimilate everybody to yourself." And they succeed in carrying this out. We are trying the assimilating experiment in Formosa, but we make next to no progress. Look at the wonderful assimilation that has gone on in the United States in the space of a century. America's greatness to-day is largely owing to her possessing the power of blending all new comers into one body, in making them all a part of herself. It is astonishing how the various units that make up the nation, despite original difference of race and nationality, become patriotic Americans. Had we this power in Japan it would put us in possession of elements of greatness and stability that we do not now possess. The countries that have a large amount of assimilating power are countries in which the people have considerable self-confidence, where the national personality is strong enough to impress itself on all who come into contact with it.

\* \* \*  
The last number of the *Chūokoron* (Central Review) has an article which discusses the future

\* We have always thought the opposite to be the case. Are not all occidentals in China living and thinking on an entirely different plane from the Chinese?—(WRITER OF SUMMARY.)

† It is largely a question of race, customs and interests. The Europeans who go to America probably have much more in common than ordinary Occidentals and Orientals. In India there is next to no assimilation going on. The cases of races mixing and not assimilating are very numerous. It is perhaps too early to decide what Japan can effect in this line; as hitherto she has laboured under serious disadvantages vis à vis Western nations. But the question is of considerable interest.—(WRITER OF SUMMARY.)

of the Anglo-Japanese Alliance. We give a *résumé* of the article below. The time for considering what steps shall be taken by the two Governments concerned in this Alliance is not far off. Various questions are being asked in reference to it. These may be briefly set down as follows:—(1) Is it advisable to renew the Alliance on existing terms? (2) If extension is desirable, should it be carried to the length of making an offensive and defensive alliance? (3) If such an alliance is desirable within what area should it be applicable? Should it apply to the whole world or only to the Far East? It is most important that we Japanese should know what is generally thought in England on this subject. The writer then proceeds to quote the views of a Mr. A. W. Wilson from the London *Daily Mail*. Mr. Wilson represents the action of the owners of some English merchant ships and coal merchants as constituting an offence to an allied country and seems to imply that the English Government has the power of preventing the sale of coal to Russia by private persons. Mr. Wilson alludes to the pro-Russian party in this country and goes on to argue that the action of certain British subjects towards Russia will tend to alienate the Japanese and make them weary of the alliance. Mr. Wilson then proceeds to work up quite an alarming situation for England if the Alliance is not renewed and extended, making out that England's retention of India will largely depend on whether Japan can help her to withstand a Russian invasion, \* and that without this alliance England's future position in the Far East would be one of great peril to her, and so on and so on, in the same emotional style. Mr. Wilson's arguments have greatly impressed the writer of the *Chūshōron* article, who seems to think that they represent general English opinion because they happened to find access to the columns of a sensational London half-penny newspaper. The *Chūshōron* goes to the length of thanking Mr. Wilson for his kindness in representing things as he has to Englishmen. The *Chūshōron* then adds that in its opinion Japan will not after this war be in any way dependent on the renewal of the Alliance, that she will be strong enough to stand alone. But it thinks that if the Alliance should not be renewed, Russia might step in and make an Alliance with Japan, and that would not for many reasons be desirable. It then proceeds to enumerate the advantages which England would gain by an extension of the Alliance, laying stress on the defence of India against Russia.

The *Chūshōron* is not very happy in its selection of articles from foreign journals, unless its object is to acquaint its readers with the worst things that have been said against England since the war broke out. It publishes a longish translation of an article published in the *Outlook* entitled "England has sold Japan." The four principal charges against England dwelt upon are:—(1) The supply of Welsh coal to the Baltic fleet; (2) the action of the Egyptian Government in allowing the Baltic fleet to coal at Port Said; this, it is maintained, England could have stopped had she been so minded; (3) the sale of the torpedo boat *Caroline* to Russia and her leaving the Thames for Libau were not stopped by the English Government; (4) England's action in the settling up of the North Sea affair has shown great coldness towards Japan in not repelling indignantly the assertion that Japan used the waters of her ally for an unwarrantable object. The *Outlook* represents all the above incidents in the worst light possible and its thoroughly anti-English sentiments are minutely reproduced in the *Chūshōron*. Judging by the emphasis marks inserted by that magazine we take it that the editor of the *Chūshōron* himself is pro-English and Anti-Russian. But he seems to fear

\* Quite a large number of Japanese, we find, have got hold of this notion. Of course it is quite absurd. No English Government would venture to depend on an Alliance with another Power for the defence of British territory against any single country and England can organize her Indian Army so as to make it more than a match for any forces that Russia can bring to the Northern frontier. The idea of England's being unable to defend herself against armies that Japan has repeatedly vanquished is too wild to be worth serious discussion.—(WRITER OF SUMMARY.)

that the above incidents will all be utilized by the pro-Russian party in this country for the purpose of trying to show that England is not an ally which Japan can trust and that she will do better to throw herself into the arms of Russia after the war is over. But one would think that the *Chūshōron* editor might see that Russia has given a hundred indubitable proofs of duplicity for every imaginable one that can be brought against England.

### THE BANK OF JAPAN.

The annual general meeting of the Bank of Japan was held on the 18th instant in the Bank building, when the following accounts were presented and passed:—

STATEMENT OF ACCOUNT FOR THE SECOND HALF OF 1904.	
Net profit.....	2,550,000
Brought over from previous accounts.....	426,900
<b>Total .....</b>	<b>2,977,800</b>
Distributed as follows:—	
Dividend .....	900,000
Reserves .....	550,000
Officers' rewards and expenses.....	185,000
Bonus to shareholders .....	900,000
Carried forward .....	463,000

The following was the address made by Governor Matsuo:—

GENTLEMEN:—In laying before you the business report of the Bank for the 37th year of Meiji, I desire to submit for your consideration the cardinal facts relating to conditions and to the Bank's transactions during the year.

The year 1904 witnessed an extraordinary situation and an exceedingly eventful time in our economic affairs. Nevertheless confidence remained essentially unshaken, and the money-market, as a rule preserved a quiet character. Since the preceding year the course of foreign affairs had given rise to a feeling of caution in our business circles, so that no very conspicuous effects seem to have been experienced from the war which finally broke out in February last. Nevertheless, in consequence of the transport of war materials, communications by land and by sea suffered some inconvenience, and certain vicissitudes were witnessed in connection with the transition of trade and industry from pacific to belligerent conditions. In the share market the rupture of diplomatic relations was accompanied by a momentary fall in quotations, but the victories won by our army and navy at once restored prices. The celerity of action on the part of our fleet obtained for us the command of the sea from an early period, and the security thus conferred on maritime communications virtually guaranteed to commerce a continuance of normal conditions. Among the people, too, from the moment of the outbreak of hostilities there was widely displayed a most laudable disposition to practise economy and saving, so that the deposits in the postal savings banks as well as in other banks showed a notable increase; loans previously made by the banks began to return largely, and the money market continued in a tranquil state. Moreover, from the Spring of the year, eminently favourable climatic conditions resulted in plentiful yields of all agricultural products, and, further, sericulture was very successful, so that the export of raw silk and *habutaye* reached extraordinary dimensions. The rice-crop especially was so abundant that it is expected to exceed the average by eight or nine million *boku*. All these things were so many factors co-operating to augment the nation's resources, and thus, although the volume of Exchequer Bonds issued during the year attained the great total of 280,000,000 *yen*, the subscriptions on each occasion exceeded by many times the sums to be allotted, and the instalments seem to have been paid with the greatest regularity. In fine, although the year closed upon a fairly busy state of the money market—as is indeed the case every fall—the opening of the new year at once brought back a large part of the accommodation then granted.

Such being the condition of the money market, the loans of this Bank also showed no special change, with the exception of a certain increase of foreign bills discounted. Only as the war progressed, the advances of the Bank to the Government tended to grow to such an extent that at times there was ground to apprehend that the note issues might attain too large dimensions. In view of this contingency the Bank twice increased its rate of interest, once in July and once in December; inasmuch as although the amount of notes issued stood at about 188,000,000 *yen* in April and May, it thenceforth kept steadily increasing month by month, until, at the close of

December, it reached more than 286,000,000 *yen*. It is to be regarded as inevitable that in time of war the demand for circulating media should be greater than in time of peace, and when we further take into account the fact that among the notes issued those transmitted to Manchuria and Korea last year amounted to some 30,000,000 *yen*, it would seem that the volume of paper now in circulation in this country does not notably exceed the figure for a normal year.

As for our foreign trade, we find that in the year under review exports exceeded 319,260,000 *yen* and imports 371,290,000 *yen*, making a total of 690,550,000 *yen*, which figures, compared with those for the preceding year, show increases of over 29,750,000 *yen* in exports and 54,150,000 *yen* in imports. The main items of increase in the case of imports were raw cotton, rice, wool, kerosene oil, leather and ships; which may be regarded as a natural result of the demand for foreign commodities in time of war; and on the side of exports, raw silk, *habutaye*, silk handkerchiefs, matches and straw-braid. This growth of the export and import trades, in spite of the existence of a state of war, was due to the circumstance that, while the commerce with China and other Far-Eastern countries did not undergo any check whatever on account of belligerent conditions, the prosperous state of the American market created a large demand for our commodities. It also bears witness to the fact that, at home, the people remained undisturbed while the war was going on, pursuing diligently their productive enterprises.

Turning now to the movement of specie, we find that the imports were over 33,940,000 *yen* and the exports 107,790,000 *yen*. It being of course inevitable that in time of war hard-money payments to foreign countries should increase, the Government had created a fund in specie to be used in case of emergency. But in a situation like the present much must necessarily depend on the specie reserve of the Central Bank. Therefore at the outset of the complication, the Government, with the object of strengthening the basis of our system of convertible currency, formed a plan for floating a foreign loan. For that purpose the Vice-Governor of the Bank was specially despatched to London, and on two occasions, bonds to the total amount of 22,000,000 pounds sterling were placed in the English and American markets. At the close of the year the Bank held a specie reserve of over 83,000,000 *yen*, and further had more than 84,000,000 *yen* to receive from the foreign loans, thus enabling us to keep our currency on a firm foundation, which is a matter of national congratulation.

With reference to the transactions of the Bank itself, few things call for special report. There is, however, one point which deserves to be remembered in connexion with our finances, namely, that, by Law VIII of 1896 and Law VI of 1898, the period for exchanging the notes of the National Banks and also those of the Treasury expired in December, 1904, and the exchange having been then completed, absolute uniformity was secured in the State's paper currency.

Such were the economic conditions during the period under review. More than a year has elapsed since war broke out, and the expenditures have reached a very large figure. Nevertheless the nation has well supported the burden. There has not been any violent economic vicissitude, and we have been able to maintain our progress in productive enterprise. This is due to the solidity of the people's resources and to their patriotic spirit; and also it should be remembered that our system of convertible currency has contributed in no small degree to this happy result.

In what future period the war may continue it is impossible to form any estimate. But our economic circles have already adapted their attitude to the belligerent situation and our industries are moving on in response to its demands. The experiences garnered make it clear that our forces may prosecute the struggle without anxiety as to ways and means. I believe that hereafter the whole nation, with ever united strength and fortitude, will continue to develop a spirit of endurance, and, each contributing his share, will help to promote the attainment of the cardinal policy of the State. I, on my part, propose to conduct the affairs of the Bank in accordance with that aim, and I have pleasure, gentlemen, in conveying to you this assurance.

Vice-Admiral Kataoka, Commander-in-Chief of the Third Squadron, arrived on Feb. 16th at Shimbashi by the 9.30 a.m. train. Baron Yamamoto, Minister for the Navy, Major-General Nagaoka, Vice-Chief of the Staff Office, and other high officers of the army and navy were present at the station. The Admiral proceeded to the Naval Department, after which he went to the Palace.

## THE IMPERIAL DIET.

## HOUSE OF PEERS.

The House opened at the usual hour on Friday. The President announced that the House's message of condolence had been conveyed through the Minister of State for War to the family of the late Lieut.-General Matsumura, and the Minister had been asked to return most cordial thanks.

The Second Reading of the Railway Mortgage Bill was then taken. Viscount Soga, chairman of committee, reported in favour of the Bill as an essential measure at the present time. Various amendments, however, had been effected by the Committee. The Seventh Article had been elided by the Government, in consequence of the discussion which it would probably arouse. This article provided that preliminary registration must be effected in the case of all articles which it was intended to mortgage. Such a provision would involve needless trouble, and the Committee having strongly objected to it, the Government had resolved to delete it. This had necessitated alterations in other parts of the Bill. The other amendments had been designed chiefly to render the provisions clear and to diminish the formalities required in taking advantage of the terms of the proposed law.

The Bill was passed as amended.

The next Bill related to the encouragement of deep sea fishing. It was read a second time and passed.

Two Bills relating to the punishment of prisoners of war, having been favourably reported by the Special Committee, were passed at once as sent up from the Lower House.

The Bill sent up from the Lower House, which provided for an extension of the functions of district courts, was then handed to a special committee, and the Bill for extending to vessels of a volunteer fleet the provisions of the Navigation Encouragement Law was passed through all its readings forthwith.

A Representation for honouring the memory of Sakaroye no Tanura Maru, who, in the Fujiwara epoch, invaded Yezo as an Imperial General, was adopted, and the House having entrusted to special committees two Bills sent up from the Lower House, rose at 11 a. m.

## HOUSE OF REPRESENTATIVES.

The House met at the usual hour on the 18th instant and after listening to questions relating to the alleged suspension of educational reforms during the period of the war, and to registration of land transactions in Hokkaido, proceeded to the Order of the Day. Two Bills sent down from the Upper Chamber were entrusted to Special Committees, and the second reading of a private Bill for transferring Awamori prefecture to the jurisdiction of Miyagi from that of Hakodate was then taken. This measure led to some discussion. It was pointed out that the Hakodate Courts were already embarrassed by lack of business and that to reduce their functions would be inconsequential in such circumstances. Attempts were also made to convict the Authorities of inconsistency since they professed to be guided at one moment by solicitude for the people's convenience, at another by considerations of legal facilities. The House, however, passed the Bill by a large majority.

The next business was a private Bill for amending the Law of Finance in the sense of requiring that expenditures in excess of budgetary items must be reported to the Diet for post-facto approval in the year immediately subsequent to their incurrence. The Government Delegate protested that this would often be impossible, as the outlays in question might not have been concluded by the time contemplated. But the House accepted a criticism that, if not concluded, they could be shown as in progress, and the Bill was passed.

Several Representations were then dealt with, the most interesting of them being a proposal to return to the old system which had largely fallen out of vogue in the Meiji era, the system of reserving to blind people alone the professions of shampooing and acupuncture.

The House rose at 5.40 p.m.

## HOUSE OF PEERS.

The House met as usual on the 20th instant.

The President having announced that he had attended the funeral of Lt.-General Matsumura on the preceding day, the Order of the Day was taken. A Government Bill for extending to graduates of duly authorized private medical schools the privilege of receiving diplomas without examination, which privilege had hitherto been limited to graduates of Government Schools of Public Schools, was taken up. The Bill was entrusted to a Special Committee.

The following Government Bills sent up from the Lower House were favourably reported on by Special Committees and passed through all their readings, namely, a Bill for amending the Land Tax Regulations, and a Bill for amending the Regulations relating to Registration of Fixed Property.

Two other Government Bills, sent up from the Lower House, with reference to Hokkaido affairs, were passed, the third readings being dispensed with.

The Government Bill for amending the Income Tax Regulations was passed as amended by the Lower House.

Viscount Okabe, Chairman of Committee, reported favourably upon the Government Bill for facilitating the raising of loans by owners of factories. This measure has already been explained. Its object, briefly stated, is to legalize the hypothecation of plant and other movable property forming an integral part of a factory as a going concern. The Chairman said that in view of the importance of the Bill great care had been exercised in examining it, and various amendments had been introduced.

The Bill was passed through its second and third readings.

The last Bill on the Order was a measure similar to the above, but relating to mines. Viscount Soga reported that the Committee had effected certain changes in the draft, and explained that these changes had been worded so as to harmonize with the corresponding Bills relating to factories and railways.

The House passed the Bill as amended and rose at 11.20 a.m.

## HOUSE OF PEERS.

TUESDAY, FEBRUARY 21.

The House met at the usual hour, and proceeded to the second reading of the amended Mining Law. Viscount Tani reported that the Special Committee had discussed the various amendments introduced by the Lower House and had approved them all. There had been some controversy about the Article which required that foreigners carrying on mining enterprises in Japan must constitute themselves in a juridical person, but a majority of the Committee had voted for leaving the Article unchanged.

The Bill was passed at once, the third reading being dispensed with.

A Government Bill was then introduced for supplementing the Law of the Upper House. At present the Law provides that Imperial Princes, non-Imperial Princes and Marquises sit by hereditary right, but that Counts, Viscounts and Barons must be elected by their respective Orders, and that the number of thus elected representatives in each case must not exceed one-fifth of the total number in the Order. The Bill proposed to amend this in the sense of fixing superior limits for the numbers of representatives of each of the lower grades of nobility, namely, 17 for the Counts, 70 for the Viscounts and 56 for the Barons, and further provides that, under no circumstances, shall the number elected exceed one-fifth of the number in the Order. Thus should the total number of names borne on the roll of Counts, for example, be less than 85, the number of Counts chosen for membership would fall below 17. Further, the present Law enacts that there shall be one highest taxpayer chosen in each prefecture and city, and that men who have discharged meritorious services to the State or are distinguished for learning may be appointed life-members by the Sovereign, but that the aggregate of such life-members together with the highest tax payers' members shall not

exceed the aggregate of titled members. The proposed amendment is to limit to 125 the members thus appointed by the Sovereign for life.

Count Katsura, Prime Minister, introduced the Bill in a short speech, explaining that the Government had not approached this subject without the most mature deliberation, but that it was considered essential to impose some closer limits than those laid down in the present Law.

The Bill was handed to a Special Committee.

A Bill relating to the extension of local government privileges in Hokkaido was passed, but a Bill for some alterations in the jurisdiction of the Appeal Courts of Osaka, Hiroshima and Nagoya encountered some opposition and the House, while voting for the second reading, deferred the reading to a future day.

Two Bills sent up from the Lower House with regard to the jurisdiction of the Hakodate Court and the Fujiyeda Court were handed to special committees.

The Bill sent up from the Lower House enacting that all outlays made from the reserves such as were in excess of budgetary items must be reported to the Diet in the session immediately subsequent to the disbursement, elicited a strong speech in opposition from the Minister of State for Finance, who explained that in many cases such an enactment could not possibly be complied with, inasmuch as the outlays would not have been concluded by the time the Diet met. The Bill was handed to a Committee.

A Bill was then read which had come up from the Lower House. Its intention was to make recourse to legal remedies possible in the case of a certain class of State Pensioners. This measure was entrusted to a Committee and the House rose at 11 a.m.

## HOUSE OF REPRESENTATIVES.

The House met at the usual hour and proceeded at once to the Order of the Day. Ten Bills (5 Government measures, one from the House of Peers and 4 private Bills from members of the Lower Chamber) were entrusted to Special Committees. Among these the principal were:—

Bill for extending the powers of the Industries Bank.

Bill relating to Hypothecation of Railways.

Bills relating to Hypothecation of Factories, Mines, &c.

Bill for coöperating to enforce sentences of foreign legal tribunals.

With reference to the Railway Bill Mr. Okada Iiyemu asked whether the provisions of the new Law extended to Electric Railways. The Government Delegate replied in the negative. He said that the Authorities had it in view to provide similar facilities for electric lines but sufficient investigations had not yet been made, and as yet the country's experience of these lines was small.

Mr. Ishii, of the Foreign Department, explained the Bill relating to assistance in enforcing the judgments of foreign criminal and civil tribunals. He said that in such matters as the enforcement of justice and the preservation of law and good order States ought to be mutually helpful, and the Government, in drafting this law, sought to remedy in the Japanese Codes a deficiency which might inure to the disadvantage of Japan no less than to that of foreign Powers.

Nine Bills were then read a second time and passed, after the reports of the Special Committees had been received. Three of these were Government measures, one relating to the extension of the operations of Law No. 63 (which confers legislative authority on the Governor of Taiwan), another a measure for granting pensions to Japanese school-teachers engaged in the instruction of Japanese children in foreign countries. The former Bill caused much discussion. It was objected that such entrusting of legislative power to an individual, though not perhaps a direct violation of the Constitution, was a doubtful application of it; that already numerous laws had been enacted under the delegated system; that Taiwan must be now pretty well equipped and that no great inconvenience could result from henceforth submitting previously to the Diet all proposed drafts of law. One member called attention to the Prime Minister's statement made before the Special Committee

to the effect that the Government intended to treat Taiwan as a colony. Mr. Moriya, who raised this point, quoted the Shimonoseki Treaty as showing that at the time of Taiwan's cession the intention had been to bring it under the territorial system. He asked whether this intention had been changed, and whether the change informed a draft of law now understood to be before the Cabinet for regulating the affairs of Taiwan in general, which law was awaiting the return of Baron Kodama. The Government Delegate replied that he interpreted Count Katsura to signify merely that some special features differentiated, and must continue to differentiate, Taiwan from the rest of the empire. It was urged also that to submit the Taiwan Budget to the Diet while excluding the island from the latter's legislative authority was inconsistent. Mr. Takenokoshi (*Seiryu-kai*) failed to see what charge of unconstitutionality could be preferred against the measure seeing that the whole matter was submitted for the Diet's consideration, and that the delegation of legislative powers was made under the authority of the Diet. Some members, while declaring themselves opposed to the extension in itself, avowed their intention of voting for it as inevitable under the circumstances of the time. The Bill was finally passed.

The House by a unanimous vote passed the Bill for extending municipal powers to communities of Japanese subjects settled in foreign countries.

One of the private Bills was for creating Saseho and Kure to the position of independent towns and conferring on them the franchise. The reason given was that Kure has already a population of 62,825 and Saseho a population of 57,497, and that both places are developing rapidly. The Government opposed the measure, but it was passed by the House.

Three Representations were adopted—one relating to the publication of official records—and two were handed to Committees.

The House rose at 4.28 p.m.

#### HOUSE OF PEERS.

THURSDAY, FEBRUARY 23.

The House of Peers met at the usual hour and dealt with 18 measures, of which 9 were entrusted to Special Committees—namely 3 Government Bills and 6 private Bills—; 7 were passed—namely, 4 Government Bills, 1 post-facto approval measure and 2 private Bills—, and 2 were thrown out, both of these being private Bills. The Government Bills passed were:—

A Bill relating to the Taxation of Medicines (sent up from the Lower House).

A Bill providing that all recipients of titles of nobility, if not already heads of houses, must at once establish cadet houses.

A Bill extending to graduates of duly authorized private schools the privilege of receiving medical diplomas without further examination.

A Bill (sent up from the Lower House) with regard to the jurisdiction of the Osaka, Hiroshima and Nagoya Appeal Courts. This measure provoked much discussion, but a closed ballot produced 155 votes for the Bill and only 62 against it.

Among the private Bills passed the most important was that introduced by Mr. Motoda Hajime for extending the juridical scope of the District Courts (*Kusai-bansho*).

The House rose at 12.38 p.m.

#### HOUSE OF REPRESENTATIVES.

The House, meeting at the usual hour, listened to a speech from Mr. Okada Jiyemon introducing a question with reference to the control of religious bodies; and a question from Mr. Kan-zaki on the subject of legal disputes with regard to Imperial estates.

The Order of the Day was then taken and dealt with 22 Bills, namely 9 Government Bills, 12 private Bills and 4 Representations. Three of the Government Bills were handed to Special Committees, and six were passed through all their readings. The most important of these passed were the Bill for co-operating to enforce within Japan the rulings of foreign courts of justice; the Bill for amending the Law of the Industries Bank; and the Bills relating to hypothecation of Factories and Mines (as amended by the House of Peers).

Of the 12 private Bills—all measures of minor

importance—6 were thrown out; 4 were postponed and 2 were passed.

The Order was changed for the purpose of discussing the Second Reading of the Trusts Bill, and it was passed with a slight amendment which, however, will necessitate a conference of the Houses.

Among the Representations, that relating to subsidies to navigation attracted some attention, but the Special Committee having reported that out of its 18 members only 3 had supported the Representation, the House, after some discussion, rejected the measure by a large majority.

The House was counted out at 5.45 p.m.

#### L'ALLIANCE FRANCAISE DE YOKOHAMA.

The réunion littéraire et musicale given at the Van Schaick Hall on Saturday afternoon by the Alliance Française proved very delightful, sustaining worthily the Society's reputation. The lecture was given by Monsieur M. J. Dayet under the caption "Alexandre Dumas père, anecdotique." He began by declaring that he would not attempt to give a lecture on Alexandre Dumas père, nor an analytical review of his writings, historical, biographical, critical, dramatic or otherwise, nor would he touch on the vexed question whether all the printed matter that appeared over the signature of Alexander Dumas was his or not; rather would he confine himself to a few leading facts in his life, and relate a few anecdotes bearing upon his character as a man and an author. The lecturer then referred to the parentage of the great novelist and writer—the offspring of one of Napoleon's generals and a French creole of San Domingo; of his entry upon the serious business of life at the age of twenty, when his mother informed him of the family's ruin; of his establishment in Paris; his first work; his first success; of the grandiose manner in which he set up his mother in the capital, etc. M. Dayet referred to many of the novels of Dumas which are household words in French and English homes to-day; of the many volumes of memoirs which he produced, and of the extreme caution which the reader must exercise in taking the incidents of those memoirs as veracious truth. The lecture was enlivened with several witty anecdotes throwing light upon the character and disposition of Dumas, and hearty applause greeted M. Dayet at the close.

The second part opened with a pianoforte solo, "La 4<sup>ème</sup> Mazurka" (*Godard*) by Madame L. Suzon. Mrs. E. C. Irwine then sang most feelingly Faure's "Le Crucifix;" she was followed by Mons. B. Cherfils who sang Chaminade's "Si j'étais jardinier;" and Mrs. Irwine closed the programme with de Massenet's ever charming "Pensée d'automne."

#### "THE SLEEPING BEAUTY."

"The Sleeping Beauty" was played for the third and, according to the announcement, last time, at the Public Hall on Saturday night. There was again a full and most appreciative house, many of those who had been present at one of the previous performances availing themselves of seeing the charming extravaganza once more. Miss Lloyd Thomas, *The Lady Mandragora*, appeared on this occasion under exceptionally unfortunate circumstances, having to rise from a sick bed, against doctor's orders we believe, to take her important part in the piece. This necessitated the cutting out of the songs appertaining to the part, which was much to be regretted, otherwise the audience, so pluckily and conscientiously did she fill the role, would have scarcely known that anything was amiss. Mr. G. G. Brady, the intimitable *San Atouis*, introduced several fresh gags and local allusions, with additional verses to his prophetic song of "The Good Time Coming," some of which were very pertinent hits and aroused all the risible faculties of the audience. For the rest all the performers seemed to be quite at home in their costumes and roles. The thanks of all present were again due to the Bijou Orchestra, which provided excellent music at the opening and in the interludes.

#### THE LAW COURTS.

##### PETITION ON IMMOVABLE PROPERTY.

The hearing of a petition instituted by Dr. Paul Ritter, No. 55, Bluff, Yokohama, against a Chinaman named Lu Wo Shing, No. 190, asking for affirmation of rights of possession on immovable property came up on Feb. 17th in the Yokohama District Court before Judge Yasuda.

Plaintiff was represented by Mr. Sawada and defendant was not represented.

Plaintiff's Counsel stated that on Oct. 12th, 1898, plaintiff purchased the perpetual lease of land at No. 190, and also buildings,—one brick house of 72 *tsubo*; 1 wooden house of 48 *tsubo*; 2 brick houses each of 12 *tsubo*; and 1 stone godown of 90 *tsubo*—from defendant for fifteen thousand *yen*. The transfer, however, was not registered at the Japanese office concerned, and it was further neglected even after the enforcement of the revised treaties, which took place in August, 1899. Plaintiff now finds that the Yokohama City Office regards the property as still belonging to the Chinaman. Counsel contended that the responsibility for non-registry lay with defendant, who ought to have informed the Japanese office after selling the property to plaintiff.

The Court delivered judgment in favour of petitioner with costs.

##### CLAIM FOR MERCHANDISE.

In the Yokohama Local Court, the hearing of a case instituted by Mr. Thom. Bernstein, No. 124, Yokohama, against Miss Alina Schmidt, No. 106, claiming *yen* 73.25, began on Feb. 20th before Judge Iyeiri.

Plaintiff was represented by Mr. Ideura and defendant by Mr. Nagashima.

Plaintiff's Counsel stated that Miss Schmidt purchased from Mr. Bernstein in May, 1904, some bottles of whisky, champagne, port wine, etc., valued at the amount claimed, and these were carried by a jinrikisha coolie named S. Omae from the residence of plaintiff to the shop of defendant. It was understood that payment should be made on delivery of the goods, but the woman had not yet paid for them though the seller had repeatedly pressed her.

Defendant's Counsel contended that his client never bought the beverages described by plaintiff, and consequently had no obligation to pay for them.

Producing a writing in pencil, plaintiff's Counsel further said that it was written by Miss Schmidt in the presence of plaintiff when she purchased the liquors, acknowledging the number of bottles and their prices. The chit did not contain her name, nor the date of the transaction, but there was no doubt that she had written it. Therefore it should be taken as evidence. Counsel asked the Court to summon the jinrikisha coolie who carried the goods.

The Court, giving consent to this request, adjourned the case till Feb. 24th.

##### CLAIM FOR LIFE INSURANCE.

Judgment has been given in the Yokohama District Court by Judge Nakanishi in the case brought by the National Bank against the Equitable Life Assurance Society claiming *yen* 2,500, dismissing plaintiff's claim with costs.

##### PAYMASTER PUNISHED.

Paymaster Furuki of the Second Division (Sendai) who had been under examination in the Kanazawa District Court on a charge of having forged official letters and stolen money belonging to the office of the division, was sentenced on Feb. 20th to nine years confinement with hard labour.

##### CLAIM FOR SHOOTING.

An action was heard in the Kobe Chiho Sais-bansho, on Friday, before Judge Ohashi and two Associate Judges, in which Takenouchi Rinzo, a coolie living in Asahi-dori, 4-chome, Kobe, sued Messrs. Simon, Evers & Co., Kobe, for damages amounting to *yen* 1,107.55. The plaintiff was alleged to have been shot in the arm some three years since by C. Gunther, a godown-keeper employed by the defendant firm, and was fined *yen* 100 in the Osaka Appeal Court.

The plaintiff then brought an action against Gunther for damages, and judgment was given in the Kobe Chihō Saibansho on March 2nd last for yen 9,506.4, which, however, Gunther failed to pay, having disappeared. The coöple now sues the firm. Counsel were heard on Friday and the Court adjourned on the application of the plaintiff for the purpose of obtaining the records of the civil and criminal proceedings against the defendant.

#### THE COLLINS CASE.

The following are the grounds of the decision given in the Tokyo Appeal Court dismissing the appeal lodged by Mr. H. B. Collins against the sentence of eleven years' confinement with hard labour passed by the Lower Court.

Mr. Collins received instructions in June, 1904, from Colonel Ogorodnikoff of the Russian Army, residing in Tientsin, to find out Japanese military secrets and to communicate them to any of the Russian agents, and at the same time he received \$1,000 and a letter recommending the accused to General Dessino, living in Shanghai. At the beginning of July he saw General Dessino, from whom he received a cipher code to be used in communicating to him Japanese secrets. For this business General Dessino and the accused had several consultations, after which the latter arrived at Yokohama and put up in the Hotel de Paris. The accused discovered secrets with regard to the number of the Japanese troops assigned to leave for the front as well as their destination and object. On Oct. 24th, 1904, he wrote a letter in cipher, communicating the information he had obtained, and posted it at Yokohama, addressed to a Russian named Mondon, residing in Shanghai. The letter, however, was seized by the military inspectors at Nagasaki. This crime of the accused is grave.

It is stated by General Terauchi, Minister for War, in reply to an enquiry made by Mr. Hadano, Minister for Justice, that the information communicated by the accused in his letter to M. Mondon is regarded as a Japanese military secret and renders the accused liable to be dealt with as the law provides. While materially admitting the foregoing facts, the accused contended that the merely supplied fictitious information in order to obtain money from the Russian officers by fraud. However there is other evidence against him. The examination of T. Sekimoto, a detective of the Kagacho police station, Yokohama, showed that the accused requested him not to leave the police station when the detective asked him whether it would be convenient to resign his position if there was any important work to be assigned him. The accused also told the detective that he was intending to start a *geisha* business in the name of a girl named Fujita Bun, by which means he would gain convenience for his purpose, namely for collecting news with regard to Japanese military movements. Further the accused asked the detective to find out the organizations of the First, Second, Third and Takushan Armies, and the details of the Japanese casualties at Liaoyang and other places, as well as whether the Japanese would attack Vladivostok and whether the Japanese would make preparations at Liaoyang for the winter, and not advance further. The accused also told the same police official that he had sent information to Shanghai by his wife, who had returned there, which he had heard from a Japanese passenger in a steamer from Shanghai. From these statements there could be no doubt that the accused was actually trying to learn Japanese military secrets whereas he stated that he was merely trying to obtain money from the Russians by fraud, that is, giving them false reports. To conceal his communications, also, the accused used the cipher given by the Russian officer. From these facts the conclusion may be arrived at that his object was to find out Japanese military secrets and not to get money by fraud as he contended.

#### THE CLAIM AGAINST THE RUSSO-CHINESE BANK.

A petition brought by Mr. Yuan Sih Cheong, formerly comprador of the Russo-Chinese Bank, against the bank asking for affirmation of order

for seizing defendant's property on a claim for yen 535,307, has been sustained in the Court of Cassation. It may be remarked that the bank appealed to the Tokyo Appeal Court against an order in favour of plaintiff given in the Tokyo District Court. The appeal being dismissed, the bank further appealed to the Court of Cassation, and at the same time the Chinaman presented a petition against the appeal.

#### YOUNG MEN'S READING ROOM.

An interesting debate, which drew a large audience of members and their lady friends, was held at the Y. M. Reading Room on Tuesday evening, the subject being "Should the franchise be extended to women and should they enter parliament?" Dr. Saunders opened the debate for the affirmative, with what proved to be the best speech of the evening. He based his argument on the equal intellectual and executive ability of women when compared with men. Mr. Bunting, in putting the negative side of the question, pointed out that the home was certainly woman's sphere. He thought that man ought to bear the drudgery of political life, and gave further support to his argument by mentioning the poor state of affairs existing in Australia and Colorado where women have suffrage. Mr. Bunting concluded his argument by relating the anecdote of an Abolitionist who was interrupted by a member of his audience during a speech. The speaker requested the interrupter to come on to the platform and say what he had to say. Thereupon an insignificant looking little man stepped quickly forward and put the following question to the Abolitionist, "Do you want me to marry a black woman?" No, replied the speaker, "I have too much respect for the black woman." "So, said Mr. Bunting, "I have too much respect and veneration for ladies to ask them to step into the political arena." Messrs. Booth and Macbeth supported the affirmative while Messrs. Nicolle, Griffin, Tebb, Dearing and Wallace upheld the negative. A vote on the merits of the question resulted in a victory for the negative by 24 votes to 4. The vote on the merits of the debate also resulted in a win for the negative by 14 votes to nine. A vote of thanks to the Chairman brought the evening to a close.

#### FOOTBALL.

The association match of football played on Saturday was a capital exposition of the game, the sides being fairly equally balanced, the men in capital trim and each and all keen as mustard. Nothing was scored in the first half, though each goal was threatened time and again. In the second half Whites scored first; then Colours equalised, then Whites made their second goal, only to be followed by Van Smith scoring again for the Colours. So the game concluded, two goals all. Teams:—

COLOURS.		WHITES.	
G. Upton	goal	E. Powys, Jr.	
N. G. Maitland		W. S. Moss	
A. W. Austen	back	A. E. Cooper	
D. Weed		T. W. Kilby	
G. N. Faithurst	½ back	A. Kingdon	
W. B. Mason		A. W. Read	
J. F. Drummond		V. Hearne	
O. Strone		S. R. Ford	
H. W. Kilby	forwards	W. B. White	
K. van R. Smith		J. E. Drummond	
J. M. Mollison		S. Stornebrink	
Mr. C. T. Mayes, referee.			

We are informed that the date of the Interport Association Football Match was definitely settled on Tuesday morning, and the game has been arranged to be played in Yokohama on Saturday, 11th March. The original date selected, 25th February, was not convenient to the visiting team, and on the following Saturday, 4th March, the Y.C. & A.C. would not be able to put its strongest side in the field. The Kobe XI are reported to be very weak, but after last Saturday's exhibition, the local players will have to pull themselves together to win the game. Neither side is yet quite settled, but it is presumed that the sides will be picked after next Saturday's games.

#### YOKOHAMA ENGINE AND IRON WORKS.

The half yearly meeting of shareholders of the Yokohama Engine and Iron Works was held on Tuesday afternoon at the office of the Company, Mr. B. C. Howard was in the chair and there were also present: Mrs. Lowder, Messrs. F. S. James, C. K. M. Martin, E. W. Frazar, N. F. Smith, F. J. Abbott, W. K. Tresize (Manager) and R. T. Bell (Secretary).

The notice convening the meeting having been read.

The Chairman laid the accounts on the table and said:—

This being the Half Yearly General Meeting of the Company, the Directors in accordance with our usual custom, have the pleasure to lay on the table the Balance Sheet and Profit and Loss Account for the term ended 30th November last, from which it will be observed the Profit made on the Company's operations during that period, after providing for depreciation of Buildings, Plant and Machinery, and Directors' and Auditors' Fees, amounts to.....yen 7,977.51 Which with the Balance brought forward from last year's Account ... " 13,614.55

gives a Credit Balance...yen 21,592.06

Owing to the state of war our business is considerably affected, and your Directors believe it to be a wise and conservative policy to husband our resources as such as possible, by carrying forward this Amount. The prospects of peace, even now, are very hopeful and it is confidently expected that upon the cessation of hostilities and the return to this port of ships of neutral powers, our business will at once recover. A good deal of the work at present in hand is of a temporary, unusual character requiring considerable extra stock to be held, and taking all into consideration, your Directors recommend that the Balance of Profit as above should be carried forward to the next half year.

He concluded by moving that the accounts be adopted.

Mr. Abbott seconded and the accounts were passed and adopted.

On the motion of Mr. N. F. Smith a vote of thanks was passed to the chair, and the proceedings terminated.

#### DR. MUNRO HONOURED.

Dr. Neil Gordon Munro, the well-known Yokohama physician and numismatist, has received from Sir Claude MacDonald, His Majesty's Minister to Tokyo, the following copy of a letter, received by the British Minister:—

Foreign Office, Jan. 5th, 1905.

SIR,—I laid before the King your despatch of November 18th last forwarding for His Majesty's acceptance a work on the coins of Japan, by Dr. Neil Gordon Munro.

I have received the King's commands to request that you will convey to Dr. Munro the expression of His Majesty's thanks for this interesting volume, which he has had much pleasure in accepting.

I am, etc., (Sd.) LANSLOWNE.  
SIR CLAUDE MACDONALD, G.C.M.G.,  
K.C.B., etc., etc.

In addition to this rare recognition we understand that His Majesty the Emperor of Japan has also been pleased to accept a copy of this interesting work. We congratulate Dr. Munro on such high endorsement of this classic on Japanese numismatics.

#### SHIPPING DISASTER.

A telegram to the *Jiji* says that the Akita steamer *Koro Maru* (1,028 tons), owing to heavy winds, ran ashore on Feb. 17th off a lonely spot near Kotomari, Aomori prefecture, on her way from Kishisaki to Hokkaido. She had been assigned to carry fishermen to Aomori. All the crew were saved, but the hull is in a serious state. The hull was insured with the Tokyo Marine Insurance Co. for seventy thousand yen.

On Feb. 19th, says a correspondent, twelve Russian non-combatants released at Matsuyama left there for Kobe on their way home. A hundred Russian officers have been removed to Nagoya.

## THE EMPRESS' BENEVOLENCE.

We observe in the *Official Gazette* a list of over 20 men of the Navy who, having been crippled by wounds and relieved from further military service, have received a flannel shirt and a present of money from the Empress. Her Majesty extends the same benevolence to the Army, and the number of recipients up to the latest date was 81 non-commissioned officers and 1,133 rank and file. This is interesting, not merely as a reminder of Her Majesty's untiring kindness, but also for the sake of the information it conveys as to the number of men rendered cripples for life in the course of the war.

## "KOKORO."

A DRAMA IN 4 ACTS BY DR. T. KITASATO.\*

Following is the paper read by Professor Lloyd at the Van Schaick Hall on Tuesday and before the Asiatic Society of Japan in Tokyo on Friday:—

This play, of which a complete translation is here given, is a modern problem play dealing with some of the social questions of the Japan of to-day. Its author is a rising writer. Dr. T. Kitasato, a cousin of the famous scientist, has written dramas, both in Japanese and German, and some of his productions in the latter language have already been acted on the boards of theatres in Germany.

The present play was, I believe, not written for public performance, for which its lack of dramatic incidents seems to render it unsuitable. Its interest for us lies in the light which it throws on the manners and habits of thought of the Japanese in whose midst we live.

I think I can best introduce the play to my readers by giving them a short summary of its plot and contents.

As the curtain rises (or rather, is drawn aside, according to the custom of the Japanese theatre), we find an elderly, somewhat melancholy gentleman of the name of Sensui, in deep conversation with his nephew Hayashi Tomoo, on the subject of the Japanese custom of adoption.

When a Japanese is childless, or when, having children, he finds that they are not thoroughly suited to carry on the traditions of the family, nor likely to keep up its good name, he can always make up for the deficiencies of blood by the adoption of a son or daughter from another family or from another branch of the same family. An adopted son is called *yōshi*. When a man has a daughter and adopts a son to marry his daughter, the adopted heir is called *muko yōshi*. Sometimes a man adopts first a son and then a daughter to marry his son. In such cases the adopted pair are *fufu yōshi*.

The old man Sensui is childless. Rather, I should say, he is apparently childless, for Sensui is a man with a past. Twenty years ago, he had lived as a student in the house of a family named Ota. He had been encouraged in the hope that he would be adopted as *muko yōshi* in the family, and he had fallen in love with Miss Masa, the daughter of the house, whom he looked upon as his future wife. The affection had been reciprocated warmly.

But fate was not propitious. When the old man Ota died, and the family came together to select a *sosokunin* or head of the family of Ota, their choice fell not on Sensui, but on his fellow-student, the man who figures in the play as Ota Michiyuki, and Sensui thus saw himself deprived of all his hopes. He did not inherit the property to which he had been taught to look forward, and through his own cowardice and meanness his sweetheart became the wife of his successful rival. Shortly after Masa's marriage, a child was born. It was Sensui's child, though he could not own it. It was palmed off on Ota as his own, chiefly through the instrumentality of an old servant, Matsushita, and grew up to be the heroine of the play, Ota Hisako, a beautiful maiden, who has many virtues.

Sensui married shortly afterwards, a *mariage de convenience* with Toyo, a person who has no important role to play in the piece. Sensui's heart is never with Toyo, but always with Masa whom he has lost, and his unhappiness and restlessness are not diminished by the fact that the blessing of Heaven does not rest upon his home. One child after another is taken from them in infancy, and when the play opens the Sensuis are a childless and lonely couple, both of them looking with envy and one with remorse as well, at the beautiful maiden growing up in Ota's family who speaks of them as Uncle and Aunt.

\* The Japanese edition is published by Shunyodo. Tokyo. 1903.

The Sensuis have given hospitality to Toyo's nephew, Hayashi Tomoo, a young man of great promise, a student of the Imperial University. He has become as it were a son in the house and Sensui conceives the hope that he may be able to atone for the past by adopting Tomoo, procuring Hisako for him as his wife, and thus providing himself with descendants of his blood to carry on the due rites of the ancestral worship which is so important in the eyes of the Japanese.

But the plan does not quite meet with Tomoo's favour. It is quite true that he is in love with Hisako, and that Hisako has shown him her affection by various little presents of her own handiwork. But Tomoo is a modern young man, with ideas on ancestor-worship and adoption. He feels that an adopted son can never have the same affection for the family ancestors as the son who has their blood in his veins. He considers that the worship of ancestors, carried on as it is by an adopted heir who is often not much better than a hireling, is apt to become a mere meaningless ceremonial, that if ancestor-worship merely means that on certain days the graves are trimmed, and adorned with flowers, and certain ceremonies observed, it would be far cheaper to make provision for a paid grave-keeper, than to give an outsider the right to inherit the family name and property in return for such trifling services. He is disposed to break more or less with the ancient customs.

Tomoo really advocates a change in the ceremonies of ancestor worship rather than its abolition.

The *meinichi* and the *tsukikwai* are, he says, too pessimistic and it would be better to celebrate the birthday, as is done in Europe, rather than the deathday of the deceased. The commemoration of a birthday implies joy and thankfulness that the person came into the world, that of the anniversary of death is expressive of sorrow at his departure, and the idea of joy and thankfulness is the more true to Japanese ideas, according to which occasions of sorrow should be celebrated by the Buddhist ceremonies, whilst occasions of joy are reserved for the Shinto priests.

To this it is replied, that whilst (a) it is true that the modern custom of adoption does keep together the family, (b) the worship of ancestors is apt to degenerate into mere formalism when carried on by men who have taken the family name without having any of the family blood in their veins. An adopted son can never have the same feeling for his father as a real son has. And (c) that a man by the provisions of his will may endow a caretaker to look after his grave. It is not necessary to give a grave-keeper your name and property, as is done to an adopted son.

Toyo points out then that if adoption is a remedy for childlessness—there is also something to be said for the view that it is often due to the results of youthful dissipation. She does this playfully, but in self-defence, her husband having hinted that if Tomoo refused to be adopted the only thing for him to do would be to divorce Toyo and take a younger wife. Toyo's defence is that childlessness is often due to wildness in early years,—and turning to Tomoo she urges him to marry,—and suggests that he admires Hisako. Of course Tomoo denies the imputation, but Toyo sticks to her point and Sensui jumps at the conclusion thus offered. If Tomoo will promise to let himself be adopted, Sensui will do his best to procure Hisako for him.

Toyo adds her entreaties to those of Sensui; the matter is not settled when the conversation is abruptly ended by the advent of a visitor.

The visitor's name is Kuruu Tomita, a nephew of Ota's. He is a Christian preacher, contriving and ambitious, and Dr. Kitasato, who in other parts of the play speaks with full respect of Christianity, does not put him before us as a very attractive personage. Kuruu is very anxious to marry Hisako. A good pure-minded girl such as she is will, he thinks, make him an admirable wife, and help him in every way with his work. Hisako, however, is not to be won. "Kurai da yo, kono hito wa..." is her muttered comment when he compliments her on a piece of work which he thinks she is doing as a Christmas gift for himself, but which is in reality being made for Tomoo.

Kuruu has unfortunately worried out something of Sensui's secret, and he is not above making use

† The case of adoption is put as follows:—

a. It is "sono iye wo omou Nippou no difu" "an excellent device of family-loving Japan." i.e. the perpetuity of the family name is secured by the practice. p. 1.

b. "ato ga nakereba senso no matsuri ga tayuru de wa nai ka?" "If there is no heir the worship of the ancestors will fall to the ground." p. 2.

c. "sore wa noshi wo omowamai hanashi da. Sore de wa sono toki ga ko nakute shinda ato wa, senso rai no haka mo areshidai to iu hakanai hanashi da."

"If the present generation dies out the family tombs will be deserted." p. 5.

of it in order to gain his own ends. He therefore comes to visit Tomoo, in the hope of discovering the truth, in which case he intends turning his mind away from the pursuit of Hisako. He turns the conversation to the subject of illegitimacy, (a topic comparatively new to Japan where lax marriage customs and the practice of adoption made it in ancient times almost unknown), asks Tomoo pointedly if he has seen any signs of penitence in his friend Sensui, and later tries to sow the seeds of doubt even in Hisako's mind by impressing upon her the fact that even she was born in sin, and that even she must expect to have to bear the sins of her forefathers. He quotes Scripture to convince Hisako that she has been born as the heir of her parents' evil deeds, and is by no means satisfied when Hisako argues against him, and quotes Tomoo (the religionless Tomoo) in support of the theory that man is born neither good nor bad, and that he becomes good or bad according to the moral influences with which he is surrounded.

Kuruu conceives it to be his duty now to warn Hisako solemnly against putting any confidence in Tomoo's views. Tomoo's words are fallacious.

"Kare no hanashi wa suna no uye ni lateretaru iye no gotoku, ishidaue naki mono desu" "His words, are devoid of foundation like a house built upon the sand," p. 46.

To this Hisako is prepared with a rejoinder; but the rejoinder is never made; the conversation is interrupted by the arrival of the old man Matsushita. Matsushita, an old retainer of the Ota family, formerly a steward (*Kafu*) but now living on a pension secretly paid to him by Sensui in the same compound with the Otas, has come to consult Sensui on some question of gardening. Sensui has gone out; Kuruu gets a chance of a *l'été-à-fille* which he utilizes for extracting information.

It appears that when the former head of the Ota family had died, Sensui had been the favoured candidate of the immediate members of the family, both for the family headship and for the hand of Masa. But at the general council it was brought to light that the deceased himself had favoured Ota, and thus Ota was elected in spite of the wishes of the *uchikata*, and in spite of Masa's predilection for Sensui.

At the conclusion of his conversation, Masa herself comes on the stage, and there is a long dialogue between her and Kuruu, in which Masa begins by alluding to the Text-book scandal which she believes to be impending over her husband. Kuruu adroitly turns the conversation to the happiness of families when the husband and wife have nothing to conceal from one another, and ends up by suggesting that it would be good for married couples to make a clean breast to each other of past flirtations and peccadilloes—a suggestion which so much alarms Masa that Kuruu is now quite sure of the truth of his suspicions.

We are now introduced to Ota, the reputed father of Hisako. If Sensui has a sorrow for the past which fills him with vain regret Ota has anxieties in the present which are weighing him down heavily. He is married to Masa, the lady who twenty years before had had an *amour* with Sensui, which he knows nothing about. He supposes Hisako to be his own daughter, but he is much troubled because he has no son, and because Masa has had no other offspring.

In his despair he has sought for comfort outside his home, and has formed a secret *liaison* with another woman, whom he visits by stealth, and who has already borne a healthy boy child. But he finds it an extremely hard matter to keep two establishments going, and has got into distressing financial difficulties when he is offered by an enterprising bookseller a sum of money as a *douceur* for recommending certain text-books for use in the schools which come under his care as a school inspector. This gives us the data for fixing the time at which the drama is supposed to be enacted: it will be in the memory of most persons that in the year 1903 the educational world in Japan was thrown into tremendous commotion by the celebrated Text-Book scandal "in which scores of publishers, school teachers, inspectors and others were involved." When the scene opens the disclosures have already been made, the stern hand of Justice has struck the culprits one after another with remarkable rapidity, and now Ota knows that not many days will elapse before his connexion with the troubles is brought to light. He had indeed done his best to resist the temptation; he naively acknowledges that had the bribe been a small one he should not have taken it. The size of the paper parcel left at his door had been too much for his virtue and now, in his distress, he applies to Sensui, who at once, in his mind, formulates a plan of which he imparts a portion only to Ota. After telling him something of his own troubles, of his childlessness and his hopes of adopting Tomoo and procuring Hisako for him as a wife, he suddenly makes a proposition. "If I succeed in saying you from the calamity now impending, will you give Hisako as wife to Tomoo?"

Ota demurs. He is more than favourable to

Tomoo, but Hisako is his only daughter, and the right thing would be for him to adopt a son to marry her: indeed both he and Masa had been intending to do so. At any rate, Masa, the daughter of the house, has more to say on the subject than she has who was only adopted. Ota withholds his consent, therefore, for the present until Masa's opinion can be ascertained. Eventually the two men make an agreement to this effect. Ota will give his consent provided that Masa is agreeable to the proposition, and Sensui himself will approach Masa and try to win her over. If everything goes well Ota will adopt his own illegitimate son as his heir, and so provide for the continuance of his family. In this way Sensui and Masa, after a separation of twenty years, meet once more, to discuss such portions of Sensui's plan for saving Ota from calamity as Sensui sees fit to bring to light.

Sensui's mind may be seen from the soliloquy which he utters just before Masa comes in for her interview with him.

"The blotting out of sin! Ah! how much better it would be to be dead than to see this suffering. How often have I promised myself that I would make a clean breast of the whole thing to Ota, and let him abuse me as much as he liked. . . . indeed it was only a few days ago that I came here with that intention. Had Hisako proved herself a bad-hearted girl, it would not have mattered much. . . . and my suffering would have been less. But to look upon that pure face, and to think that come what may she has to suffer for the sins of her parent. . . . This is indeed retribution!"

Masa has a natural hesitation about parting with Hisako even to her former lover.

She complains that her husband, Ota, has told her nothing of the trouble that is distressing him though she suspects that it has something to do with the Text-Book Scandal; but she is more alarmed and distressed when Sensui looks her full in the face and says "You complain that your husband is not candid with you: pray, are there no secrets that you keep back from him?"

She is much touched when Sensui proposes that he be allowed to adopt Hisako as a wife for Tomoo, but does not like to commit herself by too prompt an acquiescence and before any definite arrangement is made Hisako enters and breaks up the interview.

In Act. iii. we begin to get the denouement of the plot. Ogawa O-hana, the mistress of Ota, is anxiously awaiting the coming of her lover. She is sick at heart, and is being waited upon by her old nurse, to whom she confides her troubles. She has no other confidante because her own mother is too ill to be worried. The cause of her worry is that Ota, in accordance with the agreement made with Sensui in the previous act, has made a proposition to adopt her boy Ogawa Ichiro, as his heir. She knows this to be to the boy's worldly advantage, but partly through her mother instinct and partly for other reasons she is inclined to refuse any offer which implies separation. She has sent for her lover to talk the matter over and is impatiently awaiting his coming. In the meantime she carries on a long conversation with the old woman whom she addresses as *Baya* or "Nurse," a conversation which throws a strong and interesting light on the ways of some Japanese women, and which serves to show how far apart the ideas of West and East are on many particulars of domestic life. The reader will surmise that the lover is Ota, but it is not so. She has a second lover, a dissolute student of the name of Sakai, whom she has come to love more than she does Ota, and from whom she fears to be obliged to separate herself in the event of accepting Ota's offer. Sakai has received her message, but has not hurried himself to come. A visit to the theatre has kept him from her, and when at last he does come, he is drunk.

When Sakai hears of Ota's proposition he strongly urges O-hana to accept it. He has no love for the child, and when O-hana hopes to coax him into supporting her in her desire to retain the child, he stoutly refuses to do so. He maintains that it is for the child's interest that Ota should have it, as he is better able to educate than he is himself, accuses O-hana of loving her child like a she-monkey does, which clings to its young one's hand even in death, and when O-hana replies that if that is the she-monkey's way of loving, the male monkey shows his love by flitting with others, he loses his temper. "The child is not mine," he says, "it is Ota's and to Ota it must go." There is kinship in this case, but there is no natural affection. Tomoo's dislike of adoption and of ancestor worship carried on by fictitious descendants is not justified in this case. Ota has a greater love for the child than its real parent Sakai has, and the child returns the compliment with interest. Whilst Sakai and O-hana are still talking, and whilst O-hana is trying to persuade Sakai that the child is his, and that it resembles him in face and feature, Ota himself comes in. He has never seen Sakai before, and does not know who he is. The old nurse promptly declares that he is the

doctor come to visit the old lady, but the boy Ichiro tells the whole truth. "Daddy," he says, "I am not that other gentleman's little boy, am I?"

Thus Ota finds that O-hana's child is after all not his and that there is no chance of his carrying out the whole of his bargain with Sensui. Sensui however has taken no step as yet to save Ota from impending ruin, and Ota is full of the most anxious fear about what is coming. At last the morrow comes and the storm breaks. Ota's name has appeared in the papers as a man connected with the Text-book scandal, and Kurisu at once comes, to act the part of the candid friend and tell his uncle Ota that he is ruined.

He is full of spiritual sympathy and singularly devoid of practical help. He can only suggest remedies that can do no good, his mind runs on confession of sin at a moment when resolute action is of the utmost moment, and in his selfishness he forgets all about the sufferings of Ota's family, of Masa who is prostrated with grief, and ever of Hisako whom he professed to love. Now that the world looks on her as the daughter of a disgraced man, and now that he knows the stain that rests on her birth, his love is quite quenched, and he goes out of the play completely, just when, as a minister of the Gospel, he should have been coming vigorously into prominence.

Practical help he has none to give, and poor Ota is left alone, feeling that Sensui has deceived him. He has given his consent to Hisako's adoption by Sensui, and her marriage to Tomoo, he has gone through the mud of humiliation in order to get his supposed son by O-hana as his heir. He has been obliged to let his wife know of his infidelities, and has discovered that his mistress has been playing him false. And all for nothing. The blow has fallen, he is a ruined man and Sensui has given no sign, either of wanting Hisako or of helping Ota.

Whilst he is thus in gloomy reverie, Umeki the doctor, who has been called in to attend to Masa, comes into the room. He has just left the bedside, and before returning to his home leaves a few parting words and some medicines for Masa, with directions for use which Ota receives without properly understanding.

As the doctor goes out Tomoo comes in, calm and quiet and yet with a serious face. Ota at once greets him with a smile, and plunges in *media res* his own difficulties. He is not concerned about himself, but for those near to him, and especially for Hisako who is so ignorant of the ways of the world. Tomoo replies that it is for Hisako's sake that he has now come,—he has come, he says, at Sensui's request, to ask for Hisako's hand for himself. This is a great departure from Japanese custom,—a proposal of marriage being very seldom made directly by the person most concerned, and Ota is inclined to be suspicious and angry with Sensui for not coming himself to discuss so important a subject. Tomoo replies by handing Ota a letter from Sensui, which Ota opens.

The letter was Sensui's farewell to the world. He had failed hitherto to get either Tomoo's definite consent to allowing Hisako to enter Sensui's family by marriage. He had failed also to all appearance to ward off the blow that had threatened Ota. But in reality he had all along been cherishing a design by which both these objects were accomplished.

He had written a long letter telling Ota that as he could no longer bear the burden of a guilty conscience he had determined to put an end to his life. It was quite true: he had a guilty conscience—on account of Hisako and her parentage;—but the letter was so worded that it could be interpreted as meaning that Sensui had committed suicide because his guilty conscience would not allow him to rest while Ota was being punished for crime which he himself had committed. Sensui had intended that the letter should be so read, and in its lurid light Ota could see that Sensui had died to save his friend's reputation, and that in consequence the world could take no other view than that Ota was guiltless.

And where was Hisako?

She had been the first in the house to open the paper that morning: had seen the attack on her father, as she supposed him to be, and in the supreme moment of distress had rushed off to Sensui's house for help and advice, thinking that either Sensui or Tomoo might be able to get the editor of the paper to withdraw the malicious article. She had there learned the truth.

While she was gone, Masa, who, as may be easily supposed, was terribly grieved at the news of Sensui's death, makes a clean breast of the guilty secret, and confesses to Ota that Hisako is not his child but Sensui's, that Sensui had been her first lover, that though, since her marriage she had been quite faithful, her heart always remained with her lover of twenty years ago.

Tomoo absolutely refuses to credit the story, or at least to seem to do so. *Watakushi wa doko made mo Ota Hisako wo tsuna ni muka wazu kokoro desu.* "I want Ota Hisako and no one else for my wife." He will not accept her except as Ota's child, whom Sensui had been willing to accept, and he

does not ask for himself as Hayashi Tomoo, but as Tomoo the heir of Sensui, for whom he has boundless affection. Thus in every case the heart has shown its power. Sensui has owned it, so has Masa, so has the unfortunate O-hana, so has the little child, so have Hisako and Tomoo.

And so has Masa, whose end is the final catastrophe of the drama. She had been suffering with nervous prostration, ever since her interview with Sensui. The doctor had left various medicines in Ota's charge with directions which Ota had quite forgotten. When, however, he saw his wife's excitement he suddenly remembered the medicines, poured out a dose in a cup and made her drink it. It was the wrong bottle, the medicine was a poisonous lotion intended for external use, and poor Masa dies in agonies, in the presence of her husband, Tomoo, and Hisako, whose efforts to save her life are fruitless. Her last words are addressed to Hisako, the child of her love. We should not be surprised at this point to see a policeman walk in and arrest Ota for the murder of his wife. He may be waiting for him behind the scenes, but as far as we are concerned, justice is blind and the curtain falls before further complications arise.

The following headings to the Acts give the motive of the play:—

- |  |  |
|--|--|
| 1. Tamashii no   | We cannot tell whether there is a soul or not—but the fact that life exists can never be forgotten.                            |
| Aru mo aranu mo<br>Yoshi ya yo ni<br>Wasureranu koso<br>Inochi nari keru.    |  |
| 2. Hotoke wo mo  | The heart of the child that knows neither devil nor Hotoke is in truth the heart of God.                                       |
| Oni wo mo shiranu<br>Osanago no<br>Kokoro ya kami no<br>Kokoro naru ran.     |  |
| 3. Ko wo omou  | The one path of care for children lies clear before us even in the deep gloom of love.   |
| Michi hito soji wa<br>Miye ni keru<br>Ayame mo wakanu<br>Koi no yami ni mo.  |  |
| 4. Magokoro mo   | When a man stands consciously on the verge of death he returns to the first condition when his heart was neither bad nor good. |
| Anashi kokoro mo<br>Motazarishi<br>Mukashi ni kayeru<br>Shide no yama michi. |  |

It is therefore important to consider what is the Japanese family, and how far its conception has been modified in recent times.

Mr. Gubbins, in his introduction to volume 2 of his Translation of the Civil Code, points out that the family in its legal sense has a meaning to which we have nothing analogous. "It means a group of persons bearing the same surname, and subject to the authority of one who is the head of the family, and who may or may not be the common parent or ancestor." This family, which may be comprised in one household, or may embrace several, may be the main branch of the parent stock or only a cadet branch. It is theoretically descended from once common parent, and one line of ancestors, but this is only in theory. In practice "Kinship is not essential to membership," an outsider may enter the family by adoption, and having thus entered it, may be elected to the headship.

"There is, however, a large family group which consists of all those who stand toward each other in the position of kindred," blood relatives within six degrees of relationship, husbands and wives, and relatives by marriage within three degrees of relationship. (Art. 725 of Civil Code). These form the parent house (*honke*) with cadet branches (*bekke*) grouped around it.

Each of these households has its own internal liberty and its own head, and yet they all stand under the head of the parent house who is, by virtue of his position, head of the whole clan, being assisted, in all cases which concern the welfare of the whole, by a family council.

This point is illustrated in this play. . . . We are told that when the former head of the Ota family died, the election was in the hands of the Family Council, and that although the smaller family circle *uchikata* was inclined to the election of Sensui—the larger council decided to elect Ota to take the headship of the whole, and with it the hand of Masa.

Masa has one child, Hisako, the heiress of the family property and name, which she is in the position to give to her husband, whoever that may be. But her husband is not necessarily the man of her choice. If she were free she would choose Tomoo for herself, if her mother and Ota were free they would choose Tomoo for her. But the ultimate decision lies with the *shinrai sodan* without whom nothing final can be done.

The family is kept together by the bond of the family ancestors.

These family rites are a blending of Buddhist and Shinto ceremonies. Each household has its *Kamidana*, or "shelf of the gods," containing the ceno-

taphs of deceased members of the family, and before which offerings are made. In Buddhist households the place of the *Kamidana* is taken by a *butsudan*, or Buddhist altar, with a wooden shrine in which the cenotaphs have been placed. Here offerings are made and prayers offered, and it is a common practice, especially favoured since the accidents of war have visited so many families with bereavement, to have a photograph of the deceased as a symbol of the person who is to receive the worship thus given. It is a modern development of the *Tamashiro*, or "spirit substitute," which is commonly used in Shinto households.

A complete list of these rites of worship embraces many varieties of ceremonies, for the worship varies with every sect whether of Shinto or of Buddhism. A good deal has already been given to the world in Mr. Lay's Article on the Funeral Rites in the Transactions of the Society, and in Dr. Weipert's papers on the Bon Festival in the Transactions of the German Asiatic (*Deutsche Gesellschaft für Natur- und Völkerkunde Ostasiens*). Some of these rites may be performed by any member of the family: a mother, a wife, a sister or a daughter may for instance offer food and prayers before the photograph of the deceased officer;—but there are other, more solemn, occasions, which require the presence and co-operation of the head of the Family, just as there are other occasions again which require the presence and co-operation of the Sovereign, the Head of the whole nation, who is the proper person to conduct the worship of the Ancestral Gods of the whole people.

The very existence of the Family depends on the proper carrying out of this ancestral worship, and therefore there must always be a head to every family. The headship generally goes by lineal descent, but that is not an indispensable condition. If the lawful heir is unsuitable, another may be found by adoption from within or without the family, such adoption requiring the co-operation of the family council, as in the case of Sensui, and the consent of the wife, as in the case of Sensui's adoption of Tomoo and Hisako, or of Ota's adoption of his own illegitimate son to take the place of Hisako.

An illegitimate child, when recognized by the father, (and such recognition may take place at any time) is called a *shoshi*, and as such is entitled to a certain share of the inheritance. He may also become by adoption the head of the family, which is what Ota wishes to do in the case of his son by Ohana. In old times, when concubinage was recognized by law there was practically no difference between the legitimate child and the *shoshi*. But now that concubinage has been put outside the place of legal sanction, there has come to be great difference between the two, and as our play expresses it, the question of *hime* is slowly coming into prominence. Children are now treated as legitimate, *shoshi* or "recognized children," or as illegitimate, and in questions of succession "legitimate children, if males, rank before *shoshi*, and both legitimate children and *shoshi*, even though females rank before illegitimate children."—(Gubbins.)

There are many practical advantages in the family system of Japan. We need only take Art. 747 of the Civil Code, "the head of a family is bound to support the members of his or her family" to see how great may be the benefits of the system. The family, in its larger sense, becomes a co-operative benefit society for the aid of its own distressed members, and the burden of support is felt less by the others by being divided over a larger area.

But the practical advantages are more than counterbalanced by the more than equally practical drawbacks. At every turn the individual has to be sacrificed for the family, and the result very often is unhappiness. Masa, the mother of Hisako, has been thus sacrificed, and the result has been at least three lives ruined. Sensui, torn from Masa, has lived a long life of hopeless regret, Masa, married against her will to Ota, has lived a life of disappointed hopes and pretended affection. Ota has had the springs of life poisoned for him by his own infidelities. The two thoroughly happy personages are Hisako and Tomoo, who alone are single-minded.

The play well explains the reluctance felt by young people to put themselves under the operation of old time laws and customs of married and family life.

"If you can get three measures of bran," says the Japanese proverb, "don't go as a son-in-law by adoption." The proverb is daily exemplified in the increasing unwillingness of young Japanese to put themselves into a position of inferiority as the husbands of heads of houses.

And this reluctance shows itself even in the ladies. "You cannot," says Sensui, "dictate the choice of a husband to a young woman of the present age." Everywhere, the heart is allowed a freer play, and the old theory, which sacrificed the individual to the family is giving way before more rational ideas. Tomoo, Hisako, and even Kurisu, selfish though he is, represent higher ideals than were in vogue twenty years earlier, when Ota and Sensui were rivals for the headship of the Ota house, and Ota was obliged

to take with it the hand of Masa whom he did not love, and when Masa's whole life was sacrificed to the supposed well-being of the family.

Ancestor worship is too deeply rooted in the Japanese system to disappear readily. But on the whole, the contention advanced in *Kokoro* is a right one. Give play to the heart in this matter also, and the ancestor worship will be elevated proportionately. It will cease to be a mere ceremonialism, but will become more real and more genuine. And if this is not all that some of us could wish for, it is at any rate something.

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

## ENGLISH POLITICS.

London, February 17.

Mr. Asquith's amendment to the Address to the Throne has been introduced.

The debate was lifeless and a division is expected to-night.

## THE THIRD SQUADRON.

The third Baltic squadron has left Libau.

## BRITISH NAVAL DISASTER.

Later.

There has been an explosion on board a submarine vessel at Queenstown. A sub-Lieutenant and three others were killed and 14 were wounded.

## MR. BALFOUR ON BRITAIN'S FISCAL POLICY.

London, Feb. 17.

Mr. Asquith's amendment to the Address has been rejected in the House of Commons by 311 to 248 votes.

Mr. Joseph Chamberlain, in the course of the debate, said he would welcome a dissolution, as there was no difference between him and Mr. Balfour regarding the need of fiscal reform.

Mr. Balfour repeated his previous arguments in favour of retaliation, and said his threats had already had a good effect on the commercial policy of other nations. If the country gave the Government the mandate the latter asked, he believed that, without having to charge any new taxes, the country would be saved from a vast number of the commercial outrages from which it now suffered.

## ASSASSINATION OF GRAND DUKE SERGIUS.

Later.

A special telegram received by Reuter states that Grand Duke Sergius, uncle of the Czar, has been murdered by a bomb explosion at Moscow.

[Grand-Duke Sergius was born April 20, 1857, and was married June 3, 1884, to Princess Elizabeth of Hesse-Darmstadt.]

London, February 18.

It appears that Grand Duke Sergius was driving in the direction of the Kremlin, at Moscow, when he met a cab with two occupants, which at once followed him. A bomb was thrown immediately afterwards, which blew the Grand Duke, carriage, and horses, into atoms. Both murderers were arrested, one being grievously wounded. The Grand Duke had long been extremely unpopular.

## ST. PETERSBURG STRIKE AGAIN EXTENDING.

London, February 19.

The strike in St. Petersburg is again extending. Some 30,000 workmen have rejoined the strikers. Their temper is threatening, and the troops employed during the previous period of disturbance have been re-drafted to the vicinity of the works. The police are renewing domiciliary visits and arresting leaders.

## THE GRAND DUKE'S INJURIES.

The head and legs of Grand Duke Sergius

were severed from his body. One of the perpetrators of the crime exclaimed after his arrest: "I don't care; I have done my job."

## STUDENTS ASSAULTED BY CROWD.

A band of students who were afterwards distributing revolutionary proclamations were furiously assaulted by the crowd.

## SIR ROBERT JARDINE DEAD.

Later.

Sir Robert Jardine is dead.

(Sir Robert Jardine was the first baronet, created in 1885. He was the senior partner of Matheson & Co. He was born in 1825, being the son of David Jardine, Muirhousehead, and Rachel, daughter of William Johnstone, Linns, N.B. He married Margaret, daughter of J. Buchanan Hamilton, Leny, Perthshire, in 1867. He was educated in Edinburgh. Sir Robert was M.P. for Ashburton 1865-68, for Dumfries 1868-74, and for Dumfriesshire 1880-92. His heir is his son, Robert William Buchanan, born in 1868.—Ed. J.M.)

## THE RUSSIAN SITUATION.

An extraordinary sitting of the Council of the Russian Empire was held yesterday to consider the situation resulting from the assassination. St. Petersburg is being flooded with revolutionary literature. The employees of the railways at Moscow have struck and traffic is suspended. The leading Russian papers, while denouncing the assassination, declare that the need for reforms is responsible.

## MYSTERIOUS RUMOURS OF PEACE.

London, February 20.

Mysterious rumours of peace, untraceable to any direct source, have been constantly cropping up during the past few days.

## GENERAL STOESSEL.

General Stoessel has arrived at Constantinople.

## MOURNING FOR GRAND DUKE SERGIUS.

King Edward has ordered court mourning for a week on account of the death of the Grand Duke Sergius.

## THE EMPRESS DOWAGER AND THE PRESIDENT.

The Chinese Minister in Washington has presented to President Roosevelt the portrait of the Empress Dowager, in recognition of America's part in preserving Chinese neutrality and of her disinterested friendship.

## FUNERAL OF GRAND DUKE SERGIUS.

London, February 20.

The funeral of Grand Duke Sergius will take place on Feb. 23rd. It will be practically private, as the Tsar and the leading members of the Imperial Family will be absent.

## ROYAL CONDOLENCES.

King Edward and the Prince of Wales have called at the Russian Embassy and expressed to Count Benckendorff, the Ambassador, their condolences.

## CRUSHING EFFECT OF THE ASSASSINATION.

It is stated that the death of Grand Duke Sergius has had a crushing effect on the Russian Imperial Family. Grand Duke Vladimir is terribly affected.

## END OF WAR A VITAL NECESSITY.

The St. Petersburg correspondent of the *Daily Telegraph* reports that among the highest Russian dignitaries the conviction is growing that the vital interests of the Government and the dynasty demand that the war should be ended as soon as possible.

## GRIPENBERG AND THE TSAR.

General Gripenberg has been favourably received by the Tsar.

**UNDERMINING KUROPATKIN.**

Influences are working to undermine the position of General Kuropatkin.

**RUSSIAN WORKMEN'S GRIEVANCES.**

February 21.

A Commission appointed at St. Petersburg to examine into the grievances of the workmen has issued a most elaborate scheme, whereby the employers and the workmen are to elect delegates to form a Commission.

**NATIONAL PARLIAMENT FOR RUSSIA.**

London, February 22.

It has been decided to convene a Zemskysobor, or national parliament, probably on March 4, by Imperial Manifesto.

**MARTIAL LAW AT TSARSKOE SELO.**

Owing to the great numbers of threatening letters that have been received, martial law has been declared at Tsarskoe Selo.

**HENRY OF PRUSSIA AND THE IMPERIAL FUNERAL.**

At the direct request of the Tsar, Prince Henry of Prussia will not attend the funeral of Grand Duke Sergius, as it was intended he should, to represent the Kaiser.

**THE BALTIC SQUADRON.**

Reuter's correspondent at Port Louis states that seventy ships of the Baltic Squadron, including colliers were at Nossi Be on Feb. 16th. They were buying stores lavishly.

**IRISH AFFAIRS.**

The Times understands that the Earl of Dudley, G.M.P., G.C.V.O., (Lord-Lieutenant of Ireland since September, 1902) has resigned, and the retirement of Sir Anthony Patrick MacDonnell, G.C.S.I., (appointed Under-Secretary to the Lord-Lieutenant, as a temporary measure, in 1902) will follow.

**FRENCH NAVAL ESTIMATES.**

During the discussion of the Naval Estimates in the French Chamber of Deputies, several of the speakers urged the necessity of strengthening the defences of Indo-China in view of the rise of Japan.

**RUSSIA'S PEACE CONDITIONS.**

London, February 22.

Reuter's correspondent at St. Petersburg telegraphs that, in spite of official denials, information from a source enjoying high patronage shows that the question of the conditions on which Russia is prepared to make peace has not only been formally discussed by the Tsar, but has been practically decided. The conditions are: Japanese suzerainty over Korea, the cession of Liaotung, the conversion of Vladivostok into an open port, neutral international administration of the Chinese Eastern Railway, and the restoration to China of Manchuria south of Harbin. The only difficulty is the question of an indemnity, on which it is known that Japan will insist if possible. Russia will risk another battle before finally deciding, but, in view of the military difficulties and her internal situation, peace is probable shortly if the indemnity question can be arranged.

**LORD DUDLEY DENIES RESIGNATION.**

February 23.

The Earl of Dudley denies that he is resigning.

**HOME RULE A LIVING QUESTION.**

Mr. Balfour said it is evident that Home Rule is still a living and burning question. He appealed to the Unionist Party to sink its differences and not let smaller controversies imperil the Unionist cause.

(Received at the Military Head Quarters on the afternoon of the 16th instant.)

**THE SHAHO DISTRICT.**

On the 15th instant the enemy's artillery from Shahopau, Hanchingpau and Menta-pau cannonaded our position.

At 5 a.m. on the 16th a scouting party of ours under an officer came into collision with about 100 of the enemy's infantry near Piennulupau and repulsed them.

The enemy's cavalry which moved south on the 14th instant has retreated to Luchien-fang, which is about 10 miles north-west of Chitaitz.

(Piennulupau is on the right of the Japanese line at the junction of the roads from Pensihiu to Mukden and Zushun.)

(Received at the Military Head Quarters on the 17th inst.)

Last night (16th) the enemy's heavy guns at Paohsiangtun (about 2½ miles north-west of Litajentun) cannonaded Hunshantai and Yapatai, and to-day (17th) their field-pieces at Shahopau and Wanpaoshan bombarded the highlands south of Shahopau as well as Changlingtsz.

The enemy's force, which retired on the 16th, is near Luchienfang. Some of his troops are seen at Tamuchiao (about 7½ miles west of Hsiapihho.)

(Received at the Military Head Quarters on the 18th inst.)

On the 17th instant the enemy's guns at Sanlangtsz, Talientien (3 kilometres north-west of Linsingpau) and Pauhsiangtun, bombarded our positions. Also two companies of the enemy attacked Liutiaokau but were repulsed. There was no change at other points. The enemy continued entrenching as before.

(Received at the Military Head Quarters on the 19th instant.)

Yesterday (18th) the enemy's guns cannonaded our positions from Wanpaoshan, Sanglangtsz, Kwantun (about 2 kilo. north-west of Shahopau) Liuchangtun, Hanchingpau and Paohsiangtun.

To-day (19th) in the forenoon a column of the enemy numbering at least a Division moved westward from Tashan and entered Hangkiataitsz about (2 kilo. north-west of Wankiayuantz.)

(Received at the Military Head Quarters on the afternoon of the 20th instant.)

At 7 a.m. this morning about a company of the enemy's infantry advanced before Fangshin (something less than 2½ miles south of Tashan) and opened fire, but retired quickly in the direction of Liuchangtun (about 1½ miles west of Tashan).

Last night the enemy near Paohsiangtun (some 2½ miles north-west of Litajentun) cannonaded Yapatai from time to time with heavy guns. Near the Mukden high-road, also, a small force of the enemy kept up an aimless fusillade all night.

(Received at the Military Head Quarters on the afternoon of the 21st inst.)

The enemy's heavy guns are visible on the south of Shakiatun (about 1¼ miles west of Tashan).

During yesterday (20th) night his scouts and ours came into collision on the north of Changliangpau (5 miles west of the Shahopau). His field-guns at Ta-kukiatsz (5 miles west of Pao-kiawatsz) and at Wen-shingpau (2½ miles north-east of Kukiatsz) bombarded our position near Lamutun (2½ miles west of Shahopau); his field-guns at Talientun (about 1¼ miles south-west of Kukiatsz) cannonaded Sankiatsz (2½ miles south of Talientun), and his heavy guns at Chaochiachwang (2½ miles north of Litajentun) fired in a desultory manner at Litajentun.

(Received at the Military Head Quarters on the 22nd instant.)

Yesterday the enemy's artillery from Shanchutsz, from the north of Shakiatun, from Wanpaoshan and from the north-east of Sufangtai cannonaded Machwantz, Changlingtsz and the railway bridge.

Also the enemy's heavy guns at Chukwanpau cannonaded Chenchieh-pau, and his field-pieces at Rhtaitz cannonaded Chenchieh-pau and Hon-kautajentun.

The enemy continues his defensive works on the west of the railway. This afternoon his guns opened fire from Sufangtai on Changliangpau and from Hon-Talientun on Chihsiangtun.

(RECEIVED AT THE FOREIGN OFFICE.)

**CHANGING COMMANDERS.**

General Kaulbars is to command the 2nd Army. He has left the 3rd Army. General Bidering will succeed General Kaulbars in command of the 3rd Army. This intelligence is conveyed in a private telegram.

**THE THIRD BALTIC SQUADRON.**

The third Baltic Squadron left Libau on the 15th. The leading ship was the *Vladimir Monomach*, and she was accompanied by the icebreaker *Yermak*. The names of the other ships are not mentioned, but it is understood that the four already reported are with the squadron. They are the *Imperator Nicolai*, *General Admiral Bouarsin*, *Admiral Oushakoff*, and *Admiral Aprak-takoff*.

**GRAND DUKE SERGIUS ASSASSINATED.**

According to a Reuter's telegram, as the Grand Duke Sergius was passing near the Law Courts on the 17th instant, two men who had been waiting there in a carriage for him to pass, threw a bomb under his carriage and he was killed.

**THE MURDER OF GRAND DUKE SERGIUS.**

The assassins of the Grand Duke Sergius were seized at once. They frankly stated of their own accord that they belonged to the revolutionary socialist party, but beyond this they refused to say anything.

The Tsar has issued a proclamation expressing his condolences in connexion with the recent tragedy and declaring his conviction that all his loyal subjects will deeply sympathise with their Emperor in this misfortune to the Imperial House.

**GENERAL GRIPENBERG.**

General Gripenberg has arrived at St. Petersburg and had an audience with the Tsar on the 17th instant.

**THE AUSTRIAN PRESS AND THE SERGIUS ASSASSINATION.**

The Austrian newspapers continue to discuss the Sergius affair. They say that unless Russia amends her tyrannical form of government fresh troubles will occur.

**RUSSIA'S TYRANNICAL GOVERNMENT.**

The *Svet* says that if European public opinion treats this matter (the Sergius affair) coolly it is because of the dislike that is entertained for the tyrannical government to which Russian men in power are addicted.

**LABOUR REFORMS IN RUSSIA.**

The Investigation Committee constituted by Imperial proclamation on Feb. 12 has decided in the following sense: owners of factories and contractors shall elect 15 representatives and the workmen in each factory shall elect a certain number on Feb. 26, and these several representatives shall, on Mar. 3, appoint a Committee to meet the Investigation Committee.

## THE FUTURE OF KIAOCHOW.

A Berlin telegram says that, with reference to outlays on account of Kiaochow, a question was asked in the Budget Committee as to whether it was necessary to build forts there and make the place a naval base. Some discussion ensued, and the German Naval Minister definitely declared that there was no intention of making of Kiaochow a second Port Arthur.

With regard to the above the Berlin *Tageblatt* says that if Kiaochow be made a fortress it must be anticipated that a most difficult situation would arise, for it is not improbable that there might thus be created in Japan a desire to occupy the place. In that event, as Germany's naval strength is not complete, either at home or abroad, it would not suffice to defend the place. With Port Arthur a Japanese fortress, Japan's strength in the Far East would be greatly increased, and thus to fortify Kiaochow would be to create a political issue disadvantageous to Germany. Germany's policy in the Far East is simply the peaceful development of her commerce and the preservation of the open door.

## THE BALTIC SQUADRON.

According to a Reuter's telegram, the Baltic Squadron, consisting of 70 ships (including colliers) was at Nossi Be on the 16th instant.

A Russian destroyer with six German colliers arrived at Diego Suarez on the 14th of February, and large quantities of provisions are being purchased at Majunga and elsewhere.

At Kief the employees on the Russian South-Western Railway struck on the 20th instant.

A Reuter's telegram from Port Louis says that the French mail steamer *Melbourne*, before arriving there, landed a quantity of stores and dynamite for the Baltic Squadron. She reports that 5 of the Russian ships are at Jibuti and 13 at Diego Saurez.

## RUSSIA'S TROUBLES.

On the 20th the students of St. Petersburg assembled at the University and held a meeting, when violent addresses demanding a constitution were delivered. The recent assassinations were condemned, the Tsar's picture was torn into fragments, a resolution was passed accusing the Government, the workmen were applauded as striking for liberty, and it was decided to form a national army as a defence against the Government's cruelties as well as to continue the strike.

As a result of the receipt of many threatening letters at the Palace a state of siege has been declared at Tsarkoe Selo, and orders have been issued for special police precautions.

An Imperial Ukase summoning a general meeting of the Zemstvos will be published on the 4th of March.

## THE DISTURBANCE IN RUSSIA.

It is reported from Austria that since the death of the Grand Duke Sergius the disturbance in Russia has gained force. Its movement and general organization seem to be directed from a head-quarter. Strikes of workmen similar to those that took place in Moscow and St. Petersburg have occurred in various districts, and are spreading through all the provinces. Their appearance suggests that all are obeying one order. Professors and students of the University of St. Petersburg, to the number of 3,000, held a meeting on the 20th, and without any interference from the authorities passed the following resolution: "The day has come for the destruction of the autocratic system

of government, which is unsuited to the age. It has shown its incompetence and its impotence in the eyes of all intelligent people. In the Far East it has made enormous sacrifices of the people's lives and property on account of the war having for its origin an evil and adventurous policy. Further the blood recently shed was because the autocratic Government sought to defend the existence of its own hateful system, thereby showing that it does not shrink from any devices, however disgraceful. The important demonstration made in January by the section of the poor people undoubtedly inflicted a mortal wound on the system of absolutism, and must have the result of procuring political liberty for Russia." After passing this resolution the meeting voted the following demands: "The convening of a national assembly, chosen by general election; freedom of speech and publication; amnesty for political and religious prisoners; equality of rights for all classes of the people." Further, in order to carry through these demands, and as a precaution against the Government's violence, they decided to form a national army from among intelligent people. Moreover, since no employment could be carried on pending the transition from a period of disturbance to that of revolution, while all persons would be engaged pursuing a common object, they resolved to suspend work at the University until September. The students then tore down the Tsar's picture from the wall and rent it into shreds, after which they hoisted the red flag of Socialism.

The employees on the railways from Warsaw to Austria and Germany have struck work, and all communication is suspended. The employees of various other railways, including the Siberian, have also struck.

(RECEIVED IN TOKYO.)

## THE THIRD RUSSIAN SQUADRON.

Rear-Admiral Niebokotoff with the Third Pacific Squadron passed Langeland Bay on the 20th instant. His squadron is said to consist of seven vessels.

According to report the Russian Third Pacific Squadron passed the Denmark Sound on the 20th. It consisted of the following:—

Battleship	Nicolaï I.	(9,672 tons.)
Armoured Cruiser	Oushakoff	(4,126 tons.)
do	Apakum	(do)
do	Seniavine	(do)
Cruiser	Moussak	(5,593 tons)
Balloon corps aux-		
iliary Cruiser	Russ	(5,382 tons.)
Repair Ship	Kusenia	(3,772 tons.)

And the following transports of which, as they have been newly added to the Russian service, the tonnage is not clearly known:—*Sovania, Purunia, Suroganoff, Swain and Putina*. (The *Suroganoff* seems to be a sister-ship of the *Russ*).

(RECEIVED BY THE "ASAHI SHIMBUN.")

## PEACE DEMANDS GAIN STRENGTH.

London, February 17.

The War party in St. Petersburg is agitated. It is stated that according to reports from Manchuria General Kuropatkin does not see any possibility of resisting Oyama's attack, and fears are widely entertained that the Russian army may be badly defeated. Thus the demands for peace are gaining strength.

## THE KOREAN COAST TRADE.

Seoul, February 17.

The Japanese Representative has asked for the opening of the Korean coast-wise trade. The main points of his application

are that foreign vessels shall be allowed to engage in the cabotage, a ship of a thousand tons and upwards paying a tax of 30 yen; a ship of a hundred tons and over but less than a thousand tons, 20 yen; and a ship less than a hundred tons, 10 yen per annum. Many Koreans oppose this project and it remains unsettled.

## THE KOREAN EMPEROR AND JAPAN.

It is reported among the Koreans that when Minister Hayashi repaired to the Palace on the 15th instant, he urged the Emperor of Korea to take a trip to Japan.

## THE KOREAN LOAN.

It has been clearly ascertained that Li Yong-ik and his party, desiring to set aside the agreement with reference to a loan from Japan, instigated a number of Koreans to offer contributions in the names of private capitalists. Some persons are attacking and even threatening the Minister of Finance for having entrusted to the First Bank the duty of receiving and paying out the State funds.

This morning (20th) a party of insurgents attacked the electric power station at Russeki in Taiwan. They killed 8 men and 4 women among the Chinese and also 2 natives, and wounded one (whose nationality is not mentioned). They also burned a store-house.

(RECEIVED BY THE "JIJI SHIMPO.")

London, February 17th, 4 p.m.

Grand Duke Sergius, former Governor of Moscow, when returning in his carriage from the Kremlin to-day, was killed by a bomb thrown under his carriage.

## ALL QUIET IN NORTH KOREA.

Moji, February 17.

A person who has just returned from Yuensan reports that everything is quiet in North Korea since the withdrawal of the Russians. A large export of beans is taking place. Trade shows signs of briskness. Vladivostok is threatened with a storm. It is reported that some developments will be seen there before long.

(RECEIVED BY THE "HOCHI SHIMBUN.")

## CHINA AND KOREA ON THE YALU.

Seoul, February 17.

The question of the mid-stream islands in the Yalu and the Tumen (concerning whose ownership China and Korea have disagreed for many years) is to come up for speedy settlement. The new Chinese Minister in Seoul opened negotiations yesterday (16th) with the Korean Foreign Minister, Li. How the matter will be determined is still unknown, but as one or two foreign Powers are said to be supporting China the problem is very noteworthy as an international question of the near future.

## THE "KNIAZ SUVAROFF."

London, February 29.

The flag-ship (*Kniaz Suvaroff*) of the Baltic Squadron recently ran on a rock and sustained injury. With great difficulty she has arrived at St. Louis.

## THE TROUBLES IN RUSSIA.

The revolutionists at Odessa have sworn to open hostilities in order to be revenged on the tyrannical Government. They say that the murder of Grand Duke Sergius was because the chief of police of Kishineff and his subordinates attacked thirty thousand innocent strikers.

The Tsar has determined upon carrying out reforms.

## DEATH OF DR. EASTLAKE.

The death occurred in Tokyo on February 18th of Dr. F. W. Eastlake, the immediate cause being pneumonia. Dr. Eastlake was born in 1858 in New Jersey. At the age of 12 years he proceeded to Germany where he was educated for five years, after which he removed to France, attending courses in medicine and law. At the age of 18 he returned to America, but immediately proceeded again to Germany where he entered Berlin University and graduated. He next made a journey to Assyria, Egypt, China, India and Arabia, and for three years lived in Hongkong. In 1884, he arrived at Nagasaki, where his father was residing. After this he removed to Tokyo and at various times published such papers and magazines as the *Independent* and *Spectator*, besides engaging in teaching the English language. His principal works are a History of Hongkong, Educational History of Japan, Heroic Japan and several English-Japanese Dictionaries and conversation books in various languages. He spoke fluently, or had more than a passing acquaintance with the Japanese, German, French, Italian, Spanish, Latin, Greek, Hebrew, Coptic and Arabic languages. He married a Japanese lady and leaves three sons and four daughters.

The funeral of the late Dr. F. W. Eastlake took place at 1 p.m. on Feb. 22nd. The service was held in the Methodist Church, Kudan, Tokyo, and the interment took place in Aoyama Cemetery. Some two hundred Japanese attended.

## FIRES.

Fire broke out early on the morning of Feb. 18th in the dwelling of a wood-cutter residing at Watami-machi, Matsue. Unfortunately, as it occurred during a snow storm, the work of the firemen was hampered and the flames raged almost unrestricted, destroying 270 buildings. Three persons were killed. The cause is believed to be sparks from a *hibachi* (fire-box).

A junk laden with oil belonging to the Standard Oil Co. took fire and burned for over two hours at Kobe on Monday forenoon. It was towed outside the harbour limits.

At 3.40 p.m. on Tuesday, fire broke out in the shop of a fire-wood dealer named T. Saito, No. 3, Magane-cho, Itchome, Yokohama. As a rather strong northerly wind was raging at the time the flame quickly spread to the adjoining houses, the result being that five buildings were destroyed and damaged seven. The cause of the outbreak is believed to have been negligence.

An outbreak of fire took place at 3.30 a.m. on February 22nd in the Aioi theatre, Aioi-cho, Kobe, destroying 61 houses, including another theatre, the Asahi, and damaging 14. Four actors of the Aioi were killed. The Aioi was insured with the Tokyo Fire Insurance Co. for ten thousand *yen*, and the Asahi with the same company for 9,500 *yen*. The cause was negligence.

On the night of February 21st fire broke out in the Urakawa-machi Post Office, burning 6 buildings.

Early on the morning of Feb. 22nd, three fires occurred in Tokyo. One, at Edogawa-cho, Koishikawa, destroyed 9 houses, including a large boarding-house, and damaged 5. A young woman was killing while struggling to escape from an up-stairs room. Another fire broke out in an unoccupied house at Zaimoku-cho, Nihon-bashi. In this case, five houses were burned down and a fireman was severely injured. The last outbreak took place at Oban-cho, Yotsuya, destroying 10 buildings and damaging 8.

At 5.40 p.m. on Feb. 21st, fire broke out on a large lighter lying near the Cotton Godown, Kanagawa. She was laden with 130 bales of American cotton unloaded from the German steamer *Aragonia*. By breaking the bottom of the vessel, the flames were immediately extinguished. The damage is estimated at some fifteen thousand *yen*. The cause is believed to be tobacco ashes.

## CORRESPONDENCE.

## THE "KNAZ SUVAROFF."

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—The extract from the *Hochi Shimbun* in your to-day's paper, re Admiral Rojestewsky's flagship *Kniaz Suvaroff* taking refuge or having arrived at St. Louis, a port in Senegambia, is rather misleading, as it might suggest that the Baltic fleet was on its way home to Russia, for Senegambia is on the west-coast of Africa, while the *Kniaz Suvaroff* was spoken of, a month ago, to be in the neighbourhood of Madagascar.

Therefore, if the Baltic fleet has not started on its return home, the port St. Louis must be the one on the French island Reunion, near Madagascar.

I am, Sir, Yours truly,

M. S.

Yokohama, February 22nd, 1905.

## GENERAL MATSUMURA.

## MONSIEUR LE REDACTEUR DU "JAPAN MAIL."

MONSIEUR,—Dans le No. du 8 de ce mois, en annonçant la nouvelle de la mort du Général Matsoumura, vous écriviez: "Rumour says that he had undermined his constitution by too free indulgence in that most insidious beverage, Japanese sake."

Cette rumeur a été démentie dans les journaux japonais et il est juste qu'elle le soit également dans le "Japan Mail."

Depuis 1876 j'entretenais des relations de bonne amitié avec Matsoumura et je puis vous assurer que sa forte constitution n'a été ruinée par aucun excès. J'ai questionné les deux Généraux qui le connaissent le mieux: l'un d'eux est au Ministère, à Tokio, et il pourra vous répéter, si vous le désirez, ce qu'il me disait hier à ce sujet; l'autre est dans une garnison du Nord et j'écris sa lettre à votre disposition.

Veuillez agréer, Monsieur, mes salutations.

A. E. BOUGOUIN.

Tokio, le 20 Février 1905.

# Skin-Tortured Babies AND TIRED MOTHERS Find Comfort in Cuticura

INSTANT RELIEF and refreshing sleep for Skin-tortured Babies and rest for Tired Mothers in warm baths with CUTICURA SOAP, and gentle anointings with CUTICURA OINTMENT, the great skin cure and purest of emollients, to be followed in severe cases by mild doses of CUTICURA RESOLVENT PILLS, to cool and cleanse the blood. This is the purest, sweetest, most speedy, permanent, and economical treatment for torturing, disfiguring, itching, burning, bleeding, scaly, crusted, and pimply humours, eczemas, rashes, irritations, and itchings, with loss of hair, of infants and children, yet compounded.

## MILLIONS USE CUTICURA SOAP

Assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itchings, and chafings, in the form of baths for annoying irritations and inflammations, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sanative, antiseptic purposes which readily suggest themselves to women, especially mothers, and for all the purposes of the toilet, bath, and nursery. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, and the BEST toilet and BEST baby soap in the world.

**CUTICURA RESOLVENT PILLS** (Chocolate Coated) are a new, tasteless, odorless, economical substitute for the celebrated Liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humor cures. Put up in screw-cap pocket vials, containing 80 doses.

CUTICURA Remedies are sold throughout the world. Australian Depot: R. Towns & Co., Sydney. British Depot: 27, St. Charles Street, London. French Depot: 6 Rue de la Paix, Paris. Forras Depot: 100 Ave. de la Gare, Lyons. U.S.A. Depot: 100 Ave. de la Gare, Lyons.

Manufactured only at 78, New Oxford St. (1 to 122, Oxford St.)  
London. Sold by all Chemists and Medicine Vendors.

## The King

among scientifically con-  
densed foods is Bovril.  
In the smallest possible  
bulk Bovril has every  
virtue a true food should  
possess—it is nourishing  
and strengthening—it is  
a stimulant and a warmth-  
giver; and, besides being  
very appetising, is tho-  
roughly digestible. Bovril  
is a great help to the cook,  
too.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 4TH, 1905.

## SUMMARY OF NEWS.

THE Diet was formally prorogued on Tuesday.

A RAT infected with plague has been found in Oshima-cho, Fukagawa, Tokyo.

FIVE rats infected with plague were found on Feb. 24th at Yamamoto-cho, Fukagawa, Tokyo.

THE telephone between Tokyo and Kofu, Yamanashi prefecture, will be opened on March 1st.

RUSSIAN prisoners in Tengajaya and three other places near Osaka, numbered on Feb. 22nd 23,991.

OWING to heavy snow, traffic between Sapporo and Otaru on the Tanko (Colliery) Railway has been stopped.

ON February 25th, T. Toyota and nine other men were arrested at Gifu on suspicion of having counterfeited notes.

MAJOR TAKAHASHI, on the staff of the Tokyo Defence, left on Feb. 23rd for the front. Lieut. Colonel Kinoshita succeeded him.

OWING to a landslide, the first train from Maidzuru at 5.30 a.m. on Feb. 27th was derailed

at a point near Mimeseko station. The passengers escaped injury.

MAJOR-GENERAL TANABE, who was wounded at the battle of Heikautai, arrived on Feb. 26th at Ujina by the *Kosai Maru* from Dairen.

A FLOATING mine has been found by fishermen off the village of Ajiro, Tottori prefecture. It was handed over to the police authorities.

TWO Russian ladies arrived on Feb. 23rd at Nagasaki from Shanghai to pay a visit to their husbands, officers detained at Matsuyama.

A TELEGRAM from Ujina reports that 260 Russian prisoners and 583 Japanese invalids are expected on Feb. 25th to arrive there from the front.

THE death was announced on Feb. 26th of Madame Oura Toki (84) the mother of the Minister for Communications, at Miyanojo, Kagoshima prefecture.

AT the auction sale of the curios collected by Mr. Bonilla, formerly Spanish Consul at Yokohama held on Thursday and Friday, four prints by Utamaro went for yen 400.

SPOILS of war, including ten guns of 28 c.m. and 16 c.m. calibre have been brought from the front to Tokyo. Some of them were removed to the Military Head Quarters.

MAJOR-GENERAL NAKAMURA, who sustained wounds at Port Arthur, is reported to have recovered in a military hospital, Tokyo, and will remove shortly to Atami.

MAJOR-GENERAL TANABE, 14 junior officers and 232 soldiers who sustained wounds at the battle of Heikautai, were brought on the evening of March 1st to Hiroshima.

ON February 27th, a tidal wave occurred at Mimitsunichi, in the district of Kozu, Miyazaki prefecture, destroying many buildings and a large extent of sea-embankment.

THE Osaka Life Insurance Co. was ordered on February 25th by the Minister for Agriculture and Commerce to wind up its affairs in accordance with Art. 12 of the Insurance Law.

PRINCESS YAMASHINA, the consort of Commander Prince Yamashina, gave birth to a son at 10.15 p.m. on Feb. 25th. The ceremony of naming the child will take place on March 3rd.

SOME eight hundred invalids from the front who are in hospital at Tokyo, will be removed to Hiroaki during three days commencing March 1st. They belong to the 8th Division.

THE repairs of the steamer *Sado Maru*, which was damaged on June 15th in Tsushima Strait by the Vladivostok squadron, have been completed and she was recently employed as a transport.

S. NAKAMURA, a clerk of the Nippon Railway Co., was arrested on the night of Feb. 22nd and removed to the detention ward of the Metropolitan Police Office. The charge is reported by the *Jiji* to be fraud.

FROM Nagano it was reported on Feb. 26th that a woman residing at the village of South Mimaki fatally stabbed her child with a sword and attempted to commit suicide with the same weapon. The cause was poverty.

ON the morning of Feb. 26th, an employee, K. Ishii (65) of a mat dealer named I. Ishii, residing at Tamachi, Asakusa, Tokyo, attempted to murder his employer, inflicting severe injuries on him by stabbing him in the breast and hands with

a sword while his victim was asleep. The culprit gave himself up to the Asakusa police. The cause is not yet known.

A NUMBER of Russian prisoners will be brought shortly to Takasaki. The hotel Takasago, and two Buddhist temples, Kakuhaji and Etokuji, are being prepared for their accommodation.

PAYMASTER F. W. PRENCE of H.M.S. *Fearless* was lost overboard in the Bay of Biscay on that vessel's homeward voyage from China. He had destroyed his private papers before disappearing.

A TELEGRAM from Fukui reports that the owners of the leading *habutay* factories, owing to the extraordinary dullness in business, have decided to stop work on March 15th. Severe distress among many workmen is now expected.

A TELEGRAM from Utsunomiya reports that on the evening of Feb. 26th fire broke out at Maokamachi, in the district of Hoga, destroying 36 houses. On the night of the same day, a forest covering some 40 *cho* was burned down.

THE Argentine man-of-war *Uruguay* has returned to Buenos Ayres after a prolonged and fruitless search for the missing French Antarctic expedition under Dr. Charcot. It is feared that all perished in the great storm in April, 1904.

THE Yokohama Specie Bank will hold a general meeting on March 10th when the accounts for the last half of the year 1904 will be submitted. The *Boyeiki* says that the net profit in the period was yen 1,907,922.38 and the interim dividend will be 6 per cent.

It was announced on Jan. 14th that Fraulein Bertha Krupp, only daughter of the late Geheimrath Alfred Krupp, of Essen, reputed to be Germany's wealthiest heiress, was betrothed to Doctor W. Heck, a medical practitioner of Rheydt, Rhineland.

THE *Asahi* says that Viscount Okabe, who paid a visit last year to Korea to investigate agricultural conditions, has purchased some ten thousand *cho* (cho, about 2.5 acres) of fields in the Tadogan valley. He intends to plant rice there after the Japanese fashion. He will establish a residence at Pyongyang.

AN explosion occurred on the evening of Feb. 28th in one of the cars of a freight train which arrived at Akiba station, Tokyo, from the north. Four coolies were severely injured. The cause is not definitely reported, but it is believed that *kikenbutsu* (certain dangerous goods) carried in the car led to the accident.

KIKU (39) wife of a merchant named K. Nakayasu residing at Tsurumi, who is now in America on business, was found on the morning of Feb. 28th murdered in her house suffering from fatal injuries on the head and throat. On the evening of the same day, a deaf-mute named K. Nakinishi (39) was arrested on suspicion of having committed the crime. The cause is not known.

THE *Asahi* reports that on Feb. 15th, an empty junk was found drifting off the village of Hokusen, near Byoritsu, Formosa. It carried three guns and contained five dead bodies, 552 yen in silver, and several lots of Japanese cloth. At the same time an empty boat, a dead body, a mast, and several pieces of rigging were found near by. On examination by policemen, it was suggested that the junk was similar to the *Choko*, owned by a Chinaman, which left Tamsui on Feb. 12th for Amoy with a number of native passengers and which carried guns to protect it from the attacks of pirates who often appear in the Formosa Strait.

## AFFAIRS AT THE FRONT.

Saturday, February 25.

In spite of official silence there arrive continued rumours of a new cavalry raid in the Yingkow direction, but the accounts are so confused that it is difficult to piece them into any intelligible whole. Collating all the telegrams, however, we are inclined to think that the raid has been on a comparatively small scale, and that it was undertaken by a few hundred Cossacks with no object more serious than inflicting injury on railways and telegraphs. In that they seem to have had some success, as was scarcely avoidable, but their achievements were evidently very trifling for it appears that the damage done by them was repaired in a few hours. They were seen in greatest number at Takaukan, but even there they did not exceed three or four hundred. The most important feature of the raid is that these Cossacks, according to all accounts, rode southward through a neutral territory and retreated into neutral territory. Their main body halted at Changkiatun, which, as we explained in our last issue, is a town lying westward of Tienchwangtai along the Yingkow-Shanhaiwan Railway.

A telegram from Peking says that the Russians continue their incursions into neutral territory in the Hsinmintun region. They have penetrated as far as Wukiatz, which lies on the north of Hsinmintun. Apparently the necessity of seeking fodder for their horses drives them far afield. They collected some 400,000 catties in the Wukiatz region, but this Peking message alleges that as they were carrying the supply home, they were attacked by Hunghutsz and deprived of the whole fruit of their toil.

Monday, February 27.

In the official report published in Tokyo on Saturday it is stated that on the 24th instant the Russians burned Tsen-sungmu-pautsz and retired to Kukiatai. We gather from other accounts that this movement on the part of the Russians was due to the severity of the Japanese artillery fire. Put into an easily comprehensible form, what has happened is that General Kuroki's troops have driven the enemy from his last positions on the south of the Shaho. Those that have followed the reports carefully must have observed how often Waitaushan and Titishan figured in them. That was because the Russians still held some points in the Waitaushan and Titishan regions on Kuroki's side of the Shaho. From these points they have now been expelled, and the Japanese have advanced their line correspondingly. The operation near Waitaushan seems to have been effected without anything in the nature of a serious infantry attack and consequently without any serious casualties on the Japanese side. It was mainly the result of well-directed gun-fire, supplemented by a night advance, which took the Russians by surprise and placed the Japanese in possession with a list of 12 wounded.

A little later the same night the Japanese posted at Titishan moved against Chaohseng-futun and drove out its Russian occupants. The latter do not seem to have been in large force nor were their casualties considerable.

There are now no Russian troops south of the Shaho.

Yingkow telegraphs that on the 20th instant a body of about a hundred troopers reached a point about  $2\frac{1}{2}$  miles south of Haicheng and there proceeded to destroy the brick buttresses of a bridge on the railway. They seem to have had one hour's

leisure for the work, but the destruction they achieved was very trifling. Railway guards were quickly assembled, but by the time they reached the scene these Cossacks had disappeared. It is stated that they came from the cavalry force which had marched down through neutral territory to Tienchwangtai and Changkiatun. The accounts vary as to the number of the troopers engaged in this enterprise, but all agree as to the line of the Russian march, and as to the fact that the attempt was the result of information conveyed by Chinese spies.

Tientsin sends on a telegram despatched from Yingkow on the 23rd. It says that some 200 Russian troopers were attacked by the Hunghutsz at a place about 7 miles south-west of Hsinmintun. After a fight lasting 2 hours the Cossacks were scattered. Three of them were taken prisoners, and the Hunghutsz captured a quantity of arms together with 20 head of cattle which the enemy's men were driving. It is conjectured that these Cossacks were the force, or a part of it, which made the recent raid towards Yingkow and the railway, riding down and back through neutral territory. Everything goes to show that China's neutrality no longer exists in the eyes of Kypoptskin's forces.

The *Asahi Shimbun's* correspondent sends to that journal copies of letters interchanged by the officer commanding the Russians in the Battle of Heikautai—General Kaulbars—and General Oku. It appears that General Oku had caused information to be conveyed to the Russian head-quarters with respect to seven officers taken prisoners by the Japanese during the battle. On the 13th instant a Russian lieutenant accompanied by an orderly presented himself at Tutaitz and handed in a letter from Kaulbars. It goes without saying that the lieutenant was hospitably received, but we may add that he and the officer commanding the Japanese outpost exchanged field-glasses as a memento of the occasion. The letter was an acknowledgement of the Japanese kindness in conveying information as to the seven officers, but it asked for a more explicit statement of names, and it also inquired whether anything had been seen of a Russian Lieut.-Colonel whose appearance was described by the writer. On the 15th Oku sent a reply giving the names of the captured officers in full, and stating that among the killed there had been found an officer of rank answering to the description given by General Kaulbars. The body of this officer, with those of his dead comrades, had been buried with all honours by the Japanese. Thus far the correspondence was commonplace enough, though it illustrates the remarkable courtesy displayed by the Japanese in the field. But at the close of General Oku's letter there were two statements to which he politely drew the attention of the Russian commander. One was that the body of a Japanese major, killed at a place on the south-east of Heikautai, had been shockingly mutilated, and that Japanese wounded soldiers at Sanchienpau had been most cruelly treated (*sangai wo kuwayeshi*) by the Russians. General Oku explained that he reluctantly made these statements, but that as the facts were established beyond all question, it was his duty to bring them to the notice of General Kaulbars.

One of the remarkable features of this war is the indifference shown by Europe to the iterated and reiterated instances of barbarity charged against Russian soldiers in the field. There can not be the least doubt

that if even a tittle of these most cruel and inhuman acts were laid at the door of Japanese troops, the whole Occident would long ago have been ringing with cries of indignation. Turn, however, from this crushing representation made by General Oku, turn to the writing of the so-called "Russian statesman" who, in the columns of the *Deutsche Revue*, is engaged in a controversy with Baron Suyematsu, and who, with splendid arrogance which in itself is as far removed from the true teachings of Christianity as one pole is from the other, declares that Russians and Japanese "will never be able to agree upon certain fundamental principles of morality and justice" because "the conceptions of justice and morality held by Christian nations will be accepted by the Japanese on paper but will never really become their own." Should it happen that as the outcome of nearly half a century's close observation the Japanese turn of deliberate preference to their own civilization, and should it happen that their men of discernment agree to regard as a monumental example of the most extreme injustice the conduct of this pharisaical Europe towards Japan herself, will any man of ordinary honesty be in a position to demur?

The report said to have been sent by Sakharoff as to the blowing up of a bridge near Haicheng is briefly alluded to elsewhere in our columns, but as so much prominence is given to it, we translate the *Asahi's* Moji telegram in full:—

Moji, 24th February.

On the 20th instant between 1 and 2 a.m. a body of Cossack cavalry numbering over 100, appeared in the vicinity of a railway bridge, about 60 yards span at a point of  $2\frac{1}{2}$  miles from Haicheng and 10 miles from Tashikiao. They smashed the brick buttress through a distance of some 40 feet, but it is expected that repairs will be effected in 2 or 3 days. Meanwhile the service of trains is suspended but the bridge is usable by foot passengers.

Tuesday, February 28.

It will have been observed that Japanese official reports received in Tokyo up to the evening of the 27th, or, to be more correct, those published up to that time, spoke of events in the Shaho district as late as the afternoon of the 25th, and said nothing whatever of the momentous occurrence telegraphed from London, namely, that a desperate battle had commenced and was proceeding along the whole front of the huge forces collected in the Shaho Valley. The London telegram must have been despatched on the 25th, and consequently if such a battle was taking place, it must have commenced that same day. The thing seems highly improbable. None of the Japanese newspapers published on Monday morning, so far as we can see, made any reference to this matter.

A telegram to the *Asahi* from Kinchow says that on the 16th and 17th instant the Hunghutsz tore up several miles of line and broke several bridges on the railway between Tiehling and Kaiyuen, inflicting so much damage that two weeks will be required to repair it. Kaiyuen is the first town of importance on the railway north of Tiehling, from which it is 25 miles distant, Tiehling itself being 42 miles from Mukden. From the same source it is stated that the Hunghutsz recently destroyed 400,000 lbs. of fodder collected by the Russians at Fakumun.

Rumours are said to be circulating in the Russian army that a very extensive turning movement is in process from the Japanese right, but this statement evidently rests, thus far, on very slender foundation.

Wednesday, March 1.

Conjectures are rife as to the probabilities of the immediate future in Manchuria. That is natural, since so soon as the season permits one or other of the armies massed on the Shaho will certainly move. All readers of the official reports published during the past six weeks must have seen that the Russians, with untiring assiduity, have been feeling the Japanese position. They have wasted a vast amount of ammunition for the purpose of unmasking the situation of the Japanese artillery, and not a day has passed without one or two detachments of infantry being sent forward to test the Japanese dispositions. The Japanese, on the other hand, have uniformly abstained from replying to these various movements or furnishing the information desired. Not until the 22nd or 23rd of February was any operation undertaken on the Japanese side, and it seems not to have exceeded a movement against the advanced positions on the Russian left. Out of all this it is difficult to obtain materials for fore-casting the immediate future. Telegrams from Europe suggest that Kuropatkin is short of ammunition, and that it is impossible to supply him on account of the strikes. Such news must be received with extreme reserve. It is certain that Kuropatkin's army has wasted a vast quantity of gun ammunition during the past four months, but with the exception of the Heikautai fight there has not been any serious demand upon his small arm ammunition, nor is it conceivable that he has allowed his artillery to expend their stores so far as to incur the risk of imminent scarcity. The present difficulties of communication, however, may not have entered into his calculations, and their immediate effect may be to defer the offensive movement which the situation demands of him. To lie inactive is as dangerous for him as to deliver an attack, and has no compensatory possibilities, while, moreover, it would be intolerable in Russia.

General Sakharoff's report as to the destruction of a railway bridge near Haicheng is spoken of as an exaggeration. It is true that on the night of the 21st of February a body of about 100 Cossacks did some injury to a small bridge, and that the service of trains was interrupted for a brief period, but repairs were speedily effected, and things are now in their normal condition.

Friday, March 3.

Private telegrams sent across the military wires speak of events which appear to be merely enlarged—if not exaggerated—versions of the official news published on the afternoon of the 1st. At all events they indicate strategy of a perplexing nature on the part of the Russians. The official reports, which, if they err at all, err on the side of moderation, show indisputably that the Russians have commenced a series of disjointed attacks in the region immediately westward of the railway and the main road. Hitherto most, indeed we may say almost all, of the skirmishes described in the reports had to be regarded as mere reconnaissances. A company moving out of the Russian lines and approaching the Japanese positions here, a detachment there, could not mean anything in the nature of serious attacks. But the affair of the 27th of February can not be classed among reconnaissances. After a concentrated fire from field pieces and heavy guns, five companies of infantry moved down each side of the railway, and delivered an assault which was carried right into the trenches of the Japanese outpost, which continued for 4 hours—from 11

p.m. until 3 a.m.—; which resolved itself into a hand-to-hand melee, and which ended in the retreat of the Russians leaving 50 or 60 dead and some prisoners. They must have had then fully 250 casualties, and as 5 companies mustered probably a thousand bayonets all told, the fierce nature of the fight becomes plain. What it meant, however, is not equally plain. The mere feat of driving out a Japanese outpost would signify little, unless the possession of a strategically important position were in question, and as to that we are not able to judge. There appears also to have been another attack in the neighbourhood of Tashan, where Kuropatkin was supposed to have had his head-quarters during some weeks. We have no official news of this, but private statements are to the effect that a fight took place there on the 26th of February and that the Japanese casualties numbered 240, including several officers. Whether this was an attack by the Russians or by the Japanese the reports do not say, but we infer the former. Meanwhile the weather is anything but favourable. The 26th of February was marked by a blizzard, and on the 28th the thermometer fell to 29° below the freezing point. Chinese accounts speak of the Japanese having opened fire at several points with heavy guns, and of a marked effect having been produced in the Russian lines.

Meanwhile on the Japanese right in the Hanchang region, accounts concur in stating that the Russians are increasing their forces at Chiupingtai. This, it will be remembered, is the place whither the 16 battalions retired from Chinghoching, after their defeat there on the 24th instant. It is said to be strongly fortified, being, in fact, the main advanced position of the Russian left, covering Fushun. The conjecture is that the Russians always contemplated a turning movement on the Hanchang side, and that their Heikautai essay was suggested by special circumstances. Hence they have massed large forces in the Hanchang region. Matters have begun badly for them there.

#### THE PEACE RUMOURS.

It is re-assuring to see that Japanese newspapers are not at all misled by the prevailing rumours of peace. They interpret these rumours merely as indicating that a peace party exists in Russia and that its members have begun to make their voices heard, but they do not for one moment believe that the Tsar has laid aside his conviction of ability to crush Japan ultimately or that his supporters in that policy have yet been roused to a sense of the truth. What Japan has to do, we read, is to pursue her object steadfastly and unflinchingly, which object is to put an end finally to Russia's aggressive capacities in Eastern Asia. Nothing must turn this empire from that purpose; nothing be allowed to distract the nation's attention. Above all Japan must not place any reliance on the domestic disturbances reported in increasing volume from Russia. Such incidents should be entirely ruled out of the plan of campaign and the scope of its prosecution. The *Fiji Shimpō* is especially vigorous in its writing. It declares that the issue is still far distant. Possibly the opposite bank of the bloody river may soon loom in sight, if it has not already loomed, but the slightest cessation of effort at this juncture would be a calamitous mistake. Never can the sword be sheathed until Russia is so thoroughly beaten as to be ready to give substantial pledges that

there shall be no renewal of her peace-disturbing ambitions in East Asia.

The *Asahi Shimbun* has a telegram from London saying that the Tsar has decided to summon a national assembly and to entrust to it the duty of deciding between peace and war. Should the Assembly's verdict be for peace, the Government will endeavour to conclude the combat on favourable terms; but if these can not be obtained, then it will take advantage of the opportunity to prosecute the combat with renewed vigour.

It is curious to observe how persistent those peace rumours are. Is there no fire amid all the smoke?

#### THE NORTH-SEA OUTRAGE.

The extraordinary misconception originally formed about the finding of the North-Sea tribunal elicited some very caustic comments from Japanese journals. They called the court's alleged finding a conclusion without a premiss, and they suggested that such a result must be taken as indicating the judicially futile nature of international tribunals which deem it their first duty to be diplomatic and to placate all the parties concerned. But since later intelligence shows that the Court's verdict was just the opposite of what Reuter had announced, the Tokyo newspapers withdraw all their strictures. What interests them now is the action the Russian Government will take towards Rojestvensky. St. Petersburg pledged itself to punish its officers should the Paris Court declare them guilty, and the Paris Court, with an emphatic directness which savours little of diplomacy, has declared that Rojestvensky's conduct was unwarrantable and that he must bear the responsibility. It is a tight place for the Russian Government. To remove Rojestvensky from his command would be a most irksome and difficult step, yet to continue him in it and to take refuge in a mere reprimand would be intolerable to the English nation. So, once again, the problem is resuscitated in perplexing terms.

As to the singularly misleading version of the verdict originally wired to the world, there is some disposition, we observe, to blame Reuter. But before arriving at that conclusion we have to know whence the story emanated in the first instance. Reuter may only have repeated an item of news which evidently obtained credence in London.

#### VLADIVOSTOCK.

The crew of a vessel which reached Moji from Vladivostock on the 27th ultimo, say that the defences of the place are nearly completed and that work on the rear forts is being vigorously pressed. The garrison comprises about 40,000 troops, having been augmented since the place was raised to the dignity of a first-class fortress. Nearly all the non-combatants have left the town, yet provisions are already very expensive. The *Rossia* moves frequently out of the harbour, and of 7 torpedo-boats 2 are ice-bound but the remainder are in a condition for immediate service. The *Gromovoi* and the *Bogatyr* were subjected to considerable repair, but it has not been found possible to make them sea-worthy. They are lying in the ice with a palpable list, and their crews have left them.

What is the truth about these vessels? The stories we have received during the past six months would fill a volume.

## KOREA.

Saturday, February 25.

The Korean Government, it is said, has now definitely resolved to recall all its representatives at foreign courts. This rumour requires confirmation but it comes again with a sound of assurance.

Also the reduction of the military establishment is spoken of as assured. The new establishment will be limited to 14 battalions of 600 men each, or 8,400 in all.

Mr. Hayashi seems to be pressing the question of opening the coast-wise trade to foreign vessels, and also urging the inauguration of sweeping reforms in the system of internal communications, such as posts, telegraphs and roads.

M. Clemenceau, a French expert hitherto engaged in the post-office department, has resigned and is about to return to France.

A syndicate of Japanese, American and English capitalists has been formed for mining purposes in Korea, and a gold field at Suan is likely to be soon handed to the syndicate in the name of its British representative.

Monday, February 27.

Some ten of the agitators who are endeavouring to obstruct the arrangements made by Japan in Seoul have placed themselves within the power of the law by transgressing the regulations as to public meetings, and have been arrested. Probably these men believe themselves to be acting in a patriotic manner, and to that extent they merit sympathy. But in all the years that have elapsed since Korea came under foreign observation, her people have displayed ability for only two performances, intrigue and opposition. Had they any plan to rescue their country from the fate that would inevitably overtake her were she left to stand alone, the obstacles they place in Japan's way might be intelligible. But it appears to be simply unintelligent opposition: the instinctive resistance of hereditary conservatism to everything that savours of change, whether good or bad.

Wednesday, March 1.

Telegrams to the *Asahi* say that the administrative reforms in Korea have been at length determined and that they will be promulgated in a few days. They are not very signal reforms, however. Some of the essential measures are obstructed by the familiar old stumbling block, favouritism. The principal changes are that the five councillors of the Cabinet will be abolished; that the Police Bureau will be amalgamated with the Home Department; that a railway bureau will be established in the Department of Agriculture, Commerce, and Public Works, and that the Railway Bureau of the North-West will be done away with. There will result a reduction of 290 officials in all the Departments, which will bring down the establishment to about two-thirds of its previous number. The diplomatic organization has not been touched. It will be dealt with at the time of the second reforms.

Thursday, March 2.

Songching suffered considerably from the coming of the Cossacks, whose raid in north-eastern Korea brought them to this place at a comparatively early period and necessitated the withdrawal of the Japanese settlers. These were not numerous, not a hundred in all, and they had no large stake in the place, their trade being mostly confined to the export of beans and *bêche de mer*. Still it must have been a heavy blow to them to abandon

their homes to the tender mercies of the Cossacks who were not likely to spare anything capable of destruction. Last month, however, the Cossacks were obliged to turn their horses' heads once more in the direction of the Tumen, and the Japanese have begun to re-visit Songching. The first of the returning settlers made their appearance there on the 20th of last month, and the place is said to be rapidly recovering an air of business activity.

Friday, March 3.

The *Nichi Nichi Shinbun* publishes a telegram from Seoul to the effect that the Korean Government has decided to accept Japan's advice and to recall her ministers sent abroad. His Excellency Li, Minister of Foreign Affairs, has already issued orders for the recall of the Korean Representatives in France, Japan and Germany.

## THE CAPTURED STEAMERS.

Among the 40 vessels captured (42 is now the number) by the Japanese since the commencement of the war, 4, says the *Asahi Shinbun*, have been released, 9, together with their cargoes, have been confiscated, 10 are now *sub judice* and 17 are undergoing investigation. The Japanese are strenuously endeavouring to do strictest justice to every protest or claim lodged on account of cargo. There has not been on their side any sinking of ships or any wholesale confiscations such as the Russians, the highly civilized Russians, have practised.

The steamer *Powderham*, which was captured in the Tsushima Straits on the night of the 19th February, seems to have made every possible effort to escape. She refused to obey the various summonses of the Japanese and was not taken without some difficulty, though it is not stated that any shots were fired. The interesting fact is that the materials for two torpedo-destroyers were found on board, concealed under a quantity of Cardiff coal. Hiding one contraband article with another is a new device. It reminds us of the lady who, according to Dr. Johnson, was a receiver of stolen goods under pretence of keeping a brothel.

Sapporo telegraphs that certain steamers are ice-bound in the sea off Abashiri; in other words, they have been caught when attempting to pass the Soya Straits. Whether this is a multiplication of one ship into "several," and whether the one ship was the German steamer *Severus*, we can not discover, but Sapporo's message distinctly speaks of more than one ship. It is very conceivable that after the captures in the Tsushima and Tsugaru Straits all steamers bound for Vladivostock head for the Soya channel, and several of them may thus have been caught in the ice.

The masters of the British steamers *Rosalie*, *Reddington*, and *Oakley*, and of the Dutch steamer *Wilhelmina*, acting on behalf of their owners and of the owners of the vessels' cargoes, have lodged protests against confiscation. This, we imagine, will prove to be a mere matter of form, for as the ships were all captured in the act of carrying coal to a fortress of the enemy, confiscation follows in the ordinary course. The *Eastly* alone, among recent captures, has been released, and in her case clear proof was forthcoming that her destination was not Vladivostock but a neutral port. Meanwhile the crews of the *Silviana* and the *Powderham* have been released, and a public announcement has been issued to those concerned

that any protests must be lodged forthwith. In the case of the *Silviana* the master, Gibson, and 9 of the men were English, and there were one Dane, one Roumanian and 8 Greeks. The *Powderham's* people consisted of 10 Englishmen, including Captain Thomas, and 19 Chinese.

The number of the steamers captured between January 11th and February 25th, including the *Eastly*, is 17, and as one has been released, 16 seem likely to become prizes of war. It seems evident that this fleet of transports was engaged with the intention of preparing Vladivostock to be the base of the Baltic Fleet in Far Eastern waters.

It is difficult to piece together the fragmentary accounts reaching Tokyo about steamers caught in the ice of northern seas; but so far as we can ascertain there are six in all, large and small, which by attempting to make the Kunajiri passage *en route* for the Soya Strait, have found themselves embedded and can neither advance nor recede. Presumably these ill-fated vessels will be over-hauled by Japanese war-ships before they can resume their journey to the Russian port, which may be assumed to have been their destination. One of the steamers is off the Abashiri coast. She is specially unlucky, for if she got as far as Abashiri she might reasonably have expected to make the Soya avenue.

There are confusing reports about the steamers caught in the ice of the northern seas. We read of one vessel, a German steamer of some 4,600 tons, which, having received injuries, put into Hakodate, and on resuming her voyage was captured by the Japanese. Her course was changed for Yokosuka, but *en route*, she began to leak and on the 27th of February had to be beached near Misawamura in Awamori prefecture. This proves to be the *Romulus*, as is shown by a later official report.

On March 1st, a decision was given in the Sasebo Prize Court with regard to the German steamer *Veteran* (1,999 tons gross, and 820 tons registered). The Court confiscated the hull and cargo, consisting of 6,926 packages of food-stuffs, medicines, boots and shoes, and various kinds of winter cloth. The *Veteran* was captured at 4 a.m. on Nov. 19th in the neighbourhood of Yuantao on her way to Port Arthur. She was the 23rd among captured ships.

## FOREIGNERS IN YOKOHAMA.

The following statistics, compiled by the Yokohama City Office, have been kindly placed at our disposal. They show the number of foreigners—exclusive of Consular officials—residing in Yokohama on Dec. 31, 1904.

Nationality.	Male.	Female.	Total.
Austro-Hungary .....	29	6	35
Armenia .....	1	—	1
Belgium .....	7	2	9
Chile .....	1	—	1
China .....	5,788	1,354	7,142
Korea .....	2	—	2
Denmark .....	24	10	34
France .....	130	38	168
Germany .....	264	46	310
Great Britain .....	803	383	1,186
Greek .....	1	—	1
Italy .....	24	11	35
Netherlands .....	35	17	52
Peru .....	2	—	2
Portugal .....	79	44	123
Russia .....	3	1	4
Spain .....	93	15	108
Sweden and Norway ..	19	3	22

Turkey .....	10	3	13
United States .....	431	190	621
Total .....	7,814	2,153	9,967

## THE BARRACK-BUILDING AFFAIR.

Wednesday, March 1.

The temper of the House of Representatives was strikingly illustrated in its treatment of the Asahi-gawa question. This matter has been alluded to already in our columns. Several years ago when the military authorities resolved upon the organization of a Division (the 7th) of regular troops to take the place of the colonial forces hitherto forming the Hokkaido garrison, it became necessary to build a barracks at Asahi-gawa. This place is very distant from any centre of civilization, and the authorities consequently hesitated to offer the work to public tender, lest the peculiar conditions might interrupt the undertaking after a contract had been partially carried out. The method of independent agreement was therefore resorted to, and the Okura Company received the order. In 1901 the barracks were completed, and the final payments to the contracting company appeared in that year's settled accounts, which were presented to the Diet in its session just closed. Scrutinizing these accounts the Budget Committee came to the conclusion that the contract had been given at an extravagant figure and that some chicanery had been practised. In 1901 the present Minister of War, General Terauchi, was not in office, neither was the present Chief of the Quarter-Master's Bureau, upon whom the direct responsibility for such transactions would necessarily fall. Consequently no way offered of bringing the proper persons to book. Questioned as to the affair, the Government Delegate in the House did not seem much disposed to defend the terms, and General Terauchi admitted, in effect, that the then Minister of War had probably affixed his seal to the documents without examining them carefully—a procedure that must necessarily be followed from time to time—, but he added that, under any circumstances, the Minister of War is responsible to the Sovereign who appoints him, not to the House of Representatives. This reservation naturally did not tend to smooth matters, and for a time there was loud talk of addressing a petition to the Throne on the subject. In fact, up to the 25th instant such a course seemed certain to be followed by both Houses, for the Budget Committee of the Peers had also taken up the question strenuously. Undoubtedly had this incident come to light in any previous session since the Diet's first sitting, a petition to the Emperor impeaching the Ministry would have been a foregone conclusion. But the political parties, much to their credit, shrink from anything like an open collision with the Cabinet at a time when union between Government and nation is so essential. Their patience barely endured the strain, it must be admitted, for they had made previous sacrifices on the altar of concord, and the limit seemed to have been passed in this Asahi-gawa business. Still when the two great parties assembled on the 26th ultimo to discuss the matter, each on its own account, it was found that their most influential members deprecated the extreme course of addressing the Throne direct, and advised rather that the House should limit itself to passing a resolution of disapproval. There were many demurrers. Some went even to the length of asking that the problem should not be treated as a party question, but that the members should be left free to follow the dictates of their individual opinions. An additional element of dissatisfaction was introduced when it appeared that the

Parliamentary Leaders of the parties had approached the Cabinet direct prior to the meeting, and had essayed to conclude some agreement which would meet the situation without causing a rupture and without troubling the Emperor. The Parliamentary Leaders, however, frankly and stoutly announced that they had acted on their own discretion, and this unequivocal admission appeared rather perplexing to the malcontents. As for the Progressists, it transpired that their Parliamentary Leaders had suggested to the Government a tolerably drastic basis of settlement, involving sundry resignations and the permanent erasure of the Okura-gumi's name from the list of qualified contractors. But ultimately the two meetings voted for the gentler and practically innocuous device of a condemnatory resolution. In a Western parliament such resolutions, amounting as they do to a vote of want of confidence, would necessarily be fatal to the Ministry impugned. But that is not the custom in Japan. Here as the Diet does not make Ministers, its power to mar them has never been acknowledged, and its resolutions, though treated doubtless with due respect, do not entail any practical consequences. In this case it appears that General Terauchi, Minister of War, and Mr. Tomatsu, Chief of the *Kirikyoku*, both tendered their resignations, a fact which staggered the politicians, for the nation regards General Terauchi with the utmost respect and confidence, and there is universal admiration of the clever and economical devices employed by Mr. Tomatsu in procuring stores for the use of the Army. A petition to the Throne would not have been likely to displace either of these officials as a direct result, but it might have determined them not to remain in office, which would have been a calamity, and assuredly it must have furnished to foreigners food for misinterpreting the relations between the Diet and the Cabinet. History will surely say that the political parties have put a wise restraint upon themselves in this matter, and that they have shown patriotism not unworthy of the nation's recent record. The War Office, after careful enquiry, denies *in toto* the justice of the House's strictures, and assuredly the War Office is most competent to judge. But that is just what no Japanese House of Representatives is disposed to admit.

Thursday, March 2.

With regard to the affair of the Asahi-gawa Barracks it is well to keep in memory the fact that the present Minister of War, who has no direct connexion with the incident and who is universally regarded as a man of the strictest integrity, has explicitly denied the two charges preferred by the Settled Accounts Committee of the Lower House, namely, the charges that the sum paid for the work of construction had been excessive and that the work itself was bad. At first a committee of War Office officials, appointed to examine into the matter, found that grounds for that accusation existed, and the Minister of War, hastily it now seems, put his approving seal to the Committee's report. But subsequent inquiry convinced him that neither the expenditure had been excessive nor the building defective, and in that corrected sense he made his final declaration in the House of Representatives. Which side is right? To us it appears not at all improbable that the materials which went to form an altered judgment on the part of the War Office after maturer investigation were precisely the materials which escaped the observation of the Settled Accounts Committee, and that the latter's opinions would perhaps

have undergone the same modification as did the opinions of the War Office had both sides carried their scrutiny equally far. At all events it would be most unjust to conclude that a case of corruption has been made out. There is an accusation preferred by men whose opportunities for judging are obviously limited, and there is an explicit denial formulated by men equally deserving of credence and much better equipped for reaching the truth. In the presence of such facts the least that justice demands is suspension of judgment.

## THE MISCHENKO RAID AND ITS SEQUEL.

When the news of the Mischenko cavalry raid early in January reached Tokyo, we suggested—as was doubtless evident to many onlookers—that this remarkable ride by some twelve thousand Cossacks had an object other than the burning of military stores and the injuring of railways and telegraphs, that ulterior object being in the nature of a reconnaissance preparatory to an offensive movement against the Japanese left. Curiously enough at almost exactly the same time the Paris correspondent of *The Times* sent to his journal the following telegram dated January 16th:—

M. Dru, the St. Petersburg correspondent of the *Echo de Paris*, telegraphs:—"I learn from a trustworthy source that a Russian offensive is imminent. We are on the eve of great military events."

The news given in this positive form by M. Dru, who is known to be in close touch with the Russian authorities, is also mentioned by M. Lagardère, of the *Petit Parisien*. Some of his remarks, based on views expressed to him by a General, tend to confirm the suspicion reported by your Tokio Correspondent that in their recent raid General Mischenko's Cossacks openly violated Chinese neutrality. According to M. Lagardère, General Mischenko "with his 20,000 Cossacks will harass the Japanese along their whole line from Liau-yang to Ying-kau, thus preparing for the entry upon the scene of General Kaulbars's army. The future operations of this army will give rise to the risk of opening up the great question of the violation of the neutral zone, which is bounded on the Chinese side by the lower Liau. If the Russians pass the zone fixed by the American Note of February, 1904, which has been accepted by the belligerents, the war will extend to Chinese territory. This might not only provoke a rising of the Chinese population, but create complications. The Russian Government is seeking the moral support of Europe in order to intimidate the Chinese; but it is possible that their game may have other consequences. A violation of Chinese territory by both belligerents forcing Europe to intervene might very well result in a decision by the neutral States to impose peace upon the conflicting Powers."

The circumstance that this interesting suggestion should emanate from a Russophil French journalist, who is on friendly terms with official circles in St. Petersburg, throws a new light on the Russian protest against alleged breaches of neutrality. It will probably confirm in their opinion those who at once suspected that in drafting their protest the Russian authorities were thinking more of the future than of the past. It furthermore involves the admission in St. Petersburg that there is little room for turning movements on the part of their army west of the Japanese lines.

The predictions of M. Dru and M. Lagardère were very remarkably verified by subsequent events, for Mischenko's raid did indeed prelude an attack by Kaulbars, though the latter did not, as the two French journalists apprehended, move his troops though neutral Chinese territory. He may have intended to follow the route taken by the Cossacks, but if so his original purpose must have been to strike at Liaoyang from a point more southerly than Changtan. At any rate, seeing how well informed both M. Dru and M. Lagardère have showed themselves, it is fair to infer that they did not exaggerate when they spoke of the Kaulbars movement as a "great military event." The Russians certainly intended it to be a great military event, and its signal failure must have disheartened them correspondingly.

## THE QUESTION OF THE WEST LIAO.

As to the preservation of the neutrality of the West Liao region, the latest intelligence suggests that, in obedience to the advice of Viceroy Yuan, the Chinese Government have taken a prudent resolve. Instead of allowing themselves to be driven by M. Lessar's importunity into adopting large measures for quelling the Hunghtsz, they have resolved to inform Russia and Japan officially that if either Power make use of these free-booters for its own purposes, China will not accept responsibility for any breach of neutrality that may result. This is a little vague. Does it mean that if the Russians, for example, obtain evidence which in their opinion conclusively shows that the Hunghtsz are operating under Japanese leaders and in the Japanese cause, Russia will be free, so far as Chinese objections are concerned, to pursue the free-booters into neutral territory, or does it mean that all territory infested by Hunghtsz acting in that manner shall lose its neutral character? Whichever interpretation be correct, the announcement would certainly signify that China declines to acknowledge any responsibility for the doings of the Hunghtsz in regions constituting the seat of war. She washes her hands of the whole business.

There is here a curious point. It will be fresh in public memory that when Mischenko made his January raid against Niuchwang, Haicheng and Yingkow, the Japanese detected the presence of Chinese regulars in his ranks; or, at any rate, of men whom they took for Chinese regulars. Formal protest was lodged in Peking, and it elicited from the Waiwupu an official explanation that the supposed Chinese regulars were really Hunghtsz. Thus the Peking Government made an explicit avowal that some of the freebooters were serving with the Russian cavalry; not merely engaging in forays or railway-wrecking feats under Japanese adventurers, but actually serving in the ranks of the Russian army. With such a record officially published, to say nothing of previously ascertained instances of the employment of Hunghtsz by the Russians, we find M. Lessar making a stalking-horse of the freebooter question to intimidate the Chinese. There is nothing like carrying the war into the enemy's camp, but read by the light of the Mischenko raid, the Waiwupu's recent announcement seems to mean that since the Russians have made use of the Hunghtsz in this flagrant manner, China refuses to construe any future doings of these gentry as a breach of neutrality.

## THE NEW DOMESTIC LOAN.

Some journals are disposed to criticise the arrangements for the fourth domestic loan as too favourable to the bankers, but on the whole the feeling of the public seems to be one of satisfaction. It has to be noted that the loan is 200 million yen. Only 100 millions will be floated at once, but the second half will be issued in two or three months on the same basis. The comparison of the loans is as follows:—

loans is as follows :—				Issue	Nett
	Amount.	Interest.	Period.	Price.	Interest.
First Loan ...100	5	5		95	6.32
Second Loan...100	5	7		92	6.96
Third Loan.... 80	—	7		92	6.96
Fourth Loan. 200	6	7		90	8.25

Compared with the rates of interest ruling in the market for first-class securities, the last figure is high. Thus if we consider the prices of the great companies' shares the interest an investor receives on them

in the Japan Railway is 7 per cent.; the Sanyo Railway 6.3; the Kyushu Railway 7 per cent.; the Tanko Railway 7.5; and the Yusen Kaisha 7.2. Moreover the daily rates of interest on loans in Tokyo and Osaka is 2 sen for Tokyo and 1.8 sen for Osaka, whereas the new Government loan shows a daily rate of 2.3 sen. On the other hand, the amount of the loan constitutes an important feature, and it is further of great importance that these war-loans should be floated without any difficulty. It appears that the installments of this last loan are to be paid in larger sums and at shorter intervals than has hitherto been the rule.

The *Official Gazette* of the 27th February contained an announcement of the issue of the fourth domestic loan. Our readers are already familiar with the broad facts—amount 100 millions, interest 6 per cent., selling price 90, banks' commission  $\frac{1}{2}$  per cent., and period 7 years—but we now note that the period is to count from next September. The installments are to be paid thus:—4 yen per 100 (face value) on application, which must be made not later than 31st of March; second installment of 16 yen between the 24th and 29th of April; third, 20 yen, between the 16th and the 25th of May; fourth, 20 yen, between the 16th and the 26th of June; fifth, 20 yen, between the 17th and the 26th of July; and sixth, 10 yen, between the 16th and the 25th of August. In the case of subscriptions over the minimum limit (90 yen), the excess must be paid in on the occasion of the second installment (24th to 29th of April).

On the 28th ultimo the associated banks of Tokyo held a meeting with regard to the Fourth War Loan. Much enthusiasm is said to have been shown, and a sum of some sixty millions was promised at once, as follows:—Bank of Japan 20 millions; Fifteenth Bank 10 millions; Mitsu Bishi, Mitsui and Specie Banks 5 millions each; First Bank and Industries Bank 3 millions each; Third Bank and Yasuda Bank 2 millions each; Hundredth, Murai and Shogyo Banks 1 million each—making 59 millions. Further, the Imperial Household subscribes 20 millions; the Kangyo Ginko and the Yusen Kaisha 1 million each; the Insurance offices 10 millions; and there will also be the Nobles subscriptions, so that Tokyo alone puts up already a sum of over 100 millions.

It may be well in this context to correct a mistake which has been published in Yokohama, namely, that the Treasury has been obliged to abandon its intention of floating a loan of 200 millions and to limit itself to 100. That is erroneous. Arrangements have been made for a 200 million loan, but the second half of it is to be issued whenever the Treasury deems the time suitable. It should not be necessary to point out that ill-informed statements about matters of such importance are to be deprecated.

## HIGASHI HONGWANJI.

The fate of the impecunious has at length overtaken this celebrated temple. Its principal creditor, the *Kitahama Ginko*, to which it owes a sum of 530,000 yen, seems to have behaved with the greatest moderation, and would have been willing to defer recourse to the last extremity for any time convenient to the priests, provided only that they succeeded in paying interest. But the priests, chiefly their Lord Abbot, Count Otani, seem to have acted in an impossible manner. Our

readers know that this matter has been under discussion for several years. At one time Count Inouye was induced to take it in hand, and everyone then anticipated a final and satisfactory settlement. Count Otani, however, has always shown himself unable to adhere to any system laid down by his advisers. One after another those that took a kindly interest in his concerns were alienated by his action. He would confide in them and entrust them with full powers in the hour of extremity, but so soon as by their exertions the temple's troubles began to grow lighter, he would revoke these powers and revert to reckless ways. So at length public and private patience has been exhausted and the bailiffs have appeared upon the scene. All the temple's property, movable and immovable, will be put up for public sale. The movables are to come under the hammer on March 1st. They comprise, *inter alia*, 25 pairs of six-leaved gold-foil screens, and 1336 other articles, many of which would doubtless be much cherished by virtuosi. At the lowest estimate these chattels are expected to realize 13,800 yen. The fixed property will be sold on the 3rd of March—temple buildings, priests' houses, forests, fields and so forth, all estimated to be worth 340,378 yen at least. Presumably the devotees of the Shinshu sect will interfere to prevent the destruction of this great temple which is not yet a quarter of a century old. It seems but yesterday, though it was in truth in 1882, that we heard of men subscribing large sums to buy building material and women cutting off their hair to make ropes for drawing the colossal timbers of the *honden*. One can scarcely believe that the huge edifice will meet the ignominious end of being pulled down for the sake of its materials.

## THE OSAKA LIFE INSURANCE COMPANY.

A great blow will be given to life-insurance business in Japan by the suspension and dissolution of the Osaka Seimei Hoken Kaisha. Suspension was ordered by the Government; dissolution by the Osaka Local Court. In the *Shogyo Shimpo* we read that of late the internal condition of the Company had become notoriously disordered and the Minister of Home Affairs had been obliged to appoint one bank as the sole financial agent of the concern, and to forbid the taking of any step with regard to the Company's property involving an amount of over 1,000 yen. Subsequently there were reasons to suspect that, in violation of this order, the Company was secretly disposing of its property. Official investigation was therefore undertaken, the result being that the Company was found to be carrying on business of a nature calculated to imperil the interests of its policy-holders. Suspension was therefore decreed, and the Local Court was appealed to, the issue being as stated above. The Company's paid up capital is 300,000 yen and its reserves amount to 90,000, its present assets being 1,080,000 yen. On the other hand, the amount of its outstanding policies is 9,800,000 yen, and the sum that it will have to return to the policy-holders in consequence of the court's decree of dissolution is from 1,200,000 to 1,300,000 yen. The assets, therefore, are insufficient, and the shareholder will have to put their hands into their pockets. The principal officers of the Company are Messrs. Yuri Sosei, Seki Shingo and Komabayashi Koun.

## GRIPENBERG AND KUROPATKIN.

The Foreign Office publishes an epitome of some remarks said to have been made by General Gripenberg to a representative of the *Russ*. They are strange remarks to have been addressed by a general officer on the active list to a newspaper during a time of war. Gripenberg is represented as saying that the Battle of Heikautai was entirely planned and directed by Kuropatkin—a fact of which little doubt could ever have been entertained—and that its immediate object was to forestall an offensive movement apparently contemplated by the Japanese left. Gripenberg adds that in this operation he was to have been assisted by the Third Army and if possible, by the First, and finally that his own resignation had the sanction of the Tsar.

These allegations bear out from point to point the analysis made in Tokyo. Gripenberg now admits, about in so many words, that Kuropatkin expected Nogi's army to move up from Port Arthur and make a turning movement in the Hun-Shaho Valley. Consequently, he deemed it imperative to anticipate this enterprise by himself assuming the offensive. But he apparently expected that the 7 Divisions sent by him against the Japanese would suffice, whereas Gripenberg was led to believe that at least one of the other two Russian armies would co-operate with him. Kuropatkin's error, then, consisted in underestimating the fighting qualities of the Japanese, or, perhaps, in imagining that the cold would partially paralyse them. He ought not to have entertained the former hypothesis after a year's experience, but the latter would have been in accord with a very common belief. In one point his calculations were right. He found the Japanese in greatly inferior force—2 Divisions against 7, or, numerically, about 4 to 7—and under such conditions victory ought to have been possible. It is certain, however, that he should have made provision for the contingency of Gripenberg's army proving insufficient. Gripenberg would never have undertaken the task assigned to him had he not looked forward to such support, and the fact that it was not forthcoming at the critical moment, proved too much for his patience.

But as between the two men, Kuropatkin who stands to his post and through good report and ill report fights on staunchly, and Gripenberg who deserts the field, and flies to St. Petersburg to ventilate his grievances, can there be any choice?

## POLITICAL TOPICS.

Count Katsura, speaking at a dinner given by the Minister of Finance to the provincial Governors on the 24th instant, said that at this time last year the nation had not been without apprehensions as to the result of the struggle it had just entered, apprehensions justified by the might of its opponent. But to-day the feeling was very different. The fall of Port Arthur had been, in effect, the overthrow of Russia's power in Far-Eastern Asia. For her the situation was lost beyond recovery. That was well understood by the Japanese; it must be understood more or less by the Russians themselves also, and it was understood by the countries of the Occident. But there should be no inference as to the speedy termination of the war. Let them conceive themselves situated as Russia is. Evidently a man possessing supremely high qualities of judgment and determination could alone take firm hold of and solve such

a situation as that now existing for Russia. The true solution would be to acknowledge defeat and conclude peace on reasonable terms, but how much more natural it was to fight on desperately, hoping that good fortune might haply intervene to lighten the gloom! They must expect Russia to pursue such a course, and they must neither relax their vigilance nor remit their efforts to push their advantage. The issue might still be distant, but not one dark spot was discernible upon the horizon from Japan's point of view. The country, in bearing the burdens of last year's operations, had shown an elasticity of strength which furnished ample security for the future, and nothing was now necessary except perseverance.

## THE BALTIC FLEET.

We place the following telegrams side by side:—

Port Louis, January 13.  
The Messageries Maritimes steamship *Iraqwaddy* landed about 4,500 packages at Nossi Bé on the 2nd inst. for the Russian squadron.

Fifteen Russian warships anchored at Diego Suarez on December 31.

The arrival of Admiral Rojdestvensky's squadron there was delayed by severe weather encountered on its way from Cape Sainte Marie. The volunteer transport *Kuban*, with 510 men and eight guns, reached Diego Suarez on December 30.

The cruiser squadron under Admiral Fölkersahm, which came out of the Red Sea, anchored at Passandava Bay on January 4, and is coaling from colliers, which were waiting at Diego Suarez.

It is denied that any Japanese cruisers have been seen off Cape Amber, the northernmost point of Madagascar, but it is rumoured that warships have lately been seen off the west coast of Mauritius.

Suez, January 13.  
Admiral Botrovsky's squadron has sailed southwards, presumably for Jibuti.

February 22.  
Reuter's correspondent at Port Louis states that seventy ships of the Baltic Squadron, including colliers, were at Nossi Bé on Feb. 16th. They were buying stores lavishly.

February 23.  
A Reuter's telegram from Port Louis says that the French mail steamer *Melbourne* before arriving there, landed a quantity of stores and dynamite for the Baltic Squadron. She reports that 5 of the Russian ships are at Jibuti and 13 at Diego Suarez.

February 24.  
A French steamer has landed a quantity of stores and dynamite for the Russian warships, principally at Jibuti and Diego Suarez.

It is apparent from these telegrams that a large part of the Baltic Fleet arrived at Diego Suarez and Nossi Bé on December 31st and that the ships are still there. It is further evident that they are taking in provisions; that French mail steamers subsidized by the Government of France are carrying and landing in French territory stores and warlike material for the Fleet; and finally that Russian volunteer transports are bringing to a French port combatants and guns for the purpose of manning and arming the Russian war-ships. In a word, Madagascar, Madagascar which is an integral part of France's dominions, is serving for a Russian naval base in the war against Japan just as unequivocally as Libau or Reval has served. We see no use in commenting on these facts. They are much more eloquent than any words could be. But it is fair to place in their context the following extract from *The Times* of February 14th:—

(FROM OUR RUSSIAN CORRESPONDENTS.)

The difficulties with which the Baltic Fleet has to contend in consequence of the stringent regulations enforced by neutral Powers in regard to the question of coaling are described with some bitterness by a correspondent who writes to the *Russ* from Great Fish Bay on November 23.

The action of England, he says, in modifying her original declaration of neutrality by complementary articles expressly forbidding either

belligerent to coal within her territorial waters, though contrary to international usage, must be regarded as not unnatural in view of her alliance with Japan. It is, however, less easy to understand why Spain, Portugal, and above all, France should, without making any express declaration, deem it necessary to follow England's example. The difficulties raised in the matter by the Spanish authorities at Vigo are too well known to need repetition. At Dakar the Governor-General at first altogether refused to allow the Russians to coal, and only after prolonged *pourparlers* were they at last permitted to replenish their stores sufficiently to enable them to put to sea. In consequence of this inhospitable treatment Admiral Rojdestvensky refrained from entering the Gaboon River and remained at anchor beyond the three-mile limit. Even this was not enough to satisfy the local Governor, for when some Russian officers landed to post their letters he urged that the fleet should leave at once "in order to avoid any unpleasantness." Again, at Great Fish Bay the Portuguese gunboat *Limpopo* made haste to warn the Russian Admiral that the territorial waters were closed to his squadron.

This attitude of the neutral Powers, concludes the writer, who is plainly a Russian officer, has happily so far proved no more than a trifling obstacle to the progress of the squadron; "but the lesson must be taken to heart in view of the future, and we must not lose sight of the fact that in the moment of difficulty we are everywhere and always surrounded by ill-wishes, and by ill-wishes only."

(FROM OUR OWN CORRESPONDENT.)

Paris, January 13.

The St. Petersburg correspondent of the *Écho de Paris* telegraphs:—

"It is rumoured persistently that Russia has just purchased a small island in the Indian Ocean destined to serve as a *point d'appui* for Admiral Rojdestvensky, where he could find shelter while awaiting the third squadron. One of the transports forming part of the latter left Libau yesterday."

If the action of the Powers has thus far proved a trifling obstacle, it is because France appears to have changed her policy and to have placed at Russia's disposal a naval base without which the Baltic Fleet never could have come to the Far East.

## JAPANESE RAILWAYS AS SECURITY.

Owing to the accidental omission of a whole table from our recent statement as to the building-cost and net profits of Japanese railways, a very erroneous impression was conveyed. The correct facts are these:—At the end of 1902 the length of State Railways open to traffic was 1,226 miles and the cost of construction had been 125,714,859 yen. The gross earnings and outlays during the year had been:—

	Yen.
Gross Earnings .....	18,336,582
Running Expenses .....	9,066,165
Net Profits .....	9,270,417

This represented 7.4 per cent. of the capital investment.

At the same date the length of private railways open to traffic was 3,007 miles, and the capital sunk had been 213,231,933 yen. The gross earnings and outlays during the year had been:—

	Yen.
Gross Earnings .....	33,344,213
Running Expenses .....	16,203,223
Net profit .....	17,140,990

This is the table accidentally omitted. It shows that the net profits were just 8 per cent. of the capital invested. The profits that actually passed to the credit of the Company were only 7.8 per cent. of the capital, but the discrepancy was due to special causes which have no place in this context. The totals for all the lines were:—

	Yen.
Gross Earnings .....	51,680,795
Working Expenses .....	25,269,388
Net profits .....	26,411,417

## CHINA.

Monday, February 27.

Eleven Chinese who had been apprehended in an attempt to set fire to the Japanese commissariat stores at Dairen, were beheaded on the 17th February. It was always to be feared that the Chinese would lend themselves readily to the work of spies. The Chinese, it must be confessed, are an example of one feature of the civilization that is begotten of the struggle for existence as it goes on in their own country and as it is found in many parts of the Occident. Money has assumed in their eyes an inordinate value. Life even is less precious. That seems to be a contradiction. It appears inconceivable that a man who will employ any weapon in the combat for life should be willing to sacrifice his life for lucre. But here comes in the Chinaman's peculiar creed of ancestral worship. The sacrifice is made to perpetuate the life of the family, and to ensure that on his own account the prayers shall be said and the incense burned without which his eternity must be one of pain. The broad fact is that money has come to assume an excessive value in his eyes, and thus deeds otherwise infamous are redeemed by the motive that prompts them.

Shanghai telegraphs to the *Asahi Shimbun* that the Italian Government will withdraw all its troops from Chili next May except a small Legation guard in Peking, and that the Italian flag will henceforth be represented by only one or two cruisers.

Peking reports (*Nichi Nichi Shimbun*) that the cold this year seems likely to break up unusually soon in China. The ice at Taku is expected to disappear by the 3rd and 4th of March, and Yingkow will be open by the 20th of April. We do not discover any remarkable celerity in these dates. Taku is always open by March 10th at latest and Yingkow is not usually much later.

A telegram to the *Fiji* from Tientsin says that Mr. Yang, the new Governor of Shantung, who was directed to proceed to his post with all expedition, is lingering *en route*. He pleads as an excuse for delay that he wants to be present at the ceremony of erecting a tomb-stone to Li Hung-chang, but his true motive is said to be reluctance to face the music of German methods in his new governorship. In this context the *Asahi Shimbun's* telegrams attribute various designs and demands to Germany, but truly it seems to us that Germany is the butt of many unjust accusations just now, and we therefore season all charges against her with much salt.

Tuesday, February 28.

The French Representative in Peking is said (*Asahi* telegram) to be very active just now. He is pressing for the establishment of a special settlement at Nanning, and the Chinese Government has virtually promised to take this step so soon as the Kwangsi disturbances shall have been quelled. He is also asking for permission to establish a line of steamers between Shanghai and Showking, to which proposal the people and the officials of Kwangsi are said to be strongly opposed, but the Waiwupu, impressed by the vehemence of M. Dubail, has engaged itself to find some method of granting his application. Finally His Excellency is urging that even though French capital be not employed for the construction of the Hankow-Swatow railway, French experts shall be engaged for the work.

The Chinese, it is said, are contemplating a change of their military uniform on the lines of Japanese and German patterns. Un-

doubtedly there are useful alterations that might be made, but why change the whole uniform? It is an excellent costume as it stands; thoroughly well-suited to the requirements of the country, easily deprived of its target-serving distinctions, cheap and picturesque. And after all, what a whitening of the sepulchre is this clothing reform! Something very different is wanted.

Rumours continue to arrive of demands pressed by Germany in Peking, and of the posting of German soldiers to guard the railways in Shantung. The German Representative is said to have complained that the Governor of the province has posted Chinese troops also, and to have inquired whether this was done with the approval of the Chinese Government. The processes of civilized aggression are now pretty clearly defined where China is the *corpus vile*. At the basis is a mob outrage involving the slaughter of missionaries. Then follow demands for redress, such demands being prefaced by seizure of territory, as a security. Then issues the retention of the territory after the demands are satisfied. Next there is an application for "permission" to build railways communicating between the territory and its hinterland. Then comes the posting of troops to guard the railway. And finally the hinterland is annexed. It used to be said that the blood of martyrs was the seed of the church. The saying must now be changed into the blood of martyrs is the seed of imperialism. Of course Germany is no worse than other nations. Certainly no worse than England was in her day of unscrupulous aggression. But the point is that these things happen now-a-days before a different audience and with different foot-lights. Human instincts have not undergone any material alteration, but the opportunities for public observation have been inconveniently developed.

Wednesday, March 1.

M. Lessar, according to a telegram from Peking, is pressing the Waiwupu to make some responsible statement with regard to facts which he describes as unquestionable, namely, that the Hunghutsz, led by Japanese officers, are inflicting injuries on the Russian railway-bed and bridges. Possibly the Chinese may not be at all chagrined by the receipt of this intelligence, nor will Japan's friends be sorry to learn that such an obvious method of harrassing the Russians is in effective operation. M. Lessar's protests, however, are not only futile but ludicrous. What shadow of reason is there in requiring the Chinese Government to guard Russian lines of military communication for the purposes of a campaign against Japan on the ground that this is a duty imposed by neutrality? The plain duty of China as a neutral is to leave Russian lines of communication to take care of themselves, and to have no hand, act or part in anything relating to the war. The Chinese have never been able to restrain the Manchurian free-booters effectually. It was precisely on the ground of this proved inability that Russia based a plea for the military occupation of Manchuria, and to claim now that China is not duly neutral because she fails to accomplish for the sake of the Russians in time of war and with her hands tied what she never could accomplish for her own sake in time of peace and with her strength unfettered, is quite farcical.

There is a report that 25,000 tons of Cardiff coal have been landed at Amoy in the name of a Chinese subject who is known to have long acted as a Russian Agent. Naturally the supposition is that this is intend-

ed for the use of the Baltic Fleet, but such an incident can not be immediately credited. Chinese ports will surely not be accessible to Russia as coaling stations.

Peking is complaining bitterly to M. Lessar that the Russians in the Mukden region, unable to endure the cold, are making constant raids into the region of the Imperial Mausolea and felling the timber for purposes of fuel. It is a vain complaint. Where are troops to be found who would spare a tree because of its sanctity when they are perishing of cold for want of fuel, and what officers could or would enforce discipline to that extent? Moreover, the Chinese must have read the religious organs of Russia. They must know that all believers in Buddhism are intolerable in Russian eyes, and that the Mausolea at Mukden invite destruction by their "pagan" character rather than deter it by their traditions. General Kuropatkin and the senior Russian officers would certainly restrain these abuses if they could, but a Manchurian winter and religious intolerance are too powerful even for Kuropatkin.

The Empress of China has entrusted a sum of money to the care of the Japanese military for the relief of distress in Manchuria. Considerable sums are said to have been distributed through the Russians also.

Thursday, March 2.

It is telegraphed from Shanghai that this affair—the murder of two Japanese workmen employed on the Chao-sien Railway—has been settled in consideration of a promise by the Railway Company to pay compensation to the amount of \$210,000. The sum seems large, but we presume that it is destined for purposes other than a mere solatium to the families of the murdered men.

A telegram received at the Foreign Office says that the ice on the Peiho River broke up on the 28th ultimo.

A shocking disaster occurred at Foochow on the 6th inst., reports the *N.-C. Daily News*, by the sudden bursting of a boiler on the native owned steam-launch *Ting Mei*, which runs between Yungmun and Nantai. The number of serious injuries is roughly estimated as at least twenty-eight, all of which were taken immediately to the Native Hospital for treatment. Thirteen cases have, we hear, proved fatal. Pending further enquiries, we can only remark that, from the outward appearance of several similar launches, one might rapidly expect repetitions of such occurrences. If they are sound they are over-crowded.

A sad accident with a fatal termination recently happened on board of *H.M.S. Ocean* in Hong-kong harbour. It appears that while S. Rowlands, a young able seaman, was engaged in hoisting shot from a lighter alongside, a twelve-inch projectile fell on his legs, badly crushing one and breaking the other in two places. It was found necessary, on his removal to the R. N. Hospital, to amputate the right leg, while the left leg was carefully set. Despite that everything possible was done for his comfort the operation proved too much for the poor fellow, and he succumbed to his injuries the same night.

The *North China Daily News* prints an eloquent obituary notice of the Rev. Charles Hartwell, M.A., the senior missionary of the American Board in China, who died at Foochow on Jan. 30. Mr. Hartwell first arrived in China 52 years ago.

The *N.-C. Daily News* says there are about one hundred and fifty Russian refugees from Port Arthur stopping at the Wananlon Chinese Inn, on the corner of the French Bund and the Rue du Consulate. One evening a refugee, in a fit of drunken frolic, began pouring kerosene oil on the floor of a room in that inn and set fire to it. Fortunately, this was discovered before much

damage was done and the fire was promptly put out by the people of the inn. Had the hour been a later one, when most of the inmates were asleep, there is no knowing what extent the fire brought about by the drunken insanity of the refugee could have led to.

It is reported from Peking that the Waiwupu has received a confidential dispatch from H. E. Hu Wei-tê, Chinese Minister at St. Petersburg, stating that he understands that the Czar contemplates appointing General Wogack as Russian Minister in the place of Mr. Lessar.

The Empress Dowager has commanded the construction without delay of telephone lines connecting her own Palace, the Tzeningkung, in Peking, with Eho Park Palace and the Palaces at the Southern and Northern lakes, which her Majesty often visits during various portions of the year. To the above-named palaces telephone lines are also to be immediately constructed connecting with the Grand Council Room in Peking which, again, is to be connected by telephone with the Waiwupu, Shangpu, and Hupu, or Board of Revenue. The telephone, by the way, instead of being as formerly, phonetically called "ch-li-fung," is now officially designated "Tien-hua," or Electric Speech.

Mr. Skinner Turner, assistant judge at Zanzibar, has been appointed Judge of H. M. Court at Bangkok, replacing the present Acting Judge, Mr. H. P. Wilkinson, who will return to Shanghai to resume his post of Crown Advocate as soon as Mr. Turner arrives at Bangkok.

The Tientsin papers report that the Prince of Ao Han, Mongolia, after his audience at the Palace, Peking, on Chinese New Year's Day, went home, had lunch, and went to sleep. While he was asleep, his cook came in and killed him with a chopper.

The Brussels *Chronique* announces that a monthly steamer service between Antwerp and Chinese ports is to be established. It is understood that the capital for the undertaking will be supplied by various prominent personages, and that part will be drawn from the Civil List.

The Bishop of Shantung, Dr. Geoffrey Durnford Iliff, has been elected an Honorary Fellow of S. Augustine's College, Canterbury. The Bishop of Shantung was educated at the Clergy Orphan School at Canterbury, and was ordained for missionary work from S. Augustine's.

The steamer *Princesse Marie* left Shanghai for Odessa on Feb. 21 with over a thousand Russian refugees. The steamer *Arcadia*, chartered for the same purpose, left Woosung but afterwards put back to take on board a further batch of 160 refugees from the *Manchen*. The *Arcadia* left for Odessa the next day with 1200 refugees on board. The *Andalusia*, which arrived at Shanghai from Japan on Feb. 21, and the *Scandia* have also been chartered. About 2,000 refugees were expected to arrive from the North during the week, said the *North China Daily News*.

The Shire liner *Merionethshire* the other day picked up the Bergen steamer *Oscar II*, from Shanghai, 200 miles from Hongkong, with her main shaft broken, and towed her into Hongkong.

A Chinese merchant of Shanghai writing about the manner in which native merchants fared in 1904, states that the different trades in Shanghai were comparatively prosperous the major portion of last Chinese year, and that it was not until the last quarter that matters began to look serious through the sudden rise of gold exchanges. As a matter of fact while the banks made money merchants engaged in kerosene oil, yarn, pig iron, copper, tin, and spelter were the greatest losers at the close of the year. Among piece-goods merchants those only could show a credit balance on their books who dealt in American piece-goods. In teas also the green commodity was a losing speculation, while although black teas were more encouraging the profits from them were very small. Finally, Chinese engaged in importing Japanese goods

were also heavy losers through the sudden rise in exchange during the last quarter of the year.

It is reported from Peking that the Waiwupu has sent instructions to Tseng Ch'i, Tartar General at Mukden, to use every effort at enrolling the Hunghutse and roving bands of mounted brigands into the Imperial service, as a means of keeping them quiet and preventing complaints being made of the violation of neutrality by Chinese in Manchuria.

Captain Murphy and Captain Reid, successively in command of the West River steamer *Shun Lee*, have died of small pox, caught from native passengers.

The native correspondent of the *North China Daily News* at Peking remarks that it must cost Viceroy Yuan Shih-k'ai an immense sum annually in purchasing presents for their Imperial Majesties and certain princes, nobles, and eunuchs who are known to have the ear of the Empress Dowager. Last year presents and gifts of various kinds were sent to Peking no less than sixteen times, all of them costly and requiring large sums to purchase. One of the Viceroy's latest presents to their Majesties was sent to Peking a few days ago and consisted of twenty odd large cases of the very best Japanese fireworks for the celebration of the Feast of Lanterns on the 18th instant, and also ten cases of various kinds of foreign fancy biscuits, confectionery, and pastries. Of course these constant gifts are designed to keep his personality always before their Majesties for the "making solid of his foundations," as the adage goes.

The particulars of the murder of the Mongol Prince of Aohan, which occurred in Peking on Chinese New Year's Eve (Feb. 3rd) are given in the *North China Daily News*. The murdered prince was quite a young man, being only twenty years old, and only married a year ago to the grand-daughter of the late Prince Po of the Imperial House. At the inquest held over the body by a special officer from the Board of Punishments it was found that there were no less than eleven wounds, the unfortunate young prince's head having been also completely severed from the body by a heavy chopper. Besides the deceased two others were attacked at the same time by the murderer, one being one of the prince's body guardsmen and the second a Lama priest. The first named was only slightly wounded, while it is feared that the Lama's injuries may result fatally. The two were sitting by the prince talking to him while he was reclining on a couch, when the murderer (a hereditary slave of the prince's household, holding the position of assistant cook) walked into the room and getting behind the body guardsman felled him with a blow from the back of his heavy chopper. The murderer then attacked his master, and when the Lama tried to interfere, the latter received the murderous blow intended for the prince, which also brought the priest to the ground. The way being now clear the murderer sprang upon the prince and bringing down the chopper completely smashed in the latter's head. The Lama rising from the ground, although grievously hurt, was again effectually felled and then the murderer worked his vindictive will unopposed, upon his late chief and master inflicting as already said ten severe blows on his body, any single one of which would have been fatal to the victim. The cause of the murderous slave's vengeance was a comparatively trifling one. He is only a year younger than his prince, and because the latter refused to allow his slave permission to marry a very young girl, also a hereditary slave of the household, on the score of extreme youth, the murderer considered he had been ill-treated by an otherwise kind and considerate chief.

The Governor of Kwangsi has submitted a memorial to the Throne that in view of the military funds due in the 9th and 10th moons as well as the four months' funds derived from foreign sources, not having yet been remitted to Kwangsi, it is requested that on account of funds being sorely needed in that province at present, the same may not be remitted for some time. An

Imperial rescript was accordingly issued, granting the request.

Mr. J. W. Jameson, of the Hongkong Salvage Syndicate, has chartered the steamer *Hanoi* in which he is going to try and refloat the French cruiser *Sully*.

The *North China Daily News* translates the following from a private letter written by a Chinese trader at Hsinmintun:—"On the 1st instant a body of over 1,000 mounted Russians coming from Tiehling, a fortified Russian post forty miles north of Mukden, suddenly entered the town of Fak'umên, which is situated well inside the neutral lines, and forcibly billeted themselves upon the unwilling inhabitants for the night. Hearing, however, of the unwelcome proximity of Hunghutse, the raiders encamped next morning on a neighbouring height for fear of attack by the Hunghutse. The following day (Chinese New Year's Eve) hearing that the Hunghutse were preparing to attack them, the Cossack raiders swooped down upon the unfortunate Fakumênites and carried off everything edible that had been prepared by their victims for the celebration of their New Year festivities. In fact, not a single family or shop in that town escaped the Cossacks, who even went so far as to leave not a single eatable thing behind them when they fled from the approaching Hunghutse. Anything that could not be carried away these ruthless visitors wantonly destroyed.

"Mr. John Peel" heads the list of winning owners at the late Hongkong Race Meeting. He had 8 firsts, 2 seconds and 3 thirds. Mr. G. H. Potts came second with 7 firsts, 7 seconds, and 3 thirds. The Governor of Hongkong had to be content with one third.

Says the *N.-C. Daily News*:—"We understand that on his return to Shanghai, Mr. John Goodnow will resume charge of the U. S. Consulate-General until the 1st of April, when he will resign, and Mr. J. W. Davidson will again be acting Consul-General until the Department of State sees proper to make a change. All who know Mr. Davidson will be quite satisfied if that change is postponed *sine die*.

Mr. Bevis, the Shanghai manager of the H. & S. Bank, was reported on Feb. 25, to be out of danger.

A Mongolian Prince has lately received a snub from the Throne. The reprimand is conveyed in the following Imperial Decree:—

We have received a memorial from the Mongol Prince Hsi Ling-a, 4th Order, asking leave to be allowed to farm the Salt Monopoly of the Empire to commence with the taking over of the Chang-Lu Salt Circuit of Chihli province and stating that he has raised Tls. 3,000,000 to be used as capital in providing for transport, etc. The said prince also commends a certain Wei Hung-ju as a capable person to assist him in the proposed scheme. It is evident that a scheme like that proposed by Prince Hsi Ling-a has not been advanced with any idea of solely benefiting the Government, nor is it governed by disinterested motives of patriotism, but that the aim is to benefit himself and those who have persuaded him to memorialise the scheme to us. As he has been more sinned against than sinning, we will let Hsi Ling-a off this time with a mild reprimand and not hand him to the Mongolian Superintendency for the determination of an adequate penalty. Those who have been influencing him are, however, to be strongly censured for their self-seeking.

At the end of last year (Chinese calendar) Her Majesty the Empress Dowager disbursed from her private purse no less than Tls. 300,000 as contribution to the relief funds for Mukden. Of this handsome amount Tls. 100,000 were first handed over to a special deputy appointed by Tartar-General Tseng Chi, which were spent in buying cotton clothes and provisions for the poor and needy. The number of refugees, however, is daily increasing, and although over 10,000 people have fled to various places within the limits of Kinchoo, there are still many people left behind in Mukden. Consequently, an application has been sent to the Board of Revenue for the giving of another Tls. 100,000.

## THE VOLUNTEER FLEET

The projectors of the movement for forming a Volunteer fleet have met with much success, though the singular action of the House of Representatives in refusing to extend to the vessels of the fleet the provisions of the Law for Encouraging Navigation will doubtless prove a disappointment. The original idea seems to have been to construct ten ships, but as the cost of proper vessels—that is to say, ships of some 7,000 tons displacement with a speed of 22 or 23 knots—would be about 4½ millions each, it is evident that the capital fund contemplated by the projectors, namely, 15 million yen, would not suffice. There has therefore been a change of programme, and it is probable now that not more than four ships will be built, and that, in order to bring the fleet to suitable dimensions, the Government will be asked to hand over, on easy terms, such of the vessels captured from the Russians as are suitable for the purpose. There remains, however, the difficulty of maintaining the ships in times of peace. No ordinary commercial company is willing to include such vessels in its fleet, as their uses are obviously limited and the cost of running them is considerable. The Nippon Yusen Kaisha employs the hospital ships of the Red Cross Society, the *Hakuai Maru* and the *Kosai Maru*, but the Company finds them rather white elephants and would gladly remove them from the list of its fleet. Had the House of Representatives followed the example of the Peers and agreed to apply the Navigation Encouragement Law to these Volunteer ships, doubtless either the Nippon Yusen Kaisha or the Toyo Kisen Kaisha would have found a use for them. But as matters now stand the outlook is perplexing. We confess that it is not easy to trace the workings of Mr. Shimada Saburo's mind and the minds of his fellow-thinkers in the Lower chamber.

**GENERAL STOESEL.**

General Stoessel seems to be having a fine reception in Russia. Whatever may be said by the officers that served under him, or whatever testimony may be borne by the conditions under which he surrendered, his countrymen are apparently determined to regard him as a hero. It is easily explicable, for, after all, the one spot having a semblance of brightness in the Russian's record, is the defence of Port Arthur. Nowhere else have they been able to make even a tolerable show of resisting a Japanese onset. Yet how different the situation would now be were the fortress still holding out, as it might well have been; were it still detaining an army of four Divisions under its parapets; were the Baltic Fleet still inspired by an invaluable objective, and were the spirits of the Japanese depressed more and more by their inability to grasp the great prize of the war. We should be sorry indeed to think that an English general would have hauled down his flag at Port Arthur with a strong garrison and an ample supply of provisions. That is not what British commanders did at Ladysmith, at Mafeking or at Kimberley. But Stoessel is to be a hero. It is fortunate for the Emperor of Germany that Russia's mood inclines in that direction, for had Stoessel's own country refused to honour him when he arrived wearing the *Ordre pour la Merite*, the situation would have been a little awkward.

EUROPE AND THE WAR.

Europe seems to be coming to the conclusion that an almost hopeless situation exists for Russia. That is what we have been saying for some time. Only one recourse offers and that is to recover the command of the sea, which feat Admiral Rodjestvensky is apparently not anxious to essay. His long wait at Madagascar was explained on the ground that he had to be joined by a third squadron, but now we hear of a fourth being prepared, so it may be presumed that another long spell of rest in the commodious harbour of Diego Suarez will be the order of the day. How France can possibly justify her conduct in allowing her ports to be converted into Russian naval bases we are not able to conceive. To us she seems to be fighting on Russia's side just as indisputably as though her troops and ships were ranged alongside those of her ally, but apparently there is in the back-ground some explanation beyond the reach of ordinary intelligence. That is a question apart, however. The point is that Europe is at length awakening to the desperate nature of Russia's plight. Will she ever be able to comfort herself with a success in the field however secondary? We do not believe it. The Japanese are better fighters and can not be inferior either in numbers or in equipment. What chance is there for Russia?

### THE NEW RUSSIAN LOAN.

The Russian correspondents of *The Times* send to that journal the following news about the new Russian loan :—

The *Russ* draws attention to the very unfavourable terms to which Russia has been obliged to submit in order that her new loan might be accepted. After allowance has been made for the profits of the underwriters, the net sum which the Russian Government will have to dispose of can hardly exceed 210,000,000 roubles (£22,340,425), although the nominal amount of the loan is 231,500,000 roubles (£24,627,659). Moreover, the right conceded to the bondholders to claim repayment at the nominal value at the end of six or nine years will almost certainly be enforced at the end of the earlier period. These severe terms cannot fail to react unfavourably upon all Russian Government securities, and especially upon the Four per Cent. Rentes, as is, indeed, already clear from the latest movements of the Bourse.

The St. Petersburg journal admits that in present circumstances nothing better could be expected, especially if the uncertainty of the internal condition of the country be taken into account. Far-reaching reforms are necessary in order to re-establish Russia's credit. The Japan of the pre-Meiji era could never have ventured to enter upon a conflict with Russia, and could never have commanded any confidence in the international market. Thanks, however, to the re-organization of her political system, her credit is now at least as good as that of Russia.

Side by side with the above it is interesting to read the following from the Paris correspondent of the same journal :—

If the German Emperor and Government imagine that the Russians are grateful to them for Germany's participation in the new Russian loan, let them listen to Russian official opinion on the subject, as conveyed to the French public through the medium of the *Echo de Paris*. The St. Petersburg correspondent of that journal, M. Dru, after describing the conditions of the loan, passes to what is styled in the title "Truc et bluff de l'Allemagne." He says:—

"As a fact it is Dutch, English, and French capital which, through the intermediary of London, furnishes the largest share of the loan, Germany, when everything is taken into account, only providing very few millions. It is a fine piece of work, forming part of the system of bluff adopted by Germany—high flown telegrams from the Emperor William, decorations given to the Russian Generals, &c.—intended to make Russia believe that Germany is her only friend, whereas, as a matter of fact she is doing splendid business by selling ships, coal, and war material, and lends at high interest other people's money."

**PUBLIC OPINION IN RUSSIA AS REGARDS  
PEACE.**

In the middle of January the Russian correspondents of *The Times* addressed to it this information :—

An agitation in favour of peace is being started by a number of eminent citizens of St. Petersburg, who have drawn up an address to the Tsar, representing the uselessness of the war and the enormous sacrifices which it is imposing upon the country and urging that "as the Government has proved incompetent to carry the war to a successful issue, it should not be allowed to continue to prove its incapacity at the cost of the blood and tears of the nation." This address is being largely signed by people of all classes both in the capital and in the principal towns of Russia.

The new Liberal paper *Nasha Zhizn* asks whether it is worth while to continue the war. "General Stoessel," it says, "had the moral courage to stop further bloodshed as soon as he became convinced that it would be fruitless. Shall not we, the Russian nation, rise to the same degree of civic courage, admit that we have not been successful, and give up an uncertain struggle for Manchuria, which it is unnecessary for us to keep? The Japanese agreed to grant honourable terms of capitulation to General Stoessel, and no doubt they would also agree to an honourable peace for Russia—the more likely to be honourable the sooner it is concluded. The real want of the Russian nation is peace. It is high time that the myriads of men sent to Manchuria should return to their peaceful pursuits, and that life in Russia should resume its normal course."

Almost simultaneously the *Novoe Vremya* wrote in a strain which is thus epitomized by the same correspondents:—
